oduction of crude oil, at 33 million tonnes (mt) in 1990-91, was out 3 mt short of the production target of 35.9 mt. Even though the partment of Petroleum and Natural Gas has set the production get for 1991-92 at 36.10 mt, actual production is unlikely to touch mt. Even after this, net imports of nearly 28.6 mt of crude oil and roleum products will be required in the current year to meet total mestic demand.

Consumption of petroleum products has been increasing at the rate of 6.4 per cent a year. Between 1980-81 and 1988-89, consumption of LPG, petrol, diesel and kerosene were up by 22, 9, 8 and 8 per cent, respectively. However, the steep hike in the taxes of petroleum products in 1990-91 brought about a sharp reduction in the consumption of these products.

wholesale price index: The all commodities index is up 1.28 ent during the month to 13 July 1991. The index of primary ies was up due to a steep rise in the prices of fibres (3.1 per cent) oilseeds (3.6 per cent). In manufactured products the price of nemp and mesta textiles was up 7.2 per cent during the month r review.

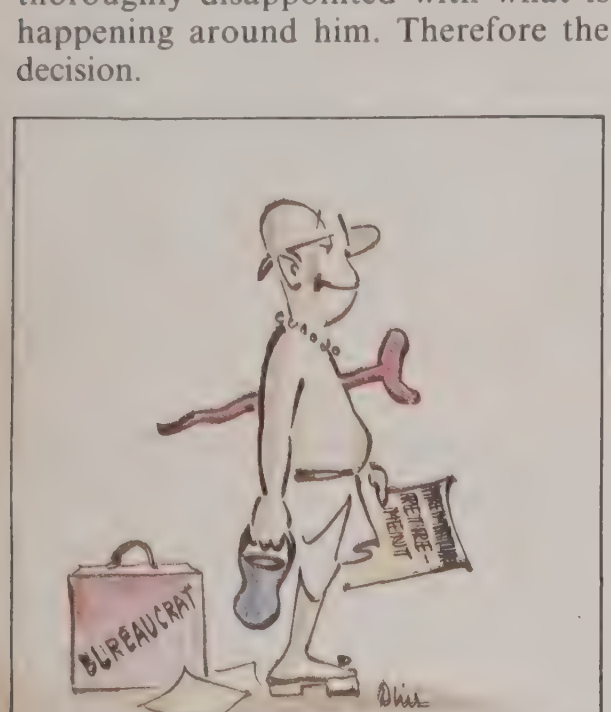
of gold is in rupees per 10 gm and silver in rupees per kg)

Alcohol



Though India is endowed with vast natural resources from which alcohol can be produced, there have been constraints to growth. Distillation of alcohol for potable purposes has been known in India from ages. But the use of alcohol for manufacturing organic chemicals was introduced only in the fifties. Alcohol is a feedstock for a number of organic chemical products like acetic acid, acetic anhydride, vinyl acetate monomer, and polystyrene. It also forms the feedstock for mono-ethylene glycol, N-butanol and poly vinyl chloride.

Production and consumption: Production of alcohol has more than doubled to 926 million litres between 1979-80 and 1989-90. Both industrial and potable consumption has been increasing at a steady pace. If alcohol has to be used as a chemical feedstock on a large scale, its production has to increase. It has been estimated that production of alcohol in 1994-95 will be over 1,000 million litres.

Divine relief

It will perhaps be for the first time that a senior serving bureaucrat will renounce the world and head for the Himalayas to take up *sanyas*. Precisely what steel secretary B.L. Das, a 1958 batch IAS officer from the Bihar cadre, is planning to do. In fact, he has already put in his papers asking for a premature retirement. Apparently, Das has had enough of work and is thoroughly disappointed with what is happening around him. Therefore the decision.

The grapevine, however, has it that this is because he cannot get along with current steel minister Santosh Mohan Deb. Whatever it might be, as things stand in government today, it will not be very surprising if more of Das's colleagues also think along the same lines.

Fate in the balance

Speculation is rife within the bureaucracy on the fate of the finance secretary S.P. Shukla. Earlier special secretary in the commerce ministry and a 1958 batch IAS officer from the Bihar cadre, Shukla has been totally sidelined by his new boss, finance minister Manmohan Singh.

In fact, it was expected that Shukla's would be the first head to roll when the Congress-I government came to power. However, matters were delayed since the budget and the various policy changes were on the anvil. Shukla has apparently been ignored during the entire budgetery exercise.

Not only that, Manmohan Singh has been relying heavily on the chief economic advisor to the ministry, Dipak Nayyar. Even during the course of the many press conferences that the finance minister has addressed this month, Shukla has had little to contribute. Usually, after the budget, the finance secretary addresses the press conference to clear various issues. Singh's presence this time therefore came as a surprise to many. Now with major economic initiatives by the government in place, it only seems a matter of time before Shukla is eased out of North Block.

Housing problems

Even as urban development minister Sheila Kaul is trying hard to get former ministers vacate their spacious bungalows in the central district of New Delhi, one former minster has refused to oblige. At present, most of the ministers in the Narsimha Rao cabinet are homeless including defence minister Sharad Pawar who is occupying the chief minister's suite in Maharashtra Bhawan. The others are not so lucky, they only have ordinary rooms to operate out of in respective state *bhawans*.

It's Sanjay Singh, former minster of state for communications, who has written to the urban development ministry that since he finds his present residence at 11 Safdarjang Road to his liking, he wants to stay put. However he has made it clear that if the ministry so desires, he is ready to pay a rent equivalent to the market rates. Which could run into thousands of rupees per month given the location.

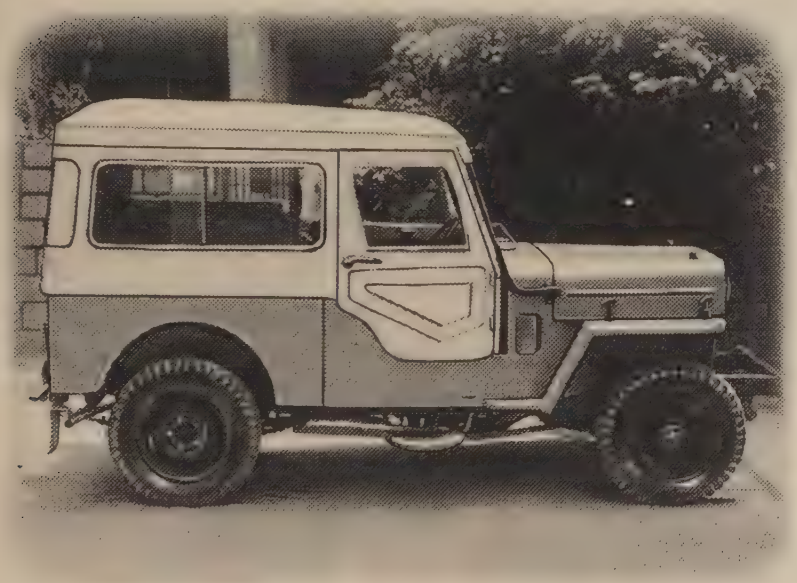
The house he is in has seen several illustrous people occupying it, the most recent being cultural czarina Pupul Jayakar had turned the house into a veritable seum during her stay.

Disappearing trick

The latest civil list of the Indian Adm trative Services has some very interes information, especially in the Bihar li civil servants which numbers 383. Bih notorious when it comes to its civil vants manning various senior positio the state and the Centre. But this beats it all. There are two officers wh on 'unauthorised absence' since joined. S.K. Saha of the 1969 IAS ba and Vijay Kapoor of the 1977 batch seems, never joined the services. B were regular recruits, a category am civil servants which means they cam through the regular civil services entra examination conducted by the UPSC ev year. Another interesting fact is that list also names two IAS officers, Ga Saran Thakur (1983) and R.S. Tiw (1973) as 'under suspension'. What th four officers are doing is anybody's gu even as they continue to remain memb of the elite civil servants club.

Tougher to get in

The private secretaries to the minister — or at least those who are trying hard become secretaries — are in for troub times. The prime minister has insist that all candidates for these plum posts screened properly by the central vigila commission (CVC). Though only the IAS ficers upto deputy secretaries to the g ernment are entitled become private secretar to ministers, there ha been cases where ev joint secretary level of cers have been chosen remain in Delhi.



It won't be so easy no as the PMO is taking firm view of all such a pointments. Also, a nu ber of IAS officers wi inquiries pending again them at the state level w now obviously not be a lowed to stay with t ministers. Meanwhile, t ministers are trying ha to get incumbents of the choice.

MAHINDRA & MAHINDRA DRIVES HOME A POINT WITH FRP

Leading automotive manufacturers have discovered the versatility and suitability of FRP (Fibreglass Reinforced Plastics) Composites to the tough Indian conditions. They have realised how FRP can help in better styling, reduce fuel consumption and increase the life of the product. In fact today, they use FRP to create parts which would have been difficult with material like steel.

Some unique qualities of FRP

- High strength to weight ratio.
- Corrosion resistance
- Fuel savings
- Ease of repair
- Low capital investment.

FRP, the revolutionary answer for contemporary automotive designers and manufacturers. And making this happen is Ceat, the manufacturers of "Decca Fibre" glass fibre reinforcements.

RPG ENTERPRISES

Presenting the Godrej 930X Printer

And a censored version of the market reactions.

What was the hurry?
The printers currently in use are quite adequate. And if [redacted] computers aren't complaining, what was the tearing hurry to bombard the market with this top-of-the-line 300 cps whiz-kid? [redacted] Preposterous!

User-friendliness? Or... seduction?
All operations of the Godrej 930X Printer, it seems, are possible through a finger-tip front panel control. And it's so designed, even a [redacted] novice can make full use of all the built-in [redacted] capabilities. This is not user-friendliness; it's [redacted] downright seduction!

Paper handling? Looks like black magic!
Both bottom feed and rear feed are possible with the [redacted] 930X, and so is cut-sheet feeding without having to take the continuous stationery out of the tractor. Feeding of paper and removal of paper is at the touch of a button! Now if this isn't [redacted] uncanny, what is?

Godrej & Boyce Mfg. Co. Ltd., Regd Office/Marketing Dept. (Computer Peripherals), Plant 16, Pirojshanagar, Vikhroli, Bombay 400 079. Tel: 5171166/77 Tlx: 011-71502 GOVK. **Branches: Bombay** (North) Tel: 5170451 1455. **Pune** Tel: 668968. **Ahmedabad** Tel. 531545. **Rajkot** Tel: 24919. **Bhopal** Tel: 554076. **Indore** Tel: 23663. **Jabalpur** Tel: 27321. **Delhi** Tel: 6845002 6845007. **Chandigarh** Tel:

Incredible hold over time and distance!

The news is that the 930X operates non-stop for days together without a [redacted] switch-off! And it's a long-distance runner with a high printhead life of over 500 million strokes! But who needs that kind of printing [redacted] prowess, except perhaps a printing press! [redacted]

The unfair advantage of font cards!

The 930X offers a variety of standard fonts. Moreover there's a slot near the front panel which eagerly takes on a font card besides the standard ones. Now that's hitting other printers below [redacted] the belt! [redacted]

Compatibility? It looks like conspiracy!

The 930X is available with IBM and EPSON ESC/P Emulations. Plus, it offers the unique option of an EMULATION card which makes it [redacted] compatible with a host of other systems. Now isn't that taking compatibility a bit too far?

Well, now that you've heard the printable excerpts of the market reactions, it's time to contact your nearest Godrej Dealer for a live demo.Without fear, prejudice, or obligation.

It first thinks ... then trips.

'U-Break' with discrimination.

Crompton Greaves makes another breakthrough with the U-Break – an MCCB that actually thinks before it trips. And unlike an ordinary MCCB, the U-Break first discriminates and allows only the MCCB in the faulty feeders to instantly trip. Meanwhile the other circuits continue to operate, thereby saving precious down time. This is achieved by the unique feature of short-time delay of 40ms – 250ms on the U-Break.

Moreover, U-Break MCCB allows you wide flexibility with different release modules which are replaceable. The release modules have continuously adjustable 60-100% rated current and 500-1000% short time delay current. Right from 150 amps to 600 amps for 35 KA and 50 KA fault levels. Making it one of the country's most advanced circuit breakers.

Above all, the U-Break is backed by an elaborate manufacturing and marketing infrastructure and the Crompton Greaves stamp of quality.

Rebuilding confidence

HIR MULJI

The government's new economic policy has so far received a splendid reception from the markets; but if the finance minister is to succeed he must keep going with economic reforms. Above all his danger area is foreign exchange and the IMF loan will not solve the problem. He must make sure that he gains the confidence of businessmen both at home and abroad. I know how I myself would do this if I were Manmohan Singh.

As a first step, I would get rid of every single enforcement agency under the finance ministry's control. There are several reasons for doing so, but by far the most important of these is that you cannot use the weapons of a police state for running an open economy; and let there be no doubt that that is precisely what these agencies are. It is no coincidence that exchange control of the kind we are experiencing was first introduced by Dr. Schacht in Nazi Germany; this system of detailed interference in the lives of individuals was initiated in the guise of nationalism.

Exciting risks

And it is this aspect of FERA that frightens off foreign investment. Every one knows that running factories in India is not easy, but its challenges are mostly of the kind that entrepreneurs like to take up. If you listen to a Dhirubhai Ambani or a Darbari Seth you will understand that part of the excitement is in taking up the risk of organising a business in the difficult conditions that prevail in poorer countries.

But, while businessmen may take up the task of difficult industrial problems, no one is interested in tangling with India's complicated economic bureaucracy. And that is what FERA is all about. Apart from the endless number of permits that are required for even the simplest foreign exchange transactions, there is always the possibility that in making orderly arrangements for your business, you may have infringed some rule or other and consequently may find yourself promptly taken to task.

The trouble is that when it comes to punishing those who may have broken some minor rule under FERA, the authorities lose all sense of proportion. The excitement of publicity — particularly if a big businessman or a multi national corporation is involved — overwhelms the politics of the country. Both socialism and nationalism rear their animated heads in a chorus of media blitz. Having satisfactorily humiliated the poor soul that has been caught, the country returns to its normal interplay between businessmen and bureaucrats.

Now after a fashion resident Indians understand this game. But those who have left this environment behind are not eager to step back into this Orwellian mess. For the ordinary non-resident investor, the notion that he has to seek permission to invest his own money in shares or equity, that if he violates any rule of FERA he can be sent to prison or suffer a penalty of seven times the amount of money involved and so on and so forth is just too frightening to contemplate.

In bad taste

Of course one can explain to them that these rules seldom bite, that in practice the authorities are much more relaxed towards non-residents than towards residents, but sadly no one believes all that. The occasional taste of Indian customs officials, or the daily news of the number of raids carried out is quite enough to put off all too many potential investors. If India were the only country in the world that one could invest in, no doubt every one would be queuing at the Gateway of India, but, as a potential investor once told me, "you know there are easier and nicer ways of making money than all this".

When it comes to punishing those who may have broken some minor rule under FERA, the authorities lose all sense of proportion. The excitement of publicity overwhelms the politics of the country

But it is not just the police aspect of enforcement agencies that should worry Manmohan Singh. He is above all an economist, and it was the distinguished economist Al Harberger who always used to tell his class that he thought of an economy as a beautiful, wilful, mysterious woman. He could never really understand her, every time he looked into her face he saw something new that had missed in the past. For him the fascination was to coax and persuade this enchanting creature to bend to his wishes. He thought that those who believed in the controlled economy felt somewhat differently. They were like those who took the whip and forced submission out of their mate.

Now, in his budget speech, the finance minister emphasised the need for domestic harmony. He would not obtain it at home by enforcing submission; he will not achieve it with his other spouse, the economy, if he relies on the whips and ropes of enforcement agencies.

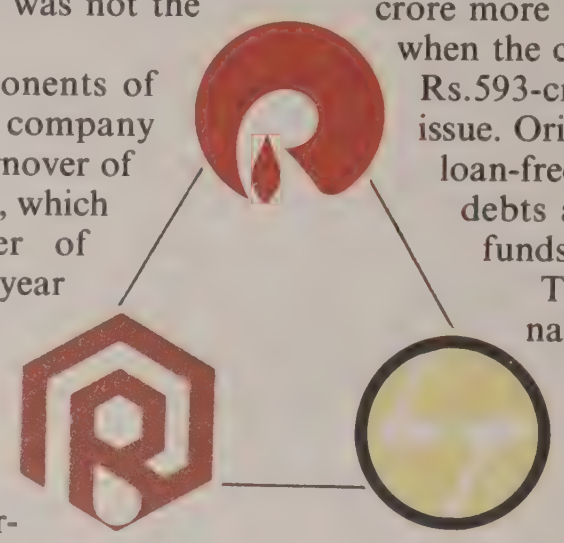
THE RELIANCE GROUP



Rolling agai

They were once the toast of the corporate world. Nothing they did coul be wrong it seemed. Mega projects. Mega growth. Mega profits. Mega issues. They introduced the Indian corporate world to these phrases. Th suddenly, they were forced out in the cold by the politics of their own creation. But now, the Ambani juggernaut is rearing its head again. L&T mind-boggling merger, et al

Until yesterday, their fortunes seemed inextricably linked with regaining control of Larsen & Toubro. They were fighting a battle for it, in a style unique to the Ambanis — in Parliament, in the bureaucracy, in the boardroom, in the stock-markets, and on the streets. People were looking forward to "corporate democracy" being put to test at the company's extra-ordinary general meeting (EGM) on 26 August in Bombay. That was until yesterday.

But, in the boardroom of Reliance Industries, chairman Dhirubhai Ambani, unwilling to wait for the outcome of the EGM, was unveiling another grand stratagem — the merger of Reliance Petrochemicals Ltd (RPL) with parent Reliance Industries (RIL). L&T was not the end of the Ambani 'vision'!

Consider the prime components of Ambani's new plan: RIL, a company moving rapidly towards a turnover of Rs.3,000 crore a year; and RPL, which expects to log a turnover of Rs.1,000 crore in its very first year of operations, 1992-93. You merge them and what do you get? Yet another Dhirubhai dream — the largest company in the land. A petrochemical giant of international proportions.

The Ambanis were unavailable for a detailed interview before *Business India* went to press; but Anil Ambani did indicate that the major proposal was discussed in detail with the people and financial institutions who matter. The first public statement will in all likelihood be made at RPL's annual general meeting on 29 August at Hazira.

On the face of it, the resolutions being moved by the Ambanis at the AGM are straightforward — early conversion of the 'B' and 'C' parts of RPL's convertible debentures amountin Rs.563 crore at a premium to be decided l issue of fresh equity worth Rs.50 crore fo and conversion to equity of an unsecured of Rs.50 crore given by RIL, the last two bei par. If the shareholders adopt them, RPL's eq will in one stroke increase nine-fold to Rs crore, over three times the equity of TISCO, s the largest in the Indian private sector. This give RPL borrowing capacity of over Rs.1 crore, the kind of money its projects need ba

That is probably the management's imm ate goal: raise the equity so that financial i tutions clear the loans. And that has to be d fast because the latest estimates put the cos RPL projects at Rs.1,700 crore, about Rs.1 crore more than that announced in 1 when the company went public with Rs.593-crore convertible debent issue. Originally, planned as a virtu loan-free project, it is now neck dee debts and struggling to raise m funds.

The Ambanis have their ex nation: "We had to go it alone projects planned in the j sector and we had to crease capacities of other conform with the minim economic size (MES) sti lated by the government for trochemicals." They have a point. Under agreement, the Gujarat Industrial Investm Corporation and the Indian Petrochemic Corporation Ltd were to share the cost of ethylene handling jetty on the river Tapi; als 60-mw captive power plant was to be set up a common industrial facility for the region. I lays on its part forced RPL to go it alone on th projects, which cost together Rs.280 crore.

Also, the MES announced by the governm in 1989 for different industries, prompted

"I assure you corporate democracy will be restored soon (in L&T)."

— Dhirubhai Ambani speaking at the re-convened sixteenth annual general meeting of RIL on 13 November 1990

Pankaj Desai

The Ambanis: L&T was not the end of their 'vision'

Ambanis to increase the capacities they had decided on earlier. Thus, MEG capacity was increased from 60,000 to 100,000 tonnes per annum (tpa) and that of HDPE from 50,000 to 160,000 tpa.

There are other reasons too, like the devaluation of the rupee and delays in implementation. As per the Ambanis' original plan, the project was to have become fully operational within 24 months of the company's public issue in September 1988. But, of the three plants, only the MEG plant has been commissioned, and recently at that. The other two — for HDPE and PVC — will go into production only in a year's time according to Reliance's own estimates. This means that the total delay will be as much as two years over the original schedule.

The Ambanis are not revealing what contributed how much to the huge cost escalation. Information about the means of financing these cost overruns is also difficult to come by. Even the usual sources for media persons, the financial institutions, are tight-lipped about it.

However, a break-up of the latest cost estimates was provided by independent industry analysts who have been observing Reliance closely for years. It shows that direct foreign exchange and rupee loans have risen from Rs.84 crore to Rs.251 crore, and nil to Rs.428 crore, respectively (*see table*). The lead institution to the Reliance group, the Industrial Credit and Investment Corporation of India (ICICI), has already sanctioned most of the company's requirements, though disbursement of a portion will have to wait until the company's equi increased.

RPL financing plans *(Rs. crore)*

Means of financing	Aug '88	Dec '90	Aug '91
Equity from RIL	50	58	58
Foreign exchange loans	84	251	251
Convertible debentures	516	593	593
Unsecured interest-free loans from RIL	50	100	100
Loans from FIs	—	218	428
Leasing	—	100	122
Deferred payment guarantee facility	—	—	35
Cash accruals with company	—	—	80
Total	**700**	**1,320**	**1,667**

Reliance spokesmen are mainta that the RPL project is still viable own, despite the higher cost. They q report made by a committee, set up ICICI to examine RPL's viability. The mittee included S. Ganguly, managi rector of Haldia Petrochemicals, S Marathe, former chairman of the and K. Krishnan, executive direct IPCL. The report said that the projects "more viable than ever".

Other independent analysts also that way. The cost overrun notwiths ing, the twin facts that demand fo trochemicals is increasing apace, and all the competitors' projects are far complete — be it SM Dyechem's MEG ject or Finolex Pipes' PVC project — ensure that RPL's projects hold the ed

The main competition for RPL will from the public sector IPCL, whose old depreciated plants allow it to pric products lower. At a meeting of pl processors, some time ago, Anil Am admitted that "our manufacturing are higher than that of IPCL". But, the demand and higher cost of impo

The RIL plant: will shareholders get a new deal with the merger?

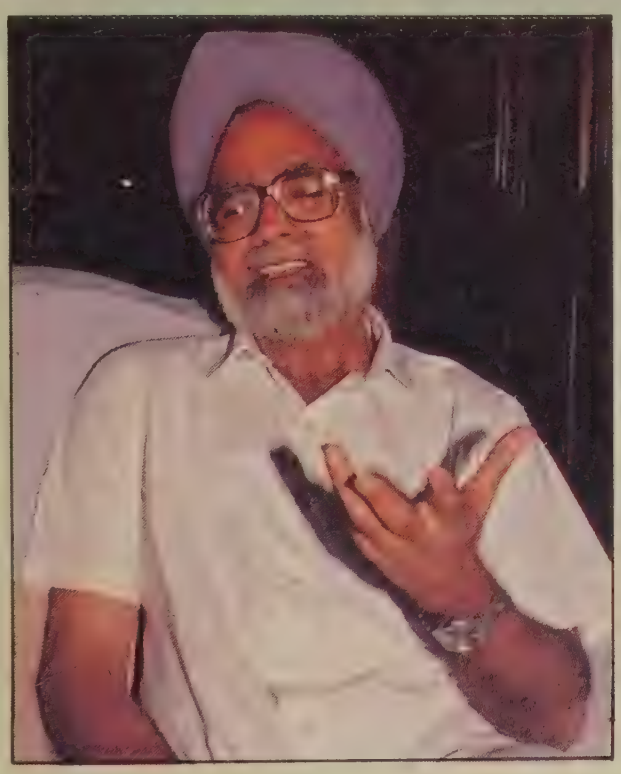
ducts will ensure that RPL does not go hout business.

gainst a current annual demand of ,000 tonnes of PVC, production in the ntry is only 120,000 tonnes. RPL, with a acity of 100,000 tonnes, can bridge the . Agreed that other projects are com- up, but demand is also increasing. ilarly, there is only one manufacturer HDPE in the country, ie, Polyolefin In- tries Ltd, with a capacity of 40,000 nes a year. Current demand itself is in excess of 160,000 tonnes a year.

Which brings us back to the question he merger. Why have that now, when nscious decision was taken at the time etting up RPL to keep it separate? Who s it benefit, RIL, RPL or the Ambanis? at happens to the shareholders? The wers at this point are available only ough analysis and independent rces.

Madhav Reddy

The RPL pipeline: no longer necessary to funnel funds from RIL?



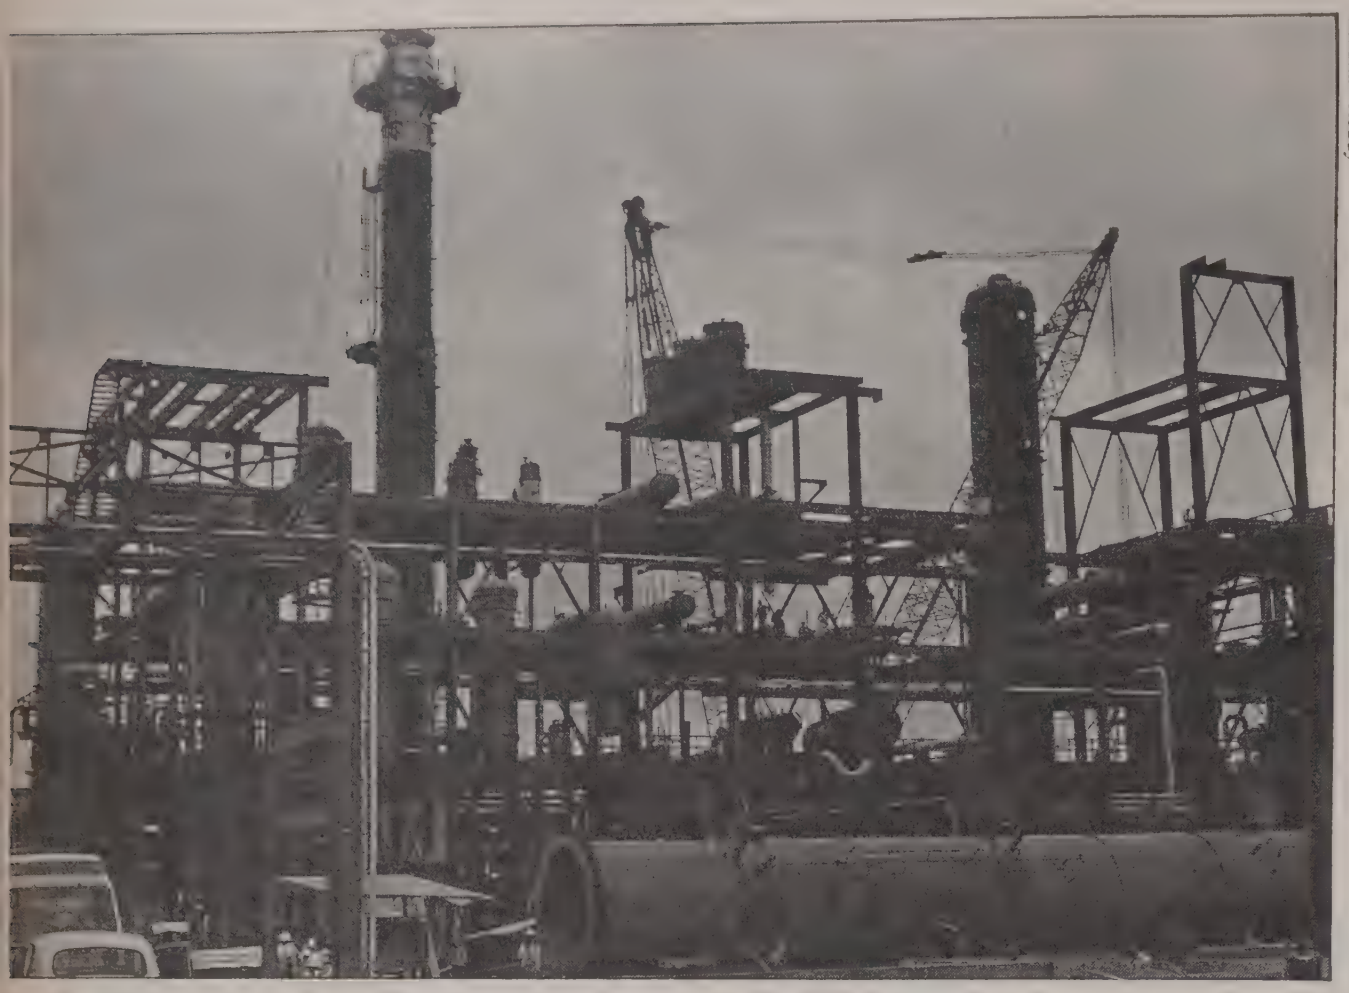
The influence game

Unlike in the past, observers say, this time around, the Ambanis are embarking upon two major tasks without being actually sure of where they stand with the government in New Delhi. Even though the Congress-I, a party known to be close to them, is in power, things are not so easy for Reliance.

Pranab Mukherjee, their close friend from the past, did not even make it into the ministry and Manmohan Singh, though not known to harbour any antipathy towards the group, is described as one who doesn't take sides. In fact, it is not to the Ambani's advantage that atleast two senior ministers in the union cabinet, Sharad Pawar and Madhavrao Scindia, have been very close friends of their arch rival, Nusli Wadia, for many years.

Sympathetic ears. Also, this time, there do not seem to be any bureaucrats who are openly friendly with the Ambanis. In the past names like Nitish Sengupta (then revenue secretary) and H.K. Khan (then petrochemicals secretary) were openly mentioned among those who had a sympathetic ear for Reliance.

This does not mean that the group has no friends in New Delhi. Over the years, the Ambanis have, through their public relations and liaison network in Delhi, cultivated and finally



convinced several senior and influential corporate bureaucrats to join hands with Reliance. And, today, the PR network is now much stronger in the capital than ever before. While in the past the Ambanis had only one lobbyist in Delhi, now they have in their employ people like Tony Jesudasan, who is vice-president for corporate communications at RIL, and R.K. Mishra and B.N. Uniyal, at their newspaper, *Business and Political Observer*. All three, as well as others, are known to have extensive contacts among New Delhi's politicians.

However, despite the high profile public relations, times are such that no bureaucrat will openly come out or do something which is perceived to be blatantly pro-Ambani. In fact, with licensing stopped in many categories of industries and liberalisation in several areas, sources suggest that Manmohan Singh might leave the decision, of whether the Ambanis should enter L&T or not, to the financial institutions.

The PMO's bidding. Manmohan Singh, though neutral, is also known to do the bidding of the prime minister's office (PMO). That is clearly indicated by the manner in which he announced the Rajiv Gandhi trust, funded out of public money, in this year's budget. This means that if the powers-that-be in the PMO, or the PM himself for that matter, were to instruct the finance minister to have the FIs throw their lot in with the Ambanis, then Singh would do so.

In the past, though, Narasimha Rao has maintained a neutral stand about the Ambanis. In fact, in the various positions he has held, he is not known to have formally come in contact with them. But then there is the Chandraswamy factor. The godman is friendly with the Ambanis and also wields considerable clout with Rao. Whether Chandraswamy will intervene in favour of the Ambanis, one does not know. And even if he does, will Rao cave in? These are the ponderables for the time being.

RPL: facing the prospect of servicing a Rs.750-crore equity burden

There was much debate in late 1988 about why RPL was set up as a separate company by the Ambanis and not as a division of RIL. Apart from the need to avoid complications with the then prevailing MRTP and licensing restrictions, there were other compelling reasons for setting up RPL separately. For one, the Ambanis did not want to put all their eggs in one ket, especially when RIL was not fa well that year. Then again, for the three crucial years, when RPL would main a 66-per-cent subsidiary, it woul easy to funnel funds from the pa company.

In any case, the institutions wante equity-based project. That tied in with the fact that the stockmarkets v down at the time and investors were lo ing for something new after the fiasc the 1985 boom. RPL gave them that loan-free company, a mega issue and dictions of a 750 per cent return.

But that was not to be. Instead, RI today facing the prospect of having bear the burden of servicing a Rs.7 crore equity. This will require, after the cost escalations are taken into count, a post-tax profit of at least Rs. crore to pay even a 10-per-cent divide That may well be manageable, since interest burden of Rs.70 crore on conv ible debentures will not be there. then, there is a better option now merger.

In sheer numbers, the benefits of su an action far outweigh the argume against it. Most importantly, there will a reduction in RPL equity to managea

Back to the future - II

Stymied by a government unfavourable to it until recently, it is growth time again for the Reliance group. On top of the Ambanis' minds right now, of course, are the twin blockbusters of a return of L&T to their fold and the merger of RPL with parent RIL. Simultaneously, in a quieter manner, plans are being drawn to make Reliance a Rs.10,000-crore group by 1995. A tall order, for a group whose turnover in 1990-91 was only a fifth of that.

There will be acquisitions, but the focus will be on Reliance Europe, the group's conduit to the world. "That is the company to watch out for," says a senior Citibank executive. Massive export plans have been drawn up by the Reliance management to not only export products from its own "world-scale projects" but also by other manufacturers in the same product line, just as the Japanese do. It has set itself a target of Rs.400 to 500 crore in exports by 1995. But, what can Reliance export that is competitive in the international markets?

Canalising exports. Polyester filament yarn, polyester staple fibre, fabrics and even projects from L&T are in the plan. Reliance Europe will "canalise" exports of all these products and many more over the next few years. To do this it has hired Mathew Panicker, formerly with Unilever, and is planning to recruit executives in several European countries.

Reliance's export plans are directly linked with its plans to acquire other companies here at home. First among them will be PSF manufacturers Orissa Synthetics and ICI's Thane unit. Though the domestic market is bad for PSF, with most plants running at 50 per cent of their capacity, export prices are good. Acquisition of these two units will give Reliance control over 65 to 70 per cent of the industry's 250,000-tonnes-a-year production capacity (RIL's capacity: 100,000 tonnes).

Where it cannot acquire or create larger capacities, as in PFY, an industry doing very well, Reliance can act as the conduit. Even if this product is priced low for exports, the resulting shortage in the Indian market will push up prices and compensate the losses another banker says.

While strengthening its trading arm Reliance is not ignoring its financ arm. Reliance Capital Finance Trus Ltd (RCFT), which went public last year is planning to make a rights issue in the ratio of six shares for every one held On the present Rs.25 crore, it wil mean an addition of Rs.150 crore to the equity. Under the 10:1 debt to equity norm permitted to leasing and finance companies, this will give RCFT a borrowing capacity of Rs.1,750 crore With its mega growth plans, Reliance would know how best to utilise this money.

Other acquisitions are also in the pipeline. Sources say the Ambanis have not lost interest in Bombay Suburban Electricity Services Ltd (BSES). They are said to have subscribed to the rights convertible debenture issue of BSES in a big way and increased their stake from the earlier 9 or 10 per cent (though Ambani men claim it was 18 per cent earlier). With the 500 mw Dahanu power project cleared, among the first in the private sector under the

els. Available information suggests t the Ambanis are considering a 6:1 or conversion of RPL shares to RIL shares. ectively, the Rs.750-crore RPL equity be reduced to Rs.125 crore additional equity. Against this, corporate ansts say RIL will get a depreciation benef around Rs.560 crore in the first year, 333 crore in the second, and Rs.212 re in the third year.

The high depreciation levels would give merged company an income tax shield to 1997. Also, the merger will ensure a huge net worth. This gives it enorus borrowing capacity and, under an eement with the Gujarat government, would be able to collect sales tax upto per cent of the value of its assets but pay it to the government for 14 years.

Would the RPL shareholders get value for money at the planned conversion? On 14 August, RIL and RPL's 10 shares closed at Rs.180 and Rs.27, pectively, on the Bombay Stock Exnge. "Therefore," says a senior ker, "that's not too bad (a conver-n), considering that the RPL projects are to go on stream." But the bonanza exted, which pushed part 'C' of the RPL vertible debentures up, may not come.

There are other reasons pushing the merger. Marketmen feel that RPL, which has drawn to its limit of 1.5:1 debt to equity norm, will go down under the slightest of pressures. The Rs.900 crore-plus reserves of RIL and its enormous borrowing capacity can bail RPL out, if needed. Moreover, in the merged company, the debt to equity ratio will not exceed 1.1:1, giving the Ambanis sufficient leeway to borrow for future projects.

In the absence of cash flow projections for the two companies, everything looks hunky dory. But the Ambanis are not giving that, and analysts are not attempting to find out for fear of misjudging "hidden capacites" in the RIL and RPL plants.

Amidst "only Dhirubhai can think of this" sighs from supporters, the Ambanis, on a high as they are now, are steering clear of the idea that there might be opposition to their grand plans. With the MRTP Act out of the way, and their legendary political clout back in action, the only force which can check their designs is the shareholders, *a la* L&T.

One criticism that is bound to come up is that the RIL shareholders will be getting a raw deal; after all a company of as yet unproven capability, and which has huge debts, is being merged with a profitable one. And if things don't really work out, RPL could prove to be a millstone around RIL's neck. Reliance, some analysts say, can deflect this criticism by offering shareholders who want out an open cash option.

But many more such questions are bound to be raised by the shareholders. And the L&T EGM is what people are waiting for, because that is going to set the trend for the next meeting - the RPL AGM.

Reliance officials still cringe at the mention of L&T; and must be on tenterhooks about the outcome of the forthcoming EGM. Informal meetings with some of them revealed that institutions, whose mood will determine the result, are playing their cards close to their chests. In effect, if the government says *nyet*, the Ambanis will lose out.

As of now, the winds are in their favour, but as Ambani men say, "Even if the institutions vote against us, we will have made a point by displaying a support base larger than their 40 per cent holding." Therefore, RIL subsidiary Trishna, which holds the 24-per-cent Ambani stake in L&T, is on a massive proxy collection drive. An army of over 200 persons has been deployed in Bombay city alone. An introductory letter in hand, they are knocking at the doors of every L&T shareholder; and each of these canvassers are picking up Rs.75 for collecting six proxies a day.

An L&T construction: conservative efficiency

ernment's revised policy, BSES is ng to be a major force in the coun-s power sector.

eap acquisition. Last, but not the t, is the presence of Reliance in the ernment shortlist for managing ndia Shipping. Acquisition of this eagured company may not make iness sense, but where else can a big up with such export plans get a t of 13 ships so cheap. It has aldy made an entry into shipping by uiring three cryogenic vessels for nsporting ethylene to its Hazira nt. Moreover, the Shipping Credit Investment Company of India , Scindia's government appointed naging agency, has already indid that a "non-shipping company manage Scindia". Others in the rtlist are Great Eastern Shipping Essar Shipping.

all this comes to fruition, the aldy huge Ambani empire is going to uire monolithic proportions in a years. The Citibank executive s, "Check out the Ambanis in 5."

L&T: keeping Reliance on tenterhooks till the 26 August EGM

What will the Ambanis do with their huge stake in L&T if the battle is lost despite these efforts? "They will probably hive it off to one of those large multinationals standing in the queue, waiting for an opportunity to enter India," says an institutional source. Names like Mannesman Demag of Germany, Mitsubishi of Japan and Du Pont of the US are said to have evinced interest in L&T. What better way to enter the country can there be than through L&T, which bankers and managers alike rate as the most efficiently managed corporate body?

Meanwhile, elder son Mukesh Ambani is waiting. Confident of victory, he has resigned as executive director of RIL to take charge as vice-chairman and managing director of L&T. His plans for the company are not known but his father's dreams are: to blend his adventurous entrepreneurial spirit with L&T's conservative efficiency and competitiveness and take it global, on a massive scale.

And why not? Over 50 refineries the world over are coming up for replacement in the next few years and L&T, being one of the few companies with the technology for doing the job, can get a slice of this cake. Dhirubhai even took the risk of letting L&T get the contract for setting up the Reliance gas cracker at Hazira. However, his demand for a supplier's credit of Rs.635 crore led to another imbroglio. But that is another story; one which is probably the most written about one in recent times.

The immediate question, if the Ambanis win, is what will they do with the Rs.820 crore of convertible debenture funds lying with L&T since RIL has already refused the supplier's credit. The c pany's present plans, drawn up u D.N. Ghosh's chairmanship, are b on a sharply reduced volume of fund bulk of the Rs.640 crore under this was to go to cement and shipp Whether they will proceed according this plan, only the Ambanis can Meanwhile, one can only speculate.

The next question, also of crucial portance, is whether the Ambanis will fil the requirements of Clause 40 of listing agreement with the BSE. To do t they will have to make a public offe acquire shares of any shareholder w wants to opt out. And therein lies a ca because acquiring L&T shares will req no small sum of money. Assuming a p of even Rs.150 for an L&T share (curr price Rs.180), the market value of its tire stock will be in excess of Rs.3,(crore. Since Ambanis already hol quarter of it, they require another 25 cent to attain majority. That will c them at least Rs.750 or 800 crore. Will Ambanis make the offer, then? Man Davar and the *Indian Express* are b upon proving that the Ambanis will do such thing. That will be seen after August.

In fact, a result in their favour mi even prompt the Ambanis to defer the cision to merge RIL and RPL. Markets abuzz with rumours that they are pl ning to merge all three — RIL, RPL and L — at a later date. That may sound f fetched now, but knowing the Amba penchant for springing surprises, it co well happen. And if it does, Dhirub will have his Fortune 500 company.

PARKINSON'S LAW of CORPORATE —GIFTS—

1 A committee invariably deliberates for 216 working hours to decide on the festive gift. No matter the length of deliberations, the gift is always thermoware.

2 If a company has been giving flasks for the past 28 years, it will continue to do so for the next 28 years.

3 The probability of the marketing manager dining out with his family increases with the number of servettes he gets.

Why follow Parkinson's laws when you can follow Morphy Richards'. Simply put, it states that a Morphy Richards iron makes an ideal corporate gift this festive season. **M**orphy Richards is the largest selling iron in the UK. It not only looks stylish, it performs efficiently too. Not surprising as it's made with the latest technology. Morphy Richards has a range of dry, spray, steam and cordless irons to suit every budget. **I**f you'd like to give your employees a surprise, forget thermoware. Think Morphy Richards. There's a special price for bulk orders. **F**or more details, please send us the coupon on the opposite page.

THE HOUSEHOLD NAME WORLDWIDE

WE ATTRIBUTE OUR 240% GROWTH TO BLOOD, SWEAT AND BAD WEATHER.

If we grew by 240% in just 3 years, we certainly owe a lot to mosquitoes. Only when they drew blood night after night did people plug in our electronic mosquito repellent – CASPER.

Then there is also the sun, harsh enough to make a cactus sweat. As rivulets of sweat trickled down people's necks, they reached for our wet cleansing tissues – FRESH ONES. The first of their kind in the country.

Even bad weather has helped us in its own way. Torrential rains lashed on rooftops making them crack and rust. And people realised the importance of our lightweight, non-corrosive and crack-proof PVC roofing – JAWAN TUF-TOP. Again, the very first of its kind in India.

Besides all this, there is also pollution. As industrial mishaps raised pollution to dangerous levels, industrial units nationwide switched to our flat, rigid PVC sheets – TAINCLEAR. Which are 0.3 mm to 12 mm thick.

Our decision to initiate a major expansion and modernisation programme will upgrade the present facilities to European standards. This decision has been inspired by the phenomenal success of our brands in India and abroad. Even though we've begun exporting just this year!

Our 240% growth in the last 3 years has been easy. Thanks not just to pollution, the sun, the rain and mosquitoes. But also to you.

REE DIGVIJAY CEMENT

Down but not out

is huge family-run company is in deep trouble and only a sensible act by promoters can save it

had to happen some day. The four-ear-long infighting in the Bangur fam-y is taking its toll in their group com-ies. The Rs.223-crore Shree Digvijay nent, once a flagship of this Calcutta-ed family and a blue chip company till early eighties is on its death-bed. The ird for Industrial and Financial Re-struction has given its final verdict; company, one of the oldest cement nufacturers in the country, is beyond ation. Last month it ordered the com-y to wind up its operations.

n five years since 1986, Digvijay nent made a total loss of Rs.41 crore. er adjusting the earlier surplus, accu-ated losses stood at Rs.29 crore at the of March 1991. Thus, its Rs.3.74 e share capital has been wiped out rly eight times over. The company has a huge liability of Rs.80 crore by way of borrowed funds.

Digvijay Cement went to the BIFR early last year and submitted a rehabilitation package of Rs.51.68 crore of which promoters Bangurs agreed to chip in Rs.10.36 crore. The rest was proposed to come in by way of interest-free excise loans from the central government (Rs.12 crore), sale of assets (Rs.6.5 crore), deferment of loans (Rs.11 crore) and fresh loans from institutions and banks (Rs.5 crore). But the financial institutions and banks opposed the package. They refused to give fresh loans and were also against deferring the repayment of current loans.

The company also claims that its new cement plant at Sikka in Gujarat is eligible for exemption from the 14 per cent sales tax payment to the state government. According to the company, the total benefit would work out to Rs.50 crore. And the company's claim, till 1990-91, is Rs.24 crore. The state government, however, refused the benefit on the ground that its new plant is actually a modernisation of the part of the old one at the same site. Subsequently, the company moved the High Court against the state government about a year ago. The matter is still *sub judice*. The company, however, has kept aside the sales tax benefits claimed, Rs.24 crore so far. Even if it looses the case, it will not have to scramble for this money.

Clearly, no one wants to do any favours for Digvijay Cement. In view of this, the BIFR in its meeting on 10 July 1991, asked Digvijay Cement to sell off its large investments in four large group companies and bring in Rs.63 crore (*see table* giving current market price of holdings). But K.K. Bangur, director of the company, flatly refused to comply with BIFR's request. Bangur maintained that disinvesting would mean that the family would lose its controlling power on these companies. Moreover, Digvijay Cement will have to pay Rs.10 crore as capital gains tax.

So the BIFR ultimately concluded that the promoter's unwillingness to encash the company's investments "makes the entire arrangement devoid of an equitable sharing of sacrifices between banks/FIs and other agencies. Accordingly, under the given set of circumstances the Bench has come to the *prima facie* conclusion that the company has to be wound up".

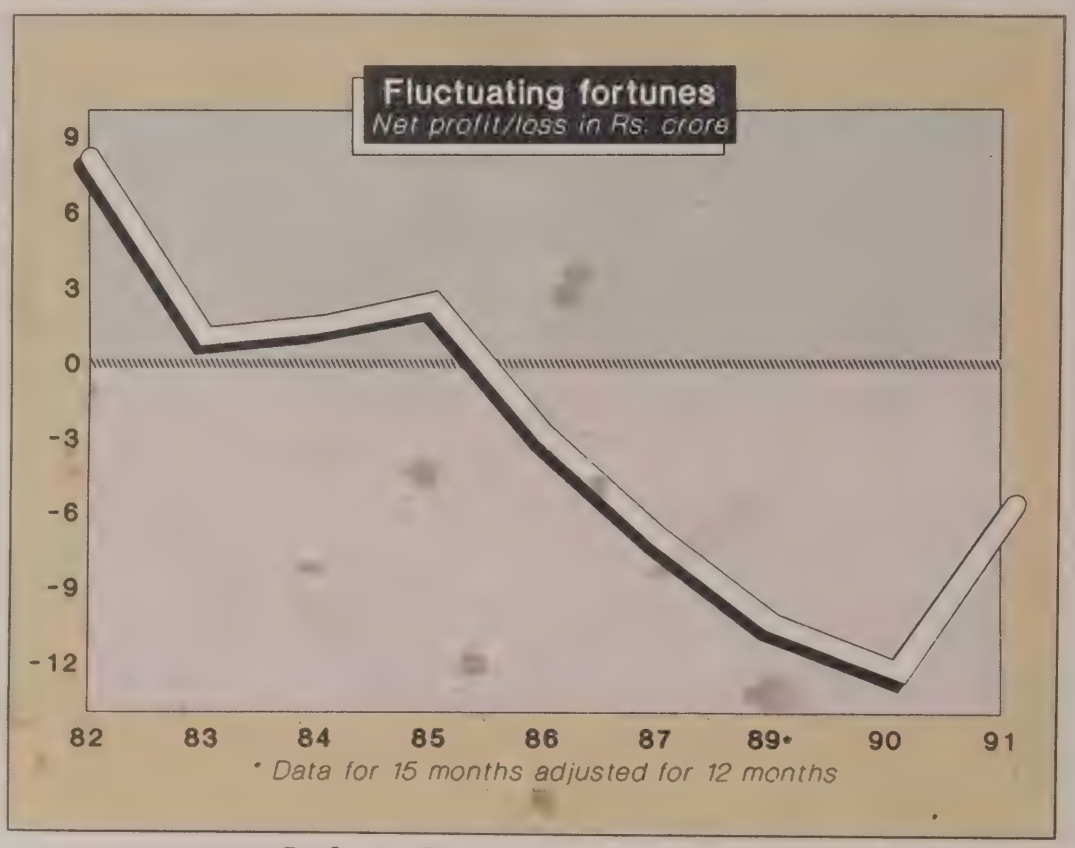
The rituals are over. But what happens to the hundreds of small share holders of the company? Asks a loyal shareholder of Digvijay Cement, "Who cares for us anyway?" Not the promoters possibly. The company started its first plant way back in 1949 at Sikka in Gujarat for making cement. In 1962, it set up another plant for asbestos cement products in Ahmedabad. Till 1982, the company's operations were highly profitable as cement was in

ijay's cement plant: profits buried by otner divisions' losses

short supply. But next year, despite strong objections from shareholders, the Bangurs merged a loss-making family company, Hastings Mills Ltd, with Digvijay Cement. The jute mill, synthetic fabrics and coir and felt division of Hastings Mills and its subsidiary Fort William were all losing money at the time of the merger. Even today, except the coir and felt division, which contributed only 5 per cent to the company's turnover (Rs.179 crore) in 1989-90, other divisions continue to make losses. Says a senior official of IDBI, "The company is paying heavily for the promoters' blunder of merging with a sick company." These units also have major labour problems with frequent strikes and lockouts as they employ nearly 5,000 workers of the total 8,000.

Meanwhile, the shortage of cement dissapeared with many new units coming up. Older units like Digvijay Cement who earlier never had to "sell" their cement suddenly found that the newcomers were far more aggressive sellers.

Digvijay Cement also took a severe beating in the hands of a new cement unit in their state — Gujarat Ambuja Cement. Armed with a sales tax exemption and lower cost of production from a modern plant, the latter sold its cement at Rs.2 to 5 per kg lower than the others and captured the market. Finally, in 1985, Digvijay Cement too modernised a part of its old wet process cement plant with a 665,000-tonne dry process plant. But it was too late and the company went into the red in 1986.



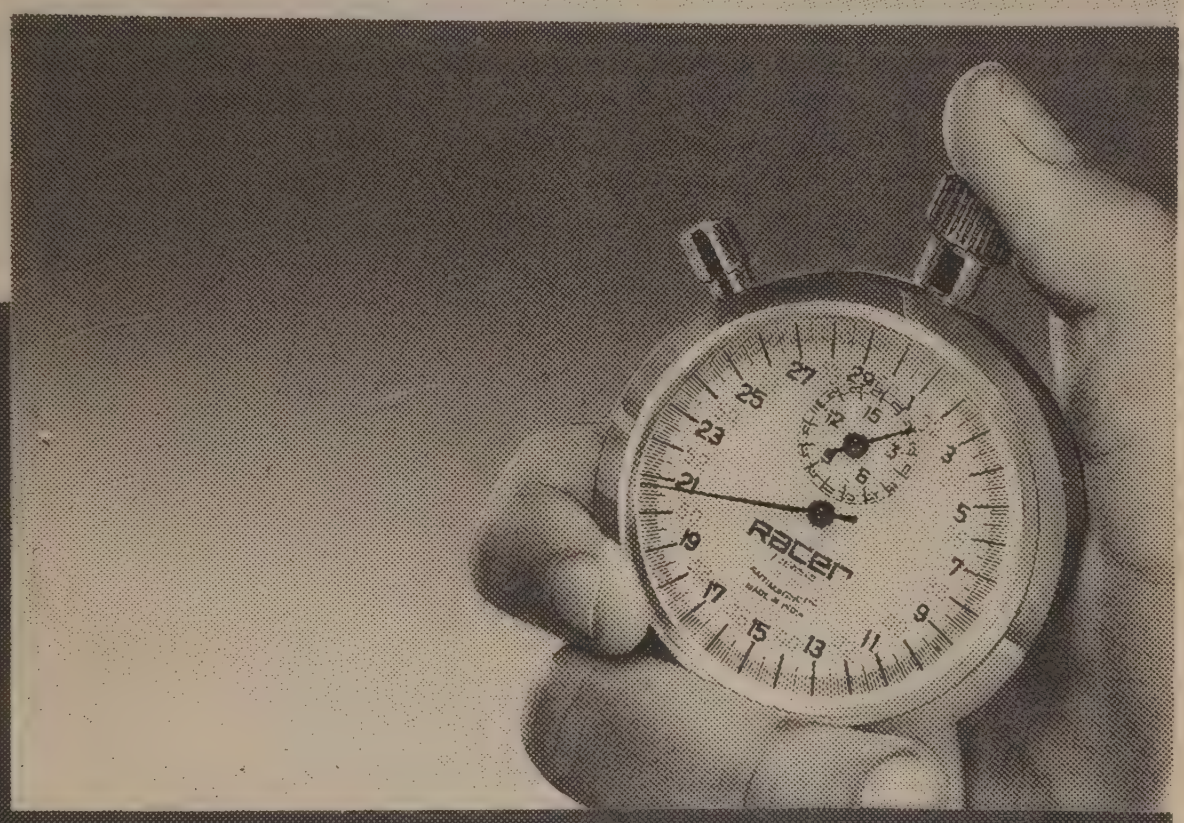
At present, half the company's cement capacity (1.35 million tonnes) in Gujarat is closed because it still uses the old wet process. The asbestos plant at Ahmedabad has recently started showing profits after many years of losses. The synthetic fabrics plant at Konnagar in West Bengal is closed since 1986 and the cement grinding unit in Sewri, Bombay is closed since 1985. The jute mill in Rishra in West Bengal is operating but losing money while the coir mill at Konnagar, also in West Bengal, is making profits.

On the whole, after the cement market firmed up, the cement division made profits last year and also the coir division. But the rest lost so much that the gains were more than offset. The company thus ended up with a net loss of Rs.12 crore in 1989-90.

Unfortunately, the BIFR was forced to give the winding up order at a time when Digvijay Cement's workings are showing definite signs of improvement. As per the unaudited figures for the year ended March 1991, the company's turnover at Rs.223 crore was 22 per cent higher than the previous year's and net loss has more than halved to Rs.5.74 crore. In fact, after many years the company made a gross profit of Rs.60 lakh in 1990-91. Sources close to the company maintain that with the cement plant operating at 120 per cent capacity, the current year's (1991-92) profits will be even higher and the company will substantially wipe off its past losses.

"In two years Digvijay Cement should be out of the red," says the same source. The stock market also reflects this optimism as the price of its Rs.100 equity share has jumped up to Rs.1,200 from Rs.300 two months ago. (There are, however, unconfirmed reports that large purchases by the Bangurs themselves have led to flare up in its share price.)

All these may sound very sweet to shareholders' ears. But will Digvijay Cement be able to pay off its huge liabilities? Financial institutions and banks which lent Rs.80 crore to the company do not think so. "Already some of the loans have been rescheduled more than once. We cannot wait indefinitely to get our money back," says the senior IDBI official quoted earlier. This is precisely the reason why BIFR asked the Bangurs to settle liabilities by selling their investments the Bangurs are reluctant to lose control and moreover, Digvijay Cement or B.D. Bangur who controls the company cannot possibly sell these shares ther. After a four-year-long squabble family is reported to have reached a tlement to split its group assets. According to the understanding reached, Paper goes to Laximiniwas Bangur, Coast Paper goes to Shree Kumar Shree Cement to Benugopal.



That's not all. Digvijay Cement itself is being split into three parts. The asbestos cement and synthetic fabrics division goes to Shree Niwas, half of the cement and jute plants go to Shree Kumar and the other half of the cement and jute mills remain with Balbhadra Das , the present chairman of Digvijay Cement. "Frankly, it is totally confusing," says one of the directors of the company privately. "How can one split a cement or a jute plant? It is like dividing a cow into two," he adds.

The Bangurs seem to have other plans. They have already appealed in the Appealate Authority in the BIFR against the Bench's order. They insisted in their appeal that the company could be revived without selling the holdings in the other companies. But the pertinent question here is how can the Bangurs hold on to their controls with the public money borrowed from banks and what does the holding company gain from such holdings? The investment is not getting Digvijay Cement any worthwile returns. On Rs.80 crore investment at the rate of 15 per cent, the company should earn at least Rs.12 crore against only Rs.1.03 lakh earned in 1989-90.

The company certainly will have to find answers to these uncomfortable questions in the forthcoming Appealate Authorities hearings. Given the rigid stance taken by the financial institutions and banks it may even have to dilute part of its holdings. If the Bangurs are sincere in saving Digvijay Cement they will have to sacrifice at least that much.

■ DILIP MAITI

Would we offer a Money Back Guarantee on deliveries if we thought we might have to pay?

Never.

But then that's how sure GATI is of meeting delivery schedules. So sure that we'll go as far as to say 'if we're late don't pay us'. And that's because GATI has standby modes of transport which virtually eliminate all delays.

There are other features too that set GATI apart.

Desk-to-desk convenience: With GATI's desk-to-desk service, all you need to do is pick up the phone. And GATI will pick up the cargo, rush through distances and deliver bang on time. Saving you the bother of dropping and collecting your consignments.

Totally protected: GATI takes the anxiety out of sending fragile time sensitive cargo. There are special containers to ensure that there's no damage in transit.

What's more, there's the added advantage of GATI's All Risk Cover to protect your cargo against any contingency.

So call GATI. Especially for medium-sized cargo. Which means individual packages should not exceed 40 kgs or 12 cubic feet in volume.

GATI

Desk-to-desk cargo

On time and intact.

. THOMAS GROUP

A new thrust

ter maximising yields and consolidating its position in plantation, edible s and exports, the group is now diversifying into other areas

A jit Thomas will not be racing his formula car at the brand new Sriperumbudur race track outside Madras s year. The 37-year-old motor racing husiast says that he will be too busy h the expansion and diversification of various plantation-related companies t come under the grand old Madras-ed A.V. Thomas group, which he now tually runs. Ditto for 33-year-old unger brother Dilip Thomas. A selec-n committee member of the Indian lf Union and the president of the dras Golf Club, he won't be playing ch of competitive golf this year. He l be helping his brother with many of new projects especially in the rubber-ated areas. The new breed is changing profile of this publicity-shy planta-ns conglomerate. Ajit and Dilip omas — the two grandsons of the nder — have more than quadrupled group's turnover to Rs.125 crore in last five years. And now they plan to ther consolidate their position in tea, ber, coffee, spices, agrochemicals, her, edible oil and biotechnology.

The foundations of the group were laid en A.V. Thomas floated the Highland duce Co Ltd in 1925. He bought, im-ved and sold tea, rubber and coffee es-es, acquiring in the process, siderable plantation property. But his reholding in each of the companies he ated was small. J. Thomas, who took r in the early fifties, consolidated the reholding so that the promoter emerged the major shareholder. "Any business undertaking is like a building, its foundation must be strong. Therefore, I had to build up the shareholding," says J. Thomas, now chairman of the group.

At the time of joining the business in the early eighties, Ajit Thomas felt AVT was "too plantation-oriented". Its considerable cash reserve was from its tea garden sales only. "Clearly, it was time to consolidate and push for growth," he felt. J. Thomas had given his sons a free reign. And they brought in a young team to serve as a second line of managers.

The strategy was to maximise yields. The group owned 2,000 hectares of tea, and 2,150 hectares of rubber, besides large interests in coffee, cardamom, pepper and other spices. In its quest for increasing productivity, the group turned to tissue culture on cardamom plants in 1984-85. A pilot plant was set up in Palakkad in Kerala, which, at an investment of Rs.16 lakh, achieved the desired effect. "In terms of yield per hectare, management, etc, AVT's plantation division is among the best in the industry," maintains M.A. Alagappan, who looks after the vast plantation interest of the Madras-based Murugappa group.

Currently, in cardamom, AVT's yields are in the region of 110 kg per hectare against an industry average of 50 kg per hectare. By 1985, AVT had accounted for 19 per cent of India's cardamom exports to emerge as the biggest exporter, a status which it continues to maintain. AVT is among the biggest exporters of pepper too. During 1990-91, it exported 1,422 tonnes of pepper worth Rs.5.08 crore. In tea, its yield of 2,520 kg per hectare compares well with the South India average of 2,060 kg per hectare, while in rubber, at 1,280 kg per hectare, the yield improves on the South India average of 1,070 kg

J. Thomas flanked by Ajit and Dilip: "My sons have learnt the ropes"

per hectare. The coffee yield of 1,280 kg per hectare scores over the industry average of 725 kg.

By 1985, AVT was ready to approach the market directly. "To provide quality at no extra cost and to become internationally competitive was our motto," says

Eapen George. Its Rehana brand cardamom was launched in the Middle East successfully. But, its foray into the domestic market was not so successful. "There was no perceived value-addition for the Indian housewife," explains Ajit Thomas, who still has not given up on this market. "Now AVT is trying to add value since packaging in small quantities alone will not satisfy the buyer," he adds. The add-on products on the agenda are ground spices, pepper and garlic. Pickles, curry powder and iodised salt will also be test marketed shortly.

In 1989, AVT decided to put its tea into consumer packs, in keeping with its policy of direct marketing. Currently, 42 per cent of its produce finds its way into consumer packs. Its AVT Premium is aimed at the small tea shop owners who want to get more cups of tea per pack. The company claims a 19 per cent market share in Kerala and 18 per cent in Tamil Nadu in this niche market in which Brooke Bond's "Three Roses", is the market leader.

"The market in the future is in packet teas and AVT is making the right move," observes Alagappan. AVT has also had considerable success at the tea auctions in CTC teas. During 1990, the tea from its Pasuparai estate was priced at Rs.49.43 per kg — the highest price obtained in the south Indian tea auctions.

Tissue culture is another growth area. Enthused with the success of its inhouse tissue culture venture, a 100 per cent export-oriented unit was set up in the Cochin Export Processing Zone (CEPZ), which was able to register a capacity utilisation of only 20 per cent in the first year. Breakeven point was reached in 1990-91, when the unit registered a turnover of Rs.1.25 crore. During 1991-92, the tissue culture division exported 5 million plants. Exports are slated to touch Rs.2.5 crore by March 1992.

Plants for the export market include lilies, gerberas and foliage plants. According to reports, AVT had a setback in its banana cultures for the domestic market. The market is getting crowded with players like the Bangalore-based Indo-American Seeds and Spic. The Tatas, South India Viscose and the Coimbatore-based Stanes group have also announced their decision to make an entry. "A shake-out is bound to come in the next few years," explains Joseph Thomas, deputy vice-president, Spic, who is in charge of its biotechnology and seeds division.

The group is also planning to enter the domestic and international flower markets. It has tied up with *Vanita* a women's magazine of the Malayala Manorama group to launch an orchid growing experiment in Ernakulam district in Kerala, in August-September 1991. AVT will buy back the orchids to be marketed in the metros. Exports will commence in 1992.

AVT's rubber estate: plans to manufacture rubber wood

The year 1987 heralded AVT's foray into new projects. A public limited company — A.V. Thomas Industrial Products Ltd (AVTIPL) — was floated and its 200 tpd (now increased to 300 tpd) soya bean extraction plant set up in Pandurna, near Nagpur in Madhya Pradesh to produce crude soya oil, a raw material for the vegetable oil industry. The deoiled cake, which constitutes 83 per cent of production, is exported. Set up at a project cost of Rs.5.25 crore, AVTIPL had some teething trouble and reported a net loss of Rs.5 lakh during its first year of operation on a turnover of Rs.6.67 crore in 1987-88. AVTIPL's turnover for 1990-91 is Rs.38.83 crore and net profit, Rs.1.4 crore.

By 1987, AVT had also decided to revamp and run a leather products manufacturing unit in Madras, in which it had invested almost a decade earlier. "AVT currently caters to the middle range of the designer fashion segment," explains Habib Hussain, chief executive of AVTIPL, who also looks after the leather unit. Buy include Pierre Cardin, Ralph Laur Carera and Christian Dior. "The tra tion to the top end is possible if the ri kind of leather is imported," he adds.

Plans include investing in a full-fled tannery. For 1990-91, exports from leather division amounted to Rs.6 cr "The quota has been a limitation growth," explains Hussain who also h dles AVT's garment exports division set around 1984-85. During 1990-91, this vision generated exports of the value Rs.1.5 crore. Buyers included Wo worths, The Gap and nana Republic.

While Ajit Thom handles tea, cardamo the diversificatio (AVTIPL, tissue cultu leather garments) expo and the overall financ of the group, while younger brother Di takes care of rubber, c fee and the agenci division.

Another maj achievement has been t production arrangeme entered into with Bay for formulations li Metacid 50 and Met systox, for which produ tion commenced in Ju 1990. "Pesticide distribution has been part of AVT's business for several decade But this is a step forward," explains Dil Thomas. A defunct unit in Salem, boug over by AVT, serves as a production base

Dilip Thomas's other major venture into the manufacture of rubber wood, f which AVT plans to set up a unit by 199 AVT itself fells 20,000 trees per annum on an average, for replanting. The inves ment of Rs.2.5-3 crore will come from i ternally generated resources. "This woo will have a white cedar finish and will b priced at one third the cost of teak," say Dilip. He also plans to convert a 100 pe cent EOU, set up for the manufacture rubber gloves, into a unit for manufactu ing catheters, condoms, etc.

"My sons have learnt the ropes," say J. Thomas, who confines himself to po icy decisions and guidance of his son "AVT will reach a group turnover Rs.154 crore during 1991-92," predic Ajit. The group certainly has come a lon way, but there are still more exciting pros pects ahead.

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

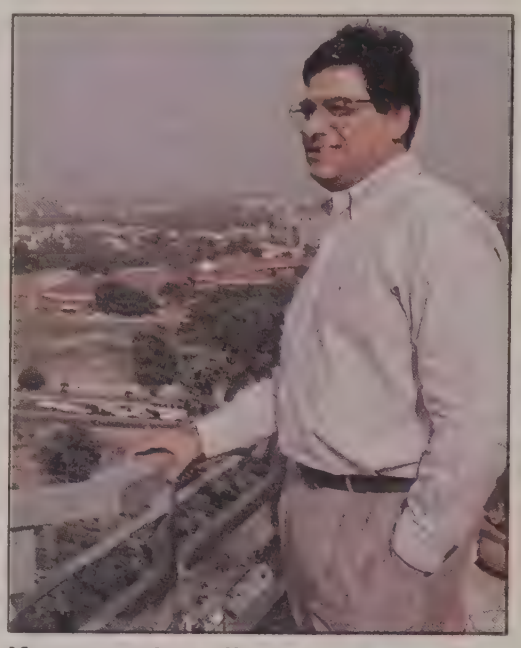
Lufthansa

SONA STEERING SYSTEMS

On the right track

Under the guidance of a persevering technocrat, a quality auto ancillary maker is going places

Surinder Kapur, the former managing director of Bharat Gears and the son-in-law of Raunaq Singh, is working hard to build a reputation as an industrialist in his own right. His Rs.26-crore company, Sona Steering Systems Ltd — which is the sole supplier of steering gears to the Maruti Udyog Ltd (MUL) is now all set to diversify into other industry-related areas.



A US trained mechanical engineer, Kapur began working with Bharat Gears in 1971. When the opening up of the automobile sector in the mid-eighties gave a fillip to the autocomponent industry, he set up Sona Steering, in technical collaboration with Koyo Seiko of Japan, one of the largest manufacturers of steering systems in the world, and also roped in Maruti Udyog as a joint venture minority partner. Says R.C. Bhargava, chairman-cum-managing director of MUL, "We agreed on a joint venture because we were very sure of the quality as Koyo were also suppliers to Suzuki." Till then, Maruti was importing its steering systems.

The Sona plant: one of the best managed ancillary units

For 1990-91, Sona Steering chalked up a net profit of Rs.3.28 crore as against Rs.1.81 crore in the previous year. Says Kapur, "Our strict adherence to quality has been our strongest point. But also our association with Maruti has been most profitable for us." And Maruti's promise to be a long-term customer augurs well for Sona Steering.

However, the new export import policy is going to make things tough for the company. Complains Kapur, "Now we have to buy REP licences from the open market which means additional costs. And these costs will have to be passed on to the customers."

Kapur: strict adherence to quality

The import content in Sona steering gears has come down from 44 per cent in the beginning to less than 10 per cent for Maruti cars and vans and 15 per cent for the Gypsy. Yet, "It will be some time before we can become fully indegenised," says senior vice-president, technology, T.K. Pal. For, certain components are not available in India and have to be imported.

Sona Steering began commercial production in March 1987 with an equity base of Rs.4.6 crore (10 per cent held by Maruti, 40 per cent by Kapur and his associates and the rest offered to the public) and an installed capacity of 125,000 steering gears per annum. Says Kapur, "Today capacity utilisation is 80 per cent which is expected to be 95 per cent next year."

Sona caters to 30 per cent of the total steering gears market for light vehicles in the organised sector. Pal sees "ample scope for further development in this market." Last year, Sona supplied 110,000 steering systems. Says Sanjay Bahl, company secretary, "We have no competitors. Our steering systems are in accordance to ou customers' specifications and no one el in India has the same technology." Says spokesman of the Madras-based Ra group which also makes steering system "While Sona caters to the total demand c Maruti, we look after the needs of th other vehicles. We have never met head-o in the market place."

Sona has also bee supplying steering gear to Eicher Motors' Can ter LCVs. DCM Toyot too will now use then for their Dyna vehicles Comments Bhargava "Sona is one of the bes managed ancillary unit and its product quality i also very good."

The company is now diversifying into rea axle assemblies and pro peller shafts. It plans to raise 50 per cent of the project cost of Rs.20 crore from the public by way of partly convertible rights debentures, 30 per cent by way of term loans from financial institutions and the rest by internal accruals. It is seeking technical knowhow from international leaders — Suzuki Auto Parts Manufacturing Co Ltd for carrier differential and Sanko Iron Works Co Ltd for case differential used in rear axle. Recently, it also acquired balancing equipment from Schenck Avery Ltd.

"Koyo has taught us to become an open organisation, and communicate through suggestion meetings and work councils, to improve quality," says Kapur. Every month, he sends his employees to the Maruti service stations for a feedback. He has decided to export steering systems through Koyo to Japan, the target for the first year being Rs.1 crore.

Kapur is keen to get the international quality assurance certificate under the ISO 9000 series, a primary requirement for the EC 1992 market. "By 1994, we should be able to get the certificate," he says. His plans also include making automobile seats. Says he, "We are looking for a niche in this market," and hopes to achieve a Rs.80-crore turnover by 1994.

HOW LONG CAN YOU TAKE HER FOR A RIDE!

"Preposterous", you may say. Because you care for your car and can't bear the insinuation. But has the thought ever crossed your mind that the use of an incorrect engine oil may eat into the vitals of your car engine. What with excess wear of bearings, valves and other engine parts like rings and liners leading to frequent break downs and costly overhauls.

Do you know there are specially formulated engine oils for your car. These are superior quality SF GRADE engine oils meeting international API SF/CC specifications.

These high-performance engine oils give your engine additional protection against wear and tear, rust and corrosion, reduce oil consumption, increase the mileage, double the oil drain period from 5000 to 10000 Km, and increase the life span of engine. The benefits are immense, immediate and come to you at no extra cost.

We agree you love your car. So, make sure you don't take her for a ride.

ERTILISERS

Problems compounded

he seemingly ambitious dual fertiliser pricing policy only serves to expose e government's ineptitude and its contribution to the repeated price hikes

inance minister Manmohan Singh has actually replaced one problem with a bigger one. Moderating the in-ease in fertiliser prices from 40 to 30 per nt was unavoidable. He was persuaded an extent by some of his own partymen d to a greater extent, opposition. But ding another ambitious scheme "to otect fertiliser use by the small and arginal farmers" via a separate scheme direct subsidy is a slovenly step. Even ree days after the scheme was an-unced, the department of fertilisers d not introduced a notification stating e mechanics of its execution.

Besides, all the budget initiatives ad-ess only one end of the problem — iling down the fertiliser subsidy. By shing retail prices up, the selling price d cost price were brought closer but eral other attempts at revenue genera-n will push costs further from the sell-price.

For the industry the message is clear — nust begin to take the first step towards ompletely unregulated market. "But, pping a ceiling on the per tonne sub-y available to the single superphosp-e plants is a serious threat to bility," says Pratap Narayan, director he Fertiliser Association of India, the x body of fertiliser manufacturers in country. The budget went even fur-r, it placed three low analysis fertilisers ammonium sulphate, ammonium oride and calcium ammonium nitrate outside the retention price scheme.

iingh may have only himself to blame the consequent problems. There was llence available from India as else-re in the world (Pakistan and Mal-a) that dramatic upward revisions in es have been followed by prices being ed back again. In India itself, prices e marked up by a hefty 90 per cent in 4 following the first oil shock and then gressively rolled back during the latter of the seventies. Again an upward re-on in 1981 was followed by a down-d revision two years later. Perhaps gh was motivated to hike prices this e in order to contain the budget cit.

The special scheme relating to differential pricing for the small and marginal farmers (holding less than two and one hectare respectively) is a misnomer. This will involve identifying 65 million farming families by the state agriculture corporations and the state agriculture cooperatives and also identifying the crop grown and the quantity that a single farmer needs.

Says former agriculture secretary M. Subramanyam, "Perhaps, a ration card system will be used." But it is a near impossible task. In fact, there are already reports that the government might do away with the dual pricing formula and uniformly reduce the increase to 20 per cent.

Nevertheless, dropping prices by 10 percentage points will, at one stroke, take away Rs.400 crore that was saved from the fertiliser subsidy while another Rs.405 crore will have to be paid to sustain the new subsidy. The fertiliser subsidy will now certainly overshoot the budget estimate of Rs.4,000 (Rs.2,900 crore on indigenous and Rs.1,000 crore on imported fertilisers) by a clear Rs.1,000 crore.

Unpaid bills up to Rs.450 crore have been carried over from last year, the 10 per cent increase in freight will add Rs.150 crore, naphtha and fuel increases will add another Rs.150 crore and the 18 per cent devaluation will add Rs.900 crore through raw material imports (rock phosphate, sulphur, ammonia and phosphoric acid). The recommendations of the Kelkar Committee, if accepted, will add another Rs.70 crore. The cost additions can be substantial damage.

Singh will now need a new resolve to hold the budget deficit down to the promised Rs.7,719 crore. Increasing prices was, nevertheless, a brave attempt. This was what both the industry and the department of fertilisers (DoF) had demanded for the last five years, but the quantum of the increase surprised even the industry. The industry sector had recommended 25 per cent and the DoF 30.

A fertiliser unit: taking the first step towards total deregulation

"The price increase is good," says K.G. Ramanathan, managing director of the Gujarat Narmada Valley Fertilisers. This finally indicates an understanding on the part of the government that the escalating subsidy is not contributed by an inefficient industry but rather by the continuing increase of administered prices from the government's own services. Sixty seven per cent of the manufacturing costs of fertilisers is paid to the government owned services, ONGC, GAIL, Indian Railways and MMTC. For ten years, retail prices of fertilisers were not altered.

The increased retail price of fertilisers

NITS (1964) SCHEME

Losing its glitter?

The budget seems to have claimed yet another victim. And this time it is he turn of the 27-year-old UTI units scheme

The budget announced last month has almost taken away the glitter that the Unit Trust of India's units had as a money market instrument. The budget has sought to modify the provisions relating to setting off of capital gains. It says, ... It is proposed to amend sections 71 and 74 of the Income Tax Act. The amendment to Section 71 seeks to provide that capital loss, if any, (whether short-term or long-term) will not be allowed to be set off against any other head of income."

Prior to this, corporate investors used to benefit twice by investing in the units through what is popularly known as 'dividend stripping'. Section 80M of the Income Tax Act allowed companies tax exemption if the interest income received from investments in units was distributed through dividends.

And it was not very difficult to do. After closing accounts in March, if a company had some surplus cash for three months, it could invest this surplus in units available in the secondary market. And once the dividends were declared by the UTI in July, offload the units back in the secondary market. At the end of a deal a company would earn a hefty pre-tax return of over 23 per cent to almost 82 per cent, depending on the period of investment (*see table*). Even if a company had to hold units for a longer time, it would not mind it. The capital loss which they would probably incur while selling units at a discount, could be set off against their income which would reduce their taxable income.

Units attracted the corporate sector's attention around 1985. Securities' dealers assign several reasons to the popularity. Says Neeraj Batra, chief executive, Prime Securities Limited, "Spread of tax planning cult (section 80M); emergence of cash rich companies (which needs short-term investment avenues), CCI's requirement of investing the money raised through a public issue in units or bank deposits and the advantages that units have as an investment instrument, such as, security, high liquidity and tax preference, made units an extremely attractive instrument for the corporate sector." In no time there developed a ready forward market for this instrument worth a daily turnover of Rs.1,000 crore. The sale of units, a mere Rs.2,000 crore in 1985 with majority individual investors, touched Rs.11,000 crore by 1990 with a large share bought by the corporate sector.

Cash rich companies like Apollo Tyres, Grasim, Telco, Tisco, Usha Rectifier, Oswal Agro, Bajaj Auto, all went wholehog into purchasing units. Naturally, attendant services like broking too came on the scene with banks, especially the foreign ones and brokers and security firms facilitated the deals behind the veil of portfolio management. Along with brokers, banks with their ready forward (a future sale or purchase at a price determined today) and buy back facilities developed an active secondary market for this instrument. Although RBI was always unhappy about such deals as banks used this route to pay a higher rate of interest on funds, for UTI it was beneficial.

Commenting on such deals, the budget says, "This provision (of allowing the adjustment of capital loss against other incomes) has been used for tax avoidance through generation of short-term capital loss on share transactions and its adjustment against taxable income under other heads."

Now that the budget amendment no longer allows setting off of capital loss against other income but capital gains, units seem to have lost much of the glory. In fact, the UTI has reportedly even bought back units worth Rs.1,500 crore in two days after declaring dividends.

S.A. Dave, the academician chairman of the UTI whose preference towards making units a truly individual's savings instrument, should be happy at the corporate sector divesting units. But it may not be that simple. Says Krishna Kumar Nandan, senior manager, money markets and securities, Kotak Mahindra Finance Limited, "There are still endless possibilities in the units market."

If the government decides to level all the mutual funds, the 80M benefit will have to be withdrawn from the units, in which case, the future of units as a money market instrument will be uncertain. Meanwhile, the question that a securities dealer asks is whether units are a worthwhile investment for the individual investors? He argues that the UTI's "lowest ever offer" of Rs.14.10 last month is much higher than the price of Rs.13.35 at which units were available then in the secondary market. "This is a straight capital loss for the investors," he points out. Moreover, the capital appreciation as per its declared NAV has been only 33 per cent in 27 years. Most agree that it is only the corporate sector which has made a success of units. And if that too does not hold then perhaps it would be an end to this 27-year-old UTI scheme.

NEW POLICIES

Much ado about exports

Everybody expects healthy export growth to come sooner or later, but some feel the piecemeal announcement is not healthy

Four policy announcements from the commerce ministry in a month and a half is a healthy indication. But commerce minister P. Chidambaram may still not have accomplished all that he may have wished. Each announcement has taken Chidambaram a small step forward. Much of what he announced through his exim policy on 13 August was a panic reaction to the alarming deceleration in exports — from the targeted 9 per cent increase in dollar terms to minus 6.5 per cent accomplished in the first quarter of fiscal 1991-92.

Admittedly, the several import compressions clamped by the RBI over the last six months have taken their toll along with the high interest rates. The commerce ministry took several steps to correct that dramatic reduction, primarily by streamlining various procedures that were hampering a healthy export growth, which everybody feels, will come sooner or later. Ramu S. Deora, president of the Federation of Indian Export Organisations immediately responded favourably that "export would now accelerate to 16 per cent in dollar terms over the next seven months with traditional exports, garments, leather and gems and jewellery leading the way."

But not everybody in New Delhi is convinced of this strategy of policies being announced piecemeal and then being followed by revisions is healthy. With last week's announcement, differential rates of import replenishment are back varying with the value addition in exports, something which the 4 July exim policy had done away with. This will apply to items listed under annexure 1 of the exim policy of 1990-93.

Chidambaram added 10 percentage points to the import replenishment value of 30 per cent that already existed to certain thrust areas, value-added agricultural products, marine products and certain electrical goods (to be specified later).

The exim policy did not address several other issues that it ought to have. The replenishment scale, for instance, is not graduated to sufficiently reward higher value addition. The discrepancy of awarding units in the EPZs exim scrips on the net foreign exchange value and those in domestic tariff area on the basis of the f.o.b. value of exports still exists. The reason is their access to free foreign exchange (not through advance licences and through exim scrip) and subsequently not having it subtracted from their export proceeds.

Neither does the policy say anything of the valuation norms (of value added) for units in the EPZs and how that will be done in a changing market, a major problem for exporters. Not withstanding these reservations and inflation, the policy is certainly a step forward towards improving the economy's formidable regulatory mechanisms.

"It may be much better for the government to make up its mind once and all," says Charan Das Wadhwa of Delhi-based centre of policy resea There was little reason to have panic for there is a strong seasonality in exp which peak during the year ending March.

The next quarter is invariably sl and besides, as Wadhwa says, "Every who had read the economy well aware of the impending devaluation preferred to postpone remittances." now being feared that the governm may be tempted to reintroduce the CC exports do not respond sufficiently o the next few months.

Primarily, the great deal of discret that trade regulatory bodies exercised been done away with. Exim scrips promised to be given out within 48 ho with the only requirement of a bank tificate pronouncing the receipt of exp

Easing imports

'New products, new markets, new volumes,' is P. Chidambaram's new slogan for the trade and industry sector. Following the theory it has mooted of linking imports to exports and pursuing its efforts to open new trade avenues, the government took the first step and launched the export-import (exim) scrip on 7 August this year. Minister of state for commerce Chidambaram flagged off the Bombay launch when he handed over the first scrip to Ramu Deora, president of the Federation of Indian Exports Organisation.

Pre-release publicity stated that the scrip would be printed on paper which can be identified by a special watermark. Ironically, the scrips released by Chidambaram were only xeroxes.

What is an exim scrip? How is it different from the REP licences that have been abolished? To begin with, exim scrips entitle an exporter to import up to 30 per cent of the value of his exports. More, the exim scrip allows exporters to import a much wider range of products. Earlier, the REP licence allowed imports between 5-20 per cent and the items to be imported were strictly restricted to a range of products related to those exported.

Additional benefits. The percentage change in the rate will bring additional benefits to a larger number of industries. For instance, tea growers were allowed a mere 5 per cent import against export, as their industry was not considered to be one that needed foreign exchange. Now this industry can get exim scrips worth up to 30 per cent of the value of its exports. They also have the facility to sell the scrips, obviously at a premium.

An added advantage is that the new exim scrip, besides being available within 48 hours as compared to the 45 days required for a REP licence, will need only a single document — a bank realisation certificate verifying the amount received from exports, as supporting evidence. In contrast, the REP licence required at least eight other documents.

Exim scrips will have a value of Rs.one lakh, Rs.10 lakh, Rs.50 lakh and Rs.one crore with a life span of 18 months. Emphasising the exim scrips' flexibility, Chidambaram remarked, "This important instrument for the investor will be freely tradeable and more open and transparent when financial institutions are involved in its trading." He also expected around Rs.6,000 to 7,000 crore worth of exim

ne exim scrip being released: 48-hour promise

scrips to be made available during the current financial year.

Exporters and importers, however, are debating the issue of trading of exim scrips by the financial institutions and the possibility of listing them on the major stock exchanges in the country.

While the final decision on the question of listing exim scrips is to be announced only early next month, some already feel that if the scrips fetch a high premium, a listing on the stock exchanges can lead to cornering in large numbers. If this happens then the purpose of issuing the scrips will be defeated.

Wide appreciation. However, Chidambaram stoutly defends their listing, "No policy can satisfy every exporter. There is always a pain in transition and we will deal with these problems when things get better." On the other hand, Anil Lakhina, export commissioner, feels that the exim scrip will serve as a parallel currency. Officials of leading financial services companies welcome the inclusion of financial institutions and see "more free play" in the trading of scrips.

There are, however, other problems. Himmat Sutaria of Pratham Consultancy Services, a Bombay-based trader who used to deal in REP licences earlier and now hopes to trade exim scrips feels that since there is no name written on the scrip it is a bearer bond and as such there is no indication of the owner. "This will make dealing in scrips risky and increase chances of theft," he says. In case of the REP licence, the transferee had a letter made out in his name by the transferer.

Exporters like S.S. Toshniwal prefer that banks rather than the Joint Controller of Imports and Exports should handle the issue of scrips. Says he, "The exim scrip is a good concept. If the bank can issue a validity certificate, why can't they issue the scrip itself. After all, the banker knows best and this will also stem corruption."

As is often the case, Indian policies incorporate unnecessary contradictions. The commerce ministry has launched the exim scrip to ease the process of obtaining foreign exchange for imports related to exports. But, on the other hand, severe curbs on imports restrict exports which in turn stand in the way of achieving the very purpose of the exim scrip. It is natural then that traders and exporters call the plans "beautiful in theory" and "dreams on paper." How well the scheme of exim scrips is implemented will eventually spell its success.

■ MANALI RESHAMWALA

proceeds. But then, if a bank certificate is all that is necessary and the government is seriously interested in reducing problems for the typical exporter, then what is the need to send him to the office of the Joint Chief Controller of Exports and Imports? "He is making that extra trip for nothing." Nevertheless, other moves as allowing the foreign exchange earnings of export houses to be clubbed with the turnover of the parent organisation in the DTA is a marked improvement.

Advance licences will similarly be given out within 15 days for those where norms for value addition have been worked out and within 45 days for those whose norms have not been. Some other procedures for the EPZs and the EOUs as well as those for advance licensing have been improved upon. Decanalisation of 14 import products, mainly of chemicals for cosmetics and toiletries, now to be imported against exim scrip is another feature. The STC and the MMTC, both monopolies will now have their commercial decisions compared with their counterparts in the private sector.

Input-output norms, a major source for delay in the issue of advance licences which have now been worked out for 540 items only will be followed by a list of a thousand before 31 October. For the policy governing the EPZs, it needs to offer the state governments a stake in export promotion. The document states that it will follow this up in the future.

Other incentives have been added for the 100 per cent EOUs and those in the EPZs. "That was more than necessary for their performance was sagging," says Wadhwa. The several incentives that industries in the domestic tariff area have now access to dilutes the incentives for those in the EPZs. Entitling them to the 30 per cent exim scrip puts them now on a par with those functioning in the tariff area.

■ ARIF SHARIF

Because you need an industrial automation system to have the global back-up to give you efficient local solutions.

When you invest in industrial automation, you have t take a lot into consideration. Such as the depth of experience that the automation vendor has. And hov well he understands your particular problems. So consider this:

Allen-Bradley: With over 85 years of global shopfloo experience, we have the perception to give you the m efficient solutions.

At Allen-Bradley, we invite you to share our global experience. With 25 manufacturing units in 57 countr and thousands of sales and support offices spread ov continents, we are certainly in a position to tailor solutions to your needs.

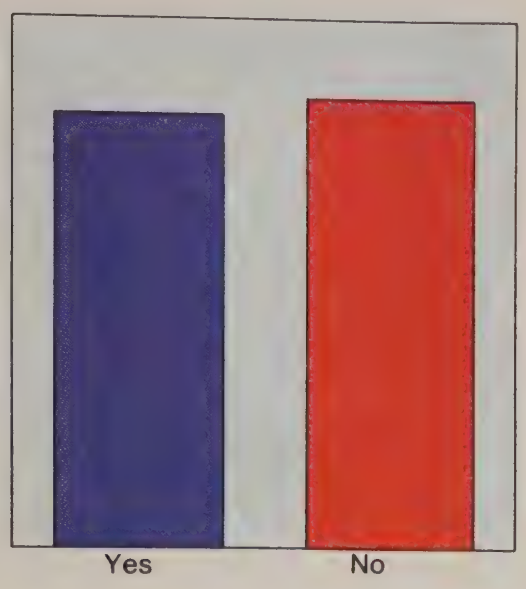
BANKING COMMUNITY

Conservative to the core

With almost all the banking surveys done so far having been focused on customer service, the customers' viev fairly well-documented and represented. But what about the bankers' views? The banking fraternity has till n never been heard — either for their side of the story on customer service or for their view on banking issues. I this question that triggered off Business India's survey among bankers themselves

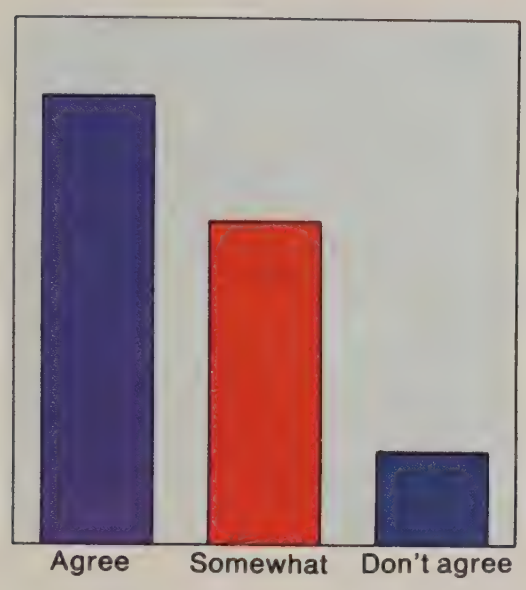
The survey was done through a structured questionnaire mailed to 15,000 branch managers all over the country. The sample was selected at random and only public sector banks were approached. More than 1,100 replies were received which included all managerial staff — from branch managers to bank chairmen.

The objective of the survey was to understand the view point of banking professionals and their environment. Quite interestingly, some of the findings were in striking contrast to impressions commonly held by bankers.



Of the total sample of 1,100 bankers, the majority were from rural or semi-urban areas, in the age group of 31 to 40 years with work experience between 16 and 25 years. Only 3 per cent of the bankers who replied were not graduates.

It is quite surprising that at a time when the wind had quite definitely started blowing towards liberalisation, bankers show up as a servative lot. But, as a very senior ba pointed out, 22 years of nationalisation conditioned the bankers' minds to such a tent that they do not wish to be liberated f the controls of government supervision. An server, however, points out that this survey conducted during the uncertainty before current economic dispensation of the Narasimha Rao government was announ He is certain that if the survey were to be ducted today, the bankers' responses would heavily towards the current mood liberalisation.



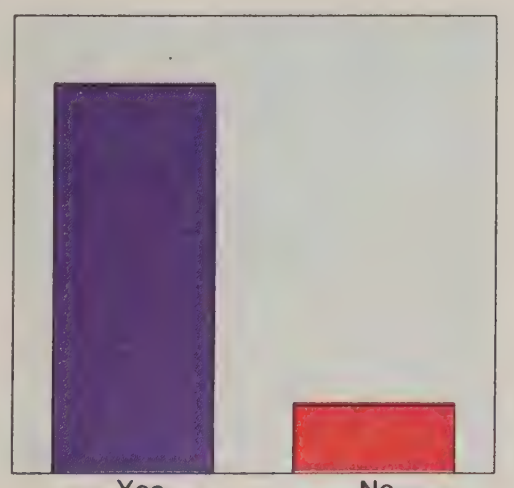
What is certain, however, is that initiati almost a dead concept in the banking indus It will take quite some time and effort be bankers get accustomed to the spirit freedom.

beralisation

you agree that growing intermediation is dermining banks' role?

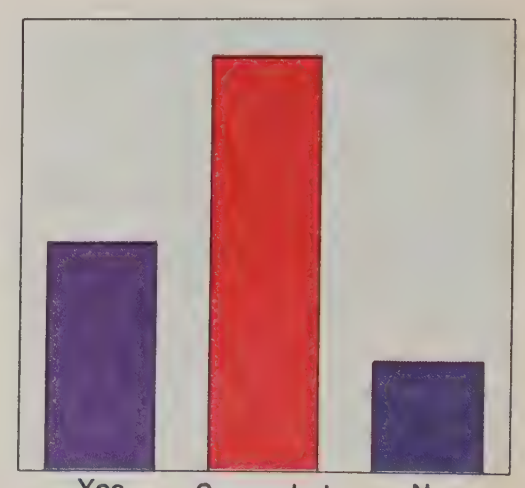
you think banks should the sole intermediary in bilising money?

Liberalisation hit (in all sense of the word) banking in 1985 when banks were permitted to take on new activities such as leasing, merchant banking, mutual funds and credit cards through separate subsidiaries. Greater competition developed in the liberalisation process and eroded the importance of the banking system. Nearly 90 per cent of the sample think that their role has been undermined by liberalisation — ie, they feel that there is, in bank jargon, growing disintermediation (where the borrower approaches the saver without the help of an intermediary).



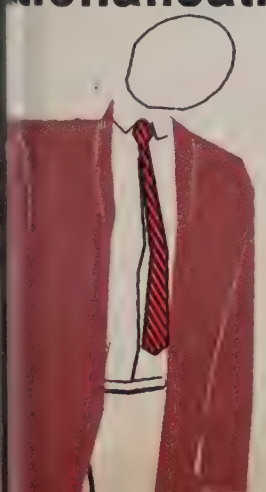
Not only this, the bankers want banks to continue to be the "sole intermediaries" for deposit mobilisation. They feel that the necessary infrastructure and capacity have been set up at high cost and if these are not used adequately, they will be wasted. People, they say, have full faith in banks and that must be vindicated. They want to avoid 'duplication of work' — which is really a euphemism for competition — and fear that with growing disintermediation banks will not only have insufficient funds, but also that it will erode banks' profitability.

Undoubtedly, the bankers' concern for their own funds position has made them forget that only competition can benefit the customers.



versification

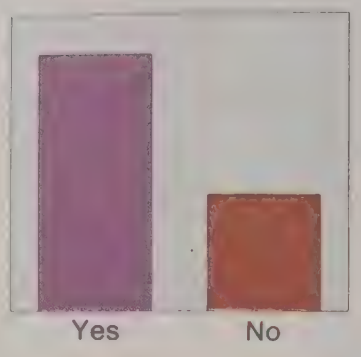
: appears that while, on the one hand, lkers do not want to share their action with one else, they want a piece of everyone else's on, on the other. Almost 85 per cent of the ple said that banks should undertake activ- such as leasing, merchant banking, mutual ls and credit cards. However, 325 bankers he total 913 who were in favour of banks rsifying, thought that banks were geared up ake on such activities; whereas as many as thought that banks were only somewhat ed to take these activities on.



Do you favour diversification?

Do you think banks are geared for diversification?

tionalisation



An opinion has often been expressed that the role of fuelling development forced on nationalised banks has been at the root of all the ills of the industry. Concessional lending, for instance, to priority sectors is blamed for the banks' limited profitability. Even so, a full quarter of the sample confirmed that rural development is the most important objective of bank nationalisation, followed by a spread of the banking habit and a shift from class to mass banking. Not only this, 52 per cent bankers even favoured banks' direct role in achieving these objectives as against a supportive or participative role.

Restructuring

Not surprisingly, bankers were strongly against privatising banks. They felt that their prime responsibility, ie, rural development, would be neglected if banks were privatised.

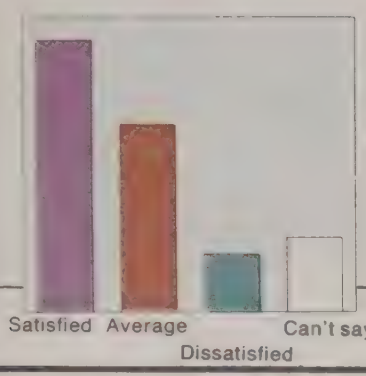
There could be two reasons for bankers' aversion to privatising public sector banks. First, the survey was conducted before 'opening up' gained government support, and second, most bankers genuinely seem to believe that development is a significant role bankers should play in India.

Should there be fewer public sector banks?

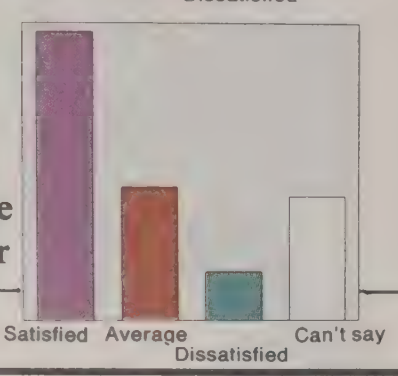
Though privatisation may not be seen a medicine for the present illness of the ba industry, bankers do feel that it needs to b structured. Almost 70 per cent of the ba feel that the number of public sector b needs to be reduced. But, they want neithe private sector nor the state governments to more control over banking. Having been fo through loan *melas* and loan write- bankers are justified in loathing political i ference. In fact, political interference to the list of the most unfavourable developm in banking in the past two decades, with 2 cent.

Reserve Bank of India

Rating of RBI



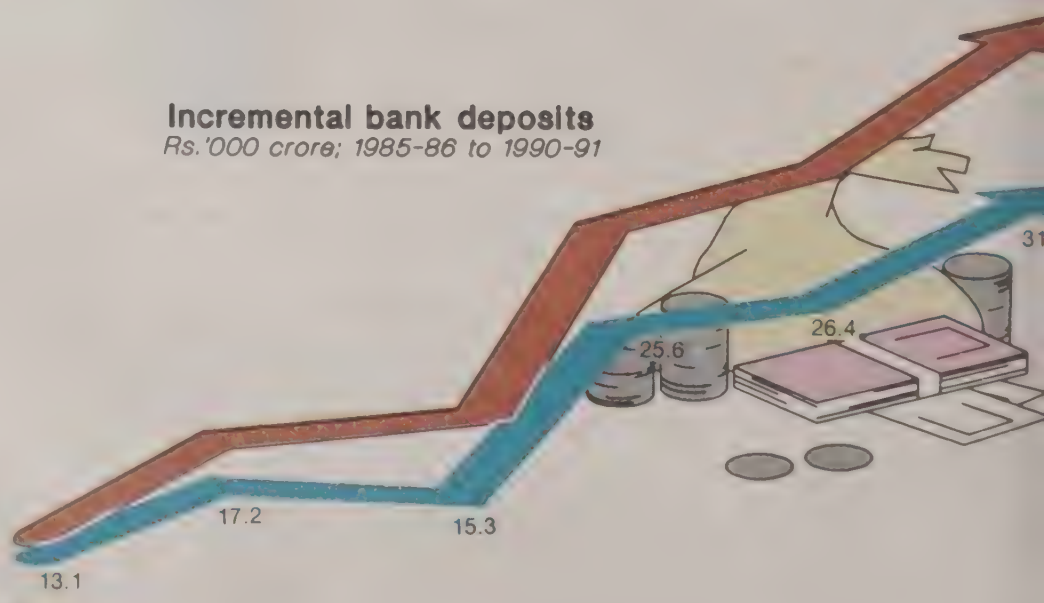
As supervisor



As banker to banks

As credit manager

As exchange controller

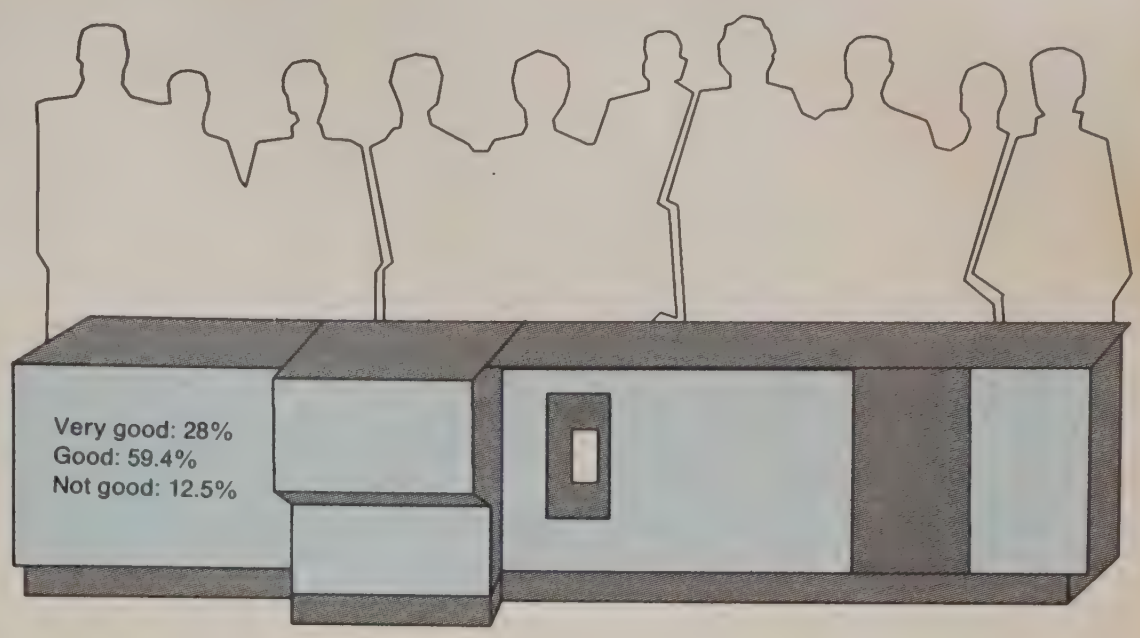


The central banking authority plays a sig cant role in a country's economic and fina systems. The Reserve Bank of India has ha share of bouquets and brickbats. How do bankers rate this institution? Though in pri discussions most bankers express dissatis tion with the manner in which the RBI con the banking system, the findings of this su do not reflect that dissatisfaction clearly.

Business India asked the bankers to rate performance of the Reserve Bank of India i four major roles. According to 36 per cen them, the central banking authority discha its duties satisfactorily. These include the R functions as a banker to banks, its supervis role, credit monitoring and exchange cont However, in all these roles, only 9 per c thought that RBI maintained the requisite in pendence. About 80 per cent of the sample f that the RBI gives into government press quite often.

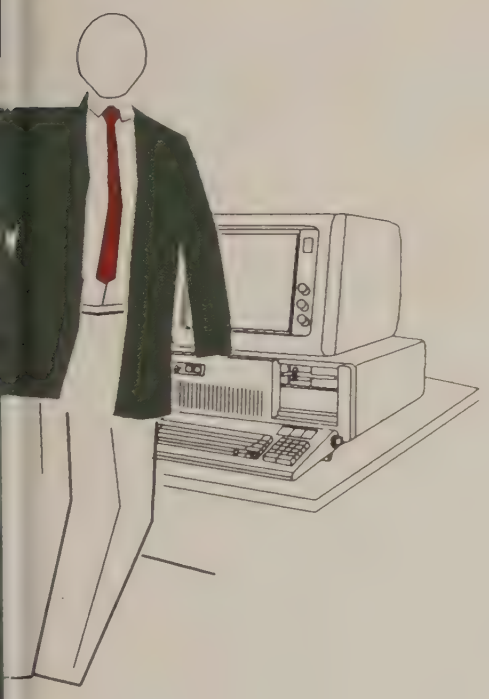
Bank deposits

Since last two years, there is a clear decline in the growth rate of bank deposits. Bankers are often blamed for the declining growth and are pushed to run harder to improve the growth rate. Interestingly, the survey revealed that 74 per cent of the total sample is currently engaged in mobilising bank deposits; and 90 per cent of them like this activity a lot or somewhat. Again, 32 per cent of the sample working in the rural areas like to be involved in deposit mobilisation. Thus, it can be easily surmised that bankers are not apathetic to deposit mobilisation. Probably there is some truth in the bankers' plea for making bank deposits more attractive to investors compared to other savings avenues.



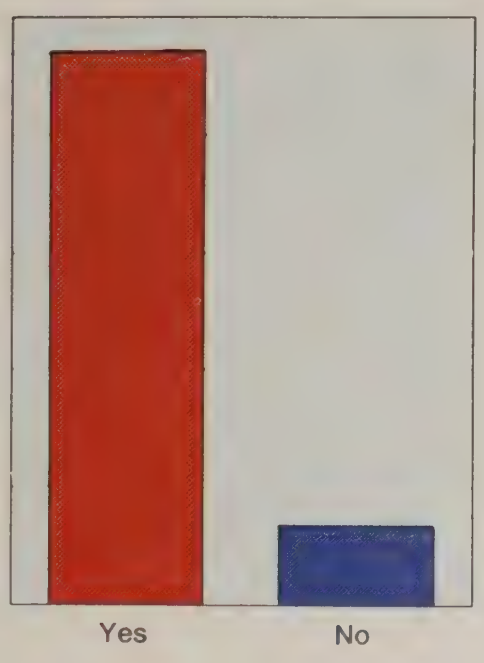
Incremental bank deposits
Rs.'000 crore; 1985-86 to 1990-91

ustomer service



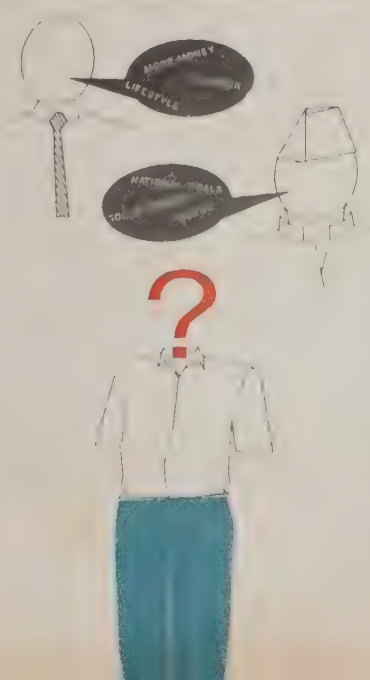
Customers are almost unanimous in decrying nks' customer service. However, when asked rate the quality of customer service given by eir banks, most bankers rated it as either very od or good. Clearly, bankers and clients have fferent views of the concept of customer ser-e. Interestingly, some bankers who were per-nally interviewed, did admit — under the eath though — that the customer service in eir banks left much to be desired. But on re-rd, only 12.5 per cent of the total sample ac-owledged that customer service in their nks is bad.

The most important reason for poor quality customer service, bankers have explained, is rk pressure (47.5 per cent). However, a quar- of the sample also admitted that compla-ıcy due to job security was the reason behind or customer service. Some 15 per cent also thought that banks lacked in work ethics. Many earlier surveys on customer service have given customer behaviour as a common reason for poor service. But in this survey, only 5.7 per cent bankers held this opinion.



How would you rate the standard of customer service in Indian banks?

omputerisation



Do you favour computerised banking?

Bank unions have for years thwarted the management's effort to computerise banking. They will be shocked to know that almost 90 per cent of bankers interviewed supported bank computerisation. And when asked whether front office, back office or innovative services like credit cards should be computerised, they said banks needed full computerisation. Of course, the response was so unanimous as the sample was drawn only from the managerial staff; but with a normally high level of education among even the clerical staff, one might expect that they too would be in favour of computerisation. Thus, the old guard at the unions will be disappointed to know that a consensus is building up in favour of computerisation. And to the delight of the customers, bankers want to use computers for improving customer service.

reign banks

ndian banks have always branded their for-counterparts as "unfair competitors". No gets of priority sector leading (at least till ut last year), freedom to computerise or to ertise — Indian banks always write off the ign banks' higher profile, high profitability ge against these so-called advantages. But er cent of them do concede that the most ificant contribution of foreign banks has n in improving customer service. Also, 66 cent affirmed that they created competition.

Most interestingly, while they decry foreign banks and private sector banking in general, 73 per cent of the bankers say that they would want to work in foreign banks which are again private! As many as 27 per cent of the top officials also showed an interest in joining a foreign bank. More than 50 per cent of the top officials also say that they would like or they would not mind a foreign posting.

While 60 per cent wish to join a foreign bank for the better work environment, only 32 per cent would switch to one for the higher remuneration it would bring.

Some popular sinking beliefs

Issue	Agree strongly	Agree slightly	Neither agree nor disagree	Disagree slightly	Disag stron
Management style in banks is autocratic	172	399	204	143	
Banking urgently needs restructuring to improve efficiency	780	170	37	38	
The profit performance of banks can be improved	705	256	49	41	
There is a lot of overlap in different commercial banks' roles	504	295	138	69	
Different types of banks should be set up for rural areas	311	170	114	103	
Unions in banks affect work and lead to poor customer service	451	344	97	93	
Corruption in banks is very high	52	215	216	285	
Bank employees have low motivation and a negative attitude	184	335	164	190	
Nationalised banks serve development objectives	447	419	114	59	
Nationalised banks serve the rural and poor	473	413	97	60	

Note: *Totals may not add up to full sample size as 'Don't know/Can't say' category, being negligible, has been omitted*

Banking as a career

The number of employees far exceeds the number of promotional avenues in banks today. As a result, highly qualified people perform most routine jobs and this often results in frustration among bank employees. However, the survey revealed that the majority (54 per cent) of bankers are satisfied with the progress they have made in their careers; 65 per cent think that merit-cum-seniority is the criterion for promotion in banks. At the same time, more than 50 per cent think that their jobs utilise their skills only partially.

Bankers are known to have disagreed with the appointment of an outsider as a chairman or an executive director. But, the survey shows that a majority of the bankers favoured in bank transfers among the top executives.

Are you satisfied with banking as a career?

Twenty four per cent of the bankers are f trated by the 'surrender of authority to unio another 24 per cent are unhappy with the s of management; while the pressure of w bothers another 11.5 per cent. Interfere from seniors and the government, no indep dence, and frequent transfers were some ot reasons for frustration.

Only 20.5 per cent think that bank jobs challenging, and therefore satisfying. A fract above 20 per cent are satisfied with their rem neration packages; 16 per cent by the job se rity; and another 11.5 per cent by the soc status that a bank job brings with it.

Conclusion

The survey — the largest ever perhaps done on bankers — brings out bankers' viewpoints quite interestingly. The need for restructuring the banking sector by reducing the number of public sector banks comes out very clearly. Yet, as no state or private sector control is preferred, the only way out is merging a few public sector banks.

Bankers generally have no quarrel with their social responsibilities. In fact, they accept it wholeheartedly. Their quarrel is with bank deposits being treated as a step-child in terms of tax concessions and interest rates. Once that disparity is taken care of, perhaps bankers will be enthusiastic about facing competition.

And if they are enthusiastic, the smaller issues like inter-bank transfers will automatically take a back seat. To face competition, computers and better service too will be imperative. The only thing required now is giving up the reins like those given up on the economy front.

After the reforms, what?

ESHUB MAHINDRA

The euphoric stage of the liberation of our economy from the shackles of government control will soon be over. The budgeted documents attempt to redefine the role of government, by and large, leaving the business of business to business. The speedy manner in which various reforms were initiated deserves applause. However, the crux of the issue is speedy implementation of these reforms as well as quick responses from business.

While many changes in both the industrial and trade structures have been gazetted, implementation cannot proceed until many statutes and acts are simultaneously altered to give effect to the structural changes. It is only then that the process of change will begin.

Whatever the conditionalities of obtaining an IMF loan, the changes effected clearly spell out the government's economic philosophy *vis a vis* the process of development. Many Left economists have questioned the merit of obtaining a standby credit arrangement from the IMF, but in doing so they tend to lose their credibility, since mere opposition without alternative programmes has very little meaning. The government's position in this respect is clear, and hopefully one will soon see the outcome of their endeavours. The question that arises is, where does one go from here?

Basic problem

In order to overcome the critical balance of payments position, it is obvious that if one is to accrue foreign exchange reserves one must earn more than what one spends. It has become fashionable to use expressions like 'business in India must go global, one must update one's technology, improve the quality of products, maintain competitive cost structures, be in a position to meet international needs,' etc, etc. The basic problem is: how does one become internationally competitive in today's environment?

By deliberate intent, governments in the past have usurped the right to nationalise all forms of savings in the country and have taken upon themselves the task to apportion these funds as they deem fit. The present government has accepted the fact that regulation and intervention in the economy have not produced the desired economic objectives and hence it has chosen a path of freeing the economy. It therefore follows logically that control of the core resource — money — must also follow suit in the process of deregulation.

This is not to say that state intervention is not necessary, on the contrary it is essential, but only in specified areas of control. Admittedly, it is one of the most difficult tasks before the government, but the process must begin and the government must accept that without it, the process of deregulating the economy loses much of its meaning. Banks, financial institutions, mutual funds and insurance companies all need to be exposed to competition domestically as well as internationally. The role of the Reserve Bank becomes critical. While it is accepted that no central bank can be totally independent of government policy, a much greater degree of autonomy is needed to be given to the Reserve Bank of India.

Interests of labour

The second most difficult task before this government in the process of deregulation is in the field of industrial relations. If one is expected to become international and globally competitive, in the process of upgradation of technology it is inevitable that a degree of rationalisation of labour must take place. But, in a country which has massive unemployment, no government can afford to call for retrenchment of labour. Although the finance minister has announced a Rs.200-crore fund, there is no social security system today which protects the interests of labour. It is therefore essential that government and employers must take upon themselves the responsibility of finding some answer, in tandem with labour, to this complex problem.

While it is easily stated that the answer lies in retraining and redeployment, in most instances it is not so and not practically feasible. The answer lies probably in the acceptance by all that when, in the judgement of management, rationalisation of labour becomes inevitable, a fund is created to which employers, employees and the government will contribute. Vast changes will need to be made in the Industrial Disputes Act to bring about a change for the better and to create a work ethic and a work ethos.

It is not an understatement to say that this most welcome process of change is going to be painful for most businesses. Radical changes need to be intelligently handled and the modalities of such change must be methodically implemented. While the country will undoubtedly pass through a traumatic two-year period, there is very little doubt that change will usher in a period of fast growth. This will generate employment as well as bring prosperity to most people in the country.

N.D. Prabhu
Chairman

Excerpts from the speech delivered by the Chairman, Sri. N.D. Prabhu, at the Fourth Annual General Meeting held on 24th July 1991 at Bangalore.

The year that has gone by has been an eventful one. We have seen events both good and bad, in either case affecting and influencing the economic, political and social fabric not only of our country but of the comity of nations globally.

Efficiency of investment and building-up a responsive and responsible management and developing entrepreneurship must be the watchword from now on backed by a strong political will and a commitment to progress.

The escalated gulf war, the drop in oil production, social and political strife and the re-thinking on the synthetic economic and political doctrines so assiduously pursued by a few nations over the past decades have all contributed in a great measure to the change in the economic structure, the social order and the political equations the world over.

THE ECONOMIC ENVIRONMENT AND THE EMERGING TRENDS:

The last few years have witnessed a policy re-orientation towards economic deregulation and liberalisation, manifested by the industrial and the international trade policies. These are only the beginning, as it were, of a process towards a market -oriented economy with lesser governmental intervention in the entrepreneurial endeavours. This is a welcome feature, no matter what the economic compulsions are. Efficiency of investment and building-up a responsive and responsible management and developing entrepreneurship must be the watchword from now on backed by a strong political will and a commitment to progress.

The policy-framers have a difficult task ahead; a vast population to care for and an aspiring people looking up to the planners for improving their lives in an economy that is slowing down and a social order permeate with inequalities.

The problems are too many. The rise in population of 23.50% during the decade which is almost the same as the previous decade, a 12% annual rate of inflation, almost 10% annual production loss in an investment of Rupees one hundred thousand crores in Government sector, due to capacity under-utilisation, fiscal deficits of 8.3% of GDP, an external debt position of one hundred thousand crores of rupees, deceleration in the growth of export trade, a widening trade gap, an acute Balance of Payment position - the list is endless and the situation grim.

These measures are inevitable. The problems require quick and solutions. The Government has initiated the first of these by adjusting of Rupee and by introducing the concept of Exim scrips, scrapped pegged imports.

The need of the hour is an agenda for growth and the priority shou elimination of avoidable and unnecessary controls and make room for for all the factors of production and move away from the present environment in industry and trade.

The cost of seperating India from the global economy has been hig exports are unable to stand upto international competition either in cost. Protected financial markets have made available finance at a ch atrophying the finance function in many organisations.

The transformations taking place globally in general and the East block in particular towards financial, economic and social liberalisatio significance to every other nation. We, in India, have been having economy. In the Indian context, therefore, any structural re-orientation economy would be far more easier, effective and faster when comp other nations.

The emerging scenario will call for perfectionist and prag policies - economically sound, socially beneficial and poli skilful.

In the Indian context, the transformations would mean oppo entrepreneurship, massive production of goods and services and an exp the financial and investment sector. The years ahead pose tre opportunities as well as challenges. All the same, the demands on the services sector will be great. Those who are possessed of co advantage and an attribute of product differentiation will certainly ha situation and the future is full of promises.

Indications suggest that the Eighth plan is bound to give a com orientation to our economic policies and priorities. The emerging sce call for perfectionist and pragmatic policies - economically sound, beneficial and politically skilful - all aimed at greater efforts directed mobilising savings and employment of capital more efficiently and i measure.

THE CAPITAL MARKET AND FINANCIAL SER SCENARIO:

The primary capital market was somewhat subdued marked by lower n capital issues and lesser quantum of resources mobilised.

This is understandable considering the fact that the year witnessed u on all fronts - an unprecedented foreign exchange crisis arising principa oil imports, virtual drying-up of oil credits, political uncertainities, hardships perpetrated by the unfettered inflation - all of which affe savings, investments and capital formation.

The secondary market scene was also none too different. The Primary Secondary market moved in tandem, one justifying the other.

The merchant banking business in the country has attained maturity, resilience. The presence of large authorised merchant bankers hav

dimension to the competitive fervour.

e capital market needs to be opened up and we should go from era of restrictive control and legislation to one of self-regulation d enforcement.

Commercial Banks continued to play a vital role in providing the use of infrastructure for mobilisation of issue subscriptions.

capital market needs to be opened up and we should go from an era of ctive control and legislation to one of self-regulation and enforcement. The of the hour is to mobilise greater savings through the capital markets. markets though large mobilise only a small part of our savings. Mobilising in the primary markets is possible only if we have a vibrant and efficient dary market. To create such a market we need more informed operators rade on the basis of legitimate information. Aberrations in the market like r trading, wash sales, etc., would have to become a thing of the past. is a need for ensuring greater information on corporate performance, to e that it is available to all investors.

v of investors' money has acquired a new dimension with the failure of a n bank recently where issue subscriptions remain frozen. This is an te situation and it will have to be seen that bank failures do not affect the ing public and the corporate entities.

the changing scenario the emphasis should be on self- discipline d this is a good price to pay for removing the stumbling-blocs d disbanding the excessive, futile and wasteful regulatory deavours.

onsistent policy of economic and financial liberalisation have provided the needed incentive to innovate and excel resulting in multilateral opment of the capital market. It is this initiative that is needed to be ned in the years ahead.

process, however, the observance of desired level of disciplines and ntability are also to be pursued through proper framework. It should er be borne in mind that a class-room type of situation does not exist in pital market and therefore when we talk of a framework for disciplines and ntability, all those who participate in the capital market and also all those hose support the frame work operates must have participatory role in the g of the framework itself.

gh this, a better realisation and understanding will prevail and the work itself will be better acceptable it being directly accountable to achieve sired end-results. In the changing scenario the emphasis should be on scipline and this is a good price to pay for removing the stumbling-blocs sbanding the excessive, futile and wasteful regulatory endeavours.

FORMANCE OF THE COMPANY:

NA once again turned out a superlative performance during the year 1990-

total 141 Public issues, **CANFINA** was associated with 84 issues in the ity of Lead Managers/Managers/ Co-managers accounting for a market share 57% and occupied the leading position in the issue management business. ompany was associated with 59 Rights issues accounting for a resource ation aggregating to Rs.2,374 Crores.

NFINA now possesses a diversified asset financing technique for erse industrial sectors.

the previous year, **CANFINA** continued to be in the forefront in the placement blic Sector Bonds having handled issues in the aggregate amounting to 88.50 Crores.

Of the most important segment of Investor Services, **CANFINA** made giant strides in R & T Services, Odd-lot Share Purchases, Broking Services and NRI Portfolio management. The News-letter has been attracting investors' interests in a large measure.

CANFINA handed down lease sanctions aggregating to Rs.83.14 Crores during the year. The cumulative lease disbursements stood at Rs.179.59 Crores.

CANFINA also launched the Hire Purchase business for the benefit of the industrial sector.

CANFINA now possesses a diversified asset financing technique for diverse industrial sectors. Canbank Venture Capital Fund managed by **CANFINA** funded 18 high-tech ventures aggregating to over Rs.5 Crores from out of the corpus fund contributed by the Canara Bank and **CANFINA** and the line of credit from the World Bank.

CANFINA achieved a gross earnings of Rs.96.42 Crores. The pre-tax profits amounted to Rs.41 Crores. After providing Rs.7.25 Crores for Income-tax and Rs.4.01 Crores for dividend at 20%, a sum of Rs.30 Crores was transferred to Reserves carrying forward the surplus of the previous year. The networth of the Company stood at Rs.86.76 Crores at the end of the year 1990-91.

The integrated approach to the project funding propositions, the cost leadership and the product differentiation techniques and approaches have earned for CANFINA a distinct place in the financial arena.

CANFINA made a Bonus Issue of Rs.10 Crores in the ratio of 1:2 by capitalising the Reserves and also made a Non-convertible Debenture issue of Rs.50 Crores.

THE FUTURE OUTLOOK:

The integrated approach to the project funding propositions, the cost leadership and the product differentiation techniques and approaches have earned for **CANFINA** a distinct place in the financial arena.

The highly dedicated and committed team of staff members versatile in their respective assigned areas fully imbibing the Canbank's corporate culture have become the most sought after cadres in the financial sector in the country. It is this quality and calibre the company strives to build-in in each of its staff members.

I perceive a distinct possibility of an expanding horizon of gigantic proportions in the financial services sector given the prevailing thinking and the directional orientation sought to be pushed through in the near future in the matter of industrialisation, public participation in the state sponsored sectors and the deregulation initiatives. And, **CANFINA** will, as usual, contribute its mite to the fullest extent and live-up to the challenges these measures will usher in.

ACKNOWLEDGEMENTS:

I place on record with gratitude the wholehearted support extended to the company by the Government agencies and departments, SEBI, the All India Financial Investment and Insurance Institutions, RBI, Canara Bank, the Canbank Mutual Fund and the depositors and clients. I thank the Canbank men and women for the dexterity displayed by each one of them in achieving a superlative performance.

THIS DOES NOT PURPORT TO BE RECORD OF THE PROCEEDINGS OF THE A.G.M.

Renaissance/459/B

Bottoms up for Zen

Zen Communications, formed by a breakaway group from daCunha Associates, hopes to "look at things as they are not"

When three top executives left daCunha Associates Ltd early this month to start Zen Communications Private Limited, the move evoked at most, mild surprise. Breaking away to set up independent shop is considered quite the done thing today in the people-oriented ad business. "Our first task was to kill cockroaches. Every drawer we opened in the new office was full of them," grins Bharat Dabholkar, who had spent 16 years at daCunha's plush premises in south Bombay. The Zen team, which includes Alaka Bhosle, senior vice-president and T.N. Ravindran, a daCunha hand for 22 years, is currently operating in a hastily cleared godown loaned by a generous friend, while waiting for their own newly acquired space to be renovated. Seven daCunha staff members have joined them. Dabholkar is president of the new agency, while Bhosle and Ravindran are senior vice-president and vice-president respectively.

Sitting pretty

While they lack the comfort of established support systems, they are sitting pretty with some business already in hand. Zen's initial accounts are worth more than Rs.4 crore. "We didn't take any that were with daCunha's before we joined," says Dabholkar, which means that the Amul account stays in place. However, daCunha's billings have gone down from Rs.16 to Rs.14 crore following their departure, with a major loss being Parle's account. Other clients who have defected to Zen include Transelektra (Hit spray) and Zenith Computers. The fledgling agency is also on Life Insurance Corporation's agency panel. Ravindran is confident that in three years, Zen's billing will cross Rs.10 crore.

Other services being contemplated include a market information cell cosponsoring programmes providing advice on buying television time. In all this, clients can expect the key executives to be personally involved. "With the hierarchy at the 80-member daCunha Associates, such day-to-day involvement was not possible," says Dabholkar.

As the newspaper reports that Zen is funded by R. Mohan's Transelektra, Mohan says his company's involvement only extends to giving them business. Dabholkar points out that bank loans and personal finances are being used to meet the Rs.15-lakh investment required.

Both Dabholkar and Sylvester daCunha maintain that the parting was cordial. "It was a big shock," says daCunha, "because I was going to lose people I valued, but we are still friends. However, we are not bleeding in terms of client or staff departures". DaCunha has assumed the position of chief executive in Dabholkar's place and intends to wr the Amul ads himself as he used to for years before 1981 when Dabholkar to over. He also says daCunhas is recoupi with new accounts. Meanwhile, t breakaway group has been involved in terviewing their replacements. "The id was not to destabilise daCunhas," sa Dabholkar, "we saw it as our own thou we were employees." Adds Ravindra "We were running daCunhas but didn't own it." Bhos meanwhile, felt th after 13 years, she ha outgrown the agenc Nothing went wron she adds, except t fact that "we wanted work for ourselv rather than for som one else." While it true that Bhosle ha some shares in Vic Advertising, a subsi iary formed daCunha, these we "negligible".

Dabholkar, Bhosle and Ravindran: With the ad industry in the grip of a recession, it's a bad time to start an agency, but Zen is converting this into an advantage

In keeping wi Zen's name, the visi ing cards and le terheads have a cut-o signature hole symbo ising nothingness – certainly not a refe ence to the profit figu they hope to achiev "Our philosophy, says Bhosle, "is to loo at things as they a not." Dabholkar has wonderful sloga "Don't look at thing as they are and as why; look at things a they are not and as why not? That is th key to progress."

With the ad industr in the grip of a reces sion, it's a bad time t start an agency, bu Zen is converting thi into an advantage. "If we'd started du ing the boom, our expenses would hav been geared accordingly. Now, we' tailor-making the organisation to be lea enough to survive," says Dabholkar.

GULF FAST TRAC
2-STROKE ENGINE OIL

trosil introduces Gulf Fast Trac. The first new generation synthetic based 2-Stroke engine oil. Gulf Fast Trac is specially formulated give an extra surge of raw power and speed to your motorcycle. **The Gulf Fast Trac advantage.** What makes it far superior conventional 2-T oils is its state-of-the-art technology. Gulf Fast Trac is blended with an advanced synthetic base and tech ashless additives to ensure complete combustion and a dramatic reduction in friction. And virtually no smoke ission. For you it means power-packed acceleration. And for your bike, longer engine life. **Approved by Bajaj uto Ltd.** Bajaj Auto Ltd., India's largest manufacturer of two-wheelers have tested Fast Trac under the toughest nditions-and have fully endorsed its benefits. Try it in your bike. And feel it turn into a clean, throbbing power machine!

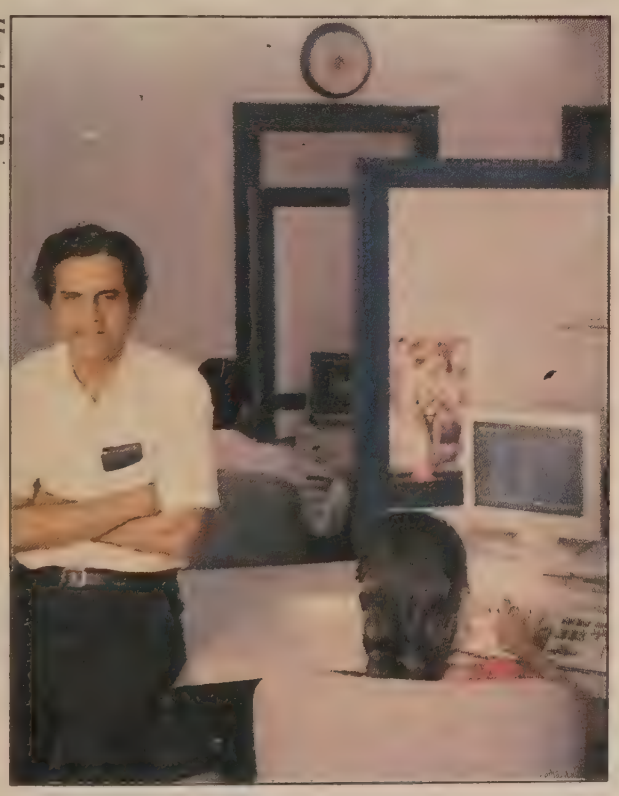
STATE BANK OF INDIA

Racing against time

A time-wasting controversy had knocked the bank's computerisation programme for its corporate banking branches off the rails two years ago, but now it is back on track and the race to get the job done is on

The State Bank of India (SBI) has, finally, made a move towards computerising its corporate banking branches. Last week, the project was entrusted to a combine of the Bombay-based International Computers Indian Manufacturers (ICIM) and Kindle Inc, an Irish software company. The project is split into two phases, to be completed by end 1994. The computerisation project which should have commenced two years ago, was stymied by a rash of newspaper reports, alleging that the contract had been unfairly placed on International Business Machines (IBM). The facts were different. The evaluation committee had, after a careful weeding out process, shortlisted two offers: the IBM-Mantec solution and the ICIM-Kindle solution. Both the vendors had had their solutions in operation at sites overseas for a while.

Most profitable part



The corporate banking branches, 26 in all, are the most profitable part of SBI's operations. Of SBI's total business they account for 78 per cent of foreign exchange earned, 40 per cent of all corporate deposits and 54 per cent of the corporate advances. Not surprisingly they contribute 70 per cent of the banks total net profit.

The decision to computerise these branches was taken in 1985 when SBI realised that their strong position was under attack from foreign banks. The latter banks did not have to face well entrenched unions that the SBI had to. Also, they did not have to meet the stringent statutory credit ratios that constrained the SBI. As a result the foreign banks were able to computerise much more quickly.

Inspite of these obstacles, the SBI fought to take on the foreign banks using other sources of strength, like its size, reach and professionalism of its staff. In fact, in a survey on corporate banking conducted by MARG, a market research agency, SBI and Citibank were rated as equal on a number of counts.

A landmark agreement between SBI and its unions in 1989 had made it possible for the bank to take steps towards implementing its computerisation plan. In the agreement, the unions agreed to the computerisation of the 26 corporate banking branches, 23 branches in south Bombay and the back offices of 500 branches nationwide. The Reserve Bank of India then went over the proposals with a fine comb and gave it a clean chit. Soon thereafter, the Department of Electronics gave the green signal for the project. Solutions were invited from the computer industry and each went through an evaluation process in an effort to select the best one.

The IBM-Mantec solution lost out on two counts: functionality and price. Functionally, the IBM solution was based

Harsh Man Rai

Computers at SBI: in a hurry

on a powerful mainframe located at the bank's head office in Bombay and connected to terminals at the various branches all over the country. The drawback here, clearly, was communication between head office and branches.

The solution assumed fail-safe communication lines and data transfer rates equal to 6,400 bits per second. Existing telecommunication facilities in India can only handle upto 1,200 bits per second. Says a senior SBI official, who is involved in the project, "IBM could be a contender five years later, when our communication infrastructure improves."

In contrast, ICIM offered a distributed system which was based on computing power at the various offices. This ensured operations at the branches would not grind to a halt in the event of communication lines breaking down. The the backbone of the system is a supermini computer with lower configured minicomputers and local area networks at the branches, depending on their size. SBI will pay a total of Rs.30 crore towards the hardware part of the order.

Tried and tested

For the software component, Kindle's Bankmaster has been selected as it is currently in operation at most of the foreign banks in the country and therefore tested in this environment. "It meets 70 per cent of our requirements straight away. Kindle will modify the rest to meet our specifications," says B.B. Saxena, SBI's general manager for science and technology.

Spread over a three-year period, SBI will pay Kindle $400,000 for the basic software, and another $3.6 million for the other components. This will entitle SBI to use Bankmaster in all its 8,500 branches.

Smaller domestic software companies are naturally peeved that an order of such a magnitude has gone to a foreign software house. Larger software companies, however, indicated that SBI had made the right decision.

One gathers that SBI selected a foreign supplier on the grounds of the time frame promised and the fact that the solution would be a tested one. Most software vendors had indicated a time frame of five years for the first phase of the contract, which was unacceptable. And none had solutions of a similar nature operating anywhere. Of the two Indian vendors who were shortlisted, the HCL-Cullinet solution was unable to make a presentation of its claims while the TCS-IBM-Hogan solution was unsuitable. Both were rejected.

SBI is obviously in a hurry to protect its strong depositor base and counter the competition. And with the bank's customers becoming more demanding, only computerisation will fuel innovations towards more speedy and personalised service. Also, it would protect the bank's profitability.

The lady you see above graces the cover of India Calling — the ideal gift for your corporate clients.

Because India Calling is a book on India with a refreshing difference. A book whose 68 colour plates stand out not because they are stunningly shot, but because each photograph unpretentiously captures the happy chaos that is this country. A book with pieces written by some of India's most famous personalities. Nissim Ezekiel, Khushwant Singh, Pupul Jayakar, to name a few. All writing on what moves, infuriates or simply amazes them about this country. A book that is also genuinely informative with practical tips on travel through India.

So cut out the coupon above and make India Calling your company's face. Because nothing else quite reflects the principles a great corporation is guided by: uncompromising excellence and an honesty of purpose.

A COUNTRY BETWEEN COVERS.

INVESTMENT COMPANY SHARES

In the wealth tax bracket

The proposed amendment in the current budget to value investment company shares on the basis of market value shows little application of mind. The amendment of Rule 12 of the Wealth Tax Rules is a good example of an unwarranted legislation that will engender needless litigation.

The Direct Tax (Amendment) Act, 1989 dealt with valuation of unquoted equity shares of non investment companies. Long debates and much unhappiness accompanied the changes that were brought about by amending Rule 12 linking valuation to market price. As a result of the dissatisfaction expressed the relevant provisions viz subsections (3) & (5) which contained reference to valuation rules at the market value were finally omitted by The Direct Tax Laws (Second Amendment) Act, 1989 with effect from 1 April 1989.

Now the amendment proposed in Rule 12 of the Finance (No.2) Bill 1991 tries to incorporate a proposal to reintroduce those subsections (3) & (5) for valuing shares in investment companies based on the market value of the assets which represent those shares. This will slap a huge burden on the owners of such investments with possibilities of the same wealth being taxed more than once and will make it impossible for companies to hold such investments. They may even have to sell those investments to pay wealth tax.

The spirit of the amendment militates against the attempt to usher in a liberalised industrial policy. With liberalisation, non-resident equity investments are expected to increase. In that case, is it wise to bring in such constraints which are likely to expose the holdings of Indian industral houses in their companies to a risk?

In any case, under the present law an industrial company is not required to pay wealth tax on its industrial assets except with some exceptions. Where is the wisdom, then, in imposing wealth tax on a derived notional basis in the hands of a shareholder who indirectly holds industrial assets through such shares?

In fact, this was the reason why such amendments were dropped in 1989 and the existing provisions were continued. It appears as if the honourable finance minister is ill-advised on this issue again. The government, however, must not forget that this will have more reason to lead to litigation than any area of revenue collection.

People are bound to find ways and means to circumvent these provisions in practice. It may not be difficult for them to think of various alternatives to dilute the effect of this proposal which may result in totally different situations from those that may be expected since it may be possible that:

- with planning, such investment companies may be brought out of the definition of "investment companies" by the simple expedient of reducing their defined income to less than 51 per cent of their total income. In that event they could continue to hold such shares by devising a complex structure of cross investments, may be, using the same investment company route.
- the nature of the investments may be changed and instead of equity shares one may resort to other forms of security instruments which could provide similar ownership rights and still help to keep out of such valuation rules.
- these investments may be transferred to other manufacturing companies within the group with a typical cross holding structure, thereby taking them out of the purview of such valuation. No doubt, in such a situation such investments may be exposed to the public eye; but there could be ways to yet maintain a close hold.
- it may be possible that these investments could be treated as current assets by trading in similar shares and other securities. This together with a structure of cross holdings with investment companies could prevent assessments on the basis of market value.
- finding out means to control prices of connected scrips where applicable, through stock exchange manipulations.

Overall, the existing provisions appear equitable and just and the amendment does not deserve to be implemented. If this has been the valuation procedure all these years, then nothing new has happened to warrant this sudden change. If wisdom prevails the authorities will reconsider the proposal.

INDIA
TOURISM YEAR 1991

• **TOURIST MAGNETS:** SHIMLA: QUEEN OF HILL STATIONS. YEAR-ROUND RESORT. LOVE-AT-FIRST-SIGHT FOR GORA-S

God dreamt of creating Himachal. Creating the earth was just a beautiful coincidence.

If you think that's a figment of *our* imagination you ought to, for once, visit Himachal. Nestled in the Himalayan shadows, with omnipresent beauty, everything about this land is like *nowhere* on this planet. Especially, *now*.

The silver snows having melt into glittering streams, the roaring waterfalls meander through fragrant pinewoods, making way into terraced, emerald fields and fruit laden orchards, drowned in the euphony of hauntingly melodius bird-calls vying with the vibrant folk-lore *(as romantic and heart-warming as the folks)* that echoes the verdant valleys, all life blossomed into a splash of myriad colours on an infinite canvas-Himachal is like an eternal painter's dream-come-true_

Beauty that's visible, yet *beyond* comprehension. That better be discovered and *felt* than described-like endless other charms of this land...

Be it the cool, utopian serenity of Dalhousie (Nehru's favourite). Or the fantasy of a floating island in Khajjiar. The mystique of the eternal flame at Jwalamukhi temple. Or the divine splendour of Kullu, the valley of Gods. The ecstasy of a soul-soaring glimpse of the timeless Himalayan peaks (Hatu: 10,000 ft) from Narkanda Or...

Himachal. An experience of a lifetime – at once exhilirating and sublime. Beyond words. Or pictures. In fact, beyond the imagination of mere mortals. A brush with God's creativity – at its peak.

Visit Himachal. You got to be *there* to believe it.

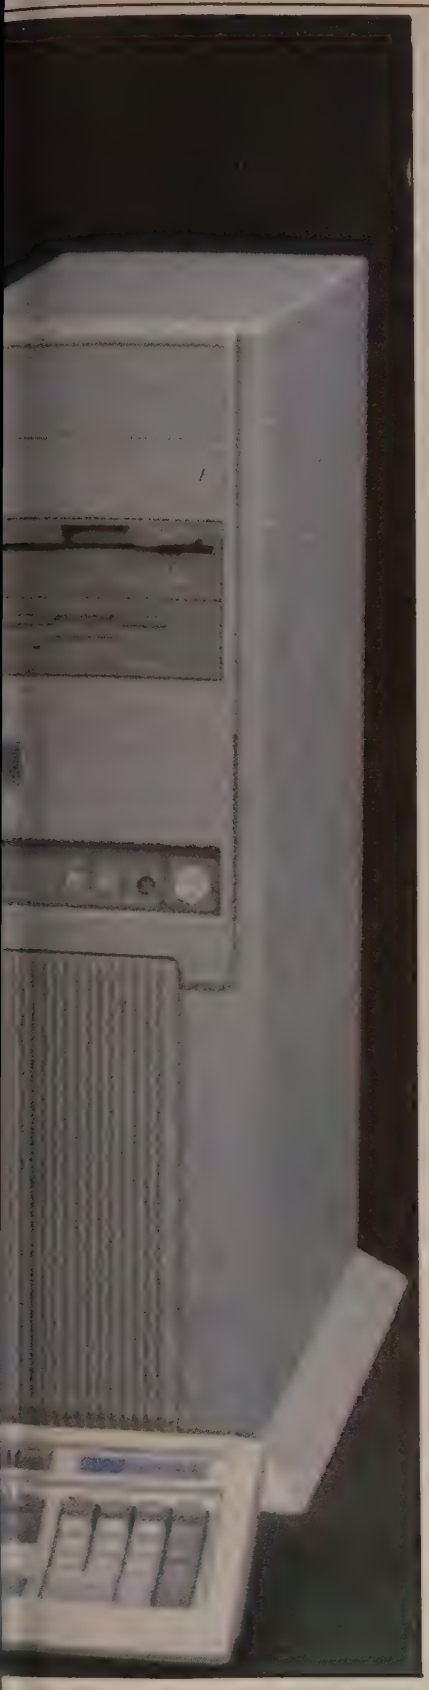
PERSONAL COMPUTERS

Ten years of the PC

After witnessing a decade of helter-skelter progress, the top guns of the industry are convinced that they have seen only the prelude; the main event is yet to come



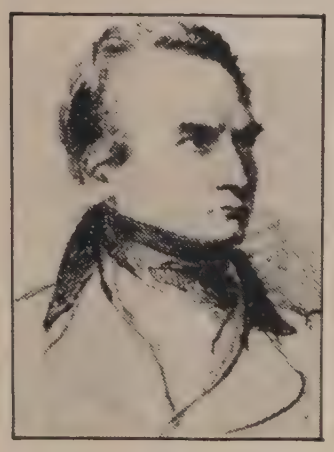
Getting ready the Reader Service pages, that appear a little later in this magazine, had always been a monumental bore. Six years ago, it was a tiresome job that took almost three days to complete. Today, with PC-based systems, total time required for the job is down to a relatively minuscule four hours.

This is really what the Personal Computer is all about — making life a little easier. This was the vision of the founding fathers of modern day computing, starting with the redoubtable Charles Babbage. The old brain cells still have to be exercised, but definitely the grunt work is reduced drastically. But it is also about the race for better, faster and cheaper technology, and smaller and smaller components.

With inventors, researchers, and developers across the world chipping away at the frontiers of artificial intelligence, the post-World War II years till the mid-seventies were a heady rush to computerised *nirvana*. Over all this, the giant IBM Corporation of the US gazed benignly, lord and master of all it surveyed, producing bigger, faster and more flexible mainframes year after year. But there were others who were concentrating on producing smaller machines, and software that could make them pull tricks like the larger computers.

In 1975, an unknown American company called MITS launched the Altair 8800 microcomputer, based on the just-developed Intel 8080 chip. This chunky little box could barely call itself a computer but it caught the imagination of comput buffs and was undoubtedly the vangua of the PC revolution. Twenty-one-year c Bill Gates, college dropout and founder a small Redmond, Washington-bas software company called Microsoft, wro the software which enabled the Altair understand the BASIC language. The fo lowing year, Gary Kildal released CP/M the operating system which drove micr computers for years before Microso came up with MS-DOS.

1977. The year of the giants. The read to-use $595 Personal Electronic Transa tor (PET) was launched by the US-based ca culator manufacturer, Commodo International. And in April the same yea the Apple Computer Company of Califo nia, co-founded by another college dro out, Steven Jobs, in his garage, followe



p with the wildly successful and path reaking $1,300 Apple II Computer. In the ime year, parts retailer Tandy Radio nack introduced its TRS-80 PC. From ien on, there was no looking back.

Big Blue and others of its ilk, like DEC, ad realised that small was beautiful. They eated models scaled down from the ainframes in an effort to mobilise the ry market Commodore, Apple and andy had jumped the gun to. But soon ough, they also realised that the market as too enamoured with the offerings of e brat pack led by Jobs and his Apple II. change in tack was needed.

The man watching these developments ost keenly within IBM was Willaim owe. He was convinced that IBM had to velop a completely new design if it were to re-assert itself in the computer market. Against considerable opposition, he also managed to convince IBM's management, who wanted to know how long he would take to do that. At a stormy meeting, Lowe said, "I think we can do it in a year."

At IBM's Boca Raton Laboratory in Florida, Lowe and his team of 12 had a working prototype ready within a fortnight. More important, Lowe and his 'dirty dozen' decided to follow a policy of 'open architecture', whereby every component that went into the new computer on the production line — besides Intel's 8088 microprocessor — would be bought from the lowest bidder. The necessary software was going to be written by outsiders. Also, the computer would be sold through retail computer chains and not IBM's exclusive retail network. There was strenuous opposition but Lowe's basic design and plan were approved by the then IBM chairman Frank Cary and the management.

Babbage, Esteridge, Gates and Jobs (clockwise from above): **founding fathers**

To Phillip Donald Esteridge, certified computer tinker, fell the responsibility of taking Lowe's Project Chess, as it was named, to fruition. Not only did he have to contend with the hair raising deadline, but also with other irate IBMers unused to having to bid to supply parts for a computer being built by their own company.

Some IBM plants in other parts of the US did manage to put in bids that were accepted, but most of the components came from companies like Intel, the Tandon Corporation, Zenith Electronics, SCI Systems (all of the US), TRL (Taiwan), and Epson (Japan) — the last two for monitors and printers, respectively. Bill Gates and Microsoft were contracted to write the operating system for the computer.

By July 1981, Don Esteridge and his group had pulled it off. Brandnamed rather unimaginatively as the Personal Computer, and hence PC, the computer was ready for the big launch on 12 August 1981 at New York. The media and computer trade positively gushed over the new machine; one retailer said, "IBM is putting its stamp of approval on the microcomputer — that means the microcomputer is here to stay." Truer words were never spoken.

Lowe's instinct had been right. He knew the market was thirsting for something like the PC, but he had no way of knowing what he was triggering off. By 1983, IBM was producing close to 50,000 PCs a month and yet not meeting the demand, and Apple and Tandy were benefitting from the residual demand.

Besides, Lowe's open architecture meant that just about anybody could open up an IBM PC, find out how it worked, buy the parts from the same suppliers, and put together a PC of his own. There were copyright hassles to be thought of, but where there was a will, there was a way through reverse engineering (you know what the instructions do, so you work backwards to how they are coded and embedded).

Compaq Computer Corporation, founded by Rod Canion, an ex-Texas Instruments engineer, in 1982 for precisely this purpose, was the first of the brash newcomers. With the launch of its Portable PC within a year of startup, Compaq set off the clone explosion in the world. Soon everyone was into the act. From upstart Silicon Valley backroom operations to vast, organised factories in the Far East.

It was the latter that triggered off the explosion in India too. At that time, there were no manufacturers in the country

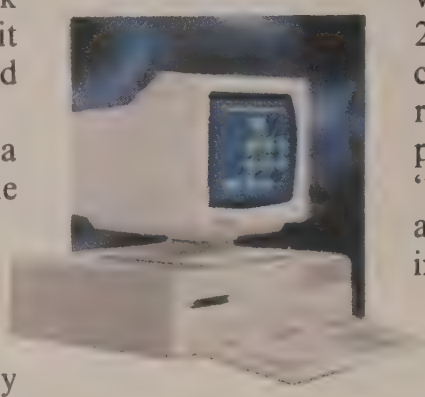
geared for the PC market. Existing manufacturers were offering clunky CP/M based microcomputers, like HCL's Workhorse, priced anywhere between Rs.3 and 5 lakh. And then, almost by accident, the first 8088 based PC found its way into Bombay through Minicomp — price tag: Rs.1.5 lakh. That left potential buyers gasping, but the race was on.

Over in California, Steven Jobs had been busy too in the meanwhile. He and his irreverant and distinctly anti-establishment group of developers, including the brilliant Bill Atkinson, over at Apple Computers had worked round the clock to develop an improvement over the Apple II. The result was the absolutely stunning $2,495 Macintosh, unveiled on 24 January 1984.

Later that year, Intel came up with its 80286 microprocessor, the fastest till then. And IBM promptly incorporated it into a new breed of PCs which it called the PC AT, which was three times faster than the original PC. But there were mechanical and other glitches and IBM didn't quite make the grade with this machine. Its market share slipped from 63 per cent that year to 40 per cent in 1986.

A number of computer companies in India had realised by then that the future lay in PCs. A ready source of components was developing literally next door in Taiwan and computer awareness was growing by leaps and bounds. Soon there were a range of PCs, high priced though they were, in Indian computer stores like Computer Point. DCM Data Products, ORG and the Zenith-Aurelec combine were all onto the PC game by then. But it was in late 1985, that Shiv Nadar and HCL shook the industry with the launch of their Busy-Bee PC. The price wars had started here too.

It was the same over in the US and the rest of the world. When Intel had released its 80386 processor in 1984, Compaq beat IBM to the market by incorporating it into its Deskpro 386 PC. And three years later, when Intel released the 80486 chip, neither IBM nor Compaq was the first to release 486 based machines; instead there were names like ACMA, CompuAdd, Mitsuba and Syntrex, among a couple of dozen others.



All the while, prices kept coming down; but so did Big Blue's share, which dropped to 17 per cent by 1990. Even it's Personal Systems/2 range of computers, introduced in 1987, with a proprietary architecture and incorporating Microsoft's new Operating System/2, or OS/2, couldn't break

What NeXT?

the back of the slide. In fact, PS/2 was a resounding flop.

In India too, the computer market was caught up in a frenzy of new products, newer features and lower prices. Sterling Computers of Madras, which launched the well regarded Siva PC in 1987, was one of the prime architects of the second price shakeout. The high point, or low point if one prefers, of the price wars was the Rs.10,000 People's PC offered by ET&T. These computers failed, and the Rs.10,000-mark went back into the realm of hopes, but it caused every other established vendor to cut prices swiftly.

Devaluation has thrown a monkey wrench into the works since; yet a PC from a reputed vendor can be had today for less than Rs.25,000. And the Indian PC market, currently valued at about Rs.500 crore, grows at a little over 20 per cent a year.

It is PCs, PCs everywhere but not an IBM original in sight. The one factor that got IBM out of the mainframe morass and back onto the top of the pile, — ie, open architecture — is the factor that has caused its market share to erode in the first place. While its partners in the 1981 success, Intel and Microsoft, are now purveyors of virtual monopolies in their fields, IBM finds itself brawling in the market with a rumbuctious bunch of clone makers, some of whom have cut prices to 30 per cent of IBM's.

And therein lies the nub of future development of the PC. While, on the one side, Compaq and a clutch of 60 other cl makers are bent on breaking the IB Intel-Microsoft standard for PCs, the gets themselves are now devising their c strategies to counter the threat. Proba the most stunning development of all in cent times was the alliance announced b ween IBM and Apple on 3 July this ye This came after Big Blue and Bill Gates out over the failure of OS/2 and Gates p moted Windows 3.0, a user friendly gra ical interface approximating the metho the Apple Macintosh, on his own.

Chairmen John Akers and John Scull of IBM and Apple respectively, have re ised that the PC of the nineties is son where between the promise of the IBM and the user friendliness of the Macinto They also know, from experience, t computer users, for all their dreams o brave new world, resist a total changeo from what they are used too. Therefo the as-yet unclear agenda is to build machine that will not upset any carts b fit in smoothly with the current scheme things.

Having said all this, a realisation creeping in among the big guns in the dustry worldwide, that the PC has n managed to improve productivity as mu as it should and could have. Ashok Ja CEO of homegrown ICIM, tells us frightening statistic; he figures that b ween 65 and 75 per cent of t 200,000 PCs installed in th country are being used as gl rified typewriters. Even A ple's Sculley admits tha "there has been no measu able increase in productivi in the past decade."

But computer bu continue to be dazzled the rapid fire developmen in their mad, mad worl Multi-media (linking audio, vide graphics and text), pentop PCs (after t laptops) and voice recognition are only b three of the more exciting promises for t nineties. The dividing line between wo and play gets thinner by the day as peop hook up their telephones, fax machine telexes, TVs, CD players, synthesisers, a what have you, to get more and more o of the PC. Maybe next year it will be th toaster, and the year after, the food pr cessor. Who knows? As Sculley told *Bu ness Week* recently, "We have been raci to get to the starting line. The really inte esting stuff begins in nineties." And tha after ten years of the PC.

In transit accessory

Sometimes it can be a long thirty hour run. Sometimes twelve, or just eight. Whatever the duration, there's a term for it in travelling parlance. It's called the Overnight trip. And it calls for a special kind of bag. Not too bulky, not too brief. But something basic, and yet, definitely stylish. Now V.I.P. has just the overnighter for you. Odyssey — world class ABS luggage. For sheer elegance to look at, the Odyssey has a leather-like finish. And its sleek black powder-coated frame ends up in two exclusives — a combination lock and a soft grip handle. Lining the inside is not satin but suave suede. A matching separator doubles up as a folio for work papers. And a thoughtful extra are the high grade elastic fasteners which don't sag but clasp tight to keep things in place. Now tell us, how would you describe the Odyssey. Another suitcase... or travelling accessory?

OA

Bonanza at last

Many dismiss the event as a political gimmick, but the owners appreciate the return of their jewellery

May 1961. Antonio Rosario Joao, pledged his wife's wedding jewellery – a gold chain, pendant, locket, ring and necklace — for 1,800 escudo, that is, for paltry Rs.300, at the Panaji branch of he Banco Nacional Ultramarino (BNU). t the time, Goa was a Portuguese colony nd BNU was Portugal's national bank in oa with four branches — in Panaji, lapusa, Margao and Vasco.

Similarly, 61-year-old Menino Aleida pawned his wife's gold ring, penant, necklace, brooch and a gold coin r 1,080 escudo (Rs.180) at BNU's Panaji anch in 1960. Octogenarian Joyce Perra pledged a chain, pendant, earrings nd four bangles in 1958. And Lodovina ias, of Raia village, in south Goa, mortged her gold necklace for Rs.100 at U's Margao branch.

The Goans had given up their family wellery as lost, when BNU shipped away e gold to Lisbon in the week preceding oa's liberation from Portugal in Dember 1961. Today they are a jubilant t as the Indian government has maned to retrieve this gold. "We are unoubtedly happy to get back our family wellery," says Almeida, a former BNU ofial, who recalls working frantically rough several nights packing the jewelly, his own as well, to be sent to Lisbon.

For once, the Indian government's perstence has paid off. Years of neogitaons have failed to reclaim historic easures like the Kohinoor diamond, the acock throne and the sword of Tipu ltan from various countries where they d been carted away by bygone inders. This time, the government has anaged to recover the gold of the oans.

Known as the "Jewels of Goa," the ld ornaments, weighing 280 kg, and rrently valued at Rs.10 crore, reached dia on 3 August, 30 years after being nt to BNU's vaults in Lisbon. Goan famis from the lower to middle income. oup had deposited the gold as collateral r the short-term to tide over straitened mestic circumstances. Only a few had pt it in the bank for safe-keeping.

Talks on reclaiming the gold began in e early eighties. Diplomatic ties between the two countries had resumed in 1974. However, though the Portuguese had agreed to return the ornaments four years ago, administrative hurdles were cleared only recently. The driving force behind the negotiations was Eduardo Faleiro, the minister of state for external affairs. Says he, "It was a major issue for me because a large number of people affected by BNU's move belonged to my constituency, south Goa. No one likes to part with their valuables." But they managed to convince BNU about its duty to return the ornaments.

BNU's cooperation cannot be overlooked either. While the claimants were convinced that the gold was gone forever, a former BNU official, also a Goan, was certain it would be returned. "The gold," says he, "was shipped away only as a security measure. BNU officials feared it would be looted during the independence struggle." Moreover, BNU's good intentions are evident from the fact that about 1,000 Goans who either took their receipts or sent power of attorneys to their relatives in Portugal, were able to redeem their jewellery, he adds.

However, it was with the State Bank of India's help that the gold finally arrived in India. How come the RBI was not involved? "RBI has no banking business," explains V.K. Agrawal, general manager operations, SBI Bombay, "So SBI, as India's largest bank, handled the transaction." Besides, since Goa's liberation, a senior SBI official has been serving as custodian of BNU's accounts. Interestingly, SBI's main branch in Panaji is housed in the building that was originally BNU's Goa headquarters.

The $47,348 (Rs.12 lakh), paid by SBI to BNU includes the original loan amounts and interest charges, which will be recovered from the claimants. BNU has been generous in charging only a minimum interest. Goans, owning any of the 5,551 jewellery pieces returned in the collateral category, have to pay, apart from the original loan amount, only 4 per cent interest for five years plus a 6 per cent service charge to the SBI. For instance, on a Rs.100 loan, a claimant will have to pay only Rs.126. On the remaining 33 trinkets placed in safe-deposit vaults, a 7.5 per cent service charge will be levied. The Rs.10 lakh spent by SBI on shipment, however, has been written off "as SBI's goodwill gesture for Goa," says Agrawal.

Reportedly, BNU's loan records have been lost. Consequently, problems are foreseen in disbursement, to begin on 16 August when the seals will be broken on the jewellery, preserved in its original 30-to-35-year-old wrappers. Names and jew-

lery descriptions have ded on some packets. the original receipts re lost, claimants will ave to accurately de- cribe their jewellery. nd if the original wners are deceased, in- eritors will have to rove their bonafides. Whatever is unclaimed, ill remain in SBI ustody.

Despite these prob- ms, however, there is ope in the hearts of the wners. Octogenarian oyce Pereira, who had orrowed from the ank in 1958 to pay for me house repairs and er daughter's mar- age, says she is "very happy". She had, e remembers, pledged a chain, a pen- ant, earrings and four bangles, all of hich she herself had got when she mar- ed. "Now, I intend to sell it and enjoy e last few years left in my life!" she says. My children are doing well for them- lves, I don't have to give anything to ybody."

Photos: Indira Khanna

Joao: waiting for his gold to come back

At the other end of the spectrum is another old woman, who does not want to be identified. "Who knows when we will get our gold back?" she says. "You know how the government works — to clear a paper from one table to another they take days, and to get my own gold it may take ages. And how much will they extract from me for that?" Naturally, she is one of the many who "don't remember how much gold there was — you know, it's ages since we kept the gold in the bank's custody!"

The return of the gold has also paved the way for stronger Indo-Portuguese ties. Bilateral trade as well as joint ventures and collaborations in tourism-related areas and other industries are expected to gain. "Portugal," adds Faleiro, "will also be a gateway for India into the EC in 1992." The Portuguese president, Mario Soares, is expected to grace the Republic Day celebrations in India next year. Permission is being sought to open a Portuguese consulate and cultural centre in Goa — a counterpart to the one in Lisbon catering to the 100,000 residents of Indian origin.

Many locals, meanwhile, dismiss the gold retrieval event as a political gimmick. On the other hand, the owners undoubtedly appreciate the return of their jewellery — both for its sentimental as well as monetary value. And while the first thousand took a circuitous route to recover their jewellery from Portugal, for the other 2,500-3,000 Goans, their pots of gold have arrived at their doorstep!

PHARMACEUTICALS vs REPRESENTATIVES

No-win situation

Medical representatives are up in arms and managements have to cope with organised unions

At Cipla Ltd, on 1 June, the field staff (prodded by two unions) went on strike, feeling insecure because of a possible 'elimination' of the role of medical representatives. The strike is going on and despite the management's refutations, come August, Cipla is heading for a possible shut down.

And Cipla is not an isolated instance. "Medical representatives' unions have, during the past one year, begun to hold managements to ransom," says a senior manager at Lupin Laboratories. There are widespread reports of violent incidents against managers, in return for perceived persecution on the medical representatives' part. Managers, when visiting territories without the prior 'permission' (a 10-day notice is mandatory) of the medical representative in the area have to bear the humiliation of insults and physical assault.

Are they workmen ?

The crux of the problem relates to medical representatives being classified as workmen. Medical representatives, under the umbrella of the amended Industrial Disputes Act (in 1984) and Sales Promotion Employees (Conditions of Service) Act (in 1987), have raised numerous demands. It is pertinent to note that the amendment in the Sales Promotion Employees Act was made particularly with reference to medical representatives. Therefore, the medical representatives — now classified as workmen —are protected from arbitrary transfers or being sacked.

The emergence of the CITU-affiliated Federation of Medical & Sales Representatives' Associations of India as the major 'negotiator' has been all the more unsettling for company managements. The FMRAI, today, claims a membership of 25,000 of which a majority are medical representatives (who altogether number an estimated 40,000).

D.P. Dubey, FMRAI's general secretary, says that the union has, for the first time, brought together medical representatives operating from isolated parts of the country. However, because the FMRAI is adamant that it will not share a common platform with 'a puppet union' (as in the case of Cipla Field Workers' Union), no dialogue has been possible. Meanwhile, Cipla has suffered a sales drop during the last three months, accompanied by a spate of resignations from managers. Of its 325-strong field staff, about 200 medical representatives are FMRAI members. The Cipla management claims that it was the medical representatives who decided to boycott the bi-monthly cycle meetings.

The affected include veterans in the field. D.B. Talukder from Katihar in Bihar, who has put in 27 years with Cipla, complains, "Our current salaries are not commensurate with the growth of the company. Moreover, we are against the anti-labour policies of the company," echoing the sentiments of his colleagues. R. Bose of Calcutta, with 18 years' experience, claims that he has been suspended from the company recently. N. Rajagopalan from Tehri Garhwal, who put in 15 years' service, says he was transferred, upon which he joined the strike.

Talukder, Rajagopalan and Bose: "against anti-labour policies"

Charter of demands

The charter of demands, raised by the two unions at Cipla, comprises restrictive practices such as notice for joint work of managers, obstruction to manager's independent work in a medical representative's territory, resistance to improvements/changes in reporting system, accounting for samples/gifts of promotional items, non-adherence to work related instructions, limits on customer calls, non or partial implementation of promotional programmes and not sticking routine development progress reports.

Starting emoluments, at least in large multinational companies (Rs.3,500 and above), are attractive. But not so in the smaller companies. Medical representatives generally hail from middle class families and conduct a boring if not tedious chore. They do not have a feeling of belonging to their companies, as they rarely come into contact with any of their colleagues. Their customer calls involve waiting for long periods to get a few minutes with doctors who treat them with disdain and often call them at odd hours.

With the FMRAI claiming to have concluded "deals" with 25 pharmaceutical companies, the union has gathered enough support to call the shots. Medical representatives, hitherto a humble lot, now have the strength to be more assertive. Says Homi. R. Khusrokhan, director, pharmaceuticals division, Glaxo India Ltd, "It's a no-win situation. Just as medical representatives are realising the powers of union support, company managements will have to learn to deal and cope with organised unions."

■ DEVENDRA TAH

Taj Bengal. A befitting venue for the meeting of minds.

Here, we help give business operations a new dimension.

Whether they are all-India conferences, product launches, weekend seminars, board meets or presentations, Taj Bengal offers just the menu.

The Crystal Room is a splendid venue for larger conferences. There's a choice of smaller conference rooms for meetings and breakaway sessions. And a modern Business Centre at your service.

You will find endless ways to unwind during your stay: Three exclusive restaurants to cater to the most exacting gourmet. A Health Club and swimming pool to stay fit. A Beauty Parlour and Barber Shop to put your best face forward.

Finally, the surrounding green, that provides such a soothing backdrop to serious business.

INDIAN ACRYLICS PRESENTS AN ISSUE FOR PEOPLE WHO KNOW THE ISSUES TO SUBSCRIBE TO

A wonder product, that has taken the world by storm. State-of-the-art technology from the celebrated Du Pont (USA). Finance and equity participation by the Asian Development Bank. And demand for Acrylic Fibre outstripping supply – a seemingly perfect combination, for people who know the issues to subscribe to.

Public Issue of 2,86,70,000 Equity Shares of Rs. 10/- each for cash at par aggregating Rs. 28.67 crores.

ISSUE HIGHLIGHTS

★ To manufacture Acrylic Fibre — the Wonder Product.

★ Wide applications of Acrylic Fibre — from knitwear, woven and non-woven blankets, blended fabrics, sweaters and T-shirts to carpets and upholstery.

★ Excellent market potential — against estimated production of 40,000 T.P.A. (1990), demand estimated at 60,000 T.P.A. (1990) and to reach 1,31,000 T.P.A. by the year 2000.

★ Technical collaboration with Du Pont (USA) — one of the world's largest chemical companies with a turnover of US $ 35,534 million (1989).

★ Du Pont, the inventor of Nylon and Teflon®, amongst others, has operations in 40 countries around the world.

★ Equity participation of Rs. 325 lacs, and a loan of US $ 5.9 million by the Asian Development Bank.

★ Commercial production expected to commence by October, 1991.

★ Rs. 2.50 per share each on application and allotment and balance in 2 or more calls.

★ Income Tax benefits under Section 88A (subject to extension of provisions for 1991-92), 80L and 80M.

★ Easy liquidity — listing in Ludhiana, Delhi, Bombay, Calcutta and Ahmedabad Stock Exchanges.

★ Risks:

- Availability and price of major imported raw materials will depend on Government policies, and International developments.
- The project cost is subject to changes in foreign exchange rates, input costs, duties and levies.
- Rupee devaluation will increase the cost of servicing foreign currency loans and of imported raw materials. Any resultant price increase may affect the demand.

ISSUE OPENS ON 27TH AUGUST, 1991

B.G. SHIRKE GROUP

Against all odds

Rags to riches: there's no other way to describe the story of the founder-owner of this successful Pune-based construction group

When the B.G. Shirke group signed an agreement with Potain SA of France a while ago, it immediately became a hot topic of conversation in corporate circles. The reason: under the terms of the agreement, this Pune-based company will manufacture and export a wide range of tower cranes to ASEAN countries. This will enable the Shirke group's turnover to cross the Rs.100-crore mark during 1991-92, with exports exceeding Rs.25 crore. For B.G. Shirke, chairman of the group, the Potain tie-up is only the latest development in a life already full of dramatic ups and downs. A successful industrialist today, he has come a long way from his poverty-striken childhood. Hailing from a poor agricultural family in a tiny village, three miles from Wai in interior Maharashtra, Shirke completed his matriculation in 1936 despite many difficulties. He then came to Pune, where he joined Fergusson College.

"I used to serve food in a canteen in order to pay my college fees," recalls Shirke. By 1943, he had graduated as a civil engineer from the College of Engineering, Pune. He then worked for a year, though what he really wanted, right since his days in college, was to form his own company. In 1944, he managed to do just that when he set up Supreme Constructions.

His first major contract, worth Rs.9,000, was for the supply of labour. After a couple of such contracts, Shirke landed a sizeable construction contract worth Rs.6 lakh for the Kolhapur jail. Shirke, who didn't have a paisa to his name then, borrowed about Rs.1 l from his friend, J.N. Marshall, a Pars dustrialist to complete the jail work. return, I paid him an interest of 6 per and 50 per cent of the profits," Shirke.

He then changed the name of his c pany to B.G. Shirke and Co, becam sub-agent of J.N. Marshall Co and s ted selling Skoda engines, tractors, ro rollers, etc. This phase however ende 1951 when the Kirloskars started mak these engines and machines indigenou So Shirke took to contracting in a way.

Ironically, the first contract that bagged was to build the Kirloskar Pr which he completed in just four mont From then on he won the contracts building for not only all the Kirlos companies in Pune, but also others l Bharat Forge, Alfa Laval, Sandvik A and Kanthal India Ltd. Says Ar Kirloskar, chairman of Kirloskar Cu mins, "The first phase of our factory w constructed by B.G. Shirke & Co m than a decade and a half ago, and never had any problems with their co struction. The quality of their constru tion is excellent."

In the meanwhile, Shirke was co stantly in search of new methods a technologies because he believed that t conventional civil engineering metho were outdated and obsolete. His friend Lars Dejoung, the then managing dire tor of Sandvik, and S.L. Kirloskar, e couraged him in his quest and in 196 Shirke toured four European countri armed with letters of introduction a references from Kirloskar and Dejoun In fact, Dejoung personally took him Sweden and introduced him to people Internationella Siporex AB of Sweden.

There Shirke saw the Siporex pre-fa factory. He also went to German France and England to look at oth technologies available there. After co sidering various options, Shirke chose t Siporex technology, which he felt was t leader in pre-fab construction. T Siporex technology involves the manu facture of light-weight, high-strengt concrete building blocks, roof panels a wall panels. It was in use in 40 countrie which meant that the technology wa proven.

Shirke with sons Ajay and Vijay: adopting revolutionary concepts

By February 1972, the Shirke-Siporex ant went onstream but by the end of 974, the company ran up losses amount- g to Rs.1.52 crore. The reason was that e plant was operating at 20 per cent pacity while the break-even was 66 per nt. In other words, there were no takers r Siporex. Says Shirke, "By adopting is technology, all that is left is to assem- e the components at the site. This is a volutionary concept and it leaves little ope for manipulation and corruption. nat is why Siporex technology faced tre- endous opposition in India, hile it has been accepted ound the globe."

When Pratap Shirke, BG's el- st son, returned from Stan- rd with an MBA in 1973, he dvised his father to look for rerseas markets, especially in e Gulf. This the company did d it proved to be a life-saving p for B.G. Shirke, when he nded a huge Rs.18-crore or- r from Dubai. From then on, r the next seven years, the irke group executed orders rth a whopping Rs.477 crore Dubai, Saudi Arabia, Ye- n, Kuwait and Iraq.

However, by 1982, the Gulf om began tapering off and e Shirke group had to look mewards again. But even ne years later, there was much istance to the Siporex tech- llogy. Shirke made several presentations to the govern- nt at various levels, right from the te's chief minister to the Union cabinet d the prime minister. He pleaded that tender system went against his kind of hnology, and that 5 to 10 per cent of civil works should be reserved for un- nventional methods, like Siporex, to e it a chance to survive.

Nothing happened till 1984, and rke's three sons advised him to close wn. Totally fed up, he made an appli- ion to the then chief minister Vasant- da Patil to allow him to close down. t Patil didn't agree and instead appoin- a high-level committee to look into matter.

The committee decided that it was fair reserve 10 per cent of the civil works for mpanies like Siporex, with unconven- nal technologies, provided the com- ny did not make a profit of more than 8 cent. To ensure this, the company uld be subject to audit by the Auditor General of India. Shirke accepted these conditions and gradually the turnover of his group, which had fallen to just Rs.5 to 6 crore in 1984, rose to an impressive Rs.76 crore by March 1991.

During this period, the Shirke group expanded rapidly and signed several collaborations: with Polynorm NV of Holland for manufacture of sheet metal, doors and windows; with Minato of France for concrete block-making machines and concrete mixers; with Read Systems Inc, US, for making silos for foodgrains, graders and pre- and post-harvest equipment. The group also diversified into paper manufacturing; a separate unit was set up for this at Shirwal near Pune.

Shirke plant: overcoming resistance to show impressive growth

Ajay, youngest of the Shirke sons and managing director of the Shirke Paper Plant, says, "This plant contributed Rs.18 crore to the group turnover of Rs.76 crore during 1990-91. Right now we are modernising the paper mill to manufacture high value-added products under licence from Clupak Inc, US. This will also raise the capacity from 17,000 to 23,000 million tonnes per annum."

Vijay, the second son, is the director of B.G. Shirke & Co. He looks after the Shirke complex at Pune along with his father. According to him the tendering system in India should be replaced by a turnkey contract system. He is quite upbeat about the Potain tie-up. "We were the first to make tower cranes in India and now we are the first to export them." Potain is a world leader in tower cranes, and out of its 18 collaborators worldwide, the B.G. Shirke group alone was selected for exports.

Today, the Shirke group employs 9,000 people, has an asset base of Rs.22 crore and ongoing construction at 30 different sites all over the country. The Shirkes have 13 offices spread across India and orders worth about Rs.200 crore in hand. So far, the group has constructed more than 100,000 tenements, not only in India, but also abroad. It has also exported Siporex to Japan, although there are 16 Siporex factories in Japan, which speaks volumes for their quality.

Says R.R. Bhavare, chief executive officer of the Pimpri-Chinchwad New Township Development Authority, "The Shirke-Siporex group has built 6,500 tenements for us since 1986, and the speed with which they have worked simply cannot be matched. It has to be seen to be believed. The quality is also good and we are continuing to rely on them."

Shirke is optimistic about the future of his companies. He hopes that in the next five years his exports will triple and turnover will rise to Rs.300 crore. If his group continues with the same innovative zeal it has displayed all these years, there is nothing to prevent Shirke from reaching his goals.

■ ROOP KARNANI

A.B.C. FARMS

In a different mould

A dairy farm near Pune is spearheading a cheese revolution in India with its exotic fare

If your thoughts waft to Amul when you say cheese, think again. Indeed, the cheese connoisseur today can decorate his cheeseboard with a delectable array: Feta, Mozarella, Berg Kase, Camberzola, Parmesan, Camembert, Gouda, smoked cheese, Himalayan Yak, a black pepper encrusted cheese that perfectly replicates a Boursin, and a cream cheese that replicates Philadelphia Cream. Though Amul still enjoys top position, excellent varieties of cheese otherwise imported from Europe, are made in India today.

Spearheading the cheese revolution in India is A.B.C. Farms Pvt Ltd. On 27 acres of emerald, rolling countryside at Dehu Road outside Pune, Sohrab Chinoy, a German-trained dairy technologist and director of the concern, along with his German microbiologist wife Marlena, supply 3,650,000 litres of milk yearly, and convert almost 30,000 litres into cheese, cheese spreads and value-added milk products, such as 11 varieties of yoghurt, ghee, mineral water and a lemon flavoured *lassi* called Lemsi.

Established in 1976, A.B.C. Farms today employs 70 workers, and has a turnover of about Rs.75 lakh. And its products are distributed to select supermarkets, shops, hotels, flight kitchens and private buyers in Bombay, Pune, Delhi, Madras, Goa and Hyderabad.

"It hasn't been easy," says Chinoy ruefully, recalling the dicey early days on the farm. In 1976 Chinoy had started with two employees and 14 head of cattle that cost Rs.3,500 each. Today, there are a hundred head of cattle, each costing upwards of Rs.10,000.

Chinoy with a display of prime cheeses: believes in fresh stuff, not cans

A.B.C. Farms has acquired two shops and a dairy which houses cold rooms, a research wing, a microbiology laboratory and rooms for maturing cheese. The import of sophisticated machinery has seen inevitable delays. Still, in addition to German turn-of-the-century moulds, the dairy boasts a pasteurising plant to increase the shelf life of products and a vacuum packing machine. For Chinoy believes in fresh stuff. He has never canned his cheeses and never will.

Chinoy is clearly happiest in his lab coat, helping create micro-organis testing cheeses for fat and ensuring t peratures for maturation. He is hard to endure the hazards of running a flu ating business based on perishables can never project quantities. A h might pick up 300 kg one week — then, nothing for months. But we hav milk cows, transport milk or conve before it spoils. The reason I haven't panded is because I cannot stomach attendant problems of coping with tributors and transporters".

As for marketing, Chinoy's appro defies conventional wisdom. He will advertise — a brown and white Jersey hoardings atop his dairy and two shop Pune are the only concessions. Nor he visit potential customers to sol orders.

Not surprisingly Chinoy subscribes the small is beautiful philosophy. T ensures quality control and enables h to make cheese to suit individual tast Health shops, for example, can order l fat, no salt cheese — and those who wa a full-bodied, mature flavour can orde ... complete with worms, as an Itali family had once done.

In keeping with the times, A.B. cheese is strictly vegetarian. Rennet, t second ingredient in the manufacture cheese, the first being bacteria, is an e zyme traditionally obtained from t stomach of a new born calf. At A.B. Farms, though, wheat rennet, distill from a fungus culture on wheat in co trolled conditions, is used. Imported fro Germany, the wheat rennet is the only i port component in the product.

Exotic varieties of A.B.C. cheese ret for Rs.150-250 a kg; the others range be ween Rs.50-150. (Amul retails for a proximately Rs.107, Vijaya for abo Rs.102, per kg). Says Chinoy: "Our cos are as low as they can be; we face sti competition from established brands as well as government dairies like Mafc whose cheese retails for as low as Rs.(a kg."

Now Chinoy says growth is inevitabl On line is a move to offer consultancy se vices to those interested in starting the own dairy farms. Despite the existence established brands, A.B.C. Farms ha matured enough to carve a niche for itse in India's cheese bazaar.

■ MRIDULA MALUST

Is the safety of your employees worth the price of a cassette?

Now CUMI helps grinding wheel users take a big step ahead in safety, by creating a safety manual on video! Another first from the pioneers in abrasives.

Titled, 'Safety and the Grinding Wheel' this cassette (costing Rs.250/-) will explain the do's and don'ts of grinding wheel operations in just 30 minutes. And it doesn't require a technical expert to decipher the message.

So if you want a copy of our latest safety manual, just clip this coupon and send it to:

Mr. N.S. Vijaya Kumar,
C/o P.B.No.2272,
Tiruvottiyur, Madras 600 019.

Name.....

Designation.....

Company.....

Address.....

Yes, I am interested. I am enclosing a DD for Rs. .....
(@ Rs.250/- per copy) in favour of Carborundum Universal Ltd., payable at Madras.

I require the cassette in the languages indicated below (Please specify number in the corresponding boxes).

Language: ☐ English ☐ Tamil ☐ Telugu ☐ Kannada ☐ Hindi ☐ Bengali

☐ Gujarati ☐ Marathi

CARBORUNDUM UNIVERSAL LTD.

India's largest manufacturer of grinding wheels

O&M 3234

CHAIRMAN'S STATEMENT

It is with a feeling of great pride and confidence that I am presenting to you this milestone Directors' Report and the Annual audited statement of Accounts for the year ended 31st March, 1991. I say this because our strategy to grow exponentially using synergistic advantages has borne fruit with two modern textile manufacturing companies amalgamating with VSL. I had emphasized in the previous year about the positive growth of VSL, and today I would like to reiterate that your Company has kept true to all its commitments as a growing company, reaching newer heights today and tomorrow. Sales was Rs. 12.32 crores, an increase of 16.28% and gross profit Rs. 1.23 crores, an increase of 45.76% relative to that of the previous year. Net profit at Rs. 0.44 crores was higher by 4.02% compared to that of the previous year's. The board of directors are pleased to recommend a distribution of dividend this year also, looking to the rapid development the Company has achieved. For the coming years too, I am confident of an excellent growth in revenues and profits as the Company has on its agenda various projects that have targets towards expansion and diversification.

During the year under review, although we witnessed socio-religious disturbances followed by major political instability in the country, we are now hopeful of a stable and growth oriented economic scenario. To avail of the opportunities provided by an expanding economy we are busy strengthening our own infrastructure. By virtue of the amalgamation, the Company's base has been strengthened and we are now set for an accelerated all-round growth. In keeping with the strategy of vertical diversification, your Company has taken up the project work for the installation of a hi-tech process house at Tarapur, Maharashtra. Project cost would be around Rs. 4.1 crores, which will be met by term loans from financial institutions and a rights issue of partly convertible debentures. The Company in the near future will come to you with the rights offer which I am sure will be very attractive to you.

The domestic market for textile is becoming increasingly competitive and only those with definite marketing strategies and specialised products can survive. Realising this, VSL is busy shuffling its product portfolio and moving towards more value added products and targeting the fashion-oriented higher end of the market. The recent advertisement campaign on the national network and the improved presentation of the annual report bear testimony to the fact that we are very keen to project this new high profile image of your Company.

In today's changing world it would be short-sighted and myopic for any company in India to confine itself to merely meeting the requirements of the local market. Enterprises in India need a global vision and should condition themselves to providing goods and services of international standard, prerequisites for competing in the global market place. VSL's export division has grown at a faster pace as compared to the previous year's growth and this trend shall definitely continue. High value added products, a strong marketing and distribution network and the opening of the export market for VSL's products spell growth and profits for your Company.

To conclude, I would like to mention that all strategies can be successfully implemented if an organisation has a dedicated workforce. The employees at VSL constitute the Company's greatest asset and I am confident that with the great talent and competence which exists in the VSL team, we will cross major milestones and continuously achieve outstanding results in the coming years. The Company is also equally proud of and grateful to other members of the VSL family, its agents, shareholders, bankers, financial institutions, depositors, debenture holders and most important of all, the growing legion of satisfied customers.

Lastly, I wish you all a very happy forthcoming year and hope our relationship shall flourish and bring happiness to all concerned.

Bombay.

RAMPRASAD PODDAR
(CHAIRMAN)

A bluechip in the making!

Synthetics Limited

Registered Office: 306, Jogani Estate, J.R. Boricha Marg, Lower Parel, Bombay 400 011.

Bearing down

The Sweden-based SKF has suffered a sharp drop in profits. In the first six months of the year, the profits of this company, the world's leading roller bearings manufacturer, fell by almost 95 per cent from Skr 1.34 billion in the same period last year to Skr 63 million now. Second quarter profits were a dismal Skr 4 million, as against Skr 622 million last year. The company, however, is optimistic about the second half having trimmed labour costs and cut production levels.

Stagnating profitability

For the first time in six years, Unilever, the Anglo-Dutch food and personal products multinational, has reported a quarterly drop in profits. At £840 million, the figure was 1 per cent lower than that in the same period last year. Unilever chairman, Sir Michael Anguz blamed the drop on "difficult trading conditions". Primarily, he meant the Gulf War, which caused a sharp decline in duty free sales of personal products. However, both food and detergents sales showed volume increases, with the latter making less profit but picking up more market share.

Panic button

The controversial closure of the Bank of Credit and Commerce International (BCCI) has had a devastating fallout; customers in some places are unsure whether they can bank on banks anymore. Witness the run on Standard Chartered and Citibank in Hong Kong last fortnight. With queues extending to 250 yards at its 114 branches in the far east financial center, Standard Chartered had to pay out an estimated HK $3 billion on a single day to panicky depositors. The scare was set off by rumours that the bank had lost its UK banking licence and had its shares suspended on the London Stock Exchange.

The rumours and speculations were set off by certain statements made by Representative John Dingell, chairman of the US House Energy and Commerce Committee. His statements even started talk that Citicorp had become insolvent, which of course the bank vehemently denied. "People should understand the facts and our position. Congressman Dingell's comments are totally untrue, irresponsible and absurd," said John Gray, vice-chairman of Hongkong & Shanghai Corporation while coming out in support of Citibank.

Standard Chartered, which has its largest overseas presence in Hong Kong, issued a statement that the lost licence report was "totally unfounded" and the rumour about the share suspension was "totally untrue". It also said that the statement had been issued with the full knowledge of the Bank of England and the London Stock Exchange.

BCCI update

The aftershocks of one of the world's most publicised banking scandals are still rolling in as 'new information' is made public every day. An uncensored version of the Price Waterhouse report, obtained by the *Financial Times* of London, implies that Ghanem Faris al-Mazroui, head of the department of personal affairs of the ruler of Abu Dhabi, was aware of the fraud. The royal family of Abu Dhabi is thus implicated by association.

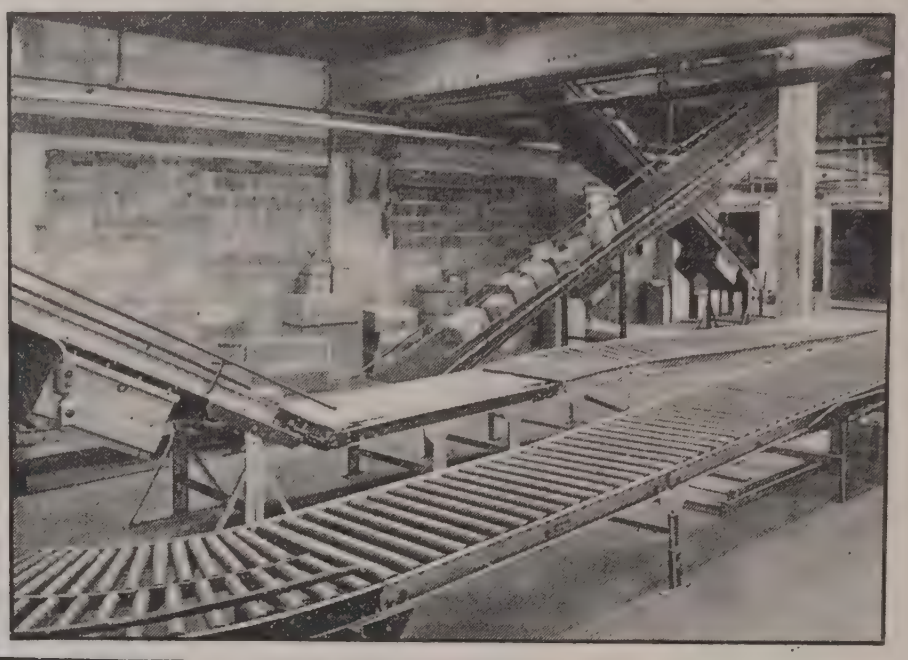
There is a conflict between the US house sub-committees that are looking into the matter, and the Bank of England. While the US authorities are demanding certain documents that the bank possesses, the latter is reluctant to hand them over on the grounds that it would undermine the confidentiality it mantains that allows "whistle blowers" to approach it without fear of later exposure.

Bowing out

Rover Group, the UK car maker, and Peugeot of France will bow out of the American car market. Rover is moving out in the face of continuing heavy losses and falling sales whereas Peugeot's withdrawal has been prompted by the failure of the company's 405 model sedan to gain a significant share of the US market.

Rover had been planning an ambitious re-launch in the US with a revised range of executive cars next spring. But now, the company has decided "to concentrate on European and other markets". Meanwhile Peugeot, which makes both the Peugeot and the Citroen, blamed the competition between the American and Japanese automakers for the failure of the 405.

Largest merger



Bank of America and Security Pacific, the second and fifth largest banks in the US, will merge in what will be US banking history's largest bank merger. The $4.3 billion merger, which will make them a regional powerhouse across the American west, has been prompted by a need to cut costs and by proposed legal changes which will make it easier and more profitable for banks to operate across state lines.

Damages litigation

KPMG Peat Marwick, the UK's second largest accountancy firm, has agreed to pay £40 million ($6.4 million) to Ferranti International as settlement for damages litigation brought by the latter, an electronics company. This had come in the wake of Ferranti's disasterous acquisition of International Signal & Control, a former Peat Marwick client. The payout is the largest payment ever made by a firm of UK accountants to a single plaintiff.

Our name carries a lot of weight . .

in many more ways than one

We at Pluton Machinokraft Pvt. Ltd. have been engaged in the design, manufacture and commissioning of various types of Material Handling Equipment on a turnkey basis.

Our technical tie-up with M/s. Material Handling Equipment, Singapore has helped us incorporate the latest technology into our products for optimum efficiency and peak performance.

Total dedication and time honoured commitment to delivery schedules has earned Pluton the trust and confidence of reputed clientele like

- Kinetic Engineering Ltd., Ahmednagar
- Kinetic Honda Motor Ltd., Pithampur
- Videocon International Ltd., Aurangabad
- Apollo Tyres Ltd., Delhi
- Bharat Forge Ltd., Pune
- Onida, Delhi

Another unique feature of our operations is our total involvement with Material Handling operations in which we undertake projects right from the planning to the commissioning stage. A service offered by very few in India.

The range of turnkey projects undertaken for various Material Handling Equipment are :

- Slatt Conveyors
- Roller Conveyors (Gravity & Powdered)
- Belt Conveyors
- Troughing Belt Conveyors
- Free Flow Conveyors
- PCB Assembly Conveyors
- Assembly Line & Process Conveyors
- Overhead Conveyors
- Automatic Turn-Tables
- Winches
- Jib Cranes
- Trolleys
- Other Material Handling Equipment as per customer design/requirement.

Is it any wonder then that our name carries a lot of weight ? In many more ways than one ?

Carrying ideas to their fruition.

OCKMARKET REVIEW

caling high

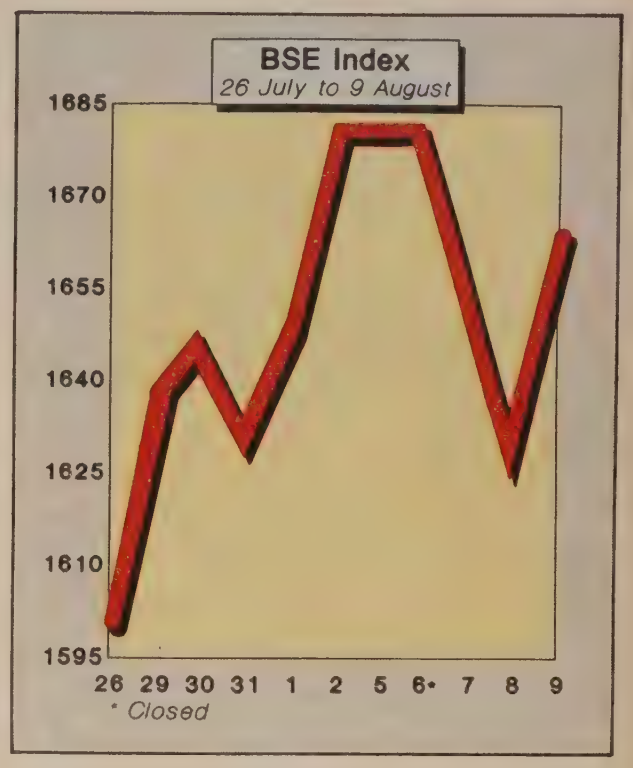
or the fortnight ended 10 August 1991)

	10 August	27 July	Percentage change over fortnight	year
SE Sensitive Index	1663.57	1599.98	4.0	59.0
SE National Index	796.43	774.73	2.8	48.6
ol (Rs.cr) fortnt. ended	212.11	211.61	0.2	48.4

ne market, at the start of the current fortnight, appeared likely to continue cale new peaks after its record high of previous fortnight. The Sensitive In- rose steadily to reach 1703.15 on 2 gust. However, at these exalted levels, an out of oxygen in mid-fortnight on ours of the finance minister's resigna- over fertiliser pricing combined with igh *badla* rate of 2.5 per cent per nth.

the finance minister had actually re- ed, this would have been the first such gnation on grounds of lapses in facing o reality (many ought to have re- ed in the past for such lapses). The asse, however, was sorted out with ut in fertiliser subsidy being reduced 0 from 40 per cent. Meanwhile, the ey market eased and interest rates on ntures became more liberal. These es helped the market recover by the night's end and brokers confidently icted a renewed elevation to the 1700 in August.

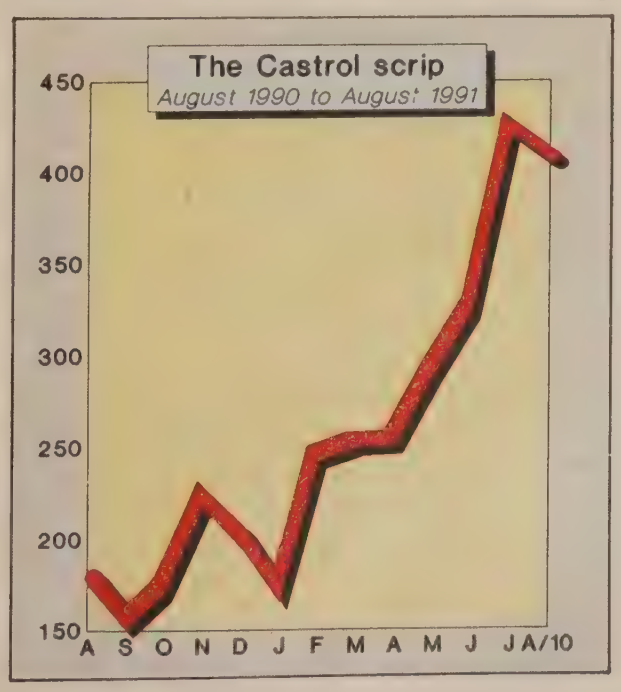
shield removed. A second reason for mid-fortnight fall was sales by the Trust of India. An amount of ,000 crore realised from sale of Unit me's 64 units are being redeemed at a l rate. Although net redemptions now stopped, thanks to the easing ey markets, over Rs.1,000 crore was emed primarily because of the ge in the tax law that disallows capi- osses from being used as offsets nst other income. This removed an itive corporate tax shield.



eanwhile, the decline in money mar- rates has had a positive effect on markets. According to a money er at a foreign bank, the easing of ey market rates is a seasonal phe- non arising from the RBI pumping in s for agricultural operations.

spite the eased money market, in- rs are confident that new issues of convertible debt will offer at least 16 nt for the best rated issues. In this xt, the establishment of a second -rating agency, the Investment In- formation and Credit Rating Agency (ICRA), set up by the Industrial and Finance Corporation, is eagerly awaited. ICRA is expected to start operations on 1 September and will, hopefully, offer unilateral credit rating of issues, including already-listed issues in the secondary market.

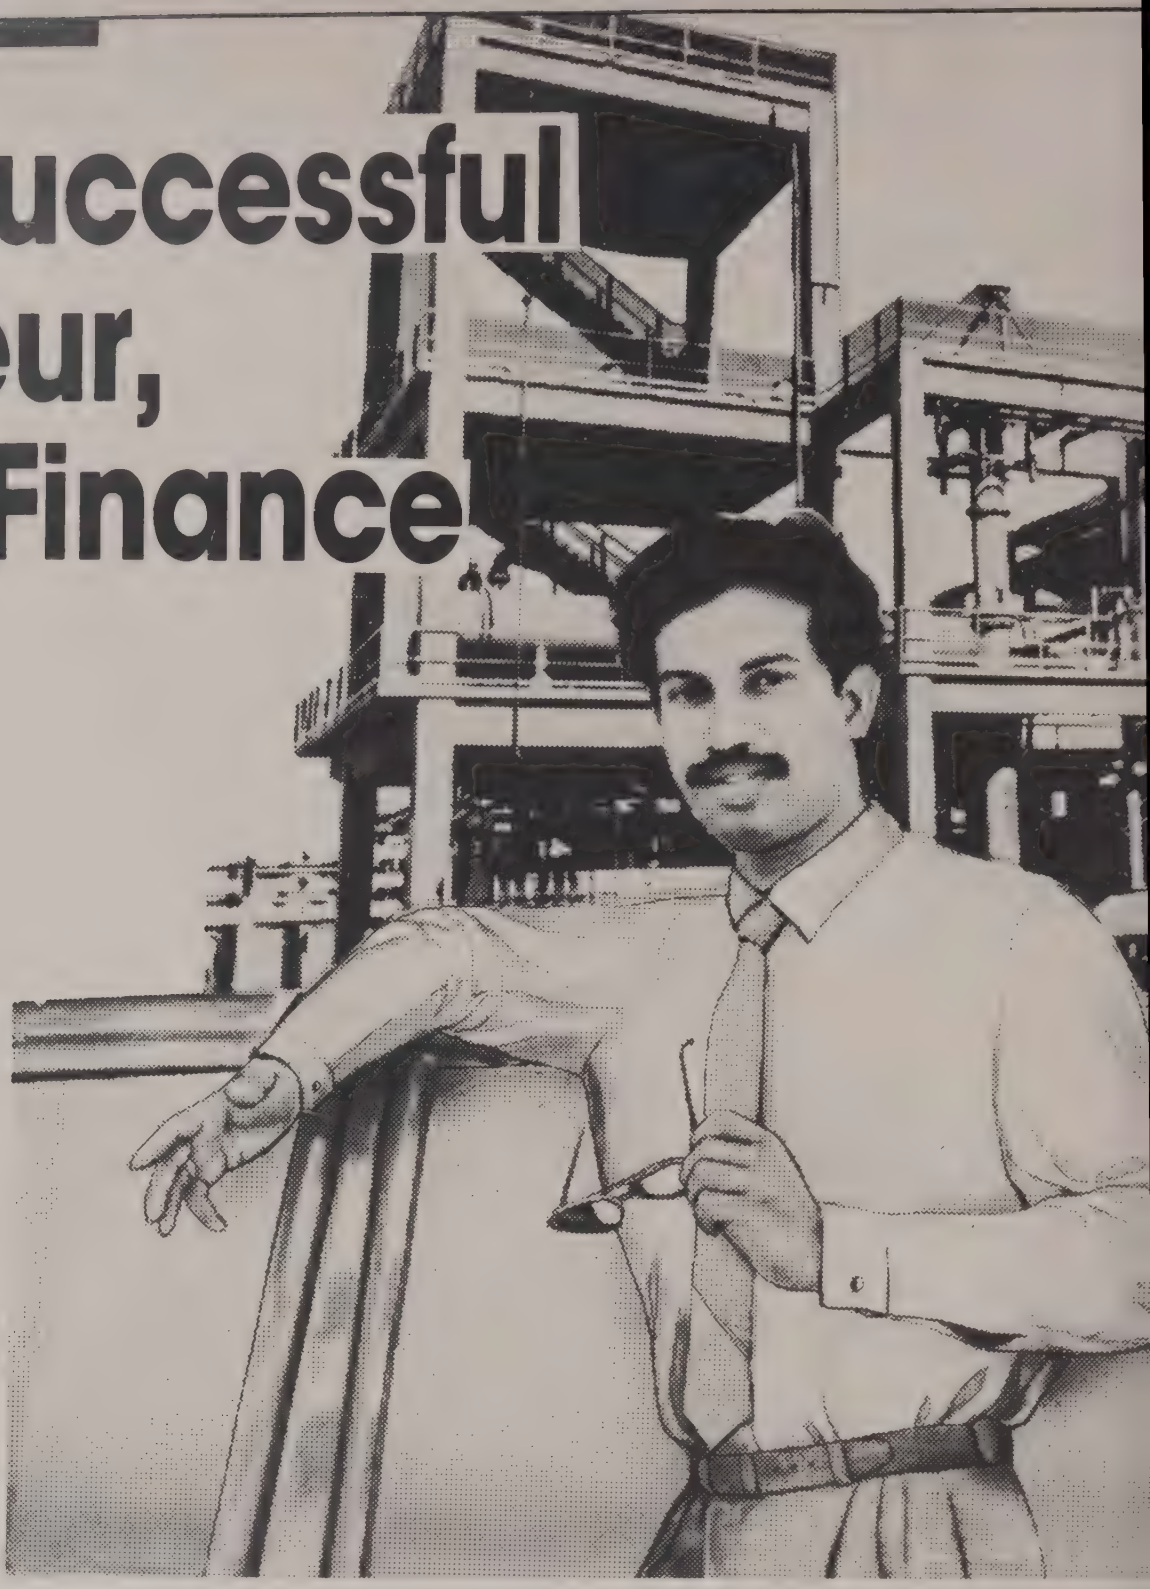
Much of the speculative interest in stocks was fueled by upcoming annual general meetings, most of which are held in August. Especially awaited are the Tata Steel and Tata Locomotive meetings in mid-August. The announcements of company performance therein will be the main barometers for the market until half-yearly results trickle in, starting October.



Present market expectations are that Tata Steel will announce a modest output increase and a turnover increase of about 20 per cent, although rising costs may reduce profit margins sharply. The scrip recorded a rise of Rs.4 to Rs.237, below the market's rise. Tata Locomotive is, however, expected to announce good progress in the current year. It recently announced that volume sales was up over 25 per cent in the first quarter and also recently hiked LCV prices. The scrip closed the fortnight at Rs.281.25, up by Rs.20.

The Ambani rationale. Is it in or is it out? Larsen & Toubro shareholders' meeting on 26 August will decide whether L&T is to re-enter the Ambani fold or not. However, the market strongly expects this to happen, given the usual institutional nerves and the fact that Dhirubhai Ambani will not risk laying his neck on the line this time. The scrip rose to Rs.147.50 from Rs.135 over the fortnight, while L&T's convertible debentures also rose similarly.

The possible Reliance Industries-Reliance Petrochemicals merger also made for arbitrage plays, in mid-fortnight, with speculators guessing the ratio of shares of RPL for an RIL share. Speculators bet on a ratio of 6 to 1, the price of RIL closing at Rs.176 against an RPL price of Rs.29.



Other stray gainers over the fortnight included Mahindra & Mahindra, possibly because it is one of the few scrips that is still allowed for forward trades. The scrip closed at Rs.105, up by Rs.35. Premier Auto, up Rs.8 to Rs.54 rose for apparently similar reasons, while Castrol has been a steady gainer over the year (*see chart*).

The only short-term risks facing the market at this time are vagaries of the monsoon or of Manmohan Singh's tenure. If the winds blow right and Singh stays in the saddle, all — say brokers — will be right with their world. Have brokers ever been wrong with their predictions? This can only be answered by a counter question, have they ever been right with their predictions?

■ RAFIQ DOSSANI

Meet the successful Entrepreneur, trained in Finance by ICFAI

FINANCE FOR NON-FINANCIAL EXECUTIVES

Nature	Self-study at home and week-end workshops.
Duration	6-8 months
Core Modules	• Financial Statement Analysis • Management Accounting & Control • Working Capital Management • Project Finance & Appraisal
Elective Modules- Any Two	• Marketing Finance • Production Finance • Project Management • Financial Services • Personal Finance & Investments • Management Control & Reporting System • Financial Management in Public Enterprises
Examinations	At 25 centres, once in 6 months

Over 1400 non-financial executives sponsored by reputed companies such as Voltas, ITC, Berger Paints, India Cements, Abbott Laboratories, Hindustan Ciba-Geigy, Mather & Platt, Asian Hotels, Madura Coats, HCL, CMC etc., are going through the DBF (Diploma in Basic Finance) Programme, specially designed by ICFAI for the benefit of non-financial managers. Basic knowledge in finance and skills in using financial tools can put you on a faster path to the top.

The executives learn about the magic world of finance through structured self-study at home and by attending week-end workshops. You will enjoy the entire process. A new learning experience. A fantastic voyage of discovery!

If you are interested, please write today for a copy of the prospectus enclosing a demand draft for Rs. 60 drawn in favour of "DBF A/c ICFAI" payable at Hyderabad.

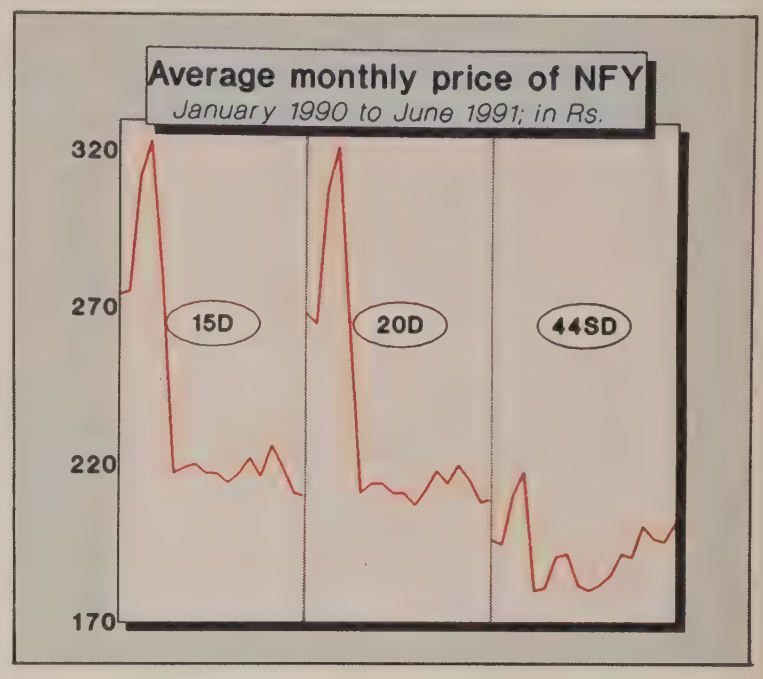
ON FILAMENT YARN

agging despite relief

gainst an aggregate installed capacity of 55,000 tonnes, production and s of NFY for 1990 were 41,163 tonnes 10.8 per cent) and 38,614 tonnes (up per cent). The market weakened after y thanks to the Gulf war and civic blems at home. In particular, a large nber of powerlooms in major weaving tres like Surat, Bhiwandi, etc. re- ned idle.



While NFY prices rose by an average of 25.85 per kg over 1989 levels, this was re than offset by two massive excise es — in March by Rs.16.16 per kg and December by Rs.15.60 per kg. Come 1 and the punches continued. Deval- on of the rupee and import curbs lt a savage blow to the industry by ng the landed cost of the primary raw erial caprolactam considerably (1.1 f caprolactam is required for every kg FY). Domestic supply comes from Fer- ers and Chemicals of Travancore Ltd T) from where supplies are yet to sta- e. Gujarat State Fertilisers (GSFC), on ther hand, supplies mainly to its affi- — Gujarat Nylon (soon to be ged with GSFC). Thus only 20 per cent tal requirement is met indigenously. e higher cost of caprolactam due to lluation (50 per cent increase in CIF e), customs duty hike (from 75 to 80 ent in December 90) on higher CIF e and the current Exim scrip pre- n of 40 per cent mean that the landed in August 1991 works out to 16.90 per kg (compared to Rs.63.50 g in June 1990) — an increase of 84 cent. In comparison, the MODVAT ts given in the 1990-91 budget, equivalent to the countervailing duty, is a poor sop which reduces the landed cost by 11.6 per cent to Rs.103.33 per kg. Domestically, the MODVAT relief was quickly mopped up by the public sector FACT which has now hiked caprolactam prices by Rs.15 per kg. GSFC is also expected to follow suit.

For the six month period ended June 1991, NFY production totalled 17,392 tonnes (down by 16 per cent from the six months ended June 1990). Prices of NFY during this period are at far lower levels than those prevailing last year and have failed to harden despite the drop in production, (*see graph*) indicating that demand for NFY is still sluggish. According to P.N. Maitra, secretary general of the Association of the Synthetic Fibre Industry, "even if concerted efforts on the part of the NFY manufacturers result in the ceiling price being raised, it is doubtful, if in the wake of sluggish demand and consumer resistance, whether the actual selling prices would touch ceiling levels.

Total production of NFY for 1991-92 is likely to be 35,000 tonnes. Given the high costs, this is not surprising and does not suggest cartel-like behaviour. In this context, the recent flare-up in share prices of some companies producing NFY such as Baroda Rayon occurred probably due to the better performance of other products like Rayon.

The first half of 1991-92 could be as bad as the earlier six months. For Shree Synthetics and Baroda Rayon, in 1990-91, profit margins crashed at the same time as equity increased (*see table*). Both companies are undertaking capacity expansions in PFY which would reduce the share of NFY in the new product mix. While JCT's first half performance is remarkable, it is unlikely to be sustained for the full year. Modipon's sales and net profit for the first half ended December 1990 are down by 4 per cent and 37 per cent respectively.

While companies like Shree Synthetics and JCT are exploring exports, Maitra is not optimistic as world demand is stagnant. Also, additional export cost is incurred because of sophisticated packaging needed, which raises costs by about Rs.30 per kg raising export prices of NFY by that amount. All in all, a glum picture for the glamour product of the eighties.

Dr. D.C. Kothari
Chairman

kunal ENGINEERING CO. LTD.

Regd. Off.: 202 'Prestige Point', Haddows Road, Madras-600 034.

Mr. Deepak Banker
Vice-Chairman & Managing Director

Commitment, our culture Confidence, our quality.

Over 25 years ago, an engineering company was established in Ambattur, Madras, for the manufacture of Textile Spindle Upper Parts. In the first full year of commercial production, the Company produced 128,000 Upper Parts and the total turnover was Rs.28 lakhs.

Today, the Company – Kunal Engineering – is producing over one million Spindles, and has added to its product range, a number of highly sophisticated components, all for the Textile Spinning Industry, all with the technical knowhow from leading manufacturers in Europe. The turnover has increased to nearly Rs. 40 crore.

The year 1990-91 has been the best year so far for the Company – highest in turnover, profits, earnings, and dividend. Turnover increased to Rs. 34 crore from Rs. 24 crore in the previous year. A dividend of 25% has been approved for the year 1990-91.

Innovation:
the spirit of a pioneer

Kunal Engineering can be credited with pioneering the science of spindle technology and earning for spindles the rightful place in the industry. It was Kunal who demonstrated the vital role spindles play in enhancing quality and boosting productivity. In the field of energy conservation, Kunal Engineering has been active even before energy conservation was perceived as a national priority. The Company's products have over the years successfully helped the spinning industry bring down energy consumption appreciably.

Resilience:
a mark of excellence

The Company went through one of the worst recessions that the Industry had ever suffered, both in intensity and in duration. It was the Company's resilience that enabled it to withstand the hardships of the recession for over six years.

R&D:
new products, new standards

Kunal Engineering has successfully developed and established as import substitution, Heavy Duty Spindles for Draw Twisting machines, spindles for Two-for-one Twisting machines, as also a number of other varieties of heavy duty spindles.

The Company's Plastics Engineering Division, started in 1987, has successfully established high quality Yarn Carriers, not only in India, but also in leading mills abroad. The Kunal-EA Yarn Carriers have demonstrated, for the first time, the potential for power saving, higher productivity and better quality, which Yarn Carriers contribute.

Exports:
a global presence

Kunal Engineering products are working in all the continents of the world! The Company has continually been the recipient of top Awards for Exports in its category, from EEPC and other bodies.

Future:
confidence inspired by competence

The Company's ongoing R&D Projects involve appreciable quality upgradation and addition of new varieties to the product range.

The Company's working in the first three months of the current year have been satisfactory. The Company hopes to at least maintain its previous year's performance. It could be much better, given the right blend of favourable factors.

Kunal Engineering. A Company characterised by its commitment to the industry, to its customers, to the country.

The Company's Annual General Meeting was held on 31st July 1991.

"No beating the golden oldies"

Manali Reshamwala and Alka Mukundan spoke to the father-and-sons trio of Priyakant, Nailesh and Vipul Dalal to discover their favourites of the future in today's decidedly upbeat market

his set of Dalals is undoubtedly bullish on the market. Even as it climbs higher r the 1,700 mark, Nailesh Dalal be- es that the market's rise is not a mere culative bubble ready to burst. Says "Even if a 'technical correction' oc- s at the current Sensitive Index levels about 1,700, the market is unlikely to below 1,500." In fact, with his 12-year erience in the market, he feels confi- t that the BSE Index will touch 2,000 Diwali this year.

mputer is king."

kers are always comfortable about future when the market is at a peak. soaring stockmarket in- es have got brokers all ex- d and the name of the game e days is to find the stock will rise the most.

n this search, says Nailesh, e computer is king." In fact, creator of the market's cur- frenzy is the computer. h software packages offer- in-depth financial data at mere touch of a button, kmarket analysts can pre- price trends and give accu- buy/sell signals.

or example, notes Nailesh, y availability of data ed Dalal and Broacha esti- the effects of the recent de- ation on companies.

nis suggests a preponderant est in fundamental and nical analysis, those nu- crunching techniques used for pre- ng earnings and stock prices. Nailesh further into a very specific aspect of rade: "Two factors foretell the for- of a scrip: the bull investors' interest government policy. No other factor, even a monopoly product or sound cial and asset management can have uch of an impact on stock prices," he

is was amply reflected, he believes, jump that fertiliser company shares even as the budget proposals an- ced an increase in the selling prices rtilisers. However one should go be- the psychological impact of freed s and also look into the usefulness of roduct, cautions Nailesh.

en more pronounced were the effects of the recent devaluations. Says Vipul, "We calculated that, thanks to the devaluation, the solvent extraction company, Tri-star Soya would see an increase of Rs.9.51 in its EPS (over its March 1990 figures). Of course, we had identified the share as a good investment even before that. Thanks to its good fundamentals, the share had already begun to be accumulated by investors as well as speculators."

Nailesh feels that southern companies tend to be underpriced because "prices are set in Bombay". He particularly likes spinning companies down south. He expects spinning industry stalwart Precot Mills to report an EPS of over Rs.20 for March 1992 and expects its share price to more than double from its current level of Rs.120 to about Rs.250. Another spinner, Super Spinning, is expected to increase EPS from Rs.12 now to Rs.18 with the share price jumping by Rs.50-75.

Vipul likes Madras Cement, a share that has more than doubled following last year's cement boom. He predicts a gross profit of Rs.40 crore and an EPS of Rs.750 to Rs.800 for March 1991 for Madras Cements. Given the already spectacular rise, he predicts that the scrip might not continue to rise at that rate, but expects a rights issue by the company.

The other southern companies that they like are Carborundum and Chemicals and Plastics.

Moving northwest, the Dalals feel that cement, cotton textiles and filament yarn, shipping, sponge iron and pharmaceutical industries are the industries that should do well in the next two to three years.

They particularly like the sponge-iron industry for its good performance and despite its already spectacular share price performance. In favour is A group mammoth, Grasim Industries, whose sponge iron output (expected by mid-1992) is expected to take care of the north Indian market. Grasim, notes Vipul, adds lustre with its diversified activities in textiles and the completed expansion of its cement capacity to 2 million tonnes this year.

The other sponge iron producer that they favour is Sunflag Steel at its current price of Rs.25. The plant is in regular production as it has overcome teething problems and now looks set for a healthy run.

Priyakant is perhaps the most cautious of the trio. While he expects bullish times through the nineties, he notes that corporate innovativeness will lead the way for share price jumps. In this context, he feels that there is no gainsaying the old favourites with their low historical costs and proven management. His favourites, not surprisingly, are Tata Steel, Tata Locomotive, Larsen & Toubro and Escorts. "There is no beating the golden oldies," he says.

PRIMARY ISSUES

The rural option

Just 15 years ago, almost every durable consumer product was in short supply and even black & white TVs had to be booked in advance (colour TVs were still six years away). The result was that companies with small capacities made huge profits selling to captive urban markets.

Move forward 10 years and there is a completely different scenario. By the mid-eighties, nine colour TV manufacturers competed to offer a range of foreign and local technologies. Marketing began to play a key role, although rural markets remained largely untapped.

Move to the present and we find that some of the TV manufacturing companies of 1985 have disappeared, with capacities stabilised among three big players. The demand growth from urban areas is tapering off and the big three are all looking rural. Even foreigners are eyeing the Indian rural market which is even larger than some East European countries in buying power.

The right strategy. Financial services, particularly new issues of capital through primary markets, are set to follow the same trend and it is important that the right marketing strategy be developed now. Essentially, the situation now is similar to that of consumer products in the mid-eighties and — given the current liberalisations — could quickly change to a highly competitive market, perhaps even faster than for consumer products.

Let us map the change. In 1990-91, about Rs.1,600 crore of new issues came on the market and 95 per cent of them were oversubscribed. In 1989-90, over Rs.2,800 crore was raised with four big issues gathering over Rs.1,500 crore. But, apart from the four mega issues, almost none of the others needed to make a serious marketing effort. Offices in a few key centres in Gujarat and Bombay almost filled the bill. Till today, investors in new capital issues come primarily from Gujarat and Maharashtra (about 65 per cent, with Baroda exceeding Bombay) with the rest from the three other metros and a handful of big towns.

A situation unchanged today. The average issue of Rs.5 crore of a typical company is over-subscribed from just a few centres. For example, when the secondary market was depressed in February, a relatively large issue of Rs.39 crore like that of ICICI was oversubscribed three times, while even a relatively unknown issue like that of Biax for Rs.3.8 crore was also oversubscribed thrice. Of course, recent oversubscriptions have been considerably more as the secondary market has picked up.

Of course, today an issue below Rs.10 crore is not considered large. That a company like Reliance Industries could even think of a near-Rs.1,000 crore issue is an indication of the change in size of this market and its underlying health.

But, although the investor population has quadrupled in the past decade, 95 per cent remains urban. The household sector contributes a mere 8 per cent of total capital raised through primary markets, much below its savings even in currency.

> Rural markets appear too costly for smaller primary issuers, especially given the current "hot" secondary and primary markets. But... about Rs.14,000 crore per annum will need to be raised from capital markets. Given the size of urban subscription, it is clear that there is no alternative but to go rural and tap the tremendous potential market in this sector

The reason for the urban nature of capital markets is primarily the ease of marketing to these areas. Yet, certain interesting trends exist. For example, wherever there is an urban rural continuum as in Gujarat and Maharashtra, subscriptions to capital issues have come in from rural areas and wherever the continuum is disrupted as in larger states like UP, Bihar and MP, the popularity of capital markets remains a purely urban phenomenon.

Rural markets exist. Yet, there are adequate signals that rural markets exist in various parts of the country. An interesting aspect of the mega issues of 198 particularly the Larsen & Toubro Nagarjuna Fertiliser issues, was tha were able to capture significant rura scriptions. Nagarjuna Fertilisers did ticularly well in the rural south, hit considered a bulwark of conserva This signified that traditional thin about rural population being too averse to consider investing in equity to be reconsidered.

On the other hand, it is true that markets appear too costly for smalle mary issuers, especially given the cu "hot" secondary and primary mar But consider this in the context of hig terest rates and industrial delicensing now expected that about Rs.14,000 per annum will need to be ra from capital markets. Given the of urban subscription, it is clear there is no alternative but to go and tap the tremendous pote market in this sector.

It is not that special strategie needed for tapping rural mar But better awareness about the and returns of investing in equity must. Second, more stock excha ought to come up, while the broker network also needs to be panded. This is because rural in tors in primary markets will invest unless they have easy acce converting their investment into uidity via a stock exchange. In context, the Pherwani Panel's ommendation for fewer stock changes perhaps ought to considered only when the country h telecommunication system on a par western countries. Third, recent guidel to have at least 57 collection centres public issues could include a rural con — although making this operatio given the tight schedules under which issues work, will need careful thought.

In essence, attracting rural equity re requires determination rather than dist strategies. At present, issuers are mar ing well, but as the tide of new issues ri it will be necessary to expand the harb if they are to be accommodated.

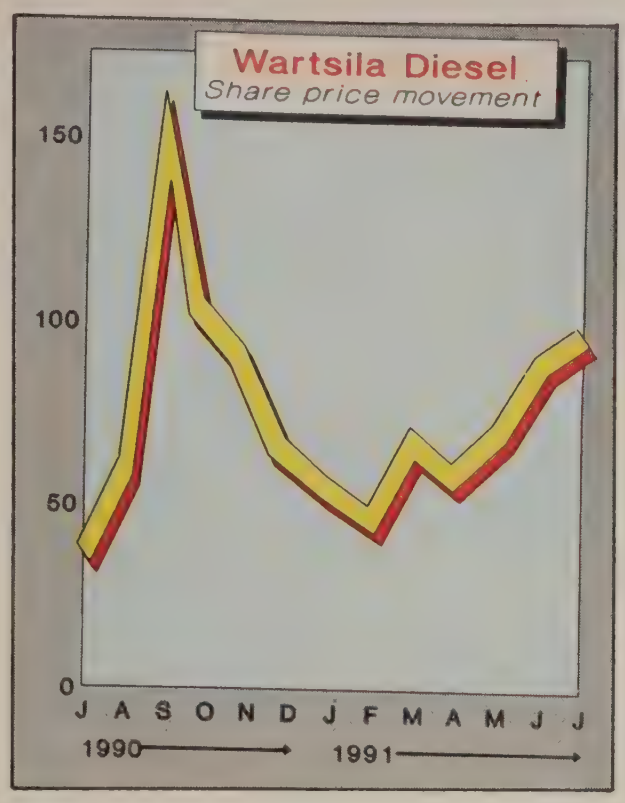
artsila Diesel India

ring profits wipe out half-year loss; re price nearly trebles; competition eases but orders worth Rs.50 crore in hand

rtsila Diesel India Ltd was set up in aboration with Wartsila of Finland, ld leader in diesel engines, for the nufacture of diesel generating sets. pite WDIL's close links with the parent pany, which has a 25 per cent equity icipation in the Indian venture, WDIL's 3 crore public issue in May 1989 — rsubscribed 17 times — was listed ini- y on the Bombay and Delhi stock ex- nges in August 1989 at Rs.20 npared with an issue price of Rs.10). s 1989-90 performance was discour- g with sales of Rs.8.07 crore and net fit of Rs.15.9 lakh (or 16 paise per e). These sales came from the delivery ne diesel genset of 4 MW.



he share price skyrocketed to Rs.160 eptember 1990 but fell subsequently n half yearly results showed a loss of 9 lakh. The results for the full year 0-91, however, improved substan- y and the company earned Rs.4.3 per e for the second half. The share price ed up again and currently quotes at 23 from a low of Rs.45 in January. despite no dividend being declared 990-91.

ys a leading broker, "While the price s linked to WDIL's recent earnings an- ncement, investors are also excited t the company's "sophisticated tech- gy".

evertheless, as its managing director, allick points out, WDIL's performance

involves risks related to its import content and new competition.

Over 90 per cent of WDIL's sales come from the manufacture of DG sets in the 0.5 MW to 7.5 MW range, using technology that is considered the world's best. The sets can work with any kind of liquid fuel (including low sulphur heavy stock fuel which is the first waste product from processing crude oil). Although its products are relatively costly, the savings in maintenance and running costs offer better value.

Value addition is high with variable costs in 1989-90 at a low 54.6 per cent of sales. Hence, when sales picked up in the second half of 1990-91 (eight of the nine DG sets sold in the year were delivered in the second half), profits soared (even though variable costs rose to 74 per cent of turnover).

The latter was largely because imported raw materials became costlier due to the continuous devaluation of the rupee in 1990 (imports also attract 63 per cent duty), causing imports to rise to 77 per cent of total raw material costs, compared with 68 per cent in the previous year. The figure would have been higher, according to WDIL officials, if the company had not successfully indigenised certain raw materials.

Exports are a way out of the problem of raw material costs. Says Mallick, "We have started by exporting components. We hope to export full DG sets once the desired quality and delivery schedules can be met. We are one of the 50 companies that have applied for ISO 9000 approval (necessary for exports to Europe)."

Future competition comes in the form of two recent collaborations, one between Modis and a British firm, Mirlees, and another between MAN of Germany with an Indian group, Khoslas. But Mallick is confident of WDIL's superior product.

The directors' report indicates that the current year could be even better than 1990 despite economic slowdowns and devaluation. It has Rs.50 crore worth of orders in hand which it will execute during the year as well as negotiate fresh orders. Company officials view the long-term prospects as good; but market analysts expect a turnover of Rs.100 crore for March 1992 with gross profit at Rs.10 to 12 crore.

Nalco Chemicals

Operating cost drops; high PE ratio of 91 times; share price more than trebles; turnover expected to continue growing at 40 per cent

Nalco Chemicals India Ltd was set up in 1988 to manufacture specialty chemicals like oilfield chemicals, process and water treatment chemicals. The superior technology has been provided by Nalco Chemicals Co of the US. Its products lengthen the lives of machines like boilers by reducing corrosion and wear and tear. Companies like Hindalco and Indian Aluminium are clients of Nalco. Coal India is believed to be the next potential large client.

Nalco's trick is in its technology. Production costs of the chemicals are very

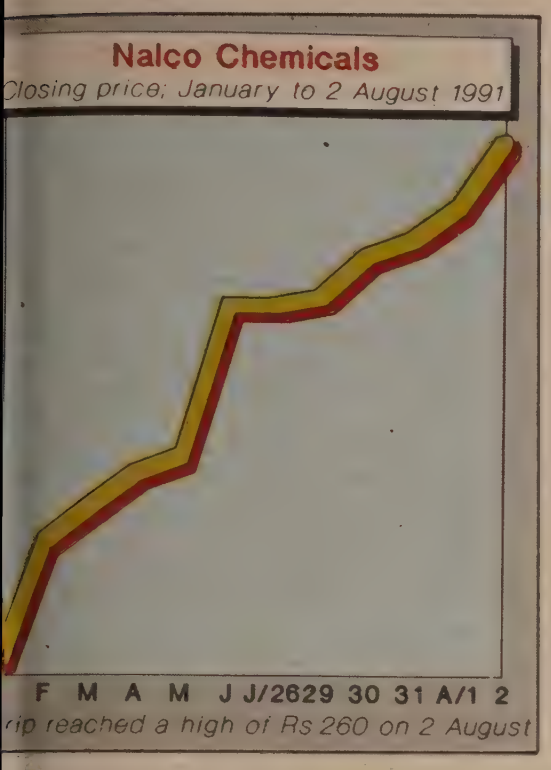
SKIP THIS AD AND SOMEBODY SOMEWHERE WILL TURN BLIND

Millions of Indians suffer from cataract. Slowly but surely they are turning blind. There is little hope for them. Except from one quarter. You. By donating as little as Rs. 100, you can help someone see. At the Lok Kalyan Samiti we have organized 275 eye camps in rural and urban areas. These have helped nearly 20,000 cataract patients. But millions are still waiting. For a little help from your side. Please hurry. Because minute by minute, somebody somewhere is turning blind.

Lok Kalyan Samiti

A voluntary, non-political, non-profit health and family welfare organisation.

Mr. K. S. Gupta, The General Secretary
Lok Kalyan Samiti, 11A, Vishnu Digamber Marg,
New Delhi-110 002, India.



For Rs. 100/- per cataract operation, I would like to sponsor 1/2/5/10 operations, payable yearly/half yearly/quarterly/monthly. I am enclosing a crossed cheque/demand draft in favour of Lok Kalyan Samiti for Rs. _____ Please send me details with photograph/s of the person I am sponsoring. Name _____

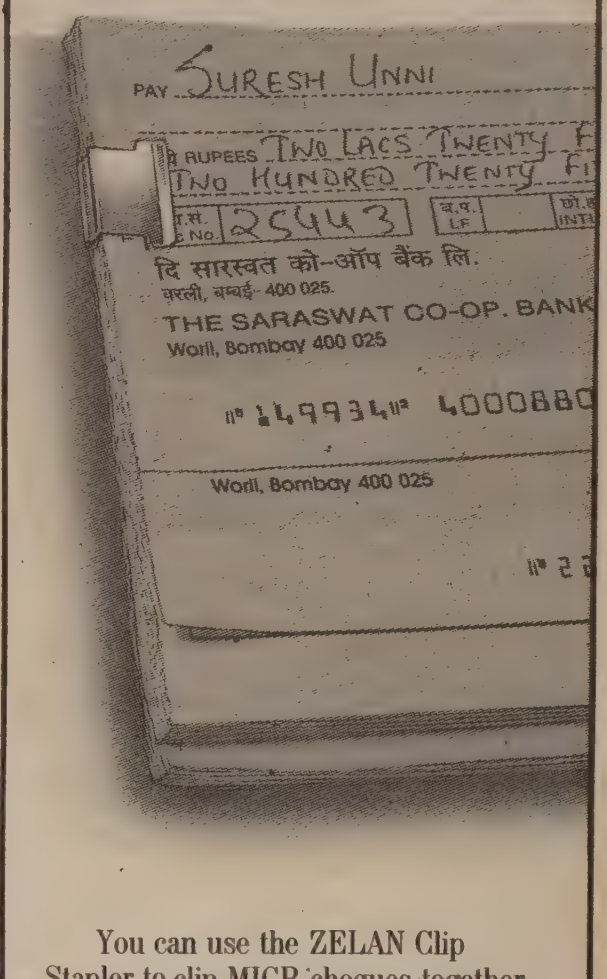
kmé

rsifying into other drugs; net up 83 per cent, exports multiply fold; rights issue coming



The company is trying to make its presence felt in the pharmaceutical industry. Production of bulk drugs and formulations have almost doubled in the year 1990-91 compared to the previous year. The bulk drugs plant operated at maximum capacity for the year 1990-91. The company has a heavy emphasis on Chloroquin Diphosphate, but is trying to diversify into other bulk drugs too. Formulations (which made up 31 per cent of sales) were affected by the Drug Price Control Order (DPCO), as a result of which margins were squeezed. However, with the eventual phasing out of the DPCO, the pharmaceutical division should register enhanced performance. Production of the cosmetics division was maintained at previous year's levels. In 1989-90 pharmaceuticals made up only 27 per cent of the company's turnover, compared to 37 per cent in 1990-91. On the other hand, cosmetics made up 73 per cent of sales in 1989-90 compared to 58 per cent in 1990-91.

Nexus + Equity/SEG/0067a

1989-90 to 24 per cent in 1990-91. A large portion of the fatter net profit can be attributed to the dynamic performance of Lakmé Exports — the wholly owned subsidiary of Lakmé Ltd situated at the Kandla Free Trade Zone. "Almost all of the company's exports are currently going to the USSR", says Mulye, the company secretary of Lakmé Ltd. Lakmé Exports has shown a phenomenal 672 per cent growth in net profit in the year 1990-91 adding Rs.3.75 crore in dividend to its parent company and the company expects to maintain this performance.

The company has earned an EPS of Rs.10.16 in the year 1990-91, compared to Rs.5.54 in the previous year. The board has recommended a 50 per cent dividend which is the highest it has ever paid to its shareholders. This is also the highest payout ratio the company has ever maintained. This could be due to the rights issue the company is planning to offer to its shareholders.

Lakmé Ltd is coming out with a rights issue worth Rs.9.39 crore with a view to augmenting long-term resources of the company and for essential capital expenditure and for working capital for ongoing operations. The company is offering 1.1 million equity shares of Rs.10 to the existing shareholders at a premium of Rs.75 per share. This will increase the equity capital from Rs.315.55 lakh to Rs.425.4 lakh. Consequently, the reserves will strengthen from Rs.1,130 lakh to Rs.1,958 lakh.

The scrip reached a 1991 low of Rs.200 and a high of Rs.305. It is currently trading at a cum rights price of Rs.275 (13/08/91) discounting earnings 27 times; which is the market average PE ratio.

TRENDS

HMM

It has been a healthy six months for HMM Ltd., makers of malted food drinks like Horlicks and Boost. The first half results for the period ended June 1991 show sales up by 37.1 per cent over the same period in the previous year. Raw materials' costs have increased by 39.6 per cent over the same period.

Profit margins at the gross and net level have dropped by 2.2 and 2.61 points respectively. With the expansion and modernisation programme at its plants

both made in 1990 are expected to reach optimum productivity levels in this year.

Further, the electronics export unit at Kodaikanal in Tamil Nadu is also expected to commence production in the third quarter of 1991.

RESULTS ANNOUNCED

Bombay Suburban Electric Supply

Performance packed with powe punch for this power distributing pany for the year ended March 1

Turnover is up 19.6 per cent at Rs.4 crore yielding a gross profit margin per cent (up by 5.4 points). With provision of Rs.6.60 crore as against the previous year, profit after tax bu fore statutory appropriations is up per cent to Rs.33.17 crore. Net p margin in turn jumped four points t per cent. The first conversion of de tures recently issued is due on 21 1992 and this will enlarge equit Rs.57.70 crore. The two power uni Dahanu are expected to go on strea March 1995. The scrip now quote Rs.135.

Punjab Tractors

Rise in turnover and profitability, dividend hiked by ten points. EPS a bit lower on ex-rights equity

For the year ended March 1991, g profit margin is 9.9 per cent (8.6 per on a turnover of Rs.186.50 crore (u per cent). On ex-rights equity of Rs. crore, the company has earned Rs.2 (Rs.24.05) which works out to Rs.3 on cum rights equity. Dividend is per share (Rs.5) at a payout of 27 per (21 per cent). The scrip quotes at Rs discounting these earnings 11.6 times

Khatau Junker

Turnover up 62 per cent, slight p sure on margins at gross level whil net level, EPS crosses face value this Dilip Khatau group company

For the year ended March 1991, Kha earned a gross profit margin of 7.2 cent (7.7 per cent) on a turnover Rs.28.61 crore (Rs.17.63 crore). E Rs.14.06 (Rs.8.02) while dividend share has been maintained at Rs.2 The scrip quotes at Rs.65 discount these earnings 4.6 times. The projec

ufacture vat dyes and the expansion modernisation of the malathion/ ethoate plant are making satisfactory gress. They are expected to commence mercial production in the last quarter ne current financial year. This natu- will exert some cost pressure on it margins for the year ended March .

romandel Fertilisers

nge in accounting year from Sep- ber to March, profit on sale of ent undertaking adds Rs.36.30 e to the bottomline that is other- in the red with a net loss of Rs.2.36 e

the six months ended March '91, net s were Rs.129.34 crore and gross it margin 9.2 per cent. With a tax bur- of Rs.11 crore as against nil in the ious accounting year ended Septem- 90, operations have resulted in a net of Rs.2.36 crore. Profit on sale of the ent undertaking effective from 29 ember 1990 however adds a chunk of 6.30 crore to the bottomline. Divi- per share is Rs.2.30 as against Rs.2 the previous year. The scrip now es at Rs.77.50.

ndustan Motors

dend skipped, bottomline shrink- nd turnover rising marginally for ear ended March 1991

over at Rs.632.59 crore is up barely cent while gross profit margin is 2 per cent (2.5 per cent). On an y base of Rs.26.33 crore, net profit is re Rs.25 lakh (Rs.2.72 crore). Divi- was skipped and the scrip quotes at 9.50.

IN BRIEF

dard Batteries have earned a net t of Rs.69.35 lakh (Rs.1.71 crore) ave recommended a dividend of 16 ent for the year ended March 1991.

wala Chemicals & Plastics have re- d CCI consent to issue 14 per cent ed fully-convertible debentures on a s basis aggregating Rs.2.76 crore.

al Overseas, promoted by Hindustan Electro Graphites and Rajasthan Spg & Wvg Mills of the Bhilwara group, is putting up a textile plant at Madhya Pradesh. The project, set up to manufacture combed cotton yarn, is estimated to cost Rs.35 crore and will commence commercial production in October 1991.

Ranbaxy Labs announced the launch of India's first Dipstick Elisa (enzyme linked Immuno Sorbent Assay) Pregnancy Test which could diagnose pregnancy on even the very first day of a missed menstrual cycle.

To part finance its expansion programme, **Jaybharat Fabrics Mills** of the Arya group, proposes to issue 400,000, 15 per cent partly convertible debentures of Rs.125 each, on a rights cum public basis.

Yokogawa Keonics, manufacturing process control systems and instruments, has turned the corner with its second full year of production. Net profit earned for the year ended March 1991 is Rs.1.69 crore against a net loss of Rs.58.72 lakh in the previous year. Having already received orders of Rs.40 crore, the company is well placed.

Tata Press has a black bottomline for the year ended March 1991 having posted a net profit of Rs.27.04 lakh as against a loss of Rs.56.13 lakh in the previous year. Dividend has been stepped up by two points to 12 per cent.

Turnover is up 14 per cent at Rs.49.05 crore yielding a gross profit margin of 21.4 per cent (19.7 per cent) for **Rama Petrochemicals**.

During April-June 1991, **Bajaj Auto** produced 2,04,539 two wheelers (up 18 per cent) and clocked a turnover of Rs.307 crore (up 19.5 per cent).

Lakmé is to issue 11,04,437 equity shares of Rs.10 each at a premium of Rs.75, on a rights basis aggregating Rs.9.39 crore.

Triveni Engineering proposes to offer debentures on a rights basis in the ratio of 1:2 subject to CCI consent.

Reliance Capital & Finance Trust has earned a net profit of Rs.4.25 crore for its first year of operations ended 31 March 1991 and has recommended a maiden dividend of 12.5 per cent.

Swedish Match AB, the major shareholder in **Wimco Ltd** has decided not to go ahead with the sale of its stake to the Flex group.

Udaipur Phosphates has proposed a partly convertible debenture issue on a rights basis in the ratio of 1:2.

Indian Hotels propose to issue rights shares of Rs.10 each, at a premium of Rs.50 per share, in a 1:3 ratio.

TEST OILS

IN MINUTES ON SITE

In service lubricating oils from DG set, Earth Moving machinery, Automobiles & Industrial Machinery should be tested regularly to decide the correct oil change period. Testing also signals early warning on oil related equipment problems/ damages. Also new oils must be tested from each and every barrel to seggregate adulterated oils.

We present ENGINE OILAB: a portable kit to test New & Used Engine oils on the spot. Tests can be done even by a layman to determine exact Viscosity, Water Content, Total Base Number, Insoluables & Dispersancy characteristics. Accurate & instant results are assured by Engine Oilab on the spot.

ENGINE OILAB

Test oils in minutes ... on site

Also available following ON SITE Oil Test GAGES to get instant results: **VISGAGE (MODEL-II)**: To test Diesel quality • **F.O. GAGE:** To determine Furnace Oil viscosity and correct burner pre-heat temperature • **VISGAGE:** To determine viscosity of lubricating oils in cSt at 40° C-range 20 cSt–460 cSt • **HYDROGAGE:** To check exact water % by volume in any liquid • **T A N GAGE:** To determine Acidity in used oils.

Chembur Patalganga Pipelines

The novelty of Chembur Patalganga Pipelines Ltd's project is that the company will own, maintain and operate the pipeline it constructs and merely rent it out to the user.

Though promoted by Satyapal Jain of Comet Steels and Sipta Coated Steels, CPCL can safely be called a Reliance group company. In fact Reliance Industries Ltd (RIL) have also advanced an unsecured amount of Rs.16 crore towards CPCL's project cost. Reliance's executive director, Manoj Modi, says, "We will provide this kind of infrastructure to any private sector company." But he also informs that the company's next project will be the construction of a water pipeline and naphtha pipeline for Reliance in Hazira. The construction contract has been given to Dodsal and Modi assures that there will be no escalation in costs due to the devaluation.

The prospectus informs that as per the line agreement, RIL will have to pay transportation charges per tonne of feedstock transported. In case RIL does not have adequate material for transportation it will have to pay a minimum revenue. The pipeline should be laid by October 1991.

Various financial institutions have given term loans totalling Rs.47 crore on which interest costs will be around Rs.7 crore. According to Modi other operational costs will total around Rs.2 crore. Modi, however, declined to comment on the expected income.

CPCL's equity capital is a modest Rs.8.7 crore. Unlike other public issues the present one is launched without the usual pre-release publicity and press write-ups. Also, the prospectus seems to have been printed in the smallest type permissible. Is the company dissuading public investment?

Chembur Patalganga Pipelines	
Issue opens	: 19 August 1991
Size of issue	: Rs.8.7 crore
To Indian public	: Rs.4.81 crore
Instrument	: Equity shares of Rs.10 each
Promoter	: Satyapal Jain
Object of the issue	: To undertake a project for the laying of two cross country pipelines from Bharat Petroleum's refinery at Chembur to RIL's petrochemical complex at Patalganga
Project cost	: Rs.71.70 crore
Listing	: Bombay, Pune.

Indian Acrylics

To be set up in technical collaboration with Du Pont of the US, Indian Acrylics Ltd's (IAL) project will be commissioned in two phases. The first phase, will have an installed capacity of 12,000 tpa. According to IAL's promoter, R.K. Garg, a project of this magnitude is being set up for the first time in India. Whilst Du Pont will supply complete technical knowhow for the development of acrylic fibre for the first phase, Chemtex Inc of the US, will supply engineering information for the expansion up to 20,000 mtpa.

Chemtex will also supply the critical equipment for the project. The imported equipment at Rs.64.26 crore works out to a substantial 34 per cent of total project cost which may see a hike due to the devaluation. "As the plant is based on imported supply of feedstock, the company will have to import its petroleum-based raw materials viz acrylonitrile and dimethyl formamide which will also be subject to price fluctuations. It is the customer who will have to bear the increase.

A high equity, Rs.54.35 crore, may well be difficult to service but IAL's project has got equity as well as fund support from the Asian Development Bank and mutual funds including Rs.136 crore loan financial institutions.

Interest costs will be high but a asset base will give rise to higher dep tions which will aid the company' flow requirements.

Garg informs that IAL has a low even point of 7,000 tpa which sho achieved in the first year, ie Sept 1992.

Indian Acrylics	
Issue opens	: 27 August 1991
Size of issue	: Rs.54.35 crore
To Indian public	: Rs.14.70 crore
Instrument	: Equity shares of Rs.10 each
Promoters	: R.K. Garg and Punjab State Industrial Development Corporation Ltd (PSIDC)
Project	: To set up a plant for the manufacture of acrylic staple fibre with an installed capacity of 20,000 tpa
Project cost	: Rs.190.24 crore
Plant location	: Sangrur, Punjab
Listing	: Bombay, Delhi, Calcutta, Ahmedabad and Ludhiana

Akhil Ceramics

Despite a number of recent entran ceramic tile industry still looks pro to Akhil Ceramics Ltd. The comp entering the capital market to p nance its Rs.13.30 crore project to ceramic floor and wall tiles. The the finance is being supplied by th moters, collaborators, mutual fun the APIDC.

The company plans to introduc grinding technology for the first ti the country. This will mean lowe material losses than in the conven wet grinding process. Since spray d of the clays is eliminated, there is a saving of 15 to 18 per cent per fi tonne. The expected fuel saving pe is Rs.45 lakh.

The machinery is being supplie MORI of Italy, who will also buy ba per cent of the total production. Wi installed capacity of 13,000 tonne annum, commercial production pected to commence by October The company expects a turnov Rs.2.5 crore at the end of the fir months says S. Ramana, one of the moters of the company. Accordi him, "Because of the savings throug new technology, we expect to com not only in the ceramic tile market also in the mosaic tile one."

Akhil Ceramics	
Issue opens	: 26 August 1991
Size of the issue	: Rs.4.63 crore
To Indian public	: Rs.1.96 crore
Instrument	: Equity shares of Rs. each for cash at par
Promoter	: S. Ramana
Object	: To part finance the ceramic tiles project
Project cost	: Rs.13.30 crore
Plant location	: Kayam village, AP
Listing	: Bombay and Hydera

A success in paper now enters the high growth area of cotton yarn.

And looks forward to attain new heights in turnover and profitability.

If you have been following our fortunes, you know how well we have done in paper. Thanks to continuous technology upgradation, our paper plant has been operating at around 100% capacity utilisation winning us three successive National Productivity Council's Awards for the years 1988, 1989 and 1990.

Our financial performance has been impressive as well. For the 18 month period ended 31st March, 1991, Shreyans Paper recorded a Total Income of Rs. 3485.62 lacs (a 41% annualised increase over the previous period) and a Net Profit of Rs. 409.52 lacs (a 65% annualised increase over the previous period). Annualised earning per Share stood at Rs. 13.32, while the book value per share soared to Rs. 43.90.

Our shareholders have reaped handsome rewards. Uninterrupted, growing dividends since 1987 and the share is quoted at Rs. 85 (Ex-Rights) on 27.6.1991 at Bombay Stock Exchange.

We continue to invest further in paper. A Rs. 769 lacs modernisation-cum-expansion programme completed in May, 1991 has increased our paper capacity to 20,000 TPA. And will contribute towards a major growth in Turnover and profitability.

We are also diversifying with a Rs. 3,700 lacs – 24,960 spindles cotton yarn project near Ludhiana. The Ring Spinning plant incorporates state-of-the-art equipment from world renowned names like Murata of Japan and Rieter of Switzerland – 6000 spindles have already been commissioned; by October 1991, 18000 spindles will be in operation and by mid 1992, the plant will be fully operational.

Cotton yarn is in great demand worldwide with the changing fashion trends. We propose to export 25% of our cotton yarn – which is expected to further boost our profitability.

Paper and Cotton Yarn. Two high growth businesses that will propel us to a bright future. A future we would like you to share with us.

olitary reaper

l the scrips moved up over the fortnight under review.

ongrats to our sole winner of IC348, Umesh C. for predicting the om accurately.

iven below is a new list of six scrips, and their closing prices on 9 August 91. Pick the share that you think will e the most in percentage terms by 9 otember 1991 and rank it number one. en choose the one that you expect will e the second most and rank it number o. Then number three, and so on till ık six. It's as simple as that!

, in this Investor Contest, you don't ve to predict the price of shares; you rely have to rank the performance (in rcentage terms) on the basis of the prices u expect each to reach on 9 September 91. You don't have to tell us the prices even the percentage changes you ect — only fill in the ranks from to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Scrips	Prices as on Tuesday 2 July 1991 (Rs.)	Prices as on Thursday 1 August 1991 (Rs.)	Ranks
Excel Industries	300.00	340.00	5
Zuari Agro	75.00	90.00	3
GKW	30.00	42.50	2
Hero Honda	78.75	93.75	4
S.M. Dyechem	68.75	72.50	6
Wires & Fabriks	91.00	130.00	1

es:

here is no entry fee.

he price mentioned last in the official quotation list e taken as correct for the purposes of calculation. If tock exchange remains closed on the stated last day, losing price on the prior day will be used.

ntries must be on the printed form given below. Any r entries will be disqualified.

nly one entry will be permitted per form.

nvelopes sent in should be marked Investor Contest.

ntries should be sent to: Investor Contest, **Business** a, Wadia Building, 17/19 Dalal Street, Bombay 001, by 5 pm, 5 September, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

Prescriptions for an emergency

INDIA'S ECONOMIC CRISIS: THE WAY AHEAD
By Bimal Jalan
OUP, 1991, pp 250, Rs.250

At a time when India is grappling with a severe resource crisis, any insight into the subject and ways to deal with it are bound to be noticed. This would be so even though the new finance minister, Manmohan Singh, has already unveiled a reforms package to put the economy on an even keel. Bimal Jalan, a former finance secretary and presently chairman of the economic advisory council to the prime minister, has also come out with a number of insights on the subject in his new book.

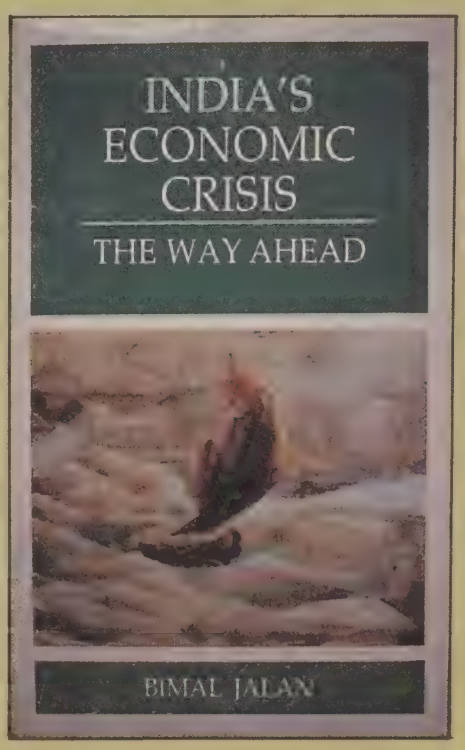
Some of the solutions detailed in the book (on which Jalan started work two years ago) are already being put into place by the finance minister. But there are some other initiatives to which no thought seems to have been given by the government of the day. It is here that the merit of Jalan's book lies. The problem of rising budgetary deficits is one of the major problems of today. Jalan, who himself has had a long innings in the government, says that in a multi-party democracy like India (where there are diverse pulls and pressures and conflicting demands on resources), experience shows that nothing short of a constitutional amendment, which is binding on all governments, central and state, will be effective in eliminating deficits. This is not the first time that such a suggestion has been made, but coming as it does from a former finance secretary only proves how difficult it is to contain the deficit.

New catchword. At a time when privatisation has become the new buzz word the world over, Jalan with his uncanny knack for practicality comes out with some down-to-earth suggestions in the Indian context. He points out that "as the size of the capital market is only about 1 per cent of the value of the total assets of the public sector (at historical cost), it is clear that a wholesale privatisation of public sector units is not a feasible option in the Indian situation in the forseeable future".

Jalan says that sick units and smaller units with low profitability could be sold through public offers, but beyond this the problems of the public sector should be solved within the framework of public ownership. To impel them to perform, a "hard budget" constraint has to be placed on them, and state and central governments would have to be prohibited from financing the losses of these units.

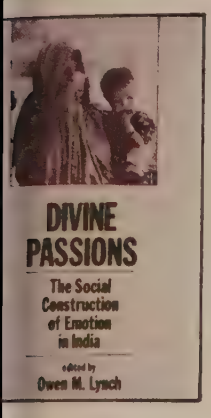
Korean model. To increase the productive efficiency of public sector companies, Jalan advocates the Korean conglomerate model (called *chaebol*) which, according to him, allows realisation of economies of large-scale production without reducing competitive pressure and market discipline. Monopolistic and monolithic enterprises should be broken into a few separate companies, and be made parts of multiproduct conglomerates. Distribution and price controls on these units should be totally done away with.

Coming from a civil servant, Jalan's comments on the bureaucracy and the role of the state are interesting. He points out that the over-extension of the state has now become a major roadblock in the path of progress and has outstripped available managerial and administrative capacities. The vast expansion of the s has also given rise to lobbies and co tions which have eroded the capacit the state to intervene in the interests o ciety. In this context, he also recomme decentralisation, which has become a litical necessity with the emergence strong regional parties.



Competing centres. Jalan points out decentralisation will also have the i dental advantage of creating several c peting centres of power. According him, action is needed at two levels. P ning and financing of many activities dertaken by the cen government, like ru development and e cation, should be tra ferred to st governments. And, turn, the states sho turn over some of th functions to lo bodies.

Jalan also states t a lesson from recent h tory is that a delay taking corrective act when the economy is flicted, disprop tionately raises the co of adjustments. This one reason why a to reforms package m be quickly put in pla Finance minister Sin has been doing this precisely in rec weeks. But there is general apprehensi whether the whole package would be i plemented in the manner that it shou be. Jalan's warnings should be tak seriously by the government in t context.



Interestingly, though Jalan talks of licensing and public sector reforms, has not said anything about the "exit p icy" which has become a major probl now. But he says that his recommend tions are those which can be effect quickly "within the constraints of the p sent political and economic system Probably, he does not think that the e policy is a measure which can be quick carried out. Or, perhaps he thinks th how much labour to use, should be a de sion of individual enterprises and the should not be any general exit policy.

■ KINGSHUK N

> Jalan points out that the over-extension of the state has become a major roadblock in the path of progress and has outstripped available managerial and administrative capacities

evotee and eity

DIVINE PASSIONS: The social construction of emotions in India
Edited by Owen M. Lynch
Oxford, 1990
pp 312, Rs.225

at mars this collection of essays is "the iges which (they) seek to replace". ey are, in editor Owen Lynch's words, ogis, lying on a bed of nails...white-rded gurus preaching meditation... se-knit families in which the aged and rm live out their days... ritualistic wor-pping by rote"

his is puzzling, for three of the nine ttributors to this volume (Lynch, Pau- Kolenda and Sylvia Vatuk) are well-wn and established Indianist anthro-ogists. *Divine Passions* then has two poses: to help the West better under-d Indian emotions and, what seems e important to the contributors, to develop a critical theory and under-ding of emotion in the West.

nthropologists and sociologists have ely concentrated on microcosms in r own frames of reference. Many cern Indologists have produced ok views" of our multi-religious, ti-ethnic, highly stratified society — -idealised pictures whose existence is btful. Yet their texts are important, without them many cultural processes ot be fully understood.

is perhaps a result of the youth of the ority of the contributors to *Divine ions* (five of whom completed then oral studies in the eighties) that they rejected western assumptions in ling the tricky subject of the basis of an emotions. What is common to the ributions is their description and ysis of emotions as culturally consti-d. They are not concerned with the hological reality.

ill, there are a few anomalies. These rs were selected from 19 presented at nference on "The anthropology of ng, experience and emotion in India" in 1985 at the University of Houston e US. While the conference is de-ed (by Lynch) as a dialogue between Indian and western social scientists, none of the contributors to this volume is Indian. Perhaps the inclusion of their views would have been seen as conflicting with the theme of the conference which, despite being presided over by M. N. Srinivas, appears quite strongly as a collection of views on the non-western "Other" by the western "Self"

The emotions examined in *Divine Passions* are several, but not all divine. Some relate directly to contemporary India — the *Dependency Anxiety Among the Elderly in India* by Vatuk; the *Moral Sensitivities of Sikhs in North America* by Verne Dusenberry; *Hare Krishna, Radhe Shyam* by Charles Brooks.

Emotion is also the subject of detailed studies, related by anthropologists simultaneously entranced by and suspicious of everything they see and hear. Margaret Trawick's *Ideology of Love in a Tamil Family* is a sensitive and self-reflexive paper. "*Mastram*" — the deep joy inspired by *bhojan, bhang, bhajan* and *kasrat* — is the dominant cultural idea of Mathura's Chaube Brahmin priestly community, as described by Lynch. Indeed, the themes of humour and food recur in this volume. They are the central transactions between devotee and deity.

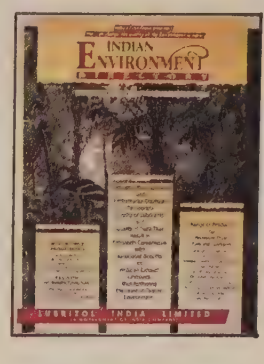
Cliched account



THE MAKINGS OF A MILLIONAIRE
By M.V. Kamath
Jaico, 1991
pp 188, Rs.200

"A Tribute to a Living Legend Raosaheb B.M. Gogte (Industrialist, Philanthropist & Educationist)" says the title page. A fairly readable tribute, even if it abounds in cliches despite the author's statement in his preface that they were shown "to the immediate door". Also sudden shifts from ponderous, platitudinal prose to Americanisms, including "gotten" — testifying to Kamath's journalistic stint in the US — cheek by jowl with ungrammatical usages, peculiar to Indlish journalese.

B.M. Gogte, for whose 75th birthday the biography was written, comes through as a man who used a combination of good luck (including the blessings of a tribal goddess), connections (Y.B. Chavan was a childhood chum) and the "determination to smile in the face of adversity" to rise from near penury to become a pillar of society in his native Belgaum and beyond. And what adversity! To quote Gogte himself: "Seven out of ten industries I started were failures." But as one speaker had said while felicitating him on his 61st birthday, "Gogte stands for 'Go and Get!'" — and that is just what 'Raosaheb' did.

■ SEKHAR SESHAN

A green directory

INDIAN ENVIRONMENT DIRECTORY
Edited by Rashmi Mayur
Astra Publishers, Bombay, 1991
pp 440, Rs.375

"The green directory of India is the first major attempt to address the crisis of deteriorating environment in India at a practical level," claims editor Rashmi Mayur in the preface. The directory not only lists the names and addresses of voluntary agencies involved in environmental action and companies supplying pollution control instruments, but also provides information on the status of environment pollution in India and compares this with other countries.

Much of the information presented in the overviews, however, is by now old hat. Also, figures relating to India are missed out in two tables — on emissions of pollutants in selected countries and waste generation and trade.

The list of pollution control instruments is revealing. Only 11 of the 18 listed are indigenously manufactured! No specifics are available on their standardisation. Also, most contributions are by company executives, which does not instil a sense of balance, while the chapter on case studies lists only two companies.

One must remember that this is a pioneering effort, and the editor admits "this directory is by no means complete nor final".

■ SHANKARI CHAKRAVARTY

Senior executive positions

A compilation of executive positions advertised in **Business I** and other major publications between 29 July and 11 August

THE FOUR BEST JOBS

- VICE-PRESIDENT (Merchant Banking Division) * Bombay * *Sal* Attractive * *Age/Qlfn* 35 years * CA/MBA * *Reqd* 4 years in merchant banking * *Cont* Selection Service, Champaklal Investment & Financial Consultancy Ltd, 2nd Floor, Regent Chambers, Nariman Point, Bombay 400021 (ToI-5.8)
- CHIEF EXECUTIVE (Manufacturing) * Gujarat * *Sal* Attractive * *Age/Qlfn* Above 35 years * Mechanical/Metallurgical engineer * *Reqd* 15-20 years experience in a senior capacity * *Cont* R.C. Vadhan, Chairman, Creative Marketing Consultants, Atlanta, Nariman Point, Bombay 400021 (ToI-5.8)
- GENERAL MANAGER * Maharashtra * *Sal* Attractive + perks * *Age/Qlfn* NS * NS * *Reqd* 20 years in cement fiel excluding 5 in senior position * *Cont* The Managing Director Walchandnagar Industries Ltd, Walchandnagar 413114 Maharashtra (ToI-5.8)
- VICE-PRESIDENT (Finance) * near Bombay * *Sal* Not lim iting factor * *Age/Qlfn* Around 45 years * Preferably CA MBA (Finance/corporate & work accountant) * *Reqd* 2 years including 5 as head of finance/commercial * *Cont* Box R-732-S, ToI, Bombay 400001 (ToI-22.1)

WEST

- VICE-PRESIDENT (Projects) * Bombay * *Sal* Attractive * *Age/Qlfn* 40-50 years * Engineer * *Reqd* 15 years experience * *Cont* CMP/A-2121, Datamatics Staffing Services, Post Box 106, GPO, Bombay 400001 (ToI-5.8)
- GENERAL MANAGER (Personnel) * Baroda * *Sal* NS * *Age/Qlfn* NS * PG in personnel management * *Reqd* 15 years experience * *Cont* Ms Pratibha Sheth, Executive Director, Shilputsi Consultants, P.B. No.9386, Bombay 400 026 (ToI-5.8)
- GENERAL MANAGER (Finance) * Bombay * *Sal* Excellent * *Age/Qlfn* NS * CA/MBA * *Reqd* 7-10 years all round finance experience * *Cont* Director HRM, P.O. 11695, Nariman Point, Bombay 400021 (ToI-5.8)
- MARKETING CONTROLLER * Bombay * *Sal* Excellent * *Age/Qlfn* Preferably above 35 * Chemical engineer/B.Sc. chem * *Reqd* 10-15 years experience including 5 at senior level * *Cont* General Manager, Personnel, Administration & PR, Indofil Chemicals Co, P.B. 9112, Bombay 400025 (ToI-5.8)
- GENERAL MANAGER (R&D) * Noida * *Sal* Attractive * *Age/Qlfn* NS * M.Tech/B.Tech in electrical/mechanical engineering * *Reqd* 10 years in R&D in electrical light engineering * *Cont* B.K. Gupta, President, Polar Industries Ltd, A-2, Sector 5, Noida 201301 Dt.Ghaziabad (UP) (ToI-5.8)
- GENERAL MANAGER (Works) * Maharashtra * *Sal* Negotiable + perks * *Age/Qlfn* * Chemical engineer, preferable with post graduate management qualification * *Reqd* 15 years including 5 in senior position * *Cont* The Director, Vinyl Chemicals (I) Ltd, Ram Krishna Mandir Road, Andheri (E), Bombay 400059 (ToI-29.7)
- HEAD OF OPERATIONS * Maharashtra * *Sal* Suitable * *Age/Qlfn* * Textile graduate * *Reqd* 5 years in a spinning unit managing operations * *Cont* President, RPG Corporate, 463 Dr. A.B. Road, Worli, Bombay 400025 (ToI-29.7)
- GENERAL MANAGER * Ahmedabad * *Sal* Attractive * *Age/Qlfn* 35 years * Engineer * *Reqd* 10-15 years in engineering in a senior of position * *Cont* Box S 294-5, ToI, Bombay 400001 (ToI-29.7)

SOUTH

- GENERAL MANAGER (Production) * Madras * *Sal* 35 years * *Age/Qlfn* NS * Engineers * *Reqd* 15-18 years experience, including as production head for at least 5 years in footwear industry * *Cont* MS/4407, A.F. Ferguson Associates, P.B. No. 1261, Madras 600034 (H-3.8)
- GENERAL MANUFACTURING * Madras * *Sal* Attractive * *Age/Qlfn* NS * Mechanical/production engineering * *Reqd* 15 years in AC and refrigerator systems manufacture * *Cont* Bo 130-S, ToI, Bombay 400001 (ToI-5.6)
- GENERAL MANAGER-PRODUCTION (Chemical & Bu Drugs) * Hyderabad * *Sal* NS * *Age/Qlfn* 40-45 years * Ph.D chemistry or chemical engineering * *Reqd* Over 10 years expe ence in a senior managerial position * *Cont* Personnel Manag Biological Ltd, 18/1&3, Azamabad, Hyderabad 500020 (H-7
- GENERAL MANAGER * Ankleshwar * *Sal* NS * *Age/Q* 40-45 years * Chemical engineer with Ph.D. * *Reqd* 15-20 ye experience in a chemical/bulk drug unit, out of which 3 years head * *Cont* The General Manager (P&A), Cadila Laborator Ltd, 244 Ghodasar, Maninagar, Ahmedabad 380008 (HT-3

OVERSEAS

- GENERAL MANAGER * Oman * *Sal* Attractive + benefit *Age/Qlfn* 35-40 years * Business management graduates * *Re* Five years general management experience * *Cont* MS/57 A.F. Ferguson & Co, Post Box. 1786, Bombay 400001 (ToI-4
- CHIEF EXECUTIVE * Nigeria * *Sal* Very attractive * *Age/Q* NS * Textile technocrat + MBH * *Reqd* 10 years experience head of a corporate textile mill * *Cont* Eastern Pacific Compar 112 Maker Chambers VI, Floor II, Nariman Point, Bomb 400021 (ToI-11.8)

Please turn over for

Polypropylene India Ltd.

President

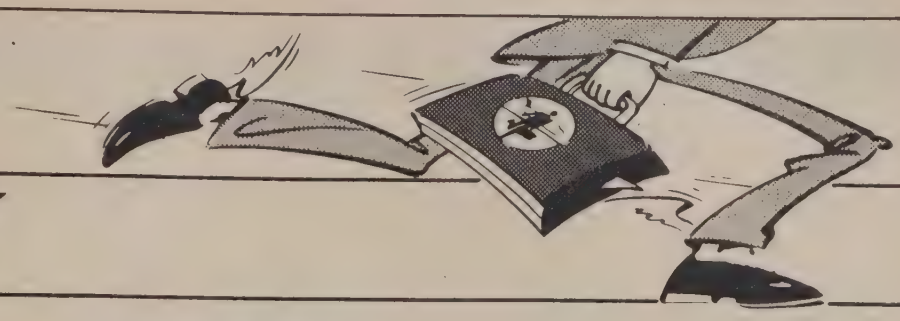
New Delhi — Excellent Terms

Wanted a President who will be the driving force behind implementing a 140 crore project for the manufacture of polypropylene chips based on feed stock from the Mathura Refinery. The plant would be located at Kosi Kalan, District Mathura, about 100 Kms from Delhi.

The company **Polypropylene India Ltd.** is jointly promoted by **Kanoria Chemicals & Industries Ltd.** and **PICUP.**

The company is looking for a leader with a proven track record of being a result oriented administrator. He should be able to lead the project team to ensure speedy and smooth implementation of the project, and to lay the foundation for future growth.

The candidate should have an engineering degree with rich Technical and Commercial experience in a senior position, with at least 10 years in Petrochemicals. Preferred age is between 45-50 years.



Compensation package will not be a constraint for an outstanding candidate, and will be in line with the best in the industry.

Applications will be kept in strict confidence.

Kindly address your applications within 3 weeks to:—

Joint Managing Director
Kanoria Chemicals & Industries Ltd.
Indraprakash, 21 Barakhamba Road
New Delhi-110001.

The Company

Our client is part of a fast-growing professionally managed group of companies that is manufacturing a variety of precision components and exporting them to markets in Europe and North America. One of the companies in the group trades in granite and consumables importing from Europe through excellent agencies. They now wish to set up an exports division catering to various product groups such as engineering, raw and finished granite, leather garments, silk, handicrafts etc.

The Job

Vice President (Exports)

To independently set up and run the division. The person, to be based at Bangalore, must be a specialist in at least one of the above product groups and have thorough knowledge of administrative/work procedures in exports to co-ordinate the activities of personnel handling the other product groups. Experience of at least 5 years and good contacts abroad, so as to achieve a minimum target of Rs. 5 crores in 3 years, is a must.

The candidate must be a dynamic, result-oriented person committed to exports and capable of organising the entire division. IIFT/MBAs desirable.

Since the entire division is being set up, vacancies are also available at managerial positions to handle each department.

GE PLASTICS INDIA LTD (GEPI)

Our client, GE Plastics India Ltd. (GEPI), is a Joint Venture Company of GE Plastics B.V., the world leader in manufacturing and marketing of advanced engineering thermoplastics and Indian Petrochemicals Corporation Limited, (IPCL), a leader in petrochemicals in India. The partners have planned to set up a Rs. 700 crores project to produce locally a wide range of engineering thermoplastics including alloys, blends and compounds. Besides India, the marketing territory for this Joint Venture Company includes all neighbouring countries and Middle East.

As part of the initial phase of the project, intensive market development activities have already been initiated. A plant for alloys, blends and compounds is being set up at Baroda backed by a state-of-the-art Application Development Centre near Delhi.

This is a new organisation with plans for rapid growth. To strengthen the existing team we are looking for dynamic professionals.

MARKETING MANAGER –
SPECIALITY CHEMICALS
DELHI

The Job: The job involves independent responsibility in developing the markets for a range of proprietory anti-oxidants, stabilizers, modifiers being produced by M/s. GE Plastics, Speciality Chemicals Group. The candidate should be able to interact with highly specialized professionals in the plastic industry and offer technical support to users.

Qualifications: Post-graduate in Polymer Science/Chemistry or graduate in chemical engineering with about 8 years' in industrial marketing in a related field. Experience in marketing chemicals/additives to plastic raw material manufacturers is desirable.

REGIONAL MANAGER
BANGALORE

The Job: The job involves sales of engineering thermoplastics and involves extensive travelling and customer visits. The incumbent will draw on the company's resources to satisfy customer needs.

Qualifications: MBA with a basic qualification in Engineering or post graduation in Science. He should possess good communication and interpersonal skills and have about 5 years' experience in industrial marketing/selling. Experience in marketing plastic raw materials is desirable.

The selected candidates for the above positions will be initially trained in Europe/USA.

Remuneration: Remuneration will compare with the best in the country and will not be a constraint for the right candidate.

Please write in strict confidence to:

Ms. Pratibha Sheth,
Executive Director,
Shilputsi Consultants,
Post Box No. 9386,
Bombay 400 026.

Our client is a well known multi-product, multi-division organisation with a current turnover of about Rs. 200 crores. The company manufactures and markets a large range of well-known consumer products which enjoy excellent brand image and are market leaders. To give added thrust to their ambitious growth plans, the company is looking for highly dynamic and result-oriented Divisional Managers.

DIVISIONAL MANAGERS

(Mass Consumer Products)

Metro Cities **Excellent Terms**

The incumbents will report to the All India Sales Manager and assume independent charge of marketing & sales activities in their respective divisions. They will achieve pre-determined ambitious sales targets & sustained levels of growth in market share through innovative & well defined strategies. They will build & train a competent sales force comprised of Regional Managers, Area Managers, Sales Supervisors/ Representatives, and effectively monitor dealer/distribution network. They will also actively participate in product development, promotional campaigns, pricing and strategy formulation. The positions call for aggressive sales capabilities on the basis of modern sales & marketing techniques.

Candidates should be MBAs from an institute of repute with about 10 years relevant experience in selling mass consumer products, out of which 2 - 3 years should be as Regional/Branch Manager. Thorough knowledge of the division, excellent sales management & communication skills and ability to lead & motivate a sales team are essential attributes. Age: around 35 years.

THE COMPANY OFFERS AN EXCELLENT WORKING ENVIRONMENT AND AMPLE GROWTH OPPORTUNITIES FOR ACHIEVEMENT - ORIENTED PROFESSIONALS. THE COMPENSATION PACKAGE WILL NOT BE A LIMITING FACTOR FOR THE RIGHT CANDIDATES.

Apply within 10 days with Bio-Data giving details of age, qualifications, experience, salary drawn and expected, marking the envelope & enclosures with Job title & code DM/7 to:

CITIL *COS*

We're looking for people like these two gentlemen.

And we aren't talking about Messrs. Reagan and Gorbachev.

We are looking for Financial Analysts.

You'll act as an interpreter. Translating our clients' needs for our software specialists. You'll also assist us in analysis, design, implementation, user training and systems documentation.

You are preferably an MBA with a specialisation in finance. Or a CA. Or a banker.

You have 4-8 years of experience in any of the following areas:

- Investment Management/Analysis
- Mutual Funds
- Securities Trading
- Corporate Finance
- Treasury Management
- Financial Engineering
- Custodial Services
- Funds Management

You are an excellent communicator. Who's familiar with computer applications. And, if you also have exposure to software development... Terrific!

And what does all this translate into?

An exciting environment. And a great compensation package. Which includes accommodation in Bombay on rent recovery basis.

Get the picture?

Write within 10 days to:
The Manager – Human Resources

CITICORP

Ah! So you feel you're getting smothered in your present job?

You've been in the building material/ sanitaryware/ paints industry for over a decade. Enjoy a tremendous rapport with the trade. Institutional selling is your forte. You've dabbled in exports. And so far professionally, the going's been good.

But now things are beginning to slow down. The boss just doesn't let you take decisions. The money too could be better.

Well we think, it's time you met us at Seema Industries. We're looking for a

Marketing Manager.

Delhi based. With a background like yours. To help us put together our marketing act for selling our revolutionary range of cultured marble products. Being currently introduced in the market under the brand name, Silgo. Developed in technical collaboration with Respecta GmbH of Germany.

"G O S H ! W H E N W I L L I E V E R G E T T O M A K E D E C I S I O N S A R O U N D T H I S P L A C E ? "

You'll be No. 1 in marketing. With lots of challenges. Hardwork. And achievements too, to look forward to. The moneys of course will be adequately attractive.

So if you think you're right for the job, write into:

Mr. T.R. GOYAL,
Managing Director,
Seema Industries Ltd.,
A-73, South Extn. Part-II,
New Delhi-110049

And we hope it will be a mutually beneficial decision.

NATIONAL POWER TRANSMISSION CORPORATION LIMITED

(A GOVERNMENT OF INDIA ENTERPRISE)

NPTC IS POISED TO TRANSFORM THE POWER TRANSMISSION SYSTEMS IN INDIA!

The National Power Transmission Corporation Ltd. (NPTC) is the national initiative to pool expertise and resources in power transmission systems, paving way for eventual formation of the much-awaited National Power Grid.

THE COUNTDOWN HAS BEGUN!

NPTC will soon take over the transmission works and personnel from the generating organisations like NTPC, NHPC, NPC, NLC, NEEPCO etc. and set the agenda for action in the Indian power sector.

NPTC offers exciting career opportunities to young professionals who are **MBAs from the premier management institutes like the IIMs** with ace conceptual, analytical and oral & written communication skills having an enviable track record of 1 to 5 years in progressive organisations — professionals who wish to contribute their mite as change agents and internal consultants — at junior management levels [corresponding to E2A (2650-120-4450-130-5100) and E3 (3700-140-4400-150-5900) grades] in the functional areas given below :

1. **Management Information Systems**
2. **Corporate Planning**
3. **Business Economics**
4. **Electricity Trading and Tariffs**
5. **Project Monitoring**
6. **Human Resource Development**
7. **Finance**

Preference is for MBAs with engineering education. For business economics, MBAs & Ph.Ds in economics with academic or industrial experience may also respond, for placement at higher levels.

NPTC swears by a work ethos that enhances executive effectiveness; hierarchy is there for routine reporting purposes and not to stifle individual initiative.

Compensation is on par with the industry practice and is generous by Public Sector standards; the recruits at E2A level can look forward to receiving a minimum of Rs. 37,000 per annum with reimbursement of two-wheeler expenses and Company leased accommodation and at E3 level over Rs. 50,000 per annum with reimbursement of car expenses and Company leased accommodation; other benefits like LTC, Medical reimbursement, CPF, Gratuity, House Building Advance, Conveyance Advance etc. are admissible.

Reservation of vacancies exists for SC/ST candidates as per relevant Government directives.

You may send your comprehensive resume enclosing a write-up of the role, you perceive for yourself within NPTC and your long-term career goals to the **Chief Personnel Manager, National Power Transmission Corporation Ltd., 10th Floor, Hemkunt Chambers, 89, Nehru Place, New Delhi-110 019,** latest by **26.08.1991.**

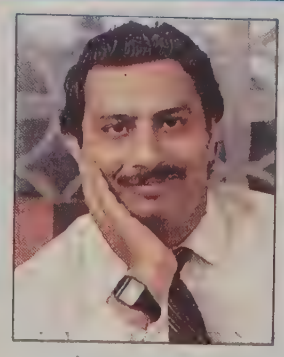
eturn of the native

hah, *47, is the managing director of Digital ment India Ltd*

ould not resist the lure of the West d went to the US in the sixties. two-decade stay he came back in ith a changed first name and a mis- make Digital Equipment Corpo- the mainframe and mini computer acturer, as big a name in India as it dwide. And two years later, un- dly he is among the most respected ter professionals in the country.

(Manoj) Shah took his degree in al engineering from M.S. Univer- roda, and his masters in comput- d industrial engineering at the sity of Michigan. His first assign- as with Cleveland Crane in 1967, e worked as a computer engineer. one-year stint there, he crossed Chase Bruss Copper Corporation. 70, Shah joined Digital, USA, the llargest computer company in the as an applications programmer. vities included automatic labora- periments, application analysis, ng of real time software for indus- ocess control applications, mar- of complex computer systems, ng management of Digital's in- product program and later com- siness management. He also held ing assignments in the US, Eu- d Latin America for Digital.

s association with the Indian er industry began about eight years back. While with Digital, USA, he had to work with international distributors in the Far East, Latin America, etc and one such distributor was Hinditron of India, whose business relationship with Digital went back twenty years. Also, in 1985, Digital, in its mission to globalise itself, had set up a liaison office in Bombay. Three years later, when the company realised the need to have a direct presence in India, Shah was the obvious choice to set up a manufacturing base in Bangalore.



It was a logical move because "we felt forex would become a big issue otherwise. It would mean that the customers would not be allowed to continue to import finished products," says Shah. "While we had the liaison office, we had a business of $10 million against ten computers a year which has now gone up to 150 machines after we set up the manufacturing facility in Bangalore."

Set up in September 1988, the Indian company has been performing well all along. Against a sale of Rs.14 crore in 1988-89, its turnover reached Rs.42 crore in 1989-90 before zooming to Rs.61 crore in 1990-91 (9 months). During the same period, its exports moved from Rs.1.2 crore (1988) to Rs.5.5 crore (1989) and to Rs.9.13 crore (1990-91). Its net profit for 1990-91 was Rs.1.4 crore.

Shah feels that the Indian computer industry is in for a tough time. "Though computerisation is here to stay, the industry is getting globalised with the advent of more and more international competitors." He is sure that his company will play a lead role in India. "Our basics are right — we are bringing in new technologies, our focus is on exports, systems integration and people development. We do not believe in compromising on business values. We are creating a quality organisation committed to excellence."

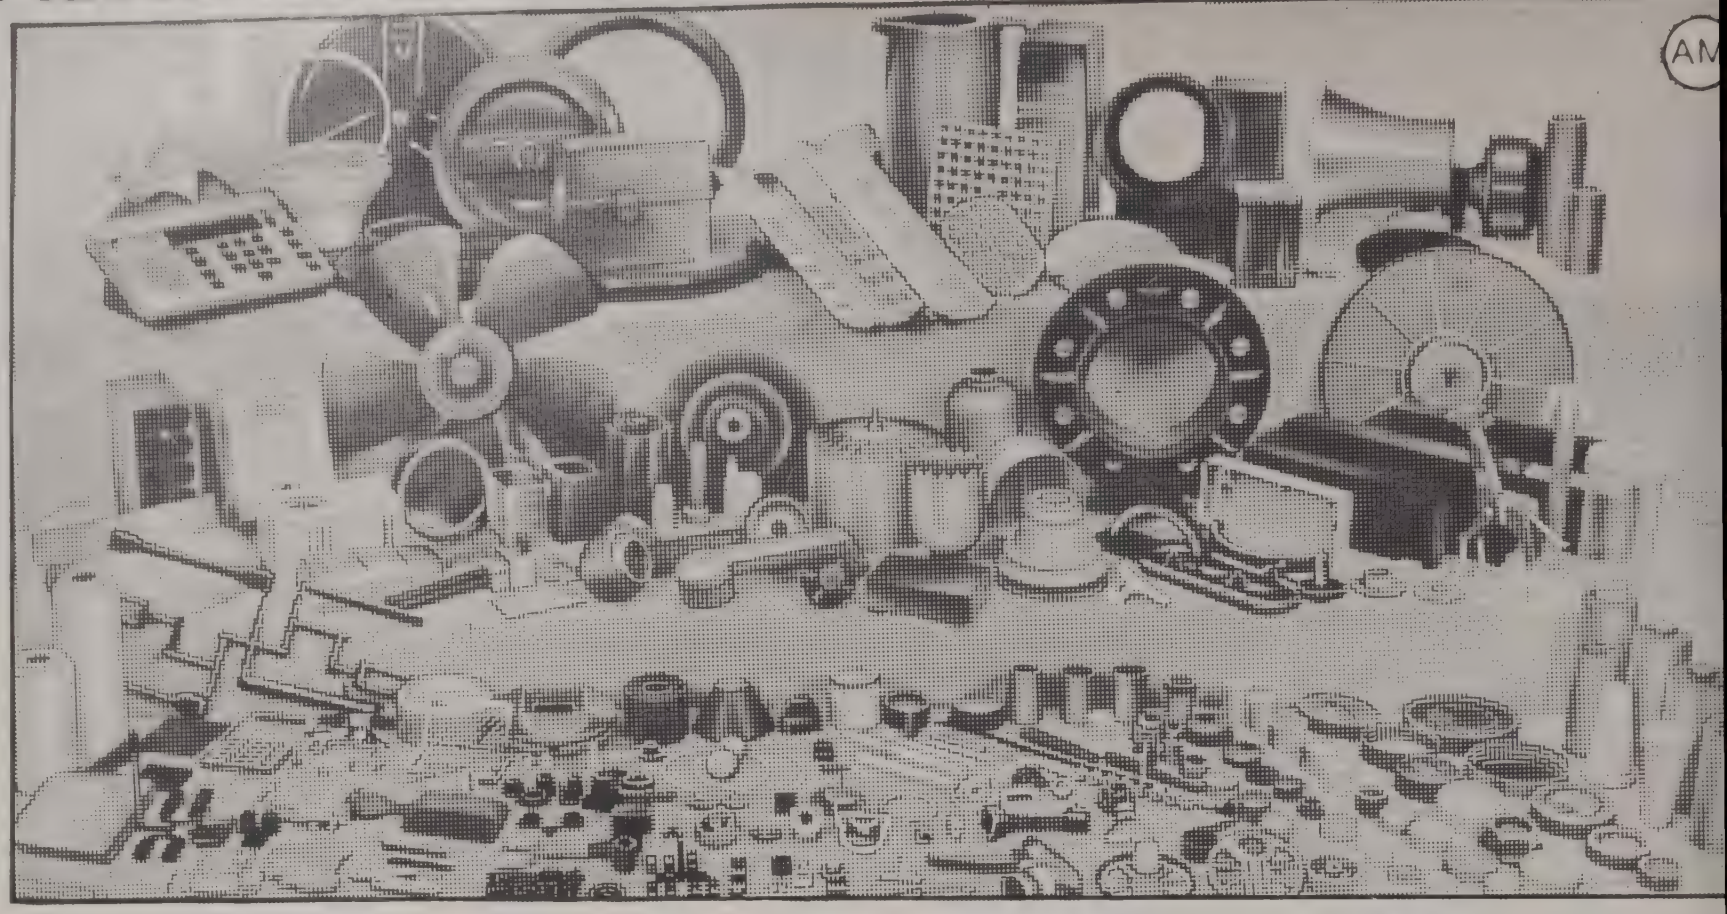
■ DEVAPRASAD PUROKAYASTHA

FRONTRUNNERS

Lokesh Sehgal promotes trade and technology link-ups between India and the US and prepares ground and creates opportunities for various collaborations. At 30, he is the senior marketing advisor to the US foreign commercial service in India.

Sehgal, a science graduate from Delhi University, took his management degree from IIM, Ahmedabad in 1982. Later, after a four-year stint with Garware Paints as area sales manager for Rajasthan, he moved to the US commerce department. Now, five years later, he feels the job has been worthwhile. "I like the diversity in my job," he says and points out that the "real challenge lies in convincing more and more US companies to come to India." He also dabbles in writing as the editor of *Indo-US*, a publication on trade and technology brought out by his office.

■ R.S.



V. Narayanan, 32, in charge of the independent electronic division of the Godrej and Boyce in Pune for the last four years, he has become the obvious choice of the management to be the project in charge of Advance Printheads Ltd which G & B is promoting in collaboration with Microlyn, Italy to make specialised computer printheads.

A mechanical engineer from BITS, Pilani with a masters in management from XLRI, Jamshedpur, Narayanan started his career with Escorts in 1983. Three years later, he moved to Godrej and Boyce Ltd as the executive assistant to the vice-president of the electronic business equipment division.

Narayanan got his big break at the age of 28, when he was put in charge of the Pune division. Now he is looking forward to his new assignment of manufacturing printheads for the first time in India.

ATHURA

aking a splash

thura's fishermen plunge into a hazardous livelihood

x in the morning. The salty air is with light as the first rays of the ruggle to pierce through the grey — silent sentinels of the southwest oon. Occasionally, drops of rain he face.

se trivial distractions do not deter e-bodied men gathered on the pier. em, this is just another monsoon ng. They hustle about tying three, metimes five, whitish logs together ir or nylon rope. The final product les a primitive raft, their only of livelihood. What they have as- d is a catamaran, their tradi- fishing craft. And they it dangerously into the tur- sea before diving in themselves.

are the fishermen of Valiathura small village near Thiruva- puram — bustling with action onsoon. Braving the rains, they go heir business with quiet efficiency, uting substantially to the coun- tal marine fish haul. In 1989, of s total marine fish production of tonnes, the traditional sector ac- ll for 440,000 tonnes. Its catch ns, the single most important item, amounted to tonnes, fetching Rs.4.5 lakh in foreign ge.

mally, the fisher- unch their cata- from the beach. h the furious monsoon sea, the ura fishermen are forced to use ., which extends 703 feet into the - easier said than done, as this op- requires a unique blend of skill rage.

ishermen first transport the logs zzia (the low-density *chilla* wood the catamaran) to the end of the rlier, they used the trollies of the thorities, a facility abandoned rs ago. They now pair up to carry on their shoulders. The logs are ed and spaced to offer the cata- self-draining feature. This also he impact from the heavy surf, uring stability.

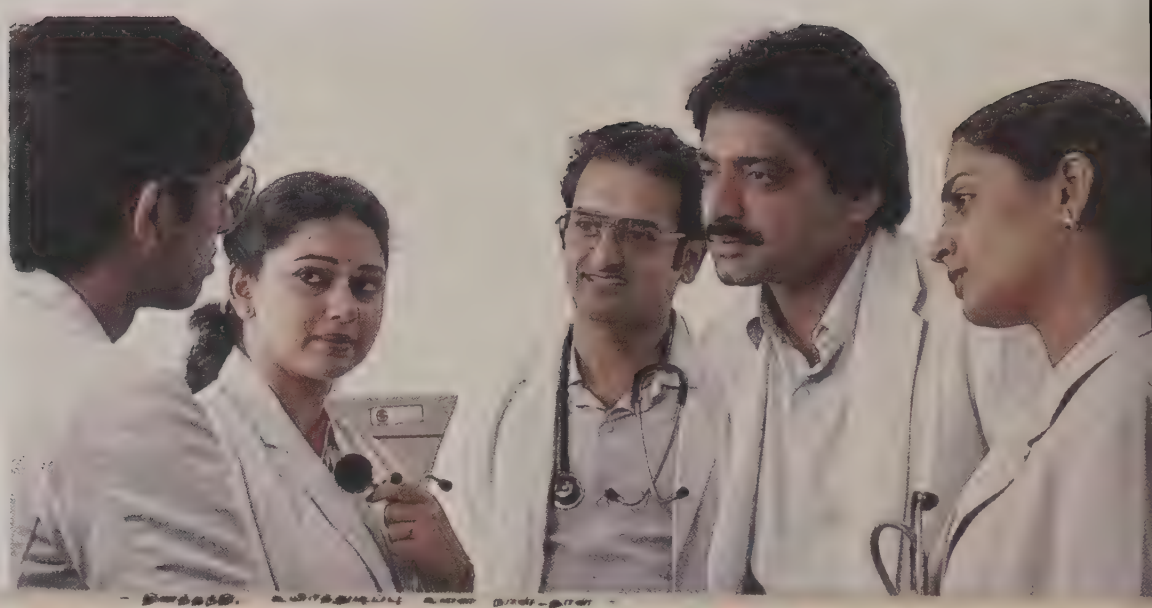
shing gear — nets and hooks-and- loaded at the front end of the cat- amaran, along with personal stuff. One end of a strong nylon rope is tied around the front cross-piece of the catamaran. The other end is fastened to the fist, waist or sometimes, neck of one of the crew.

A fisherman scans the sea and on spotting a major receding wave with no incoming ones in sight, dives into the frothy water — about 50 feet below. The receding wave pulls him away from the pier. When the next such wave is sighted, the remaining crew push the catamaran over the edge of the pier. It is also pulled away by the wave, but the first fisherman with the rope, already in the sea, can control its movement. The other two fishermen then plunge in and all three quickly clamber onto the catamaran and propel it beyond the breakers.

Diving styles differ. Some plunge in headlong, arms spread to break the fall; others jump feet first; still others leap out with arms outstretched. Whatever the style, one thing they always do first is to make the sign of the cross — most of them being Christians.

K.G. Kumar

The profession has its hazards. Sometimes the waves dash the fisherman against the concrete pillars of the pier or against the catamaran itself. Fractures are the least that can result. Sometimes the very dive causes cuts and bruises. And sometimes, during launching, the catamaran hits the pier and breaks. No small loss, at around Rs.5,000 per craft.



In a normal year, the average catch at Valiathura is 500 kg, fetching a fisherman an annual income of just Rs.4,000 to 5,000. Yet, from the point of view of the state's fishing economy, this monsoon haul is crucial. The fish landings at Valiathura during the monsoon make up about 77 per cent of the total annual landings along the southern stretch of the Kerala coastline.

Diving styles differ. Some plunge in headlong, arms spread to break the fall; others jump feet first; still others leap out with arms outstretched. Whatever the style, one thing they always do first is to make the sign of the cross

Though the pier was built only in 1956, the fishermen say this adventurous practice dates back a generation or so when, during the reign of the Maharajah of Travancore, a wooden pier existed adjacent to the present structure. History apart, today it is a springboard for their livelihood. For these fisherfolk, the Valiathura pier has become as much a part of their lives as the sound of the surf.

■ K.G. KUMAR

"Why do I prefer the Daily Thanth for reaching Tamil Nadu?

"Because 2 out of 5 professionals in Tamil Nadu don't read English dailies."

தினத் தந்தி
DAILY THANTHI

Some advertisers feel that the leading English daily in Tamil Nadu is good enough to reach officers, executives and businessmen.

Here are some facts that drive home the truth.

First, 40% of these professionals don't read any English daily.

Second, as many as 2,20,000 professionals read the Daily Thanthi.

And third, the cost of reaching each of these professionals through the Daily Thanthi is 19% lower in Tamil Nadu and as much as 63% lower in Madras city than through the leading English daily.

The Daily Thanthi is as effective in other vital segments too – people with a monthly income Rs.2,000 and above, graduates and those who are socio-economically forward.

So, when you think of corporate, financial or business advertising in Tamil Nadu, it pays to pre the Daily Thanthi.

Because, no other daily, Tamil or English, gives you such quality readership, with such cost-efficiency.

THE DAILY THANTHI • NOT JUST THE NO.1 TAMIL DAILY • THE NO.1 DAILY IN TAMIL NA

stitch in time

e working hours can be a boon to management and employees

ost people who arrive at work ex-ted by peak-hour traffic or early-g domestic crises, the freedom to one's working hours must seem istant dream. Yet, the concept of e has been gaining credence ide. In West Germany, where an 3,000 companies use flexitime, Bolton, a labour consultant, a survey that 65 per cent of em- expressed an improvement in g life. Produc-vels, then, are o increase.

rend is slowly g on in India. 0'Souza, man-, Herbertsons, ut—"Flexitime individual re-nts without be-isadvantage to ganisation. It iciency, because does not have t to fixed tim-.B. Mendonza, e personnel , Wander India s: "It is over rs since we in- flexitime. Pro- has gone up by ent in our fac-use it enables groups to set their e and targets without anyone hem around. Time management oved significantly. Absenteeism tors beyond employees' control exists."

exitime, employees choose their d departure time, but there is a ry "core time" when all em-ave to be present — usually bet-a.m. and 3 p.m. "The company enefit of core time, and the em-e benefit of flexitime and both ," says N.H. Athreya, author of management books. The l group, which introduced the differing forms five years ago, p further. Toshniwal Brothers alf hour grace in the morning, ter than 9.15 a.m. with the lost g made up in two days; the l Institute, on the other hand, offers two shifts — 8.30 a.m. to 5 p.m., and 9 a.m. to 5.30 p.m. Employees have to stick to the option they have selected. Individual needs are considered, however, says Kamala Toshniwal, director, personnel, Toshniwal Instruments.

While organisations must trust employees in flexitime situations, a punch clock system is invaluable too. "If the required number of hours are not clocked, the employee will not get paid pro rata," explains management consultant S.V. Pandit. "With an efficient punching system, there can be no charges of favouritism," he adds. Such a system is hardly likely to be popular with those at the top, but at one point, even Toshniwal's managing director punched in arrival time. The practice was discontinued, however!

Various problems are associated with flexitime... Unions tend to view the punch system as a fall in status. Also, flexitime cannot be introduced for all employees in all sectors... since payment is on the basis of hourly working, accountants have to be particularly vigilant

Various problems are associated with flexitime, and this is why, perhaps, the Maharashtra government withdrew the system for its employees after briefly introducing it in 1975-1976. Unions tend to resist the introduction of flexitime, viewing the punch system as a fall in status. Also, flexitime cannot be introduced for all employees in all sectors; in banks, the functions of branch manager, account staff and cashier are interlinked and the cashier can hardly work according to flexitime. Also, since payment is on the basis of hourly working, accountants have to be particularly vigilant.

However, there are clearly benefits which make the introduction of flexitime worthwhile. In congested cities such as Bombay, where public transport is packed to capacity at peak hours, flexitime would do a great deal to ease congestion. "Flexitime provides a great benefit especially for those who live far away," says R.P. Apte, deputy manager, personnel and salaries of Bayer India, which was the first company in the country to introduce flexitime, in 1981. Bayer's deputy manager, training, Ritu Singal, adds that is "very advantageous to women", who are saddled with household chores. Bayer has found that absenteeism has dropped since the introduction of flexitime.

Another advantage is that optimum use can be made of some kinds of machinery and office equipment, whose continuous running results in better operational costs. Blue Star has found flexitime a boon for its computer staff at the Santacruz Electronic Export Processing Zone, where a 7.30 am to 3 pm shift has been introduced.

Whatever the initial difficulties may be, flexitime is a concept most companies would find worthwhile to adopt.

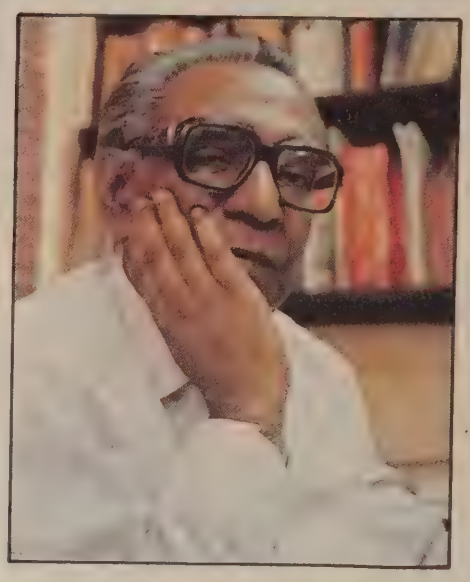
been in India for three years and has come an Indophile. hn Hamilton, the managing director lore-based Cargill a Ltd, now plans to ndian girl and ulti- re to a village near is enjoyable being in nd watching what can do for it," says

Hamilton who has often been to remote areas in the course of his work. "An average Indian village is full of warmth and hospitality. An Indian villager can teach an urbanite a great deal on good manners and acceptable social behaviour." A pilot for the last 24 years, the expat has taken more than 1,000 photographs of sunsets in 30 countries. "There is nothing more beautiful than a setting sun," he muses.



It's been a long season of biographies and autobiographies with the likes of Dr. S. Radhakrishnan, Raj Thapar and Raja Ramanna leading the way. And more are being committed to print, notably Rajiv Gandhi's by Minhaz Merchant, J.R.D. Tata's by R.M. Lala and the

latest — one on the legendary Mohinder Singh Oberoi. The nonagerian hotelier has led a colourful life packed with action, and he seems to have revealed much of this to *Times of India* journalist Bachi Karkaria, who has been working on an authorised biography to be published by Penguin in March 1992. The work, promises Penguin editor David Davidar, will be the most talked about book next summer.

of fair play. "Srikanth is not a chauvinistic person to select people from his own metro," he said.

While his own agency (Radeus) has never outgrown its modest beginnings, it has always stood out for its astute professionalism. Therefore,

What is **K. Srikkanth**, former Indian cricket skipper, doing these days? Apart from desperately pitching in for a place in the Indian eleven, the maverick opening batsman is regularly seen on the dais at most corporate functions.

Last week, Srika (as he is affectionately called by his friends) was asked to pick winners in a lucky draw organised in Madras by Mercard Credit Cards. To the utter dismay of the huge audience which had eagerly gathered there, none of the winners was from Madras. Mercard's A.L. Vadivelu attributed the total washout of Madras to the cricketer's sense of fair play. "Srikanth is not a chauvinistic person to select people from his own metro," he said.

when the prestigious Advertising Agencies Association of India-Premnarayen award for 1990 was conferred on K. Kurian recently, there was an air of congeniality at the award function. Admen, ordinarily uneasy about applauding another of their own kin, spontaneously cheered a true gentleman who has put in 32 years in the field. Characteristically, Kurian voiced his concern for the development of a better working environment. "It's time to think of the generation ahead of us," said the soft-spoken, unassuming, journalist-turned-adman in his acceptance address.

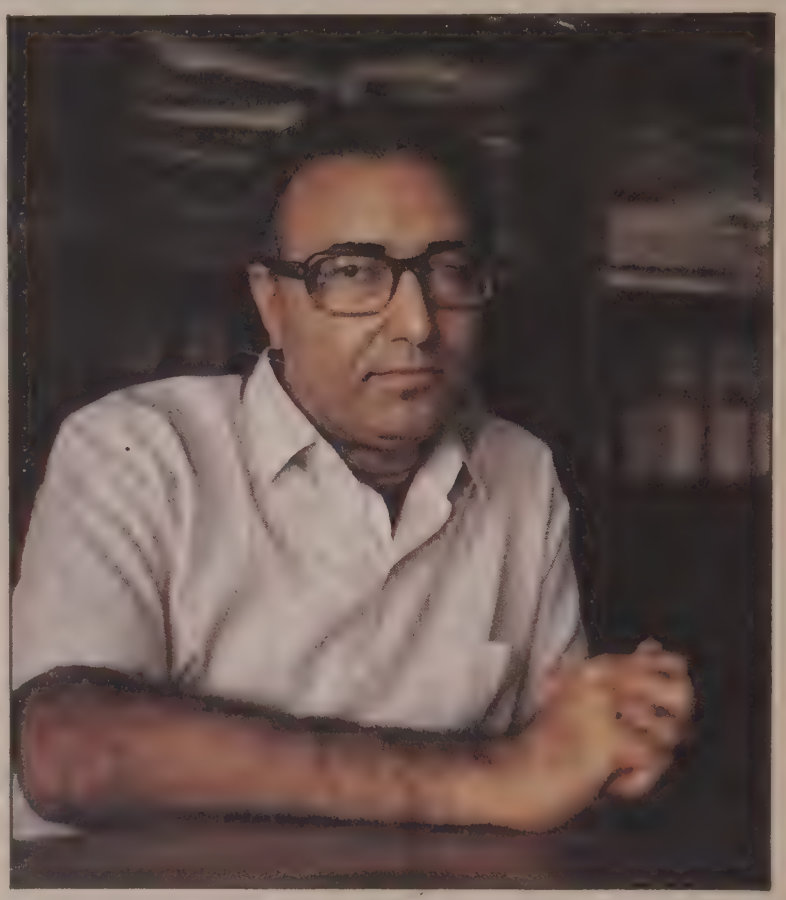
Make the policies work

Now that regulations governing foreign investment have been liberalised, how far do you think this will lead to an increased flow of foreign capital?
The first thing I would like to say is that mere paper liberalisations will not do. Though the government has begun well, all these measures have to be followed and implemented in the proper spirit.

I would like to point out that last year as well, the industry minister at that time had announced that the government was about to liberalise regulations governing foreign investment. Ajit Singh even spoke to potential investors on his trip to Canada. The Canadians were very excited. I do not think any Indian minister who went abroad had ever received such a tumultuous welcome, as was the case with Ajit Singh. But subsequently what happened? Nothing.

Faced by opposition from within his government, Ajit Singh failed to introduce either a negative or a positive list for foreign investment. This was despite the fact that the industrial policy had been announced after cabinet approval. He even had to cancel his trip to address foreign investors at Davos, a month after the Canadian visit.

What does all this mean?
What I am trying to say is that the greatest danger is from within, from forces who may try to stall the policies. Foreigners on their part after last year's bad experience are very apprehensive. They are waiting and watching. They are looking for clear and unmistakable signals that they are actually welcome. Only when they are sure that things have actually changed will they come. So if anyone thinks that foreigners are lining up ready to get into the act, he is surely mistaken.



How will the Japanese react to all these changes? Great hopes are being pinned on them.
Well, they are also waiting and watching. But the Japanese have a peculiar problem. They do not like to live and work with Indians. That is why they want colonies and parks exclusively for their use, as a pre condition for coming to India. This proposal is pending with the government of India.

Also the Japanese are very much interested in the consumer goods market in India, especially entertainment electronics. But this area has not been opened to a large extent to foreign investment.

I think we Indians should try and exploit the skill of the Japanese in trading and egg them on into a partnership for trading purposes. Since the government has now liberalised the setting up of trading companies, we can persuade the *sogoshoshas* to use India as resource base. The advantage is that we can use the *sogoshosha* network to access hitherto inacessible markets.

Export performance has been poor after the announcement of the several changes.
Well, the commerce minister did agree that export performance had actually slowed down in the first quarter of the current fiscal year. I would not be worried about this. Every country in the world that went through a devaluation has had exports decline immediately after. This is a period during which businessmen usually re-negotiate contracts, where buyers overseas demand the sharing of the benefits of the devaluation.

Indian exports will do well slowdown in overall world tra Asia-Pacific countries are doi because there are several pock affluence where incomes are g Today, we are in a much bette than we were in the post 1966 devaluation. Our export baske diverse and our products have range than in '66.

Charan Das Wadhwa, professor and senior fellow Centre for Pol Research, the Delhi-based t tank, is an authority on international t and marketing spoke to King Nag of *Busine India* on the ir of the new for investment an trade policies

Will devaluation make a differ
It certainly will. This also depe our ability to control inflation. 15 per cent inflation, we can w the benefits of a 22 per cent de in a year and a half. Export performance may also depend whether a currency devaluation undertaken in our competing c as well.

But more than bridging the t the finance minister hopes to re faith in the Indian economy by to devaluation. Immediately on assuming office, he noticed tha State Bank had defaulted on pa commitments and there was th real danger of a run on the fore currency NRI deposits. If this we happen, we would really be in t For the Indian economy, the fo currency NRI deposits are a vuln area.

From the Publisher

There is an impression, particularly within bureaucratic, political and leftist circles in the country, that foreign companies are dying to get into India. This is simply not true. The same lot further argue that the fact that the IMF and World Bank also want us to open up to foreign investments only "proves" that foreign companies are waiting in the wings for us to change our policies. Again, nothing could be farther from the truth.

The reality is that almost all developing countries (except some with closed, dictatorial regimes) and the entire former East Bloc actively welcome foreign investments. They recognise that investment capital, whether foreign or domestic, is a scarce resource necessary for rapid growth. And that without foreign investments and technology, it is their own citizens who will suffer the most in terms of growth, employment and social justice.

Ours is probably the only country in the world, developing or otherwise, that does not welcome foreign investments. The recent pronouncements of liberalisation and the opening up of selected sectors to foreign investment are held out as significant concessions and almost an act of favour.

But what is the case against foreign investments? Nobody has cogently and sensibly spelt it out. Vague fears are expressed of being taken over by foreign investors; of foreigners wanting to "exploit" our domestic market; of a huge outflow of foreign exchange; or of squeezing out weaker domestic industrialists. But examined closely, none of these arguments holds water. The history of the post-War period, not only in India but in countries in the East and in the West, has shown us that by keeping foreign investments out domestic industry becomes uncompetitive, technologically backward and survives only on account of the very heavy price paid, every day, slowly but surely, by the consumers. It is for these reasons that we at *Business India* have consistently argued for opening up the economy and not just permitting, but welcoming, foreign investment.

It is time to recognise that our infrastructure and services are very poor compared to other developing countries; that the country is rife with social and political tensions; and that we have a corrupt and creaking administrative machinery and a political system that is increasingly violent and volatile. These factors keep foreign investors away as much as the restrictions in our industrial licensing and foreign exchange laws. But we must also accept that these very factors will also frighten away domestic capital. For example, who will invest in Kashmir today?

The subject of foreign investment has needlessly become an emotional issue. However, it does help focus on the real issues facing us as a society. Who can deny that if these issues are effectively dealt with, India won't be a much better place to live in?

The rose is not red nor is the sky so blue. It is a world of near darkness for millions of our countrymen.

A world that is turning into darker shades of grey everyday, due to lack of eye care.

And more so, lack of funds. Arunodaya Charitable Trust is committed to wiping out needless blindness in India.

And with your help, it can be done.

The trust aims at providing state of the art facilities in eye care for the poor, by conducting free eye screening camps (mobile eye hospitals), where medicines, investigations, and even good quality spectacles are provided. Surgical facilities under coaxial operating microscopes for cataract extraction, Intra Ocular Lens implantation, glaucoma, squint etc. are provided.

Without your help, all this will not only be out of reach, but out of sight.

Whatever your contribution, big or small, as an individual or as a company will go a long way in providing proper eye care.

Together, let's bring back the colours of spring.

At KCP, backward integration is the thrust behind our great leap forward in engineering. The need to keep our sugar and cement plants at a high level of productivity led to our setting up a versatile, well-integrated heavy engineering facility at Tiruvottiyur, Madras. This move to supply for our units ultimately led to a one-source shop of high engineering excellence. Capable of undertaking turnkey projects for sugar, cement, chemical and other industrial plants, in India and abroad.

To take a giant leap forward

ay, KCP has emerged as an equal to the world's industrial leaders for turnkey projects. We've set up
4 million sugar plant in Sri Lanka. Our sugar technology and recommendations for appropriate
ultural practices have made an impact in Vietnam and Africa. Iran is considering us favourably for
a large capacity sugar project.

k a small step backward.

As our Rs.150 crore company strides purposefully into the future, we know it's our investments in technology that give us the cutting edge. And keep us a giant step ahead.

R & D breakthroughs and manufacturing excellence make KCP's engineering unit an internationally accepted supplier for turnkey projects..

Letters to the Editor

A foundation of values

Your coverage on Alacrity Foundation is informative but not passionate enough (Enterprise, 5 August). This company conveys a message to the society, which could lead to untold benefits.

Here is a company paying Rs.4 lakh as compensation to its clients to avoid paying a bribe of Rs.150 to get an electric connection! Does this really sound like a piece of information which you can state as a matter of fact and pass on to the next point?

Alacrity is a mission by itself, not just a company. The company's market is not just 25 per cent of the value of flats coming up in Madras. It is 100 per cent of the heart of each and every Alacrity flat owner in Madras!

M.S. JAYARAMAN
Madras

Subsidies only help the rich

You have rightly pointed out that the budget of Manmohan Singh is in the right direction (Cover Feature, 22 July). How long can one sustain an unstable economy by giving undue allowances and concessions to inefficient mechanisms? Manmohan Singh is right in removing the fertiliser subsidies as only the rich farmers benefited from them. It would also be sensible, if the government brings income tax loans applicability on the agricultural income as agriculture for the rich has become a tax haven.

G. BALAKRISHNAN
Bombay

For the record

Your Corporate Report on Canara Bank's financial services (5 August) was excellent, especially the box on Canfina.

However, a small error has crept in — the book value of our equity share is Rs.28.90, and not Rs.2.89 as given in the article.

K. MOHANAN
Executive vice-president
Canbank Financial Services Ltd
Bombay

A closer look

The suggestion about the role of organisations like SEBI is welcome (Editorials, 22 July). The opinion of professional bodies and individuals, who can dissect the functions of the companies which are sick, or likely to be sick should also be considered in this context.

Potentially sick companies often exaggerate their potential and promise a revival. But the institutions keep on funding the project, till it reaches a dead end. Hence BIFR, SEBI and the financial institutions should make use of independent professionals or organisations (public or private), to critically examine the functions of the company as well as the general market trend of a particular product or service. This will ensure that the revival plans submitted are factual and can be adhered to.

J.N. TIWARI
Aurangabad

Retirement age

I could not buy the Reserve Bank of India's argument 'A breather at last' (Banking, 22 July) for extending the age of retirement. It is expected to play a model role for the banking industry in India, not to follow them and that too in retaining its "old junk", when unemployment figures are soaring year after year.

B. NANDITA
New Delhi

Charming the British?

It is very unlikely that the Ambassador Nova priced at £5,495 will be the cheapest available car in Britain (News and Events, 22 July). According to the report, other cars are priced at £11,000 and above. If Britons can shell out £5,495 for the Ambassador, they might as well buy the vastly superior Maruti as the French have done.

Incidentally, South Korean cars (like Hyundai's Pony) are retailed in the US markets for less than $4,000.

BHARAT RAM
Calcutta

Is labour eroding the economy?

"A near impossible Task" is a bold and realistic representation of the events that took place in the Tamil Nadu political scene and went unnoticed (Editorial, 8 July). Added to this is pro-labour statutes with which the unions have grown big to threaten the very government itself.

M.V. KRISHNA REDDI
Nellore (Andhra Pradesh)

Ban gold sale

In his 'Agenda for the New Government', Sudhir Mulji has suggested freeing the markets for gold and foreign exchange (Economy, 24 June). Why not try to apply the law of the land for a change?

Smuggling of goods including gold is a crime. The sale of smuggled goods is also illegal. Then why cannot action be taken against those jewellers who sell smuggled gold in the form of ornaments?

No country can progress if it spends $2 billion a year on buying gold. A way must be found to stop this. One is to ban the sale of gold as suggested above.

K.S. NARAYNA SWAMY

The Peacock and the Bear

The communist party that created the Soviet Union, initially a popular formation, quickly lost legitimacy in the twenties. But it stayed in power for over six decades thereafter on what seemed a formidable base of armed might. The double coup of August, however, demonstrated, like Eastern Europe earlier, that even the "mother of all police states" is fragile in the face of sustained reform, however gradual. The Soviet Union is the last great empire of the twentieth century and its collapse should hearten reformers everywhere, especially the long-suffering citizens of the Soviet Union. Beyond that, there are several questions that current events in the Soviet Union raise.

For one, does it matter that the superpower that remains will be the United States? The US is a democratic entity and an energetic supporter of western-style democracies. But it has a dubious record of supporting brutal right-wing authoritarianism while opposing its leftist or nationalist form in the name of anti-Sovietism. This matters to countries like Cuba, now friendless, as it does to right-wing regimes like Haiti's which can continue their old ways. If leftist dictatorships like Syria's get a better deal, it is because their leaders have accepted Pax Americana and have been co-operating with the US for some time now in anticipation of current events. As for the others, such as democracies like India that are poor and non-aligned, dependent on American-supported aid initiatives, American dominance is assured.

This may not mean much to India for whom foreign policy is, in any case, likely to take a back seat because of its current foreign exchange problems. But it matters to liberation movements in South Africa and the Middle East where Soviet (and Indian) support made a difference.

Yet, more directly, Indians have more reason to be concerned than most about the geo-political repercussions of Soviet events. The first concern is the reaction of our government. It indicates that, notwithstanding our democratic method of electing parties, the style of the Congress party's internal operations is as dictatorial as that of the Soviet Communist party. This can be seen in the recent extension of the Indo-Soviet treaty of friendship and co-operation by 20 years without any public debate on the matter. It was also seen, more ludicrously, in the Prime Minister's egocentric response to the coup wherein he dwelt (wrongly, of course) on the tragic fate of radical reformers.

In this context, one wonders whether the party is seriously debating, as it ought to be doing, the political and economic consequences of the rapid break-up of the Soviet Union. If it is, one is yet to hear of it. Yet, these are crucial issues. For example, there is the distinct possibility of a new set of countries with ideologies distinct from communism coming up as India's new northern neighbours, in particular, Uzbekistan, Kirghiz and Kazakhastan. These areas have natural and historical economic and political ties with India. They are currently backward areas that will be in considerable need of new trade links. How is India to best strengthen thes with offers of trade now that these will be independent omies? A rapid consolidation will also help these countr avoid overtures from richer, but more fundamentalist n bours such as Iran.

Meanwhile, the Communist Party of India is likely to over the issue of its continued loyalty to Soviet-style cor nism. However, it has been marginalised over the eighti the Marxists, whose solid mass base in West Bengal and with Chinese communists will probably help it to surviv Soviet split.

There are two other areas of concern for India. The fi military related. India's military hardware is almost ent based on technology or imports from the Soviet Union Soviet Union (what remains of it) may well decide to India to speed up its payments of defence equipment, v also deciding to reduce its investment in defence techno

The second concern is trade. The USSR is India's se largest trading partner (after the US) and its largest ex market. Last year's trade surplus with the USSR Rs.2,800 crore. With the break-up, there could be a re tion, in the short term, in the USSR's ability to buy prod such as tea and pharmaceuticals. Until these sectors dev new markets elsewhere (such as, as noted above, with s of the new nations emerging there), there could be an adv impact.

By and large, Indian goods such as tea, computers cosmetics were exported to the Soviet Union at prices ceeding international rates. The USSR was a willing b because it saved hard currency. Not surprisingly, this si tion generated a Soviet deficit on current account which adjusted against a huge backlog of surpluses on earlier fence exports to India.

While exports of globally marketable goods such as could recover after some initial shocks, other items suc computers may not. In a free market economy, given Inc high tariff rates and low production volumes, compu hardware ought not to be produced locally, much less ported. Yet this industry developed its exports on a bas component imports from hard-currency areas solely to s ply finished computers to the USSR.

The changes in the USSR could have been better prepa for. Yet the Department of Electronics showed no forw thinking in this matter. Its latest annual report does not e refer to this problem. This is the price that has to be paid operating in a protected market.

In the long run, though, India's exports will increasin depend on their global competitiveness. The recent eve only speed up an inevitable process.

The break-up of the Soviet Union has begun and affect everyone. India's government needs to position country now for the waves that will wash over world.

Four new stock exchanges?

The report of the high powered study group on the establishment of new stock exchanges is sure to be controversial despite some of its proposals being sensible. Thus, most people would agree that its delineation of the areas of concern in stock exchange trading, viz, lack of liquidity, poor infrastructure facilities and inefficient trading and settlement mechanisms, is apt.

The committee's proposed solution to the problem areas is also commendable. There is, it argues, the critical need for better linkages across exchanges to allow efficient interchange trading. This is because the areas of concern largely arise from the fact that the Bombay Stock Exchange organises 70 per cent of the country's funds for capital market investment and, therefore, attracts the plum listings and the biggest clients. Thanks to abysmal communication facilities provided by the government and the brokers' don't-care attitude about on-line computerisation, this has led to poor access by investors and brokers outside Bombay to stocks traded at the BSE. As a result, the BSE functions as an elite club of brokers mostly involved in trades on its own behalf or on behalf of larger clients.

Once infrastructure and communication facilities improve this will require scripless trading, quick settlement systems and on-line information), national trading will begin, and, it will become worthwhile for an investor in, say, Shillong, to buy shares listed in Bombay through his local broker. At the end of the rainbow, however, there are huge social gains to be made. Firms will be able to raise larger amounts of funds through capital markets, investors in outlying areas (who currently pay up to 20 per cent more for buying shares listed major stock exchanges) will be able to access the stock-market directly. It will, additionally, be worthwhile to market new or neglected securities such as non-convertible debt and futures contracts.

Of course, just providing better linkages will not be suffice. the report correctly points out, the Securities and Exchange Board of India needs to be adequately empowered in order to efficiently regulate the markets. Similarly, the risks and returns of investing in various securities need to be clearly understood, for example, credit rating of debt.

The controversy arises in the strategies that the report proposes. Most controversially, these include the setting up of four new exchanges including a model exchange (at New Bombay) which will embody the best communication facilities in order to allow easy nationwide access. The model exchange will concentrate on developing the market for debt securities (a market that is currently thinly traded at the BSE and other exchanges). The model exchange will also be linked to all the other exchanges as part of a national market system.

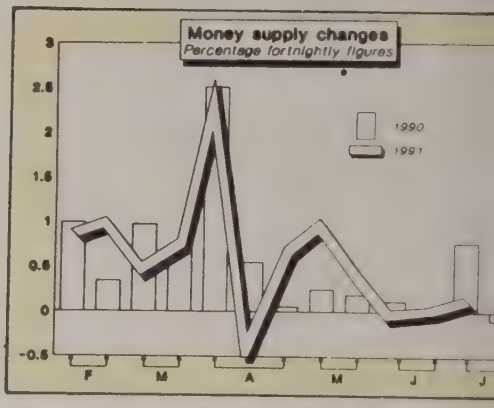
Given that the BSE already exists and that a fully computerised new exchange for smaller companies' debt and equity, the OTC exchange, is about to be established, the question is whether the new exchange will be viable. Would it not make more sense to provide existing exchanges with better communication and computer facilities than to add a new exchange?

The point is that if communication is costly (relative to its quality), a new exchange offers no advantages over the existing system (as the country's near-defunct exchanges such as at Cochin illustrate). If communication is cheap, the existing system — properly interlinked — can cover the country more effectively through a sub-broker network than via a new exchange. The experience of countries like Korea, the UK and, particularly, the US (where regional stock exchanges as well as the New York-based American Stock Exchange have failed) indicates that an efficient sub-broker network works better than having more exchanges even when communications systems work well.

The study group, having correctly identified the problems and the approach for a solution, needs to rethink its strategies. Meanwhile, the government has, surprisingly, accepted the report, allowing no time for debate.

A crash a year

For Indian Airlines, a crash a year is becoming inescapable reality, however scary this might sound. Last fortnight when IC 257 perished in the thick jungles near Imphal it was the domestic airline's third major accident in three years, accidents which, between them, have claimed 288 lives. Of course, this time also we went through the ridiculous ritual that usually follows a plane crash — full blown media coverage, the minister for civil aviation rushing to the spot to an-



nounce a court of enquiry, efficient arrangements to ferry the victims' relatives, announcement of compensation, the airline leaking out news that the pilot was at fault, and the pilots' association retorting with press statements implying that they never are. A fortnight later everything is forgotten.

After all these years we still don't know what caused the Ahmedabad crash of October 1988 and the Bangalore crash of February 1990. If the aircrafts were at fault has anything been done to make sure that accidents don't recur, and if the pilots were at fault, was anything done to ensure that they don't slip up again? What one does know is that going by the frightening regularity of the accidents, it is reasonably certain that one more Indian Airlines plane will crash in the next one year. We can't trust our lives in the hands of an Indian Airlines pilot anymore. But considering that we have no option of flying any other airline on the domestic sector we will be constrained to using Indian Airlines regardless.

Can anything be done to make air travel safer in this country? Yes, plenty. The government has to make a beginning by ensuring the profitable functioning of Indian Airlines and Air India towards the regulation and safety of their operations. The present situation is a direct conflict of interests. It is really a sorry state of affairs that the minister of civil aviation should expend his energy on interviewing candidates for the chairmanship of Indian Airlines and Air India or se ing the contractors for the inflight catering service. The ernment's nationalisation of civil aviation in the 1950s understandable considering that the nascent Indian indu was not capable of making the capital investment that necessary to provide airline services then. But in these when the Tatas and Birlas run empires with turnovers ceeding several thousand crores there is no reason why government should operate Indian Airlines and Air Ind

The civil aviation ministry instead should be concent ing its energies on setting up a strong regulatory bod monitor the safety standards of airlines and airports, lik the US and UK. Monitoring safety is probably the si most important job in the aviation sector today for any g ernment. Though we do have the director general for c aviation who's entrusted with this task, the less said about working the better. What is needed instead is an autonom air safety monitoring body which will have both the sources and power to detect and rectify faults before a cr takes place and not one like the DGCA which does the mi ter's bidding and issues press statements after a plane g down. Too many lives have been lost for nothing and i high time the government sits up and takes note of the con quences of its inaction.

Decontrolling prices

Inflation, currently at over 13.5 per cent, could derail the government, and, with it, the process of liberalisation. Such high inflation rates were last seen in 1980 following the failure of the monsoon and the international oil crisis. This time the causes are: too steep a rise in money supply since April and a hike in the prices of edible oils, natural fibres and cement. Already, this has raised demands for price controls in these items, most notably in cement, a demand that the government has, for the moment, turned down.

In the area of resisting controls, the government has acted rightly on two counts. First, some increase in inflation was expected to follow from devaluation, liberalised interest rates, petrol price hikes and rises in general excise. Although the rate is more than the nine per cent predicted by the finance minister in his budget speech, the causes are 'cost-push' factors that can be offset by tightening money supply. Indeed, the new regime has cut down on money supply growth and, as a consequence, the rate of inflation should fall off. Further, bumper crops are expected in both edible oilseeds and natural fibres this year. Hence, it is not necessary to act to control prices at this stage.

But there is a more fundamental argument against price control, even when they work (which is rare). Price controls make sense only when cartels operate. Despite allegations, there is no evidence as yet of cartels in edible oils or cement. cement producers today are making undreamed-of profits, is because of high demand. Just as they absorbed the heat 1987 and 1988, when demand sagged and the Central go ernment (rightly) did nothing to help the industry, the indu try today should be allowed to reap the benefits of i patience. Only then will the industry's capacity increase at rapid enough pace to meet demand.

The point is that, in a liberalised regime of no interference in an industry's functioning, the governme must yield to market forces its earlier prerogative of contro ling or unduly taxing successful industries because of the temporary success. Such controls had been resorted t earlier — most notably the banning of tea exports in 198 and taxing exporters of black pepper in 1985 — with disas trous results. If inflation is to be controlled, the governmer should think of ways that will increase the supply of com modities. Price controls will do just the opposite. Allowin market forces to operate will lead to increased productio which is the only sensible way of holding down prices.

The government needs, in fact, to give up its ideas of con trol and liberalise even further. But because of its minorit status, it will need considerable political will to stand up t demands for price control.

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

Lufthansa

Steal me if you can

Door-to-door salesmen are hawking hi-tech these days. The latest product to take the direct selling route is Autocop, a car security system for Maruti owners. Autocop is touted as the most advanced of its breed similar to the one manufactured by Radio Shack, a division of Tandy Corporation, USA. In India, it is assembled by Ultimate Electronics Pvt Ltd, a Nasik-based company.

With Autocop installed, the salesman explains, the car can turn into a touch-me-not. The system starts working the moment the driver steps out. Any tampering with the doors, bonnet, windows or wheels sets off a screeching siren. It stops automatically when the ignition is turned on.

Varshal Thakore, director of Genesis Marketing, the Bombay distributors, claims that they are doing good business. A thousand units costing Rs.2,600 each have already been sold. With cars getting costlier, that's not so surprising.

Life goes on

"We are only still at the s of removing the shackles. One would have thought any sensible government would have done it 40 yea ago, but in India things m very slowly. Time is of no value at all. So a lifetime wasted means nothing. Af all we will be born and reborn and we will have many more lives to waste. Therefore, we can afford t waste this one, we still hav another life in which to ma good."

Nani Palkhivala speaking the new industrial policy a the annual general meeting Tata Unisys held on 14 August 1991.

The real cause

M.R. Pai, the indefatigable crusader for the consumers' cause has reacted strongly to the accusation that "pilot error" was responsible for the recent Imphal air disaster. Pai says its unjust to blame someone even before an inquiry is held. Numerous laxities on the part of the domestic carrier as well as the airport and civil aviation authorities are being ignored — stray dogs wander around unchecked on airfields, airports are swarming with touts and the area is badly maintained. In one case, passengers landing in Bombay had to wait for an hour for their luggage due to a "technical snag" which was really a lunch break for the duty staff.

Road wise

On an average, road accidents in India claim the lives of 700 persons daily. According to the *Road Development Plan for India (1981-2001)* published by the Indian Roads Congress, the casualty rate, 48,000 at present, will cross 84,000 per year if the trend continues.

Absence of road discipline and bad roads are cited as the main causes. To focus the attention of policy makers and the general public as well on this problem, the Loss Prevention Association of India Ltd has launched a quarterly guide which is exclusively devoted to issues relating to accident prevention and safety on roads.

Costly whiff

Mexicans gasping for a breath of fresh air will have to pay for it literally through their nose. *The Environment News Digest* reports that the world's first "pay-as-you-breathe" kiosks are being installed around Mexico City Centre providing people with pure oxygen at US $2 a minute.

The city has earned the dubious distinction of being the most polluted in the world. Spewing smokestack an oil refinery and nearly three million cars pollute the city's environment. As a result, most people die due to respiratory infections.

Eximscript

In the light of the new industrial policy, the eximscrip is nothing short o a sacred document. So .....

If you forget to collect your entitlement, it could be an **eximskip**.

If you lose it, an ex-**eximscrip**.

If you buy it just before th expiry of the maturity date, an **exitscrip**.

If you buy it after maturity by mistake, an **eximscrap**.

If you buy it for safety, an **exhumescrip**.

And if your ex-husband sells you one, an **ex-himscrip**.

Change of face

While statues of Lenin are being pulled down across Eastern Europe, the Moscow office of BBDO Marketing, the American ad agency, has found a new home for the revolutionary's face. In a new image campaign for the Moscow Savings Bank (Sberegatelny Bank), BBDO designed a red US dollar with one notable difference — Lenin's face in place of George Washington's. The red dollar is accompanied by the slogan "New times, new people, new services." It appeared in an ad which was released in several Soviet newspapers recently.

Big change

Collections from Hindu religious institutions, especially temples, constitute a major chunk of the Kerala-based Dhanalakshmi bank's deposits. With these collections being mainly in coins, the bank is now facing a disposal problem. Other public sector banks are reluctant to accept coins in large quantities. And so the bank has decided to offer the change to employees of other banks instead.

"We have designed a special loan for the benefit of the employees of commercial banks. The formalities of the loans are simple and the amount will be disbursed in coins. What you have to do is just to produce a salary certificate and co-obligancy of two of your co-workers. There is no delay and the amount can be sanctioned on the spot," says the notice circulated by the bank manager.

GOPALKRISHNAN T.S.
Palakkad

Front-end fibres

Du Pont Inc, the world's largest supplier of synthetic fibres to the textile industry, began its pioneering efforts over six decades ago in a small plant located in Richmond, Virginia. Today the Spruance plant, as it is called after pioneer-inventor William Spruance, a Du Pont employee, has 3,400 people and is considered a historical site. It was here that the first rayon and cellophane were manufactured by the company. A wide range of products are made here, such as teflon (discovered accidentally by a Du Pont researcher in 1938) and Nomex (an aramid fibre that is used for firefighting apparel, which also formed part of the 21-layer suit that Neil Armstrong wore on his historic moonwalk in 1969). The newest in the Spruance range is Kevlar that is five times stronger than steel and used for cables and fibre optics.

Recently the company has been assisting an Ahmedabad based company, Fluteffe, to set up a unit to manufacture an aerospace wire called Kapton which will be used in wiring aircraft.

High fliers

As the Bombay Stock Exchange Index scaled an all-time peak last fortnight, share prices too touched never-before highs. The biggest percentage increase — 82 per cent — was recorded by Garden Silk Mills, which reflected investors' confidence that this turnaround case would continue to put up a good show. Meanwhile, a leading speculator was responsible for the 76 per cent rise in the price of Birla 3M, a new company with a small equity base, of the Ashok Birla group. The market is bullish on textiles and tyres and this sentiment was translated into handsome gains for Nahar Exports and Vikrant Tyres.

Top 5 gainers

Name of company	Variance (%)	Closing price 23 August	Previous closing 19 August
Garden Silk	82	77.50	42.50
Birla 3M	75.6	180.00	102.50
Nahar Imports	73.6	230.00	132.50
Surya Imports	65.7	29.00	17.50
Vikrant Tyres	60	60.00	37.50

Egyptian venture

Birla: a matter of experience

After spreading his wings in the South-east Asian countries of Thailand, the Philippines and Malaysia, Aditya Birla is now looking towards the Middle East countries. One of the Birla group companies, most probably Indian Rayon, is setting up a joint venture with a state-owned company in Egypt. The new company is setting up a Rs.31 crore project to manufacture 10,000 tonnes per annum of carbon black. Birla was apparently chosen as partner because of his experience in running carbon black plants, one in India and another in Thailand.

Cutting losses

ITC Ltd is soon going to take over Gujarat Hotels Ltd, a company which was jointly floated by Gujarat Industrial Investment Corporation (GIIC) and ITC in 1986 to put up a 5-star hotel in Baroda. Run by ITC's hotel division, Welcomgroup, the hotel has been doing badly, ending up with losses in the last two years. The company, along with its bankers, has now worked out a rehabilitation package. GIIC has also sold its entire stake (26 per cent) to ITC, raising the latter's stake to 51 per cent. With such large holdings and given Gujarat Hotels' bad health, there is a possibility that the company may even be merged with ITC.

Slow road to revival

Majestic Auto, the ailing Munjal group company, has recently received two shots in the arm, which may ultimately lead to its revival. First, the union budget reduced the excise duty on mopeds having an engine capacity between 50 cc and 75 cc, and Majestic Auto's 65 cc "Hero-Puch" receives the benefit. And last fortnight, the company signed an agreement with Derby Rabasa of Spain to export a large number of mopeds to that country. Initially, Derby will pick up 20,000 Hero-Puch mopeds every month and market it under the "Panther" brand name in Spain and some other European countries. If all goes well, the company may raise its order to 50,000 mopeds a month subsequently.

Whither NRI deposits?

The State Bank of India has been facing a cash crunch for almost two years now. The reasons are many, ranging from the country's forex problems (SBI's huge Indian Oil and ONGC accounts have a large forex outgo) to elections to 'dryness' in the financial system. Recently, yet another factor has surfaced. Over the past two years, SBI has lost as much as $35 million (Rs.700 crore at the exchange rate prevailing before devaluation) through NRIs in arbitrage. After defrauding the bank, the NRIs, naturally, are absconding. SBI is now borrowing money from its associate, State Bank of Saurashtra, to tide over the crisis.

Foreigners preferred

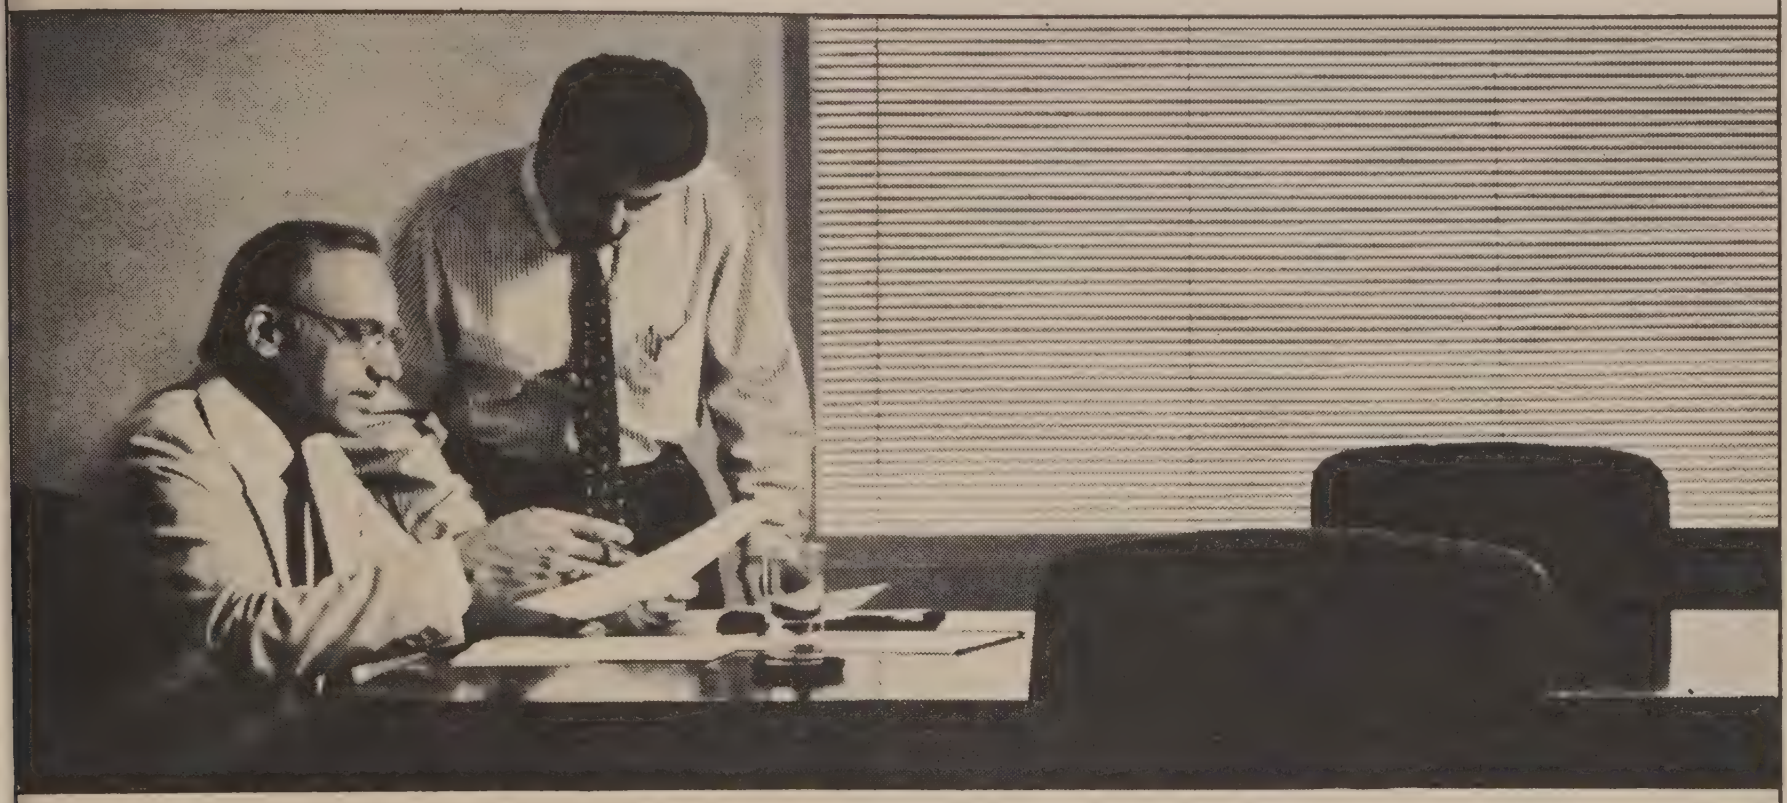
The much talked about privatisation of public sector enterprises is likely to take some tangible shape in the ministry of tourism and civil aviation soon. The ministry has recently requested merchant banking divisions of some foreign banks to assess the real market value of the hotels and resorts owned and run by the Indian Tourism Development Corporation and Hotel Corporation of India.

Once the assessment is ready and approved the ministry is likely to invite private hotel companies to share financial responsibilities and help in running the hotels more efficiently. The possibility of hiving off some hotels completely to the private sector is also not ruled out.

Meanwhile, people in the banking sector are wondering why the merchant banking divisions of Indian banks are not getting their share of the lucrative valuation of assets business.

Pipe dream

From pipes to PVC seemed the logica to take, since backward integration in fashion. So P.P. Chhabria and F Pipes went that way. But who coul guessed that the cost of the projec had planned would escalate from R crore to almost Rs.500 crore? Now as the Chhabrias battle this pro there is trouble on other fronts. Th going to be the inevitable delay in i mentation and the project may not stream as planned in October 1992. such cost and time overruns, wha happen to the economics of the pr The Chhabrias are, of course, g ahead with the project, probably ba on the fact that other PVC projects i pipeline — Reliance Petrochemical one — will face the same economics.



Coveted chair

Many continue to covet the prestig job of chairman of State Bank of I (SBI). Though the present incumb M.N. Goiporia, has a few years to go fore retirement, this hasn't preve others from aspiring to take over the r of India's largest bank. The modus o andi would be to 'promote' Goipori another job within the government (pr ably as deputy governor of RBI.

The person being currently tal about as a potential successor is P Subba Rao, who is known to be frien to prime minister P.V. Narasimha Ra businessman son. But since Rao, as d uty managing director in charge of cor rate banking at SBI, is three levels bel his elevation will first mean accommod ing the two managing directors, T. Sinha and V. Mahadevan, somewh else. The gameplan is that Sinha ta over as chairman for a short while bef retiring, while Mahadevan, with his pertise in corporate finance, can repla N. Vaghul as chairman of ICICI. If all t can be wangled by January 1992, R stands to get a full two-year term.

Meanwhile, according to the banki circle grapevine, R. Srinivasan — w was desperately trying for the top SBI po has now succeeded in getting himself t chairmanship of the Board for Industri and Financial Reconstruction after t controversial R. Ganapathi retires January. Other recommendations rema pending with the union finance ministr

If you're looking for cost-effective and thermally eficient furnaces ...

ask Precimax

Our range:

- Galvanizing Furnaces
- Bell Furnaces
- Pit Furnaces
- Roller Hearth Furnaces
- Bogie Hearth Furnaces
- Shuttle Kilns
- Car Bottom Kilns
- Car Tunnel Kilns
- Pusher Furnaces
- Continuous Lines
- Rotary Hearth Furnaces
- Accessories

PRECIMAX has come to be known as an important and innovative supplier of furnaces, since its inception.

PRECIMAX is managed by highly qualified and skilled professionals with experience of over two decades in the field.

The most important objective that we have set for ourselves is to design, develop, manufacture and market world-class furnaces

At PRECIMAX, we leave no stone unturned in our search for thermally efficient and rugged furnaces which meet exacting standards – yours and ours.

We welcome any query that relates to furnaces for any application. PRECIMAX is anxious to serve you in any way that is helpful in this field.

A meeting extraordinaire

"The meeting stands adjourned," the chairman said, and left. And then ere was pandemonium. The corporate nt of the year, the extraordinary eral meeting of Larsen & Toubro, had ed, even before it began! Shaken out heir reverie by the announcement, reholders, who had denied the banis the pleasure of their proxies to ch the takeover drama, took over

bani brothers: marking time

ntrol' of a battle they had already lost. **gans and protests**. They protested rily, this they did with a flourish, ng the choicest swear words. The brunt t was borne by the man chosen by the itutions for the job, the "unanimously ted" chairman of the meeting and LIC minee director on the L&T board, .Gupta. Left behind to listen to the gan shouting, *Gupta hai, hai* and *We nt Dhirubhai*, were the grim faced Amai brothers, Mukesh and Anil. Tria's massive proxy collection effort not enough, having fallen short of a ority by a mere 1.5 per cent of the votequity.

Though they deny it, the Ambanis were bably aware of what was going to pen, which is why Dhirubhai Amai, who was seeking re-election as irman, was not present. But, they were ing that the mood of the shareholders was it their own supporters?) would ry the day for them. The 48.51 per cent port they have garnered from L&T reholders will be valid when the EGM e-convened on 16 September and they ght even be able to muster the required jority.

But, if 26 August was not the Ambanis' day, neither did it belong to the institutions. They cut a sorry picture before the public over the manner in which they got the EGM adjourned, because neither the LIC representative's last-two-days-were-holidays excuse nor Gupta's bomb scare cut any ice with the shareholders. They only served to strengthen the suspicions that the institutions had come prepared to adjourn the meeting, since they also announced the venue for the next meeting.

Obviously, the institutions were buying time, not having received any "written directive from Delhi". For some strange reasons, until noon on the EGM day, the institutional shareholders of L&T were not even willing to meet together to discuss the subject. The cause as well as the beneficiary of the confusion was none other than the Central government. Its non-committal stance helped boost its image of non-interference in the affairs of the institutions and the corporate sector. Moreover, with Parliament still in session, the minority Congress government, for obvious reasons, does not want to face questioning on this count.

So the L&T saga continues beyond D Day. That the Ambanis will eventually return to control the engineering giant is almost a certainty. The three-week wait might well serve as a respite for them to strengthen their claim further. At the next meeting, who knows, the institutions might just not turn up.

■ MADHAV REDDY

SPARTEK CERAMICS

Synergic merger

The Madras-based Spartek Ceramics India Ltd has revolutionised the ceramic tiles market (see *Business India*, 22 August, 1988). And now, Krishna Prasad Tripuraneni, the young managing director of the company has pulled another surprise. Last month, Tripuraneni unveiled his plan to merge two group companies — Spartek Ceramics (turnover for 1991: Rs.31.84 crore) and Spartek Granites (a new company with an expected turnover for 1991-92 of Rs.10 crore).

The merger will take effect from 1 April 1991 and the shares will be exchanged in the ratio of two Spartek Ceramics' shares for three Spartek Granites' shares. The exchange ratio has been worked out keeping in mind the price of equity shares of the two. Spartek Ceramics is quoting around Rs.75 and Spartek Granites, around Rs.50. "The shareholders of both the companies will not be worse off," says Tripuraneni. "In fact, all will gain from a stronger company," he adds.

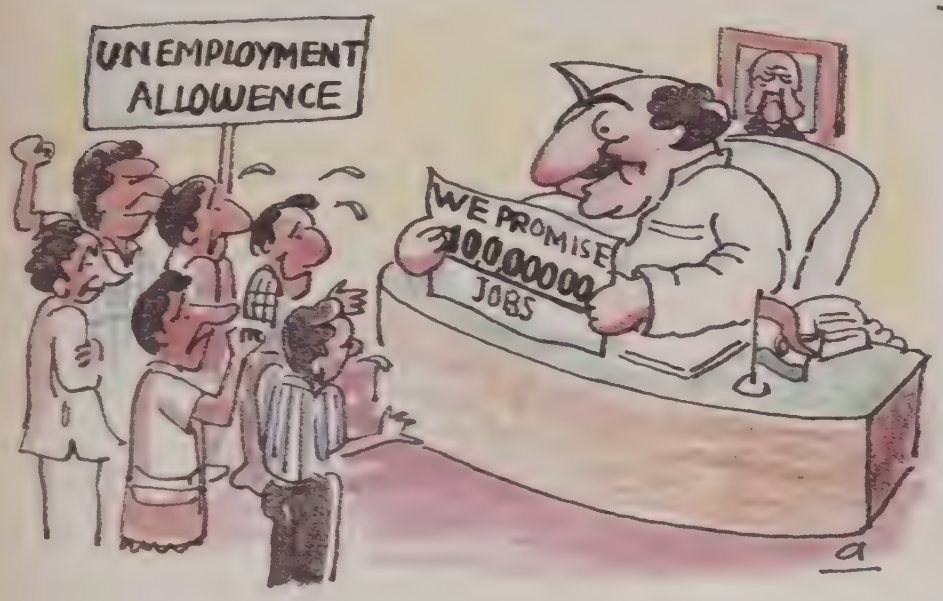
What made it necessary to merge Spartek Granites which was floated only last year? It had made a public issue of Rs.5.74 crore (equity shares plus convertible debentures) only in last September to part finance a Rs.20-crore export-oriented unit for ceramic granite tiles. And the 750,000 sq metre plant went into production in March 1991.

Despite a small cost overrun, Tripuraneni insists that Spartek Granites is not unviable on its own, and the reasons

SPARTEK Ceramics India Limited

for the merger is synergy in the production process, technology and marketing. Spartek Ceramics makes ceramic floor and wall tiles and Spartek Granites makes ceramic granite tiles. Says Tripuraneni, "About 75 per cent of granites is to be exported to overseas buyers who also deal in ceramic tiles. So, the tiles marketing abroad will become easy."

Synergies apart, the merger will help Spartek Ceramics save on taxes by way of larger depreciation claims. The equity capital of the merged company will go upto Rs.7.96 crore. Against this, the company's turnover is expected to go up to Rs.45 crore in 1991-92. Tripuraneni is confident that the company will maintain its earnings per share around last year's level of Rs.6.5.



■ DILIP MAITRA

Promises

The **World Bank** says that reforming India deserves a helping hand. It has advised developed countries to offer quick disbursement aid. However the Bank feels that a firmer stand needs to be taken on the contentious issue of the exit policy. In any case, the Bank's view should be a positive pointer when the Aid India consortium meets in Paris later this month.

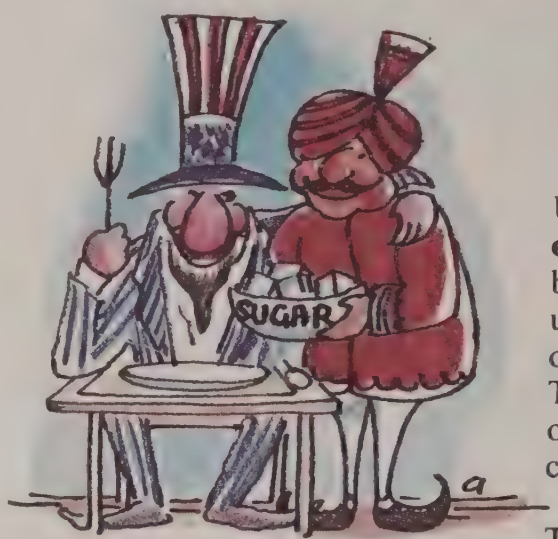
After conferring for two days in the capital, telecom experts concluded that the most important thing was to provide instant relief to suffering subscribers. If a telephone goes on the blink it will be repaired in a day, promised **Rajesh Pilot,** minister of state for communication.

The government has ruled out dole for the country's 35

million unemployed. Instead 100 million **job opportunities** will be created over the next 10 years. H.R. Bharadwaj, minister of state for planning, said that unemployment allowance would only make people lazy.

Compromises

Those with their illicit millions stashed away abroad will be allowed to convert it into legal Indian tender under an **immunity scheme** devised by finance minister Manmohan Singh. No questions will be asked nor any tax imposed on those receiving "gifts" in foreign exchange. The cabinet recently approved the proposed legislation which is to be presented as a bill in the current session of parliament. Singh expects a billion dollars to pour in.



The **newsprint imbroglio** ended last fortnight with the government agreeing to a "cost sharing" scheme. In place of the proposed price hike on imported newsprint is a one-time surcharge of Rs.800 per tonne on standard newsprint and Rs.2,300 per tonne on the glazed variety. The newspaper industry accepted the compromise formula with reluctance.

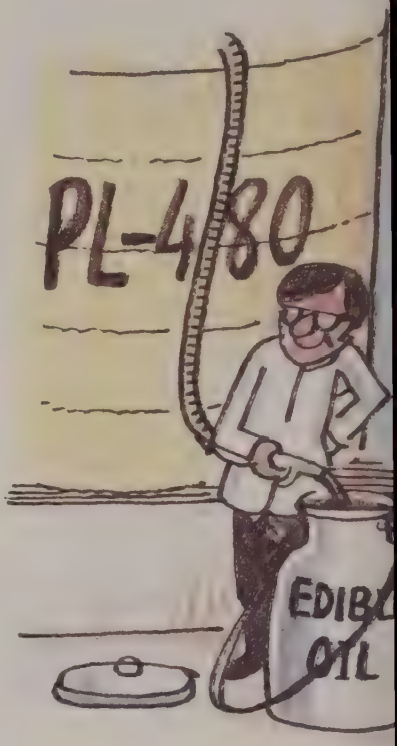
Hopes

At a meeting in Calcutta, Reserve Bank governor **S. Venkitaramanan** announced that the all-important IMF loan should come through by mid-September. Press reports quoted him as saying that $4 billion was on the way. The Reserve Bank issued a hasty clarification the next day: the loan amount is as yet unconfirmed, though the talks have been "fruitful".

The recent economic reforms have gladdened the hearts of overseas Indians somewhat. In April this year, foreign currency **non-resident deposits** were draining off at the rate of Rs.145 crore every week. The average outflow is now down to less than half — Rs.62 crore weekly. Hope springs eternal...

India is expecting "preferential treatment" from the United States, to increase the country's **sugar import quota.** According to S. L. Jain, secretary-general of the Indian Sugar Mills Association, it was

"non-performance" that caused the quota's fall from 100,000 tonnes to the current 15,000 tonnes.



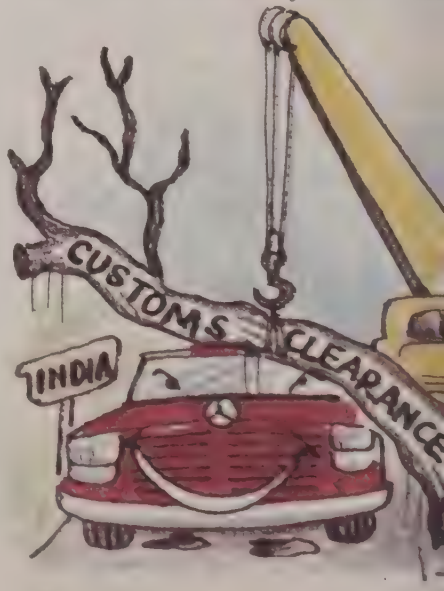
Fears

There may be no takers for the **twenty per cent equity** offering by selected public sector units, unless the shares are listed. Reason: the charter of the biggest mutual fund, the Unit Trust of India, prevents it from investing in unlisted shares. To get out of this bind, the finance ministry just might make a concession and offer a small percentage to the public first.

Representatives of the **foundry industry** have urged the government to remove customs duty on pig iron and steel scrap, two of its major raw materials. They expect a shortfall of 500,000 tonnes of pig iron this year alone.

Reprieves

The Department of Economic Affairs' negotiations with the



US authorities to include **edible oil** under PL 480 hav borne fruit. A supply stream upto 6 lakh tonnes is assured over the next couple of years This should prove a stabilise on domestic prices and conserve foreign exchange to

The State Bank of India has resumed gold supplies to **jewellery exporters**. Vociferous protests from the latter that they were losing o on foreign exchange earnings upto Rs.60 crore every mont prompted the commerce ministry to issue the necessar diktat.

Reliefs

Importing cars is now easier. Vehicles have been placed under OGL and the requiremen of a customs clearance permit has been done away with. The

ategories of people
led to such imports
ains unchanged, though
oms duty will have to be
by all, save government
ants, in foreign exchange.

otests

mists and pharmaceutical panies shut shop on 26 ust in what was meant to country-wide protest nst the government's hy to the drug industry's vances. The main one es to prices which, they should be raised forthwith lse the manufacture of vital gs could get emunerative and spurious gs would abound.

State Bank of India (SBI) ed the Supreme Court nst a directive issued by Madras high court asking lend Rs.40 lakh to the agement of the closed (Binny) Mills towards ing 50 per cent of the kers' wages. The Supreme rt granted the stay on the nd that wage payments the management's onsibility.

e major **bank employee ons** have reached an erstanding to launch a tning strike if the ernment made any move to ratise banks or raise money n the public. No date has n fixed for the offensive, their sleeves are rolled up reparation.

icers of **Syndicate Bank** divided over the issue of ging a 'war' against the k's management. As a lt, a new officers' forum, All India Syndicate Bank icers Confederation, has n formed by the former sident of the Syndicate k Officers Association.

rtnerships

e Tamil Nadu Industrial velopment Corporation CO) has chosen the Calcutta-ed McNally Bharat as its partner to construct and operate a Rs.6,000-crore power plant in Tamil Nadu. Lignite from the Neyvelli coal fields will form the primary fuel for the plant.

Koyo Seiko Company Ltd, will pick up a 10 per cent equity stake in Sona Steering Systems, which is based in Delhi. For starters, the Japanese company will source $10 million worth of components from its Indian partner. Later, the sourcing arrangement may be expanded to include steering systems as well. This strategy makes sense given the high production costs Koyo has to cope with in Japan.

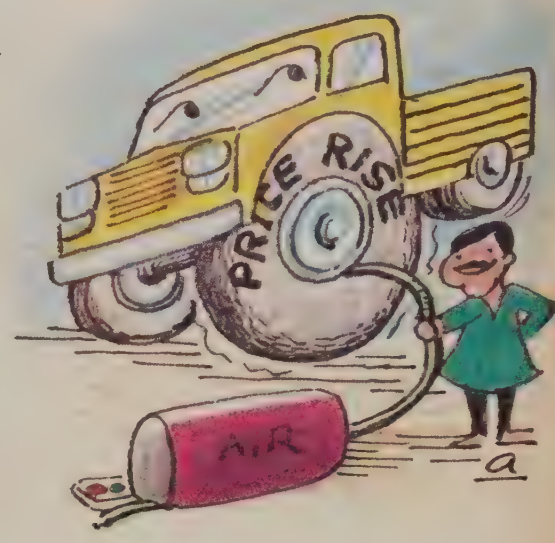
Godrej Soaps Ltd will now manufacture Margo soap and Neem toothpaste for Shaw Wallace and Company. Labour problems led to the closure of Calcutta Chemicals, the Chhabria company making these products, and prompted Shaw Wallace to look for an alternative manufacturing base.

The International Finance Corporation, Washington, will invest $16.7 million in the expansion project of Varun Shipping Company Ltd. This is in addition to the Rs.3.5 crore equity it already has.

The public sector **Hindustan Aeronautics Ltd** wants to set up an advanced engineering software company together with British Aerospace of the UK. A tripartite agreement between the two partners and the government is in the offing. HAL has been assured business from BAE.

Hoechst AG has developed technology for the manufacture of H-FC 134a, the ozone-friendly alternative to chlorofluorocarbons (CFCs) used in refrigeration and air-conditioning. Hoechst is offering technology to Mafatlal Fine Spinning and Mfg Co Ltd whose chemicals division has formulated a Rs.100-crore plan to introduce environment-friendly gases, propellants, and suitable lubricants in the country.

Controversies



Despite last minute telephone calls from the prime minister and the finance minister, **Dhirubhai Ambani** refused to call off the controversial extraordinary general meeting of Larsen & Toubro Ltd. It eventually turned out to be an abortive affair, thanks to a bomb scare and a plea for postponement by the financial institutions who said they wanted more time to mull over the case. Reports suggest that political pressures prompted the delaying tactic. The Ambanis have to wait a little bit longer — until 16 September — to realise their L&T vision.

Meanwhile, the Ambani flagship, **Reliance Industries Ltd** has got the nod of assent from the Controller of Capital Issues for its Rs.987-crore debenture offering. This should ensure that the company's gas cracker at Hazira gets cracking soon.

A study group headed by **M.J. Pherwani** has recommended that the office of the Controller of Capital Issues be abolished. Market forces, rather than the CCI, is the best determinant of share premium. Pherwani's proposal for a national stockmarket system, which got the government's go-ahead has, raised a storm of controversy.

"Surely you don't want India to become a country of maid servants?" That was prime minister **Narasimha Rao's** rhetorical rejoinder to Nirmal Chatterjee of the CPM. In a parliament parley, Chatterjee accused the government of allowing the manufacture of washing machines under the guise of technology.

Hikes

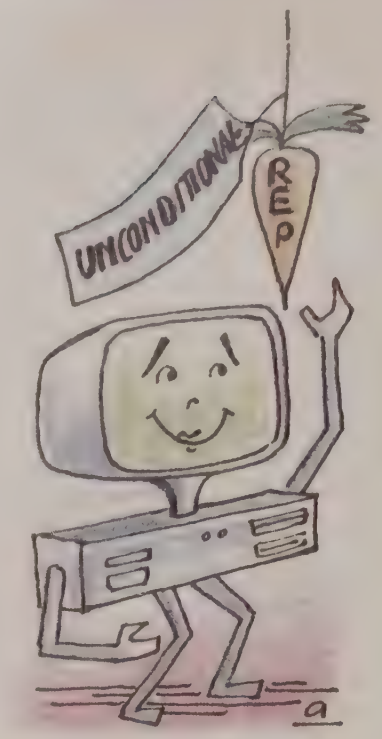
Tyres are now costlier. Manufacturers have jacked up prices by 11 to 15 per cent following the excise duty revision in the budget. This is the steepest hike in ten years.

Discussions between the Textile Commissioner and the indigenous producers of caprolactam, the raw material for nylon filament yarn, resulted in an increase in the **ceiling price of NFY** by Rs.11 per kg. This hike comes as a timely reprieve for the industry which has been reeling under rising production costs.

Commitments

Goa, the sunseeking tourist's paradise, is now looking to develop its industrial base. The new industrial policy announced by state industries minister Suresh Parulekar contained a host of handouts to would-be entrepreneurs. These include a 25 per cent investment subsidy, sales tax benefits and a 25 per cent relief in water and power tariffs. The state hopes that its new slogan "take industrial schemes to the people", will enthuse its citizens, especially those who are now non-residents abroad.

Technopark, the collective name for Kerala's **electronics technology parks** coming up in Trivandrum, Kochi and Kozhikode is five months old. Thirty-three companies have already registered their export-

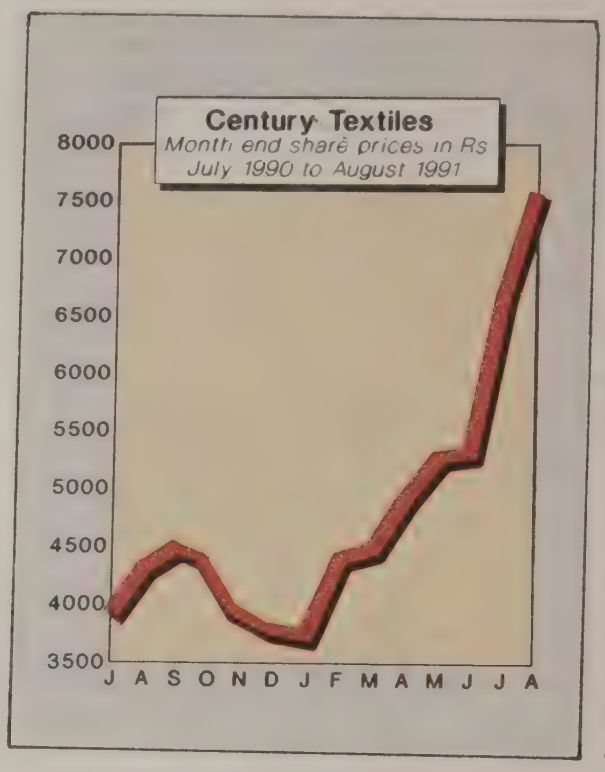


oriented software units in the Trivandrum park. Each park is estimated to cost Rs.22 crore with the Department of Electronics providing infrastructural support. Technopark's ultimate ambition is to create the "world's greenest electronics technopolis."

Market forces will be allowed to prevail in the **cement industry**, declared the government categorically while rejecting a demand by Haryana, Uttar Pradesh and West Bengal for reintroducing price controls.

Gainers

Manu Chhabria has pipped Vijay Mallya in the liquor stakes. In their bid to take over Doburg Lager Breweries an ailing beer manufacturer under BIFR, United Breweries lost out to Sica Breweries, a Shaw Wallace company. Sica plans to pump Rs.7.19 crore into Doburg.



Computer units with a domestic turnover of more than Rs.5 crore will be allowed flexible REP facility. This was so far available only to the TV

industry, which has been allowed to import components other than those required in TV manufacture.

The restraint imposed on cigarette giant **ITC Ltd**, earlier this year, from manufacturing and selling its bestselling Wills brand by a district judge in Sikkim, has been lifted. The Sikkim High Court dismissed the two suits that accused ITC of passing off Wills as a foreign brand. The company is convinced that the complaint was engineered by a rival; it has caused a production loss of Rs.5 crore.

The **Bombay Stock Exchange** Sensitive Index crossed the 1,800 peak last fortnight. The highest priced share is Century, long considered a star performer.

Losers

Thanks to the grounding of the A320s after the Bangalore crash, **Indian Airlines** carried fewer passengers in 1990-91. The total number of people ferried was 78.4 lakh as compared to 98.5 lakh in the previous year. By 1994-95, the number should increase t lakh, according to the civ aviation and tourism min Madhavrao Scindia.

Employees of the Pakistar branch of the **Ba Credit and Comm International** made a bid to buy Pakistan operatio the beleagured b This bid came afte Pakistani governm recent decision to s public sector bank Allied Bank Limite its employees.

Pens, prices and ...

Ninety seven per cer of the **pens and pencils** made in Ind are the handiwork o small-scale manufacturers. The Writing Instruments Manufacturers' Organisation, their representative body, recently organised an exhibition in the capital, called — yes, that's right — The Write Show.

LANDMARKS

Released, K. Doraiswami, executive director of Indian Oil Corporation of Bombay after being held in captivity in Srinagar by Kashmiri militants for 54 days, in exchange for 9 terrorists. But S.L. Khosa, the Srinagar branch manager of New India Assurance who was kidnapped by the same militant group Ikhwan-Ul-Muslimeen on 17 August continues to be in captivity.

Appointed, Dr. C. Rangarajan as member, Planning Commission. He was till recently deputy governor, Reserve Bank of India.

Appointed, former PTI spokesman and ex-editor of the Calcutta daily *The Telegraph*, M.J. Akbar as advisor in the Union ministry for human resources development. The job is honorary and will not carry any remuneration.

Appointed, Surendra Singh, a 1959 batch IAS officer of UP cadre as secretary, heavy industry in the industry ministry. He was earlier a special secretary in the prime minister's office.

Achieved, a record of sorts by Tamil Nadu chief minister Jayalalitha who visited her Bargur constituency in Dharmapuri district in a convoy of more than 1,000 vehicles which was three km long.

Revealed, by commerce minister P. Chidambaram that he had appointed an advisory committee to examine the desirability and feasibility of setting up a free port in India.

Revealed, by minister of state for finance, Dalbir Singh that only 15,894 tax payers in India earn more than Rs.5 lakh and 8,692 tax payers earn more than Rs.10 lakh.

Revealed, by minister of state for health and family welfare, Tara Devi that 48 people have died of AIDS in India in the last three years. Maharashtra topped the list with 15 deaths followed by Delhi and Madras with 8 each.

Inducted, Sadanand G. Bhatkal, chairman, Popular Prakashan, a reputed Bombay-based publishing house into the Indian Publishing Hall of Fame, New Delhi. Apart from publishing technical books for over three decades he ran the industry journal *Indian Publisher and Bookseller*.

S.M. PARANDE

The inhuman face of a bankruptcy related liquidator is all too well-known. S.M. Parande, the former executive director of

SBI Caps and now the Bombay high court appointed provisional liquidator of BCCI India assets, however, would not fit into this mould. The desperate among those who have their money stuck with the bank have approached him for help and he has been more than willing to oblige. A handicapped hawker who owned a food cart outside the bank's premises at Bombay's Nariman Point suddenly found himself without money to do the business the day after BCCI ceased operations. His Rs.15,000 deposit was among the Rs.520-crore asset of the bank frozen by the high court. When his mother approached Parande a few days later saying that they had no money to do business, the career State Bank official immediately arranged for an overdraft facility at his parent bank's nearby branch. Similarly, when the government run School for Shipping Engineers attached to the ministry of shipping pleaded with Parande saying that the freezing of their Rs.40-lakh deposit meant that they had no money to pay their staff wages worth Rs.2 lakh for the month of July, the banker again arranged for an overdraft facility. Parande says that he will consider similar requests in future as well, on a case-by-case basis.

PRAKASH RATNAPARKHE

Electronica, a Pune-based machine tool company, recently tied up with Staubli Unimation of the UK, for selling industrial robots in India. Staubli has already manufactured over 10,000 robots and has been in this field for over 30 years. It manufactures 1,000 robots annually at its Telford plant in the UK. "Later on, we will be supplying components to Staubli and in the final phase, shall start manufacturing robots in

India," says Prakash Ratnaparkhe, director, Electronica. Most of these robots will, however, be exported to south east Asian countries since the market in India for industrial robots has still not picked up.

SANJAY KIRLOSKAR

Last fortnight, the Kirloskarwadi plant of Pune-based Kirloskar Brothers Ltd joined the exclusive club of Indian companies who have received the much-coveted ISO 9001 certificate. According to vice-chairman and managing director Sanjay Kirloskar, a complete and stringent audit was carried out of not only the quality control systems at the plant but also the manufacturing processes, storing systems, material handling systems, etc. The audit is carried out by an international organisation, which in this case was Bureau Veritas Quality International of the UK. The country's largest diesel engine manufacturer is already doing well in the domestic market with sales crossing the Rs.180-crore mark in 1990-91 and exports exceeding Rs.14 crore.

MUKESH JAIN

After setting up an acrylon fibre project, Mukesh Jain, managing director of Delhi-bas
hupati Acrylon has dec

which has caught the in-
y unawares.

S.N. BAKSHI

s 25 years with Air India,
where he retired as a se-
manager, systems catering,
988, S.N. Bakshi travelled worldwide 80 times. Wherever he went, he mesmerised gourmets with his Indian cooking. For the last three years, it was the Japanese — as general manager of the Tokyo-based Maharaja chain of restaurants. There, he also gave cooking classes and has trained 850 Japanese ladies in the art of Indian cooking. Now the country's most famous vegeterian chef has become a freelancer and will cater his skills in capitals all across the world. On special occasions in the past, Bakshi has cooked for ex-princes, four Indian prime ministers and four

Indian presidents. But perhaps the high point of his interesting life was the time when Maxim's in Paris allowed him to use their kitchen to create a grand Indian dinner for 200 international personalities including the entire cast of the "Gandhi" film. That day, the chief chef of Maxim's assisted Bakshi in peeling onions!

RANDHIR SAHNI & VINAY TOSHNIWAL

vies Sahni Inc, the success-
Houston-based architec-
al, planning, urban design
consulting firm, Randhir
ni now has designs on
lia. Early this month he
ned an MoU with Vinay
shniwal, managing director
Toshniwal Brothers (a
der in sophisticated high
hnology instrumentation in
erse fields) for a 50-50
uity participation in a new
mt venture — Toshbro-
hni Consultancy Pvt Ltd.
e new Bombay-based firm
l undertake turnkey project
nsultancy for building hospitals in Russia, the Middle East and the Far East.

"With growing awareness and affordability of tertiary health care, there is an unprecedented demand for well-equipped hospitals in India as well as in Russia. A combination of Western technology and Indian engineering and consultancy could, therefore, become an internationally competitive product," says Sahni. Toshniwal concurs, "The recent entry of the corporate sector into health care indicates that there will be bigger investment in developing hospital infrastructure."

V.S. GOSAVI

At this stage, it sounds farfetched but V.S. Gosavi, associate vice-president of Kirloskar Consultants is serious about the project. The Pune based company has bagged the contract for a Rs.300-crore "floating" hotel and commercial complex to be built off Nariman Point in Bombay in the sea. The 1,000-room hotel named Chateau International, will house a shopping arcade, diamond and jewellery bourses and a mini hospital. The project is being promoted by D. Mukkerji who has 15 years experience in the hotel industry and Le-Groupe Martin Fenouillet of Paris has been roped in for designing the project. Kirloskar Consultants has already received an advance payment for the project, expected to be completed by 1995-96.

CHARLES HANCHETT

The US-based Harris Corp — world leaders in radiation-hardened ICs — has set its eyes on the Indian market what with the recent policy charges. Through a technical and financial collaboration with Intersil Inc (a subsidiary of Harris), Intersil India had been the exclusive export-oriented manufacturer of Harris semiconductor products in India and also its sales representative since 1979.

"Only now for the first time it has become possible to reach out to the vast Indian market," says Charles Hanchett, vice-president (Asia-Pacific), Harris Corp. Harris has set its targets right. According to Hanchett, who has been with Harris for 18 years, the company will not actively pursue the consumer market. Instead, Harris will be looking for bulk orders from the defence and communication sectors and also from the automotive industry.

THE BOEING DEAL

Last-minute approval

Dogged by controversies and political machinations accruing from three government changes over the last two years, Air India finally received cabinet clearance for the purchase of four Boeing 747s a day before the — third and final — 15 August deadline. It was on 13 September, 1989 that the Air India board had approved the purchase. Following its recommendations, the Public Investment Board clearance was ultimately received on 15 March, 1991, but the president informed the cabinet committee for economic affairs (CCEA) that the then caretaker government of prime minister Chandra Shekhar could not sanction such a big order.

Gupte (left) **signing the agreement: keeping all options open**

The first of the aircraft will arrive in August 1993, eight months behind AI's originally planned schedule. The rest will follow a few months later. Boeing has also agreed to give the airline the option of placing orders for five more aircraft immediately after the delivery of these four. The bureaucratic delay and the recent devaluation of the rupee have increased the cost of the purchase by around Rs.600 crore to Rs.1,960 crore. At least three international banking corporations have approached Boeing with an offer of asset-based financing towards the foreign exchange component of $667.09 million.

AI enjoys an unblemished debt servicing record and its all-time high profit of Rs.81.23 crore in 1990-91 has also been reassuring, considering the global recession. While an advance payment of about $35 million will have to be made by end August, the remaining amount will be paid up in periodic instalments for which a variety of options are yet being studied. "We prefer the leasing arrangement but we are also keeping all the options open," AI's acting chairman and managing director S.R. Gupte told newsmen while signing the agreement on 14 August with Boeing representatives at the Air India headquarters in Bombay.

Boeing, on its part, has not accepted any role in terms of supplier's credit or other forms of financial assistance. "As per company policy we'd like to stay away from any direct financing," stated D.A. Keskar, director, international sales (India), Boeing Commercial Airplane Group. In fact, the last purchase of two Boeing 747 combis in November 1988 was through Citicorp.

Engine choice. The choice of engines, earlier controversially awarded to the British company Rolls Royce, is also in abeyance till 30 September. In this connection, a four-member committee has been set up under the chairmanship of V.S. Arunachalam, scientific adviser to the defence ministry and secretary, department of defence research and development. It is studying the protest about the choice of Rolls Royce by two American manufacturers, Pratt and Whitney and General Electric. The committee's report is expected by August end, and marketing men from General Electric are parked in New Delhi trying to fathom how Rolls Royce could have 'undercut' them.

The induction of the four 747s is expected to satisfy the airline's requirements till 1995. These aircraft will reduce the fleet age (22 aircraft in all — 747s, 11 Boeings, 11 Airbuses) fr years presently to about 10 years. part of AI's overall strategy to repla aircraft and augment its fleet streng

The four new 747s will be utilis the US-Canada sector. However, rising competition it is becoming in ingly difficult for the airline to fill 74 long haul flights like the Bon London route. And hence, for more ibility in passenger scheduling, post-1995 purchases will be in the n of long haul medium capacity pl These aircraft, the first of which are developed by all the three leading mercial aircraft manufacturers in world — Boeing, McDonell Douglas Airbus — seat between 230 and 270 sengers. It will then also become pos for the airline to delink Bombay and Delhi and provide direct flights.

■ DEVENDRA

POLYSTYRENE IMPORT

Pricing paradox

Polystyrene manufacturers might wish they had considered mak some other commodity plastic. A com nation of factors makes imported po styrene substantially cheaper than t produced by the two local manufactur — Polychem and Hindustan Polymer

The import duty on polystyrene used for everything from audio casse to automotive components — was per cent in 1986-87, at a time when international price was $700 per tonne. March 1987, the price shot up to $1,4 and the duty was subsequently reduced 74 per cent. In January 1990, when t price had reached about $1,100, a speci basic duty of Rs.17,500 per tonne was troduced. But barely two months lat this was slashed to Rs.1,000 per ton mainly due to lobbying from the plas processors.

Downswing in price. Soon however, t international price of polystyrene bega to fall and has now hit a low of $75 There has been no complementary rev sion of the duty structure which mean there exists an effective difference Rs.9 per kg at present between importe

lychem plant: "handicapped by an artificial and irrational duty structure"

ystyrene and that locally manufactured. The percentage of import has upped m 50.5 per cent in 1988-89 to 61.5 per nt in 1990-91. Imports are mainly from uth Korea, which has a surplus pro-ction (of roughly 150,000 tonnes). The wer units have an export commitment 50 per cent and this leads to aggressive rketing on their part. The price of lystyrene in Korea itself is 25 per cent gher than their export price.

Local manufacturers, however, are ndicapped by more than the price fac-. Says R.N. Ganjoo, marketing man-er, BASF India Ltd, which acts as an lenting agent for import of polystyrene m BASF units in Korea and Germany, ocal manufacturers are certainly in a fficult position, since they cannot com-te with foreign ones, which have newer nts with larger capacities that provide nomies of scale."

To add to the woes of manufacturers, w material prices have been rising too. e price of petrochemical inputs like nzene has gone up by 52 per cent since tober 1990. Also, benzene — which ng with ethylene is used in the manu-ture of first ethyl benzene, then sty-e, and finally polystyrene — is also in rt supply. One way out could have n to import styrene directly. But here mes the first hurdle; the duty on styrene higher than that on polystyrene. This s led to a peculiar situation where the w material is more expensive than the ished product! In effect, this means at it is still cheaper to import poly-rene than to manufacture it. There is other area where this is the case.

bstantial losses. The result of this situation is that the local manufacturers are making heavy losses. In fact, in May this year, Polychem shut down one line of production, and operated the other at minimum capacity for 28 days. And Hindustan Polymers, a divsion of McDowell & Co Ltd, has suffered an estimated loss of Rs.4.5 crore during 1990-91. According to Kirit Mehta, president of the All India Plastics Manufacturers' Association, this is due to their own inefficiency. Says he, "Even if after 30 years of existence, they are not ready to face the competition by lowering their production costs, why should we suffer?"

Says Parthiv Kilachand, project executive, Polychem, "We are not asking for protection. We are all for competition but are handicapped by an artificial and irrational duty structure." The manufacturers are, however, still hopeful that the duty structure will be revised and made more reasonable. Says S.Bedi, general manager, marketing, Hindustan Polymers, "We hope that something will be done soon, since the situation cannot continue like this for long."

Many feel that the present situation could be more or less temporary. In fact, BASF intends to put up a 65,000 tonne plant in a few years. Says Ganjoo, "The demand is expected to grow and this duty structure distortion is likely to be resolved by then." For the same reasons, Polychem itself is going ahead with its plan to add 18,000 tonnes to its capacity.

But all this is to talk of the future. For the moment however, manufacturers can only hope that the government takes a less step-motherly attitude.

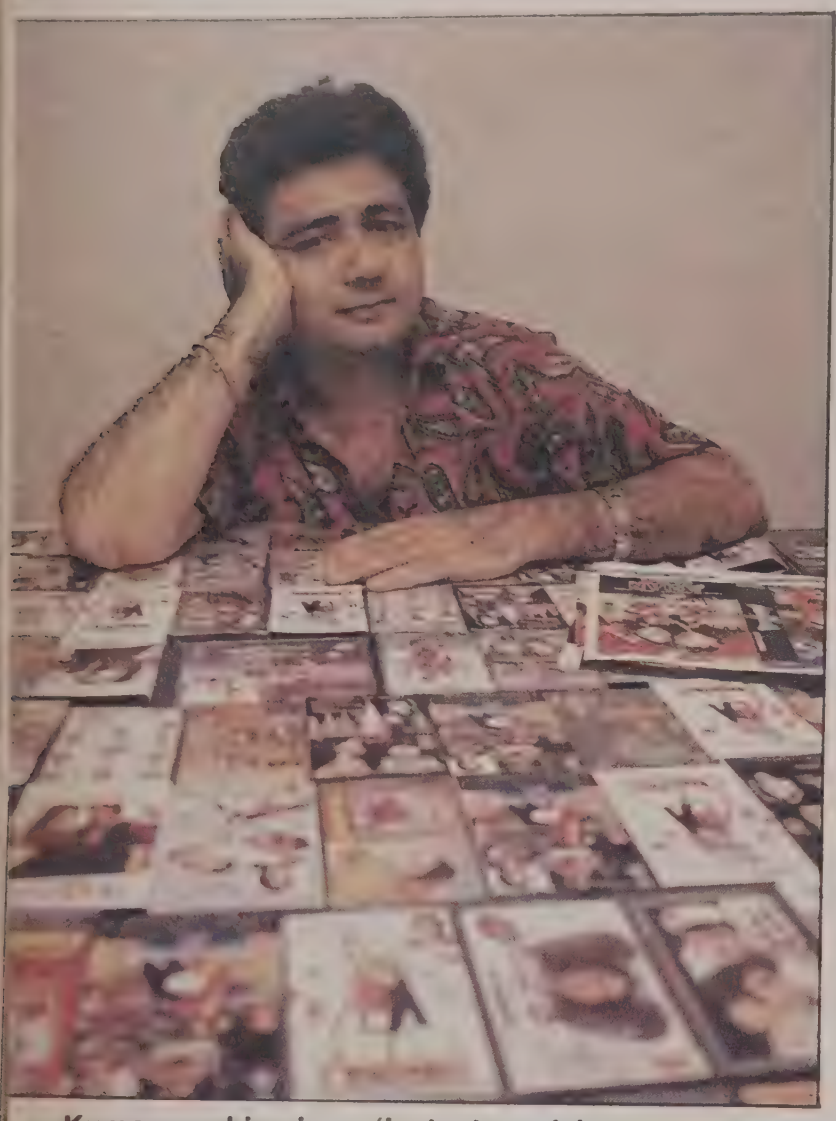
AUDIO CASSETTES

Music, music everywhere



Be it cab drivers in Calcutta, street side *paanwallahs* in Bombay or *chaiwallahs* in Bihar, all of them play popular Hindi film songs at full blast on their cassette players to liven up their days. And why not? With pre-recorded audio cassettes available at as little as Rs.15 each, one can't escape the onslaught of popular strains from *Maine pyar kiya* or *Saudagar*.

Music cassette companies have never had it so good. "Last year alone, there was a near 100 per cent jump in sales," says Ganesh Jain, partner in Venus Records and Tapes. Over 90 per cent of the clientele buys pre-recorded cassettes, of which 70 per cent choose Hindi film music even in southern and eastern India.

Vast number sold. With 260 cassette manufacturers in both the organised and unorganised sectors, India is the third largest audio cassette maker in the world. A survey commissioned by the Indian Phonographic Industry revealed that a phenomenal 217 million (legal and pirated) cassettes were sold all over the country last year. Of these, nearly 22 million were sold in Bombay alone, followed by Delhi with 21 million, Calcutta with 17 million, and Bangalore and Hyderabad with 13 and 7 million respectively. Jain says, "The market has the potential to double."

The main reason behind the growing mass appeal is low cost. Not only are the tapes going for anywhere between Rs.10 and 25 each, but cassette players also are available for amounts ranging from a low Rs.400 to a few thousands. Sales have also been nudged by the ready availability of the product.

The return of appealing music to Hindi cinema, like *Qayamat se qayamat tak* and then *Maine pyar kiya* has been to a large extent responsible for the spiralling cassette sales. Today, there is a mad scramble for getting the music copyrights of expected hits. Making the most of this era of 'instant music' is Gulshan Kumar, the man behind the success of the 'T series' and 'Super' cassettes. He has recently started his own music 'bank'. The bank scouts for new music directors and singing talent whose songs are then made available to film producers. "The music for films like *Ashiqui* and *Dil hai ke*

Kumar: cashing in on 'instant music'

manta nahin were selected from this bank, which eventually turned out winners," says Kumar.

The paucity of good music in the late seventies and early eighties made the music companies turn to *bhajans*, *ghazals*, pop and classical music. However, this trend is being replaced by the more trendy musical offerings of the Hindi film industry. "Though there is a growing and dedicated clientele for classical music, it is nowhere near the mass appeal of film music," says Mehmood Curmally of the music shop, Rhythm House.

It sells itself. Film music also practically sells itself, with video, cable TV and television programmes like *Chitrahaar*, promoting them. "The impact of seeing a song picturised on TV has a stronger recall value," says Vinod Dubey, vice-president, Gramophone Records & Tapes, the parent company of the popular brand, HMV.

Today, the major impediment to growth in the otherwise buoyant market is piracy. Though piracy levels have gone down from 90 per cent in the early eighties to 40 per cent, even today, there is no effective method to control piracy. "However, we expect the copyright act to be amended by September," says Jain. This means that *bona fide* companies can at least hope to have many loopholes plugged.

Ironically, the pirates have been responsible for creating a demand for western music. For years, they had been marketing smuggled rock and pop music. So when local companies like Magnasound and Bremen — selling only western music — came on the scene, they found it easy to cater to an already established demand. In the process, other companies like Music India and CBS (now marketed under the Sony brand name) have also benefited from a market hungry for Indian and western music.

So as long as music cassettes continue to be popular, with lots of money to be made in the bargain, there will be no relief from "chartbusters" by the likes of Anuradha Paudwal or Kumar Shanu.

■ SHAMPA KAR

DIAMOND INDUSTRY

Forced to slow down

Mehta: cannot cater to growing market

The future does not appear to a well for the Indian diamond indu which accounts for 65 per cent of world market. Exports are likely to cline in the present circumstances. Du April-July, net diamond exp amounted to $802 million (Rs.1 crore), a 11 per cent increase over the responding period last year. Howe these exports were based on the previ year's acquisition of rough stone. This quisition went down by 17 per cent year with the Reserve Bank of India tiating curbs on 19 March, 1991.

Opportunities missed. The decline in port of roughs will affect exports dur the critical period prior to the p Christmas season. And the particu boom for imports in the US will another opportunity missed. There is tle doubt then that overall growth in diamond trade (worth approximat Rs.7,000 crore) will be curtailed to a le much below the three per cent decline l year.

As an ancillary to the jewellery e porters' problems, the finance ministr reluctance to permit import of gold h affected their buying power further. La year, in October, the government had d cided to make available only confiscat gold, disallowing imports. And since July this year, as per the ministry's i structions, the mint has held up shi ments of gold jewellery worth Rs.50 cro a month. The SBI scheme for supply gold was resumed on 20 August this yea but the immediate fallout h been the disruption of schedule deliveries of the entire gamut gems and jewellery.

The RBI curbs have made it di ficult for the diamond expo trade to function normally. Re ulations like the requirement an exporter's undertaking tha there are no outstandings beyon 90 days, that they enjoy 90 day of supplier's credit and that the will bring export proceeds withi 90 days, have thrown regula trade out of gear. Foreign buyer have not been able to adjust t these sudden changes.

Trade crippled. "It is unfortu nate that though the market i growing, we will not be able to of fer sufficient products to cater t it," says Kaushik Mehta, chair man, Gems & Jewellery Expor Promotion Council. "This is par ticularly annoying since diamond

orts provide 25 per cent value addi- in the three-four month processing iod." Moreover, the reduction in sight ocations and the basic policy change allowing import against REP licences e had a crippling effect on the trade. ere are 35 sight holders in India, who all finding it difficult to make sight yments under the new regulation.

The purchase of roughs from Antwerp d other open markets proves to be even re expensive. And there are reports t banks in Belgium have abruptly pped extending credit to Indian dia- nd exporters, with the confusion over settlement of dues.

The recent statement of the RBI gover- r, S. Venkitaramanan, that import mpressing measures taken by RBI can- t be continued provides a ray of hope. e Indian diamond industry is therefore pecting the RBI to act on the governor's omise.

■ DEVENDRA TAK

CHIN PORT

xorcising a host

or several years, shippers who wanted to get their cargoes loaded fast at chin Port have been seeking a ghost's p. This strange ally appears invisible to ignorant eye, but Cochin's stevedores d dockers know its presence only too ll — by the rustle of currency notes sur- titiously changing hands.

This is no spooky apparition but the notorious 'ghost money' or 'speed money' — the extra payment that has to be doled out to dock labour gangs to get work done fast — particularly for stuffing and destuffing containers. Not everyone defines the concept in such polite terms. According to K.A. Varghese, president of the South Western India Shippers Association, "In plain terms, ghost money is an extortionate monetary payment which workers successfully wrest from shippers and shipowners under covert disruptive tactics calculated to delay cargo operations."

Official fiat. But from 1 August onwards, the Cochin Port Trust authorities, in an attempt to hound out the ghost, has banned the practice by an official fiat. Predictably, cargo handling operations have slowed down as dockers stick uncompromisingly and strictly to the old work norms. These were fixed way back in 1962 and do not reflect the needs of current container cargo operations, say shippers. According to these dated norms, one gang of 12 dockers need handle only 32 tonnes of reefer cargo (equivalent to two containers) or 44 tonnes of general cargo (four containers). With payment of ghost money — sometimes up to Rs.6,000 extra per gang, according to some stevedores — output would often double or even, in the case of general cargo, treble.

But with no additional incentive to strain their muscles, Cochin's dockers have decided to sweat less. From the usual level of 8 to 12 containers per gang per shift, productivity has now dropped to two containers. As a result, the export of some commodities like cashew is being shifted to the nearby port of Tuticorin.

Cochin Port Trust chairman G. Krishnan has sent out stern warnings: stevedores paying 'ghost money' will lose their licences and steamer agents will be denied permission for their ships to enter the port. But beyond appearing tough, there is little the port authorities can do.

Wrong timing. Some shippers fault the Cochin Port Trust's timing in stopping ghost money. In the wake of the devaluation of the rupee, exporters had geared up to ship out more of their commodities, especially marine products whose season peaks soon. Thus there could not have been a worse time to try to put an end to this menace, assert some disgruntled exporters.

Yet, there are firm voices to be heard. Says C. Cherian, president of the Seafood Exporters Association of India: "No surgery is possible without the oozing of some blood. True, there will be some difficulty for exporters, but they should bear it in order to stop this practice once and for all."

■ K.G. KUMAR

100 PER CENT EOUs

Fighting to consolidate

Since the government allowed the setting up of 100 per cent export-oriented units in the early eighties, plenty of confusion has surrounded its implementation. Even the newly announced trade policies have not clarified matters, in spite of the commerce minister attempting to offer a new package for EOUs. The confederation of 100 per cent export units, while welcoming the reliefs in the new trade policy, has appealed to the Union government to simplify the procedures with respect to export-oriented units, and Export Processing Zones/ Trade Zones.

Lacuna perceived. R. Veeramani, vice-president (southern region) of the confederation, points out the lacuna in the new package. For instance, he says that all procedures relating to EOUs should be grouped under one ministry in an effort to implement the single-window philosophy. At present, not only the commerce ministry but the ministries of industry and finance as well are involved in procedures relating to EOUs. This causes tremendous communication gaps between

authorities in different departments and inordinate delays are created in the implementation and operation of units.

Says Veeramani, "EOUs are fighting for an increasing share in the competitive environment of the world market. Hence, it is imperative to revise certain irksome customs procedures." For instance, he points out, the assessment of capital goods imports takes a long time though these goods are not liable for duty. The EOUs are permitted to sell a certain percentage of their production in the domestic tariff area (DTA). Right now, this is a near impossible task which involves a whole lot of permissions and clearances.

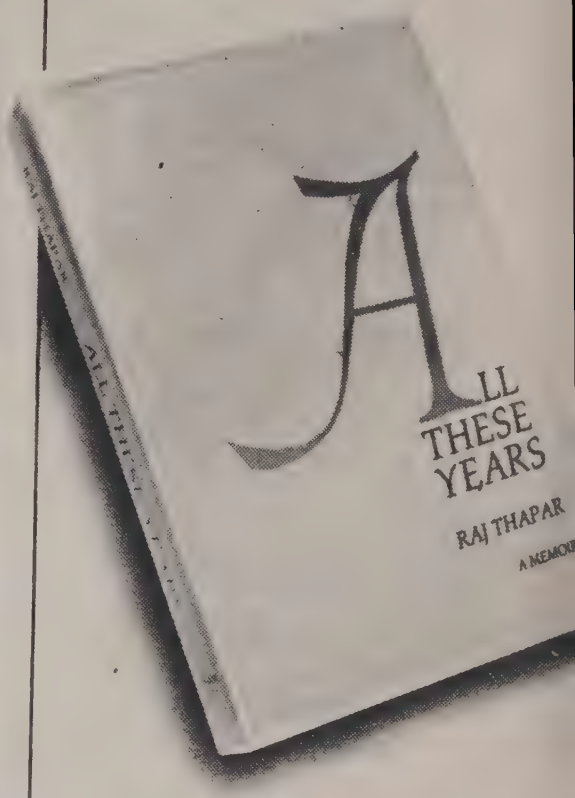
The other major problem faced by EOUs is the disposal of scrap. Scrap from several EOUs is piling up inside the units. Apart from customs duties, auxiliary and excise duties are also levied on scrap, when it is sought to be disposed of in the DTA. Says Romi Dhall, all India secretary general of the confederation, "It is ridiculous to levy customs duty on scrap, which is primarily from indigenous materials. Unless the customs duty on scrap is removed, EOUs will not be able to find buyers for their scrap because their price is far higher than the scrap disposed of by the DTA units." The price difference is nearly 50 per cent.

EOUs: gearing to compete in the world market

Need to expedite. To expedite the working of the 100 per cent export-oriented projects, the confederation has asked the Union government to specify which financial institutions the promoters should approach to apply for loans. "Every time we approach a financial institution for a loan we are turned down as this involves foreign exchange. Even Exim bank and IFCI try to pass the buck. Because of this, though 1,500 units have been licensed by the commerce ministry, only 200 units are functioning in this sector," says Dhall.

Though the Union government has liberalised licensing and broadbanding in the general industrial policy, the EOU/EPZ units are still shackled by narrow licensing terms. They have to apply for a fresh licence every time they want to alter the product mix in response to changes in market conditions. Says Veeramani, "Even a small variation in our product has to get the approval from the government. The replacement of machinery involves the same amount of bureaucratic procedures as in the case of original machinery import. If we have to really take on the world market, replacement imports should be brought under automatic approval procedures."

Dhall also wants certain facilities — exemption from power cut, sales tax and octroi and also declaration as an essential service for purposes of solving industrial disputes — granted to EPZ units by state governments, extended to 100 per cent EOUs as well.



Veeramani has urged the government to extend the right to deal in Exim Scrips granted to EOU and EPZ units under the new policy should be effective 3 July, 1991, as in the case of other industries. The confederation believes that unless these hassles are sorted, the EOUs may never take off in spite of liberalisation.

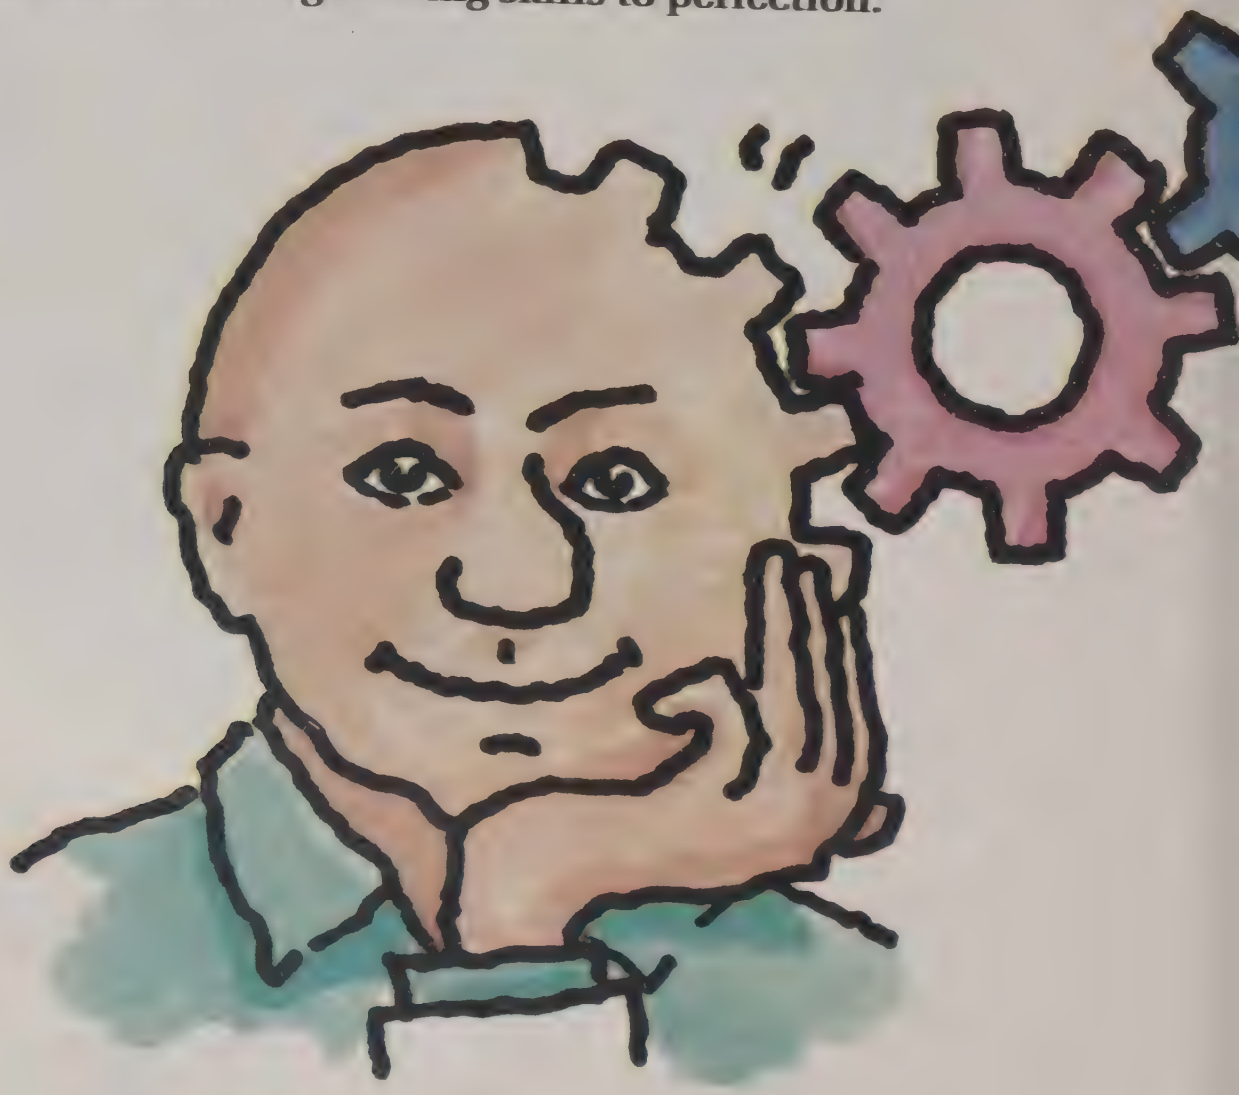
"A LEGEND WITH LEGEND"

INDIA'S FAVOURITE CAR TYRE



MRF RH L1

Over the years we have developed a one-track mind...

... but that's what helped us hone our engineering skills.

Ours has been the classic case of a one-track mind.

A mind totally dedicated to excellence in technology. For over seven decades. A quest that honed our engineering skills to perfection.

KIRLOSKAR BROTHERS LTD. ▮ UDYOG BHAVAN, TILAK ROAD, PUNE 411 002 ▮

The path has not been easy. Yet we progressed steadily. Passing exacting tests ever so often. Each test leaving us richer.

Richer in expertise that spelt quality and precision. It also helped us indigenously engineer the first and the largest Cooling Water System in India, for NTPC's 500 MW thermal power plant at Korba.

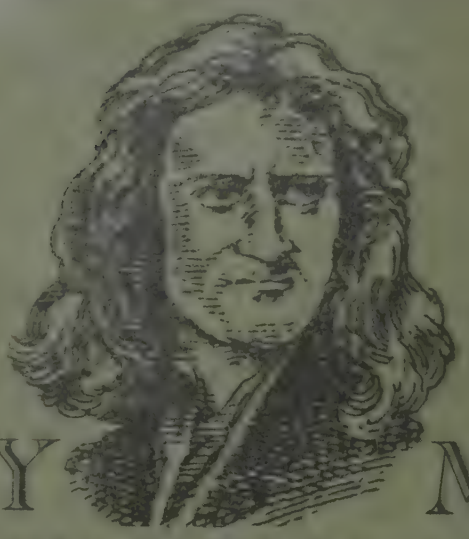
These pumps are used for cooling water circulation; an operation so critical that a single failure of the pump would bring the whole plant to a grinding halt. And there is no stand-by pump.

A silent tribute to KBL dependability.

Our advanced metallurgy and up-to-date machining techniques not only brought in a flood of similar orders from other thermal power plants, but also a challenge from the Municipal Corporation of Greater Bombay. To design and commission a battery of seven massive vertical turbine pumps, to supply 75 million gallons of drinking water per day, to one-third of Bombay's population. A challenge we met to the utmost satisfaction of the M.C.G.B.

As a result, a repeat order for seven similar pumps was placed with us. On completion of this order, KBL pumps would be supplying drinking water to half of the metropolis.

Interestingly, our one-track mind has helped us to diversify successfully, into sophisticated machine tools, hermetic compressors, valves and turnkey project engineering.



It also reminds us, never to rest on our laurels but continue our quest for perfection. Ceaselessly.

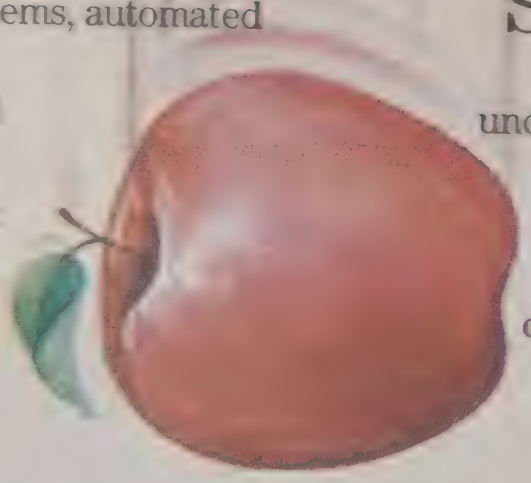
PRATIBHA-91-518



SORRY MR. NEWTON BUT THE CENTRE OF GRAVITY AT AKAY IS THE CUSTOMER.

Changing times has brought about changing needs amongst customers. Understanding and anticipating their needs is of prime importance to us. Hence development and upgradation of products to match customer requirements is an on-going process with us.

Our CAD/CAM systems, automated manufacturing facilities and advanced test facilities have been instrumental in customisation and standardisation of our products – Chemflo process pumps and valves that match international standards. Add to it is our excellent service back-up. And when our customers approach us they get the full advantage of our leadership quickly and dependably.

So Mr. Newton we are sure you will understand why in our case the centre of gravity is shifted to the customer.

ARMS-AI-3-91

For growth with equity

In recent years, it is being increasingly realised that human development is the key to economic development. In 1890, the classical economist Alfred Marshall wrote that "health and strength, physical, mental and moral ... are the basis of industrial wealth; while conversely the chief importance of material wealth lies in the fact that wisely used, it increases the health and strength, physical, mental and moral of the human race." The historical development of some nations is testimony to this statement.

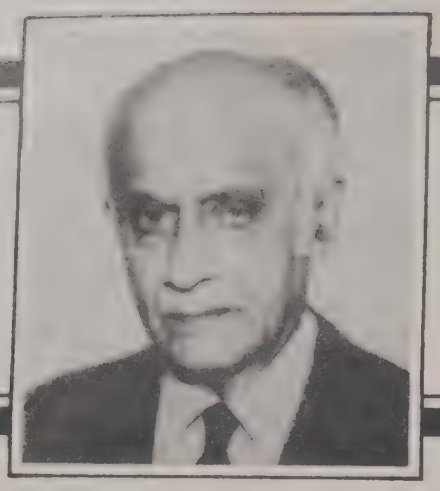
In India, alleviation of poverty has been the central objective of development planning. Various programmes focusing on the poor have been in operation for the last two decades. The result is that the incidence of absolute poverty has declined over the last two decades. This is borne out by the fact that while around 52 per cent of the total population lived below the poverty line in 1972-73, this has now declined to around 30 per cent.

Generally, health and education are the two broad parameters of human resources development. Better diet, housing and proper medical facilities have raised the quality of life everywhere. In India the life expectancy at birth which was only 32 years in 1951 is estimated to have increased to 59 years now. But this is still far below the world average of 65 years. Also, the low income economies have an average life expectancy at birth of 62 years as against 76 years for high income economies.

High infant mortality

But despite the progress made in India, infant mortality is still 91 per thousand live births. In middle income countries, it is around 60 and in high income countries, as low as 10 per thousand. Due to better health facilities, the death rate has declined from over 27 per thousand people in 1951 to 9.4 in 1991.

India is a signatory to the Alma Ata declaration of 1978 and is committed to the goal of "Health for All" by the year 2000. In order to take health care and family welfare services to the doorstep of the poor, an integrated health care delivery system has been developed and is being implemented. Progress on this front has been slow. Expenditure on health and family welfare has generally been on the low side and during the Sixth Plan period, total outlay was only 2.9 per cent of total government expenditure. During the Seventh Plan period this increased to 3 per cent. Considering that the incidence of leprosy, tuberculosis and blindness in India is among the highest in the world, the effort made in this direction is not adequate.



It is now common knowledge that improving people's ability to acquire and use information strengthens their ability to meet their wants and those of their family by increasing their productivity. In the Indian context, though universalisation of elementary education has been an avowed goal for some time now, progress has been tardy. In the case of primary education, though gross enrolment of 6 to 11 age group increased from 43.1 per cent in 1950-51 to 99.6 per cent in 1989-90, the drop-out rate is high and the retention rate among female children is low.

Elusive goal

By the government's own admission, universal elementary education is still an elusive goal. Expenditure is still skewed in favour of secondary and higher education. And the Education Commission's recommendation that by 1985-86 the country as a whole would be spending six per cent of GNP on education remains only a pipe dream. The reality is that total expenditure on education as a per cent of total government expenditure is only around 3.5 per cent. The result is that about half the population aged seven years and above is still illiterate.

Clearly health and education are both critical in India's socio-economic strategy for growth with equity. Greater resources and more imaginative programmes are now called for.

■ ASPI CONTRACTOR

Speech by the Chairman Mr. Mantosh Sondhi at the Company's Fifth Annual General Meeting held in Bombay on August 28, 1991.

Ladies & Gentlemen

I have great pleasure in welcoming you to the 5th AGM of your Company. This is the first time the meeting is being held in Bombay, following the change in the registered office of the Company to Bombay. As the Company's Head Office is located here, this shift has advantages both in economy and in administration.

The report and accounts of your Company, including the notice to the shareholders, have been in your hands for some time and, with your permission, I shall take them as read. I am pleased to report on behalf of the Board that your Company has achieved excellent results during the year ended March 31, 1991, the first full year of production. Your Company maintained a dominant market presence in its field of captive power generation, added substantially to its list of satisfied customers and pursued its declared goals of achieving Excellence through Teamwork and Total Quality Management.

In the period under review, your Company earned a net profit of Rs. 3.32 crore on an income of Rs. 51.75 crore. This is indeed a creditable performance for a Company in its nascence. The success of this is due, in large measure, to the state-of-the-art technology of the globally popular Vasa 32 engine, which your Company makes in Khopoli. The satisfactory experience of Indian industry using this economic and reliable heavy fuel engine for continuous base load applications has proved to be a very good reference.

The prestigious orders secured by your Company for turnkey power plant deliveries are under execution; these plants will be commissioned during the year adding further to our credibility.

Revitalising the Economy

In a rapidly changing, fiercely competitive, turbulent environment, companies and nations need to change if they are to remain ahead. The environment has always been changing over the decades, but recent market-driven changes in the USSR and Eastern Europe have been historic. The emergence of a united Europe in January 1993 has set the scene for sweeping changes within the EC countries, and companies the world over are gearing themselves for the challenge.

India too has been witness to sweeping social, political and fiscal changes these past two years. It is true that large organisms are prone to change slowly, especially if they - like India - follow a democratic process in a pluralistic system. The recent elections to the tenth Lok Sabha have yet again restored the country's faith in the democratic process. After months of chaos, and absence of an effective Government, there is a reassuring feeling of governance. For the sake of national interest, I hope this feeling lasts.

The recent announcement of radical trade reforms and the bold industrial policy seek to release Indian industry from the shackles of regulations and licences, cut wasteful expenditure, halt the sharp fiscal decline and move India towards a market-driven free economy whilst retaining the presence of the public sector in key and strategic areas. It is recognised that India has been living beyond her means, and any macro-economic structural re-design of our high-cost economy driven by controls and shortages must necessarily provide for shedding flab and curtailing wastage of public resources.

It is to India's credit that her people have delivered their best in times of crises. It is creditable too on the part of the new Government to attempt to convert crisis into opportunity. What needs to be remembered, however, is that the process of correction will take time, and that our path to recovery will entail sacrifices, determination and tough options. Fortunately, a good start has already been made in this direction and some bold, imaginative and irreversible policy decisions taken. Nobody could have visualised these even six months ago.

The Power Scenario

Experts forecast that infrastructure is going to be the major hurdle in India's economic revival, and that the power sector faces its worst crisis yet. Notwithstanding substantial outlays of 19% of total outlay for addition to installed power capacity in the Seventh Plan, the physical performance of the power sector has been dismal on account of poor management of State Electricity Boards, mounting transmission and distribution losses, and unsatisfactory Plant Load Factor.

As power constitutes the basic essential input for rapid economic development, strident action is called for to ensure speedy completion of on-going power projects, and a thorough overhaul of the present system including improvement in PLF, reduction of T&D losses and reforming the SEBs. What is most gratifying is that the new government has set the ball rolling to bring about changes in that archaic piece of legislation - the Electricity Act of 1948. Changes however take time. In the short and medium term, therefore, industrial and economic growth will be heavily dependent on adoption of short-gestation solutions such as captive power.

It has been proved that Captive power DG sets using heavy fuel are a viable alternative as they operate at lower running costs, and deliver better quality of power than most grid supplies. They are more reliable too.

Gas Diesel Engines

Wartsila Diesel Research & Development has been in the forefront of modern diesel engine advancement. Their technological superiority, expertise and experience as a global player has led to their success in the field of captive power plants using a variety of fuels. Today, Wartsila Diesel is able to provide creative solutions for diesel power generation with fuels ranging from LSHS to natural gas. They were also instrumental in the development of highly efficient cogeneration plants and ecologically sound exhaust systems.

The Wartsila Diesel Group has been developing a new generation of environment - friendly, natural gas burning engines for several years. The first three commercial installations in USA and in Finland were started up in 1990. The gas-diesel concept is based on high-pressure injection and gas combustion in a dual-fuel engine.

Your Company has commenced marketing the concept of dual-fuel gas-diesel engines in India. It is unfortunate that India's vast gas resources are not being utilised gainfully, and it is indeed a pity that in an energy-starved market, natural gas is being uselessly flared. It is hoped that issues related to gas pricing and transportation will soon find acceptance between the Centre and State Governments, and that this valuable source of energy will be put to productive use quickly.

Indigenisation

In the short period since commencement of production, your Company has already achieved an indigenous content of over 60% in the manufacture of DG Sets for captive power production. This has been possible through untiring efforts in vendor development combined with the active support from the collaborators in the transfer of this high technology. In the light of the balance of payment position, these efforts have been further intensified to accelerate vendor development in order to achieve a higher indigenous content.

The high quality standards of complex components are exacting, and your Company is engaged in the continual evaluation of viable options that will ensure a judicious balance between in-house manufacture and quality-controlled vended products. Simultaneously, the indigenous development of high-cost spares is a high priority area that will in time help effect large savings in foreign exchange outflow. I take this opportunity to thank our collaborators and our vendors for their support and positive response.

Exports

A beginning was made on the export front in the form of an order from your Company's collaborators for machined castings to Wartsila Diesel Oy, Finland. This encouragement is expected to be a small beginning for further exports as your Company's progressive indigenisation efforts gain ground.

Being a part of the Wartsila Diesel global network, your Company has also earned small sums of precious foreign exchange through providing technical services for the maintenance of Wartsila diesel engines overseas, and through training overseas engineers at the Technology School in Khopoli.

Component and Services exports has been identified as a Key Result Area that holds promise for your Company in the years ahead.

Total Quality Management

Total Quality is a dynamic process involving all levels in an organisation, and is aimed at improving the overall competitiveness of the Company in effectively meeting its objectives of ultimate customer satisfaction. Your Company has embarked on the Total Quality Management programme with the declared objective of obtaining ISO 9000 certification, the internationally recognised standard of system quality.

The liberalisation of the Indian economy imposes a greater responsibility on industry to expand its technology base, improve its product quality and develop corporate attitudes that will project India as a major player in the global market. To achieve this status, and attain international competitiveness, product quality, system quality and organisational quality would need to undergo a sea-change. Only four Indian companies have so far obtained ISO 9000 certification. Thanks to the promotional efforts of the Confederation of Engineering Industries, many more companies expect to shortly join this select band, thereby securing for themselves the prequalification for exports to the European Community. Your Company is one among these.

Training

The operation of large captive diesel generating sets is a highly technical function requiring specialised know-how in timely preventive maintenance and overhauling procedures. As equipment and related systems become increasingly complex and sophisticated, technical know-how assumes greater importance. Effective training in all facets of power plant operation is thus seen as an operational necessity and this is what ultimately determines the reliability and economy of captive generation. Such training is essential both for the power plant suppliers as well as for the users.

To fulfil the need for continuous training in the wake of advancements in technology and improved work methods in the operation, maintenance and management of power plants, your Company had decided to set up a centre for high-tech training. The Wartsila Diesel Technology School was inaugurated at Khopoli on April 4, 1991 by Mr. G Ehrnrooth, Chairman of Wartsila Diesel International Ltd. The School has commenced training programmes for customers and for the Company's own engineers and operatives in a wide variety of topics ranging from diesel engine basics to power plant operation, management and performance evaluation, using modern training aids and utilising the locational advantage of the School for practical hands-on training.

Human Resource Management

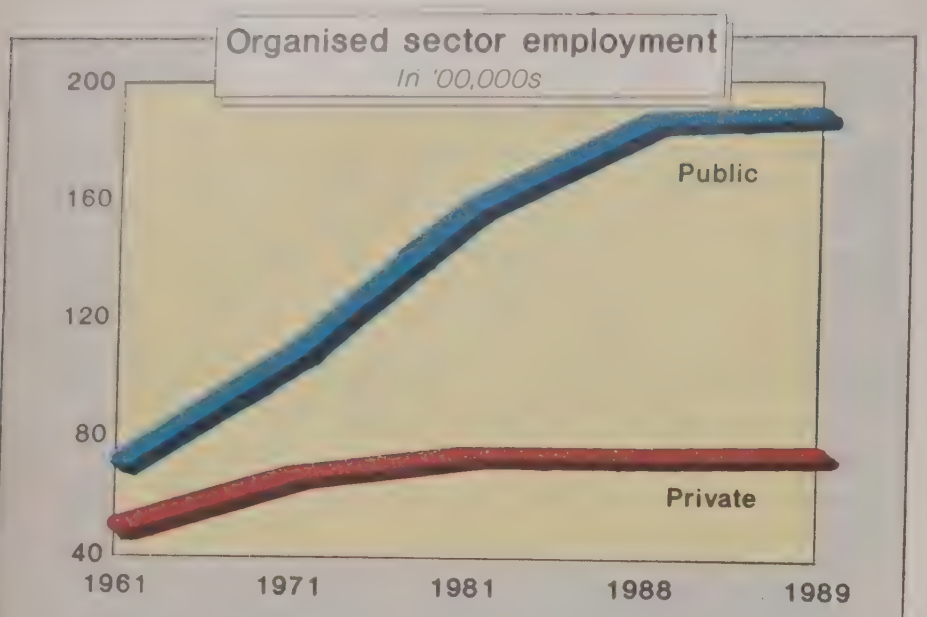
It is well established that people are the key to managing complex strategies and organisations. This is truly apt in the case of your Company. It is the commitment and teamwork of the Company's 210 dedicated personnel that has contributed to your Company's excellent results.

The conscious involvement of all employees in participative management continued to be a focal area of the Company's Management Development Programmes during the year, both in functional and cross-functional disciplines. Human Resource Development will continue to receive the attention it richly deserves.

Collaborators

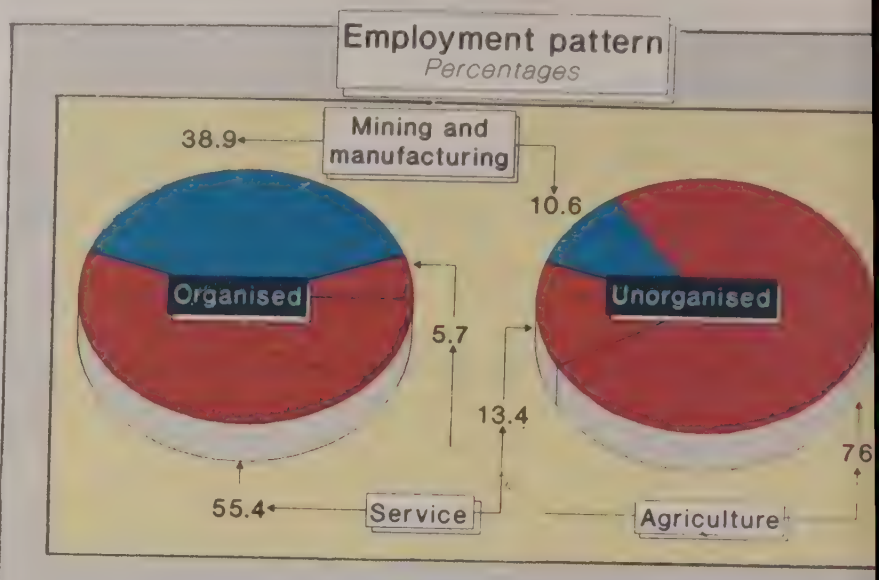
Your Company's collaborators Wartsila Diesel maintained their position as market leaders in medium speed diesel engines. Their sales in 1990-91 were 39% higher than in the previous year. In the field of land based diesel power plants over 1MW, the Wartsila Diesel Group enjoys an impressive 20% share of the global market. With an order backlog 30% higher than in the previous year, and with a streamlined sales and service global network, performance in 1991-92 is expected to show a further improvement despite global recession and stiffening competition.

India is an important market in the Wartsila Diesel Global network, accounting for 15% of Wartsila Diesel Power Plant deliveries world wide. The matrix structure of the global network encourages continual horizontal communication within and across functional areas for instant flow of technological updates, while also permitting easy access to specialist support in project engineering and service troubleshooting.



Outlook and Prospects

The demand for your Company's product is large and the potential for growth in the medium term is immense. I am happy to state that in the short period since inception, the Company's pro-active approach has made an impact on the market. The prudence of Total Quality Management and Service Excellence in achieving customer satisfaction will continue to ensure your Company's dominant market position. The superior product techology, its adaption to Indian operating conditions and the proven capability in heavy fuel operation for continuous base load process industry applications will provide your Company its competitive edge of being a reliable supplier of economic captive power. The introduction of the Gas Diesel Engine will further strengthen its position in the Indian market.



In the short run the credit squeeze, the high interest rates and the tight money market conditions will increase operating costs, depress margins and slow down industrial growth. Given our nation's market size, diversity, the industrial and economic growth achieved in the past few years, the technical and managerial talent and the country's resilience to overcome obstacles, the present economic despair is but a passing phase. As I have already said the macro-economic structural reforms undertaken by the Government to combat the fiscal crisis will undoubtedly revive industrial and economic growth and I feel confident that the medium and long term prospects for your Company are extremely favourable.

This does not purport to be a report of the proceedings of the 5th Annual General Meeting.

Economic Indices

The public sector accounts for 71 per cent of organised employment. Growth in employment has been faster in the public sector and in the last decade annual rate of increase averaged 2.1 per cent per annum as against 0.3 per cent by the private sector. The organised sector only accounts for 10 per cent of total employment.

The unorganised sector accounts for 90 per cent of total employment in the country of which 76 per cent is in agriculture. In the organised sector, services such as transport, communication, trade and commerce account for nearly 55 per cent of employment.

Money and banking (Scheduled commercial banks): Broad money (M3) was up 13.08 per cent during the year to 26 July 1991, as against 17.1 per cent in the corresponding period of the previous year. In the same period bank credit was down from 18 to 11.25 per cent.

	26 Jly '91	28 Jun '91	27 Jly '90	% change over Month	Year
Broad money(M3)	2,77,989	2,77,413	2,41,616	0.20	13.08
Aggregate deposits	2,01,822	1,98,753	1,75,175	1.52	13.20
Bank credit	1,17,415	1,17,552	1,04,202	0.11	11.25
Food credit	4,863	5,316	3,883	–9.31	20.15
Credit/Deposit ratio	58.15	59.14	59.48		

Consumer price index: The consumer price index for industrial workers was up by 2.39 per cent during June 1991, as against one per cent in June last year.

	Jun '91	May '91	Jun '90	% change over Month	Year
Industrial Workers (1982 = 100)	209	204	185	2.39	11.48
Urban non manual workers (1984-85 = 100)	170*	169	151	0.58	11.17

** April*

Bullion prices and stockmarket index: There has been a sharp increase in the price of gold (up 6.3 per cent) during the month to 23rd August 1991. On the other hand that of silver has declined by 1.23 per cent. The Bombay Stock Exchange Sensitive Index soared past the 1800 mark on active bull support.

	23 Aug '91	22 Jly '91	23 Aug '90	% change over Month	Year
Gold (Bombay)	4,300	4,029	3,430	6.30	20.23
Silver (Bombay)	6,819	6,903	6,897	–1.23	–1.14
BSE index	1,802.81	1,419.31	1,151.3	26.99	56.55

(The price of gold is in rupees per 10 gms and that of silver in rupees per kg)

Wholesale price index: The wholesale price index of all commodities was up by a hefty 2.7 per cent during the month to 27 July 199 On a year-on-year basis the WPI was up 12.29 per cent. Primary articles was up 15.6 per cent mainly because of steep increases in t prices of fibres (45.3 per cent) and oilseeds (18.0 per cent). In manufactured products, there has been a steep increase in the price fertilisers (37.4 per cent) as a result of a sharp fall in fertilis subsidy.

(1980-81 = 10

	27 Jly '91	29 Jun '91	28 Jly '90	% change ov Month	Yea
All commodities	201.9	196.4	179.8	2.72	12.2
Primary articles	211.2	204.4	182.7	3.21	15.5
Manufactured products	197.6	193.2	180.6	2.22	9.4

Industrial production & infrastructure: The index of industrial production declined from 277.1 in March 1991 to 199 in April this year thereby recording a sharp fall of 28 per cent in a month. But on a year-on-year basis IPI for the manufacturing sector was down one per cent. Crude oil production continued to decline in June 1991. However, steel production was up 8.9 per cent in July 1991.

	Latest month	Previous month	Year ago	% change ove Month	Yea
Industrial production index	199(4)	277.1	197.3	–28.15	0.9

Presenting the Godrej 930X Printer

And a censored version of the market reactions.

What was the hurry?
The printers currently in use are quite adequate. And if [redacted] computers aren't complaining, what was the tearing hurry to bombard the market with this top-of-the-line 300 cps whiz-kid? [redacted] Preposterous!

User-friendliness? Or... seduction?
All operations of the Godrej 930X Printer, it seems, are possible through a finger-tip front panel control. And it's so designed, even a [redacted] novice can make full use of all the built-in [redacted] capabilities. This is not user-friendliness; it's [redacted] downright seduction!

Paper handling? Looks like black magic!
Both bottom feed and rear feed are possible with the [redacted] 930X, and so is cut-sheet feeding without having to take the continuous stationery out of the tractor. Feeding of paper and removal of paper is at the touch of a button! Now if this isn't [redacted] uncanny, what is?

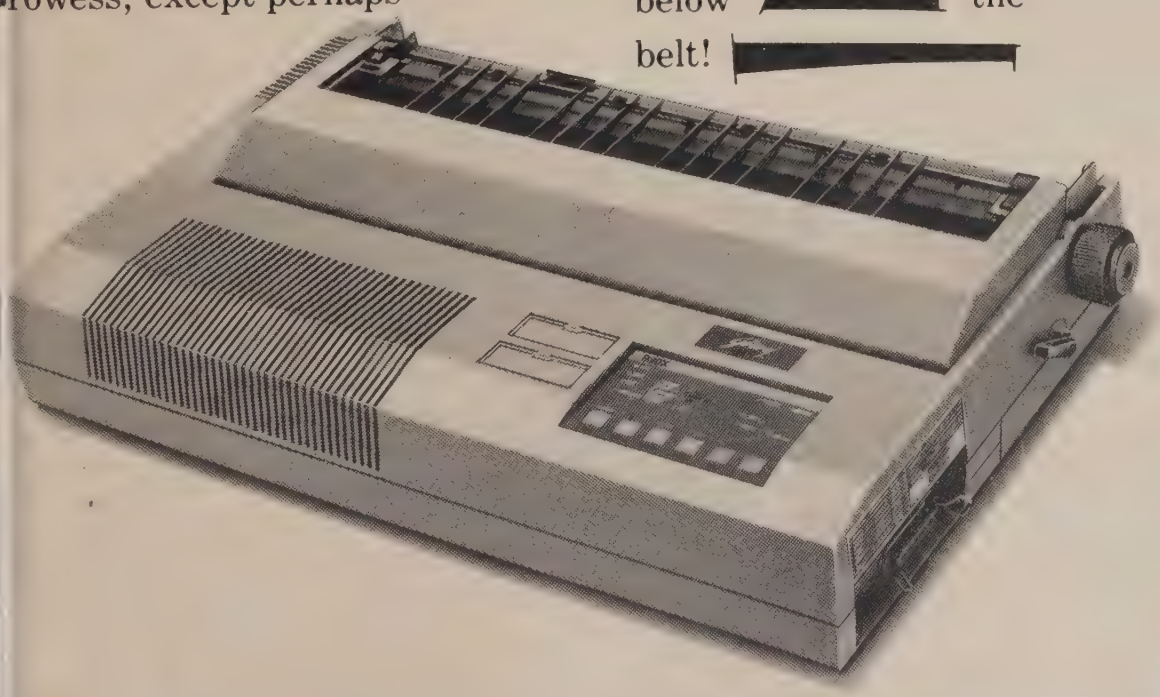
ncredible hold over time nd distance!

"he news is that the 930X perates non-stop for days ogether without a witch-off! And it's a ong-distance runner with a igh printhead life of over 500 nillion strokes! But who needs hat kind of printing rowess, except perhaps a printing press!



The unfair advantage of font cards!

The 930X offers a variety of standard fonts. Moreover there's a slot near the front panel which eagerly takes on a font card besides the standard ones. Now that's hitting other printers below the belt!

Compatibility? It looks like conspiracy!

The 930X is available with IBM and EPSON ESC/P Emulations. Plus, it offers the unique option of an EMULATION card which makes it compatible with a host of other systems. Now isn't that taking compatibility a bit too far?

Well, now that you've heard the printable excerpts of the market reactions, it's time to contact your nearest Godrej Dealer for a live demo.Without fear, prejudice, or obligation.

Give your motors the 'NO-FUSE' advantage

M&L Series MCCBs with type-C co-ordination. From Crompton Greaves.

Announcing a powerful leap towards fuse-free motor control.

Now a tiny contactor of 16 amps or a bimetallic overload relay of 0.25 amps can face faults upto 50 kiloamps and still meet the safety and co-ordination standard type-C as per IEC292-IA. Which means no more irritations of fuse maintenance and single phasing.

The M&L Series MCCBs can protect Motors from 0.2 KW to 200 KW. Thanks to precise overload settings and matching type-C co-ordinated contactors and bi-metal relays upto 400 amps. Furthermore, they are lightweight, cost-effective and save space in Motor Control Centres.

Above all, the Crompton Greaves M&L Series MCCBs are backed by a nationwide support network of 18 branches and service centres plus a helpful team of dealers spread all over the country.

So switch to the Crompton Greaves M&L Series MCCBs today.

ctful move

nce secretary S.P. Shukla's fall from e is now complete, it would seem. n the most powerful position in the an bureaucracy, Shukla will now be a's executive director at the Asian elopment Bank at Manila. Never be- has a finance secretary been sent to ADB. Their postings are usually in West, to the International Monetary d or the World Bank when they have e moved out of North Block (as the Singh government did with the for- finance secretary Gopi Arora).

ukla's appointment to the ADB is inly a plunge from the pinnacle of ureaucracy. The previous executive torship to the ADB was held by reve- secretary, D. Bandhopadya, a post idered a notch below that of the fi- ce secretary. Worse still, Bandho- a's predecessor was only an addi- al secretary in the finance ministry!

dvantage GOs

etted officers of the Central govern- t blessed with the powers of attesting uments are putting this privilege to d use — in fact, they function more as stors and less as government em- ees. Outside Delhi's courts sit several ese gazetted government employees, icipants in a flourishing business of sting various documents, all at a fee s.10 for every document. Whoever the government was short on rprise.

abus vs brains

Is bureaucracy the destination of the country's most educated men and women? If it is, then the fact that the state's contribution to the list of candidates selected for the civil services has n progressively declining is worrying members of the West Bengal assem- Quite clearly it must be concluded this fact points to a continuous dete- ation of the state's education system. issue even caused a shouting match in West Bengal assembly last fortnight.

The states's education minister, however, indicated, the opposite he declared that West Bengal's declining contribution to the country's civil services was, in fact, an indicator of the improving quality of both the education system as well as the intellectual levels of the state's young women and men. Our men and women, he pointed out, in their greater wisdom, prefer higher scholarliness, studying for a doctorate or involving themselves in social development by working as teachers in schools and colleges.

Tricky gimmick

Commerce minister P. Chidambaram is envious of the trade leverage that his counterpart in China enjoys with the US. The country, at present, enjoys a large trade surplus with the US and is pushing hard to obtain the most favoured nation (MFN) trade status with that country. But the US has refused to relent, apparently because a lobby of senators strongly opposes China.

The Chinese government has recently despatched a trade delegation to the US to identify, first, the constituency of each of those senators and then, to place large export orders with firms located in each of those constituencies. That is quite clearly a situation which Chidambaram will never find himself in.

Unexpected relief

The failure of the coup in the Soviet Union has thrown up a series of varied reactions. And, not all of them have expressed dismay. For finance minister Manmohan Singh and the Congress party the coup has brought relief in another unexpected way. Their assurance of rolling back several prices after they assumed power seems, now, to hold some promise. The commerce ministry anticipates that the major political changes in Moscow will dislocate Indo-USSR trade in good measure.

For many, as well as for the country's substantial tea trade, that will be a damper. A large part of the country's tea exports destined for the Soviet Union, will now remain in the Indian market. Inevitably, this will trigger a slump in domestic prices of tea, a commodity the price of which the Congress manifesto had promised to roll back. Some relief for Manmohan Singh whose initial statement that prices cannot be brought down had run him into rough weather in the Congress party.

Three-day wonder

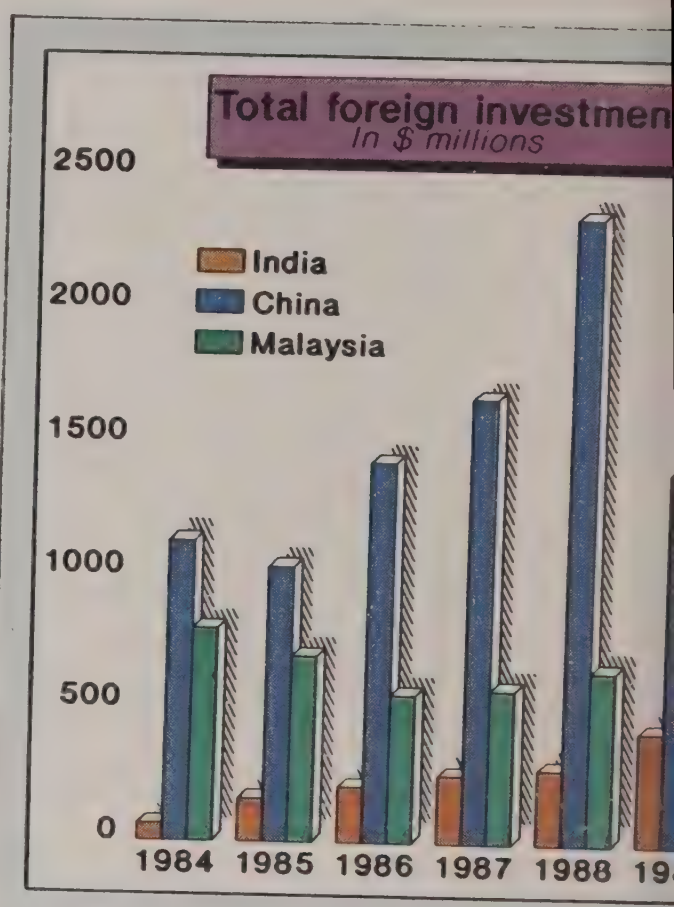
Even more than the Union government which seems to have fouled up at every stage, it was the CPM that was caught with the egg on its face while reacting to the destabilised coup in Moscow. There was a general air of jubilation at the party's office on Ashoka Road on the two days that the hardliners struck out at the Kremlin. Politburo member Harkishan Singh Surjeet was quick to hail Gorbachev's ouster as a "positive development", and that "those who believed in the gains of the October revolution could not step aside to allow Gorbachev to sign the union treaty. It would go against the express wish of the people of that country". But the "people" seem to have suddenly changed their minds. And with the CPSU dead, the CPM will have to look elsewhere both for jubilation and inspiration.

Too much to do

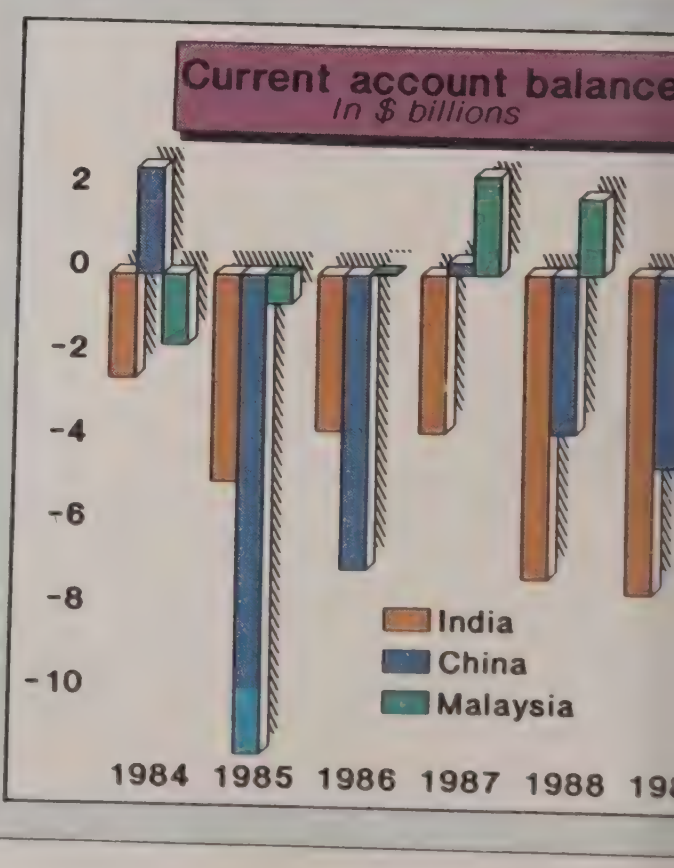
Union minister for civil aviation, Madhavrao Scindia, has a knack for getting involved in controversies, even when he is not lashing out against the BJP. An ardent fan and patron of cricket, he is also president of the Board of Control for Cricket in India (BCCI). But his ministerial reponsibilities are interfering with his work for the BCCI. For example, since he was being sworn in as a minister in Delhi, Scindia could not attend the all-important meeting of the International Cricket Council in London held on 8, 9 and 10 July to decide the readmission of South Africa into international cricket. Similarly, the BCCI special general meeting and the working committee meeting, scheduled for 17 and 18 August, had to be postponed, since the minister had to rush to Imphal following an air crash. All of this prompted one observer to ask, "If a politician cannot find the time to promote sports, shouldn't he just stay away?"

FOREIGN INVESTORS

The second c



Whether the government's attempts to woo foreign investments stem fr genuine conviction about the benefits involved or pressure from the IMF is unclear, but the policy appears halfhearted and could fail to be powerful enough to lure foreign investment

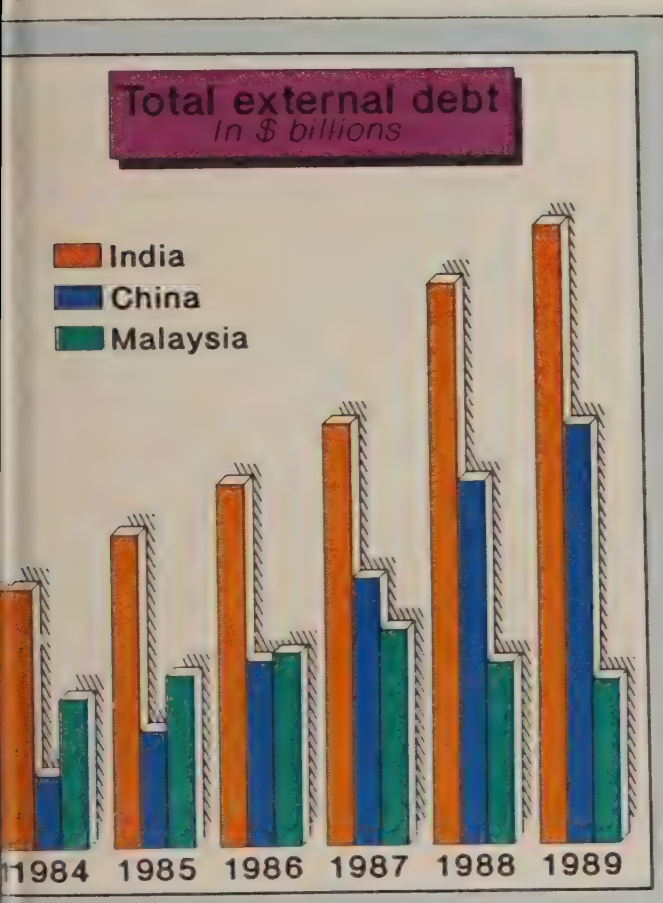


The coup that failed to overthrow Gorbachev symbolises the real end of the twentieth century, just as the First World War marked the real end of the nineteenth century. Gone with it is the belief that big governments are better, which is replaced by the reluctant acceptance of the fact that there are few alternatives to a market economy and integration at the global level. And India's new industrial policy is a belated and hesitant recognition of this reality.

In a single stroke, the Narasimha Rao government has attempted to alter the framework of the Indian economy, change long-held beliefs and attitudes, and cut down bureaucratic controls, for long considered responsible for the tardy development of the country. Important among these landmark policy changes is the whole slew of concessions to foreign investors, finally recognising the role foreign investment could play in future economic growth.

The burgeoning trade gap explains the government's urgent need to secure foreign investment. The focus has shifted to manufactured goods, which requires the import of technology to be competitive. And that requires a lot of money, in foreign exchange. And today, foreign investment seems the logical way out. "Foreign investment, which must perform before it can earn a return, is a more rational source for external finance, and the preferred way of getting technology," says Kalyan Bannerjee, chairman and managing director of Export and Import Bank.

But, what does not emerge from finance minister Manmohan Singh's announcements, and is probably impossible to ascertain, is the reasons for the concessions to foreign investments. Were they made as a result of a heart-felt belief in the benefits of such investments or were they prompted by the IMF and the World Bank? Allegations of a sell-out by the opposition aside, the policy suggests that reservations still persist about the possible negative effects of such



ning

stments, giving credence to the oft-essed fear that there will be a large gap bet-n stated intentions and actual implementa-. And the government is not making too y efforts to answer the 'ifs' and the 'buts'. his casualness has affected India's cred-ty. H.R. Prasad, managing director, Schrader-Scovill Duncan, a Bombay-based valve manufacturer, has been talking to a US multinational about the possibility of a joint venture. After the policy changes were announced, he told them that no government approvals would be necessary. His counterpart's rejoinder was, "How long is that going to last?"

Hailed as revolutionary within the country, the new policy is not evoking more than a wait and watch response from abroad right now. Says Girija Pande, general manager, investment banking, ANZ Grindlays Bank, which arranged the largest number of foreign loans into the country last year, "We are getting a large number of enquiries from potential investors but there isn't much we can tell them at this moment in time. And their own attitude seems to be to wait and see how things change in the coming months." Adds Robert Wade Gery, former British high commissioner to India and now executive director, Barclays De Zoete Wedd, the Barclays group investment bank, "Two questions are tempering our optimism. The first is political — whether a minority government can actually get the measures required passed in parliament. The other question arises because the new policy will mean the wholesale slaughter of a lot of sacred cows. Whether the vested interests, the left wingers, including

As foreign investment increases, debt and current balance account decrease

Box 1:

Foreign investment norms

Then	Now (proposed)
• 40 per cent equity participation	• Direct foreign investment upto 51 per cent allowed automatically. Policy still unclear for existing companies
• Higher equity only for high technology or units in FTZs or EOUs	• Higher equity on case by case basis Also, proposed 100 per cent equity for the power sector
• Non-FERA companies could increase equity from 40 to 51 per cent provided the company could guarantee 40 per cent export of annual turnover	• Only 18 industries like coal, petroleum, sugar, motor cars, drugs and pharmaceuticals restricted from foreign investment
• Severe restrictions on expansion or participation in activities like trading for FERA companies	• Automatic approval where costs of capital good imports covered by equity or less than 25 per cent of plant and machinery up to a ceiling of Rs.2 crore.

Take the example of the limit on foreign shareholdings. Says M.S. Patwardhan, vice-chairman, NOCIL, "Letting foreign companies own 51 per cent in their subsidiaries has a direct psychological impact. While a 40 per cent holding did mean virtually total control, there are certain benefits to allowing a still higher stake. It implies that the parent company can consolidate the accounts of its subsidiary."

Some multinationals who, contrary to popular notions, are quite happy with their minority holding in their Indian affiliates, feel that the new policy gives them an opportunity to expand their operations in India with much more freedom. Says David Whitwam, chairman of Whirlpool Corporation, the US-based world's largest manufacturer of appliances with a 34 per cent stake in the Indian washing machine maker TVS Whirlpool, "We are quite happy with our minority holding in TVS Whirlpool and don't plan to increase it. In fact, in most of our worldwide associates we have a minority holding. It doesn't bother us."

Pande of ANZ Grindlays points out the importance of a 51 per cent holding for a foreign company in another context. According to him, a large number of potential investors this time are going to be small and medium size technology-oriented, family-owned companies from countries like Germany, South Korea, Taiwan and Japan. For them total control is very important. Says he, "51 per cent is a great comfort line."

As for existing multinationals with a minority shareholding like Glaxo, who in the future would want to raise their foreign holding to 51 per cent, the government has still not indicated what route they can take to do this. Commerce secretary, Montek Singh Ahluwalia, when asked about this said, "We have been unable to decide uptil now about what to do."

This lack of a clear statement on how they view the attempt of parent companies in existing subsidiaries is baffling. One merchant banker, expressing a commonly-shared sentiment, feels that the whole matter should be left to the shareholders to decide and the government should refrain from complicating the matter needlessly.

"Many international companies, who want to introduce a new technology into the country, might decide to set up a new company instead of introducing it through their existing subsidiary," says Humayun Dhanrajgir, managing director of Glaxo. He is certain that his parent company would want to increase its stake, but for the negative effects of the drug price control order, which makes it hard to justify further investments.

Hoechst, like many others, is also labouring under huge liabilities of the drug price assessment scheme, which, E. Baltin, managing director, points out, are more than the total profit Hoechst has made over the last decade. According to Baltin, Hoechst has a policy worldwide of having subsidiaries in which they have either a 100 or 75 per cent stake. The situation in India is an exception. Hoechst AG has 40 per cent holding in Hoechst (India), a 32.8 per cent holding in Colour-Che Ltd, 33 per cent in PIL, 74 per cent in Uh India, while Hoechst (India) has a 67 p cent holding in Roussel India. An applic tion has been made to increase Hoech AG's stake in Colour-Chem to 40 per cer But neither in PIL or Hoechst has there be any discussion about increasing the sta to 51 per cent.

To a large extent, the interest or lack it, in increasing their stake or investmer depends on the nature and the growth the industry a company is part of. Ja Bergvelt, the former managing director Peico, claims that Philips' investment dec sions in India are not linked to its equit holding. In fact, it was such investment as sets which enabled the company to tur around in the last few years.

Bergvelt suggests that most interna tional companies have made large invest ments in South East Asia and China. Onc such large investments are made, th

"We are quite happy with our minority holding in TVS Whirlpool and don't plan to increase it"

DAVID WHITWAM
Chairman
Whirlpool Corporation

Box 3:

A small step forward

In a bid to step up foreign invest the government has set up a s investment board chaired by the principal secretary. Its missio speedily clear proposals outsid norms set by the foreign invest policy. Meanwhile, the existing eign investment board, chaired b finance secretary, will continue to cess the routine cases falling unde purview of the industrial policy. H ever, the special investment boa empowered to deal with some o proposals before the FIB.

Montek Ahluwalia, commerce retary, who along with the finance industry secretaries is a member o board, says that SIB will consider a posal in its totality. "Uptil now body had the power to say yes. everybody had the right to say Now if the board finds someth wrong in the proposal, it will not no, but instead suggest amendmen **SIB's scope.** Apart from consider large and strategic investment p posals by transnationals, SIB will a scout around for such investme Both the Indian embassies abroad a the domestic chambers of comme and industry could be roped in to he However the board has set no targ for how much investment it will tap a particular time frame.

The board can use its discretion to cide whether a proposal is good for e country. Says Ahluwalia: "For in-nce, if we have to develop a sound se for the electronics industry, I do t see how you can afford not to have here. But a proposal by Coca Cola, natever be its merits, will be low wn on our priority. That is clear." The board actually has no sweeping wers. If investments are proposed in nsitive areas like telecom, aviation with an adverse environmental nt, the board cannot take decisions thout consulting the concerned min-ries. Not surprisingly, therefore, the ecial board will constitute only a nall step forward, which is not quite ough.

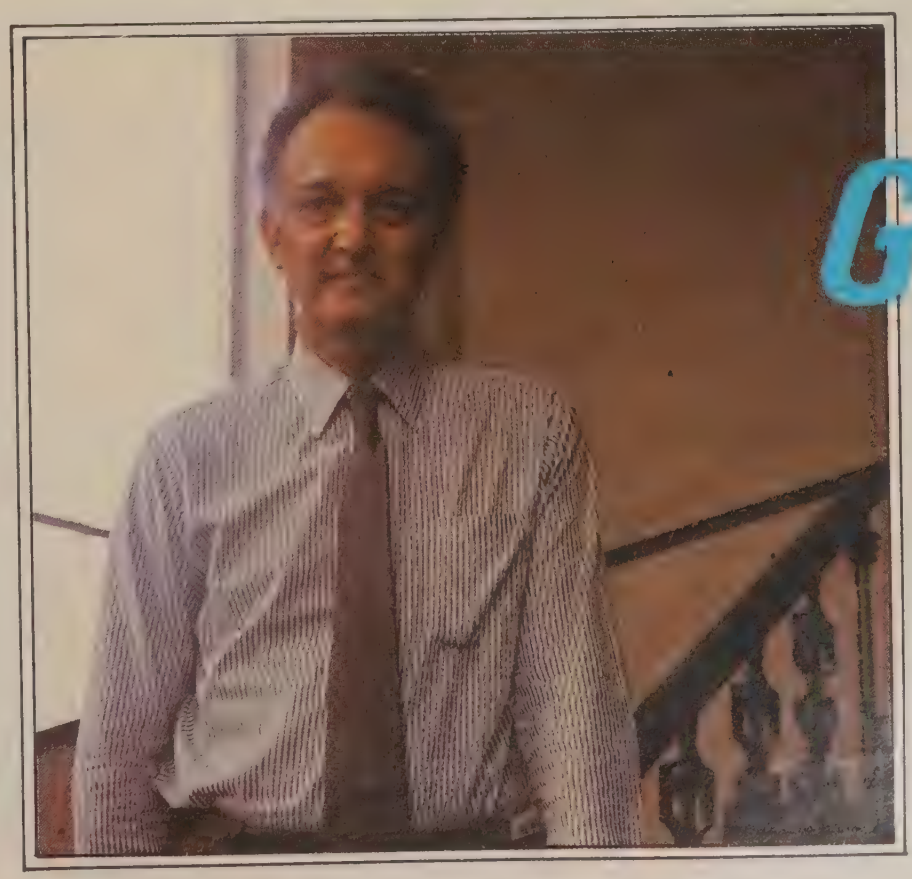
The Indian effort appears to be di-cted at contacting new investors, but may not be the right way of going out it. A publication of the Interna-nal Finance Corporation's Foreign dvisory Service, entitled 'Marketing Country' suggests efficient invest-ent promotion as a solution.

ecision making stages. Investment romotion is quite similar to indus-ial marketing and requires a group of ell informed "consumers" to make rge investments. Research in indus-ial marketing suggests that corpora-ons go through five stages to reach the first purchase decision: awareness, interest, evaluation, trial and adoption.

Several countries, such as Ireland, Britain, Canada, Mexico, Malaysia, Jamaica and Costa Rica, have used investment promotion with varying degrees of success. Ireland, for example, concentrated on image-building strategies for 20 years. When the Industrial Development Agency began its work in 1970, Ireland was synonymous with a picturesque, agricultural country with a limited industrial infrastructure. Initially, IDA offered attractive incentives to firms for setting up a base in Ireland. After 1973, and its entry into the EC, Ireland highlighted its low-cost access to the EC market.In the eighties after its labour costs rose, Ireland changed tack, projecting itself as a source of high quality labour.

What emerges from the study is that investment promotion is best done professionally by a specific agency assigned to the task. Repeated personal contact with potential investors is necessary. Expecting a board comprising India's most senior government officials to aggressively promote investment, is asking for too much. The obvious choice would then be to invite businessmen of the calibre of Russi Mody or Rahul Bajaj who are far far more attuned to the realities of business.

■ KINGSHUK NAG



ency would be to put more investment at location itself.

shok Chindarkar, general manager, orate planning at Siemens, says that iens A.G. already has a 51 per cent e in the company, so control is not an e. But the new reforms remove many iers, even psychological. Siemens' e is power — generation and distribu-— information technology, telephone ches, medical electronics and so on. ndarkar estimates that the growth in area will be in the region of 14 per cent annum, while the prevailing trend in US and western Europe is 6 per cent, Japan, 7 per cent.

n indication of the significance of the an market is the decision of Asea wn Boveri, another global power-se, to increase investment in India. So M, which is planning to enter the coun-once again, and is talking to at least possible collaborators, including the Tatas. Another multinational giant, General Electric of the US, also has a sustained commitment to invest in India.

Most other US companies want to at least consider increasing their stake in India. One of them, Digital Equipment Corporation, has a 40 per cent stake in Digital Equipment Corporation (India) Ltd. But its chief executive, Mike Shah, expects a clarification from the government on how such an increase could be effected, only after which the issue will be seriously considered. In the case of Birla 3M, all decisions are hanging fire till 3M's chairman visits India at the end of August. Says William Scrivens, managing director of Birla 3M, "We have not yet decided whether to go in for a rights issue or to buy shares from the public." Both Yash Birla and 3M have a 40 per cent stake in the company.

What will happen to Indian houses who have tied up with foreign companies? If the foreign companies are allowed to have a 51 per cent stake, their Indian partners would be concerned about loss of control. Curiously, there appears to be unanimity among Indian businessmen to allow their partners to raise their stake to 51 per cent, without losing control. Venugopal Dhoot of Videocon has informed his collaborators, Toshiba, that they could increase their stake in the VCR unit from the current 25 per cent to 51 per cent. "But have made it clear that we will not allow loss of management control," he says. G.P. Goenka, another leading industrialist, has no objection to his foreign partners holding a higher equity than his own. But he

those in the ruling party and the trade unions, allow all of it to be carried through." If anything, Gery's scepticism reflects his recognition of the deep-seated suspicion of foreign investment.

Manmohan Singh explains that the Indian fear is "a typical post-colonial problem". He dismisses it as the East India Company syndrome, and says there is little reason for Indians to feel that way in today's economic scenario. "I would like to think that we are capable of competing with any country in the world," he says.

What he misses out is that after 40 years of being cocooned and protected, the Indian elite may be chary of taking on competition from foreigners. But Singh has not gone all the way in opening up the economy. He has made provision for some of the earlier restrictive and protectionist policies to continue, without fixing a time frame, and chosen the middle path.

It has been forgotten that between 1947 and 1973, when there were no restrictions on foreign direct investment, there were no signs of economic, political domination or social degradation. In fact, there was little inflow of investment — for other reasons. During this period the country was just not ready to accept foreign investment and the people's purchasing power was far smaller. It is only in the last 20 years that this purchasing power has really developed.

However, even the recent record is nothing much to go by. Foreign direct investment in India was only $280 million in 1989, against $22.4 billion in all developing countries. Between 1984 and 1989, direct investment in India was only $1.3 billion, against $8.9 billion in China and $5.1 billion in Malaysia. Why was foreign investment in India so niggardly? "Let's face it, it couldn't have been any other way. You couldn't desire to be largely self-sufficient and also expect to be an attractive arena for foreign investment," says G. Krueger, executive director, Indo-German Chamber of Commerce.

But the tragedy is that even the heady early days of Rajiv Gandhi failed to alter fundamental Indian attitudes to foreign investment. His triumphal visit to the US in 1985 set most minds in board rooms the world over thinking about investing in India. But when they actually tried to invest, they experienced a cool reaction and India lost another chance. And coupled with the deteriorating political situation, this made India bad news. And "good news travels slowly, bad news travels fast," says J. Rajgopal, managing director of the Indian affiliate of the international accounting and investment consultancy firm, Cooper & Lybrand.

India, therefore missed the bus, while other developing Asian nations capitalised extensively on the world economic boom in the eighties. As Vinod Thomas, the leader of the team that produced the World Development report of the World Bank this year, puts it, "Foreign direct investment has been increasing its share in total finance flows to developing countries," which for 1989 was 35 per cent. Four countries, China, Indonesia, Korea and Malaysia, accounted for about one fourth of all direct foreign investment in developing countries in the eighties. The success of these countries in attracting such investment was because they unreservedly welcomed it *(see box 2)*.

India could again fail to attract foreign investment because of the current political instability. According to R. Banatawala, managing director of Parke Davis, for any investor the stability of a market which he operates in is the first criterion before questions of the size of the market, or whether he can hold a controlling interest.

Moreover, there is a global shortage of capital. The continuing recession in the U and the UK, traditionally the largest inve tors in developing countries, rules out t possibility of fresh investment from the Also, the situation of European countri like Germany is towards East Europe. something is not done quickly to bolst the economies in eastern Europe and t former republics of the Soviet Union, flood of refugees could flow into the pros perous nations of western Europe.

Pande of ANZ Grindlays, though, hold a slightly different view. He thinks tha considering the miniscule amount of for eign money that has come in so far, even few billion dollars of new investment, in significant in global terms, will make a bi difference.

The bulk of investment from the devel oped countries, anyway flows into othe industrialised countries. In 1990, for ex ample, 95.4 per cent of German direct in vestment was in industrialised countries. In addition, global investors currently want to invest in the two emerging trading blocs, the EEC and the American free trade area — being the biggest markets of the world. Given this scenario, if investment is to come to India, it will have to be

Box 2:

The neighbourhood scene

"We are open for business" is the one clear signal coming through from many of the Asian countries today, be it Pakistan, Bangladesh, Malaysia or China. They have all heeded the writing on the wall and rapidly opened their hitherto protected economies to foreign investment. By devising clear-cut policies and offering generous incentives and attractive facilities, these neighbours have left India far behind in the race to access direct foreign investment.

Take China, for example. By 1978, the economy clearly showed the strains of a highly centralised system. Structural reforms were subsequently introduced and a sustained effort was made to attract foreign investment in both the core and service sectors. More significantly, one of the laws stated that if a company applied to the National Investment Board of China for a licence and did not receive a reply within a month, it was considered automatically granted. By contrast, in India, a five-year wait for a project clearance is normal, which is what Shell did for its Nocil expansion an Du-Pont for its Nylon-66 project.

Developing fast. Another country o the fast track has been Malaysia. I was transformed by prime ministe Mahathir Mohamad's open door poli cies in the mid-eighties, from a dor mant agrarian economy to one of the fastest developing countries in the Pacific rim. Radical economic reforms in 1985 allowed direct foreign owner ship as well as gave lucrative tax holi days, to woo direct investment. The impact of these policies can be gauged by indicators like per capita income increasing from $1,724 in 1980 to $2,475 in 1990. Real GDP too has more than doubled from five per cent to 10.5 per cent during the same period.

However, Malaysia's story of economic success is not complete without a mention of Japan's influence in this region. Tokyo's direct investment in its neighbouring countries has benefited Malaysia immensely by creating jobs thereby a higher standard of living. Mahathir's ideological alignment with Tokyo has proved beneficial for

teral trade. Coincidentally, the
5 Plaza Accord raising the value of
and forcing Japanese companies
elocate their labour-intensive in-
tries to low-cost production has
n a blessing in disguise. Malaysia is
ay a host to nearly 850 Japanese
npanies making, among other
ngs, magnetic tape heads to highly
histicated polished silicon wafers
l engineering goods. In addition,

business. According to highly placed officials in the foreign ministry, Indian missions are being told to liaise with chief executives of major companies with a view to attracting them to India. The government's resolve to attract new investment has also led to the setting up of a new high-powered investment board (*see box 3).*

Another initiative which has promise is the proposal to set up what are called model industrial towns, to attract foreign investors. The proposal was first mooted by the Indo-Japan study committee, a body comprising leading Japanese and Indian businessmen and officials, to tackle the shortage of infrastructural facilities in the country. The concept of the model industrial town, which has been implemented in Indonesia, Thailand and China is based on the assumption that while one can't improve infrastructure all over the country, it can be done at one or two sites.

In many ways, the model towns would be like free trade zones, but much larger — maybe up to 700 to 800 hectares. The industrial model town would be equipped with all the necessary infrastructural facilities. A committee headed by Kalyan Bannerjee (in his personal capacity) will look into the feasibility of setting up the sites.

If the proposal gets off the ground, there are ample prospects for investment. Today the life cycle for most products abroad is 18 to 36 months. For example, audio tapes have been replaced by compact discs in the markets of developed countries. Yet, products like audio tapes will continue to have markets in India and many other developing countries as well as developed countries. And it is this rationale that has led Koyo Seiko, a $2 billion Japanese company, to recently take a 10 per cent stake in Sona Steering Systems, the official supplier of steering systems to Maruti.

Masuo Hoshino, director, Koyo Seiko Ltd, explains that Koyo Seiko took the stake because of its desire to source manual steering gear systems from Sona Steering, a Maruti joint venture. The demand in Japan is not large enough to merit production at one of their automated sites. "But the volumes are still large — several hundred thousand pieces a year. Sona's total production capacity is only 120,000 systems a year," says Hoshino.

The easiest way to step up fresh investment would be to get multinationals with subsidiaries to boost their investment. It would be easier than to persuade a fresh investor to come in and make an investment. Over the last few years, a sustained debate has taken place on the benefits of letting foreign companies having a dominant stake in Indian companies.

would continue to run the business. This seems to be the general perception of most leading Indian business houses.

While no Indian businessman is willing to come out and really say it, there is bound to be reluctance to let go the benefits that were acquired through the 40 per cent limit. Today, every Indian businessman will be faced with the spectre of losing control or not acquiring profitable alliances in the future. Multinationals may seek non-dominant Indian partners or come in on their own. Merchant bankers point out that several companies like Esab, Carrier Aircon and Hoganas have entered the Indian market without seeking an Indian collaborator. Further, smaller Indian businessmen with foreign collaborations may be forced out if they cannot ante up the equity for large expansions or for the infusion of new technology.

But all these debates presume the important fact that foreigners are keen to invest in India. Contrary to conventional wisdom, no investor is dying to get into this country. What with Eastern Europe opening up, with some of the Latin American countries like Mexico seeing better days and with Thailand and Indonesia providing a much better deal, investors would do a lot of soul-searching before they actually come here with their money.

Birla 3M

There is much that goes against investing in India at this point in time. The widespread publicity given to the caste and communal riots last year in the international media is only the tip of the iceberg. In the sixties and seventies, the Asian tigers were still placid rice-growing lands of largely illiterate peasants. China was a forbidden empire. India, thus, had a distinct edge both in trade and industry. The times have changed dramatically. China now offers a far more peaceful and disciplined workforce for any foreign investor than India will ever be able to. Even countries like Malaysia and Indonesia, where industrialisation came only in the last two decades, provide better infrastructural facilities — like better telephones and roads — than this country can dream of possessing, at least in the near future.

But this is not to deny the advantages that India still enjoys vis-a-vis many of these countries and which a thinking government should be projecting forth to attract foreign investment. Skilled labour, of course, is the most important of these. Though many would say that Indian cheap labour is now only a myth, the reality is that an improved standard of living in countries like South Korea and Taiwan has pushed up wages there, and this country continues to have an edge in that area. This is one of the reasons, for instance, that Whirlpool Corporation is planning to set up a manufacturing facility in India to service specifically the east Asian market.

The other advantage, of course, is the often stated one of the lure of a huge mi dle class market which keeps burgeoni by the year. No large corporation in t world can afford to ignore a country th houses nearly a quarter of the world's po ulation. Directly and indirectly, this pop lation will create a demand which will ne to be satisfied by industry. Besides, there the obvious edge of possessing a fairly – comparatively speaking — well-develope banking and securities market. India economists and bankers rate among th best in the world and people the hierarch of some of the most prestigious interna tional financial institutions. An interna tional investor will face a similar situatio in India as B.K. Birla, the chairman o Century Textiles and Industries, experi enced when he travelled to Rumania a fe months ago to look at the possibility o taking over a textile mill there. Laying ou the terms and conditions of the deal wa not easy because, as he told *Business India* "We had to literally start from scratch, a they had no concept of even basic thing like debt-equity ratio." The Indian stock market today is among the most advanced and biggest in Asia.

So, the foreign investor of the 1990s is going to weigh a whole basket of pros and cons before taking a flight to India. According to a study undertaken some time ago by the Associated Chamber of Commerce and Industry, India should lure investment to the tune of at least around Rs.1,500 crore every year all through the Eighth five year plan if it has to get out of the economic mess that it finds itself in. That is not an easy task, and the Indian government will have to do much more than announce that 51 per cent foreign investment will be allowed into the country in 34 select areas. The Second Coming is not going to be too easy.

■ EAPEN THOMAS and SHAMPA KAR with KINGSHUK NAG and ARIF SHARIF and bureau reports

ONE OF THE MOST PROGRESSIVE GROWTH COMPANIES IN INDIA BELIEVES THAT ALL ITS ACTIVITIES SHOULD SUBSERVE THE BASIC NEEDS OF OUR PEOPLE

"At Century, we are the first to
it that our manufacturing units are
in what most people call glamour
igh profile industries. On the
rary, we are in the basic industries:
kind that are at the heart of national
nomic growth.

Our commitment to the
ntry's economic priorities has
le us the largest manufacturer-
orter in India. This year alone, we
earn about Rs. 140 crores in hard
rency. And we are progressively
anding our cement production to
o bridge the widening
nand-supply gap.

We believe that we should strike
armonious note between our
reholders' and workers' interests and
interest of the nation. Our workers
happy and proud to belong to us.

Often three generations of the same
family have been working with the
company. Our shareholders too have a
reason to be happy. After all, the value
of Century's shares over the last
40 years has appreciated over 340
times, considering issue of bonus and
right shares. And in the last decade
alone, Century has contributed over
Rs. 660 crores to the national exchequer.
And now, to create vitally
needed productive assets for the
country, we propose to move into the
critical areas of power and
petrochemicals.

SESA GOA

To a cast-iron future

Changing government policies and quick reactions from this company, the only one in the private sector that exports iron ore, are pushing it to new heights, financial and otherwise. Soon, it will be the first private company to manufacture pig iron

The sylvan surroundings of Goa are more conducive to afternoon siestas and merry making than frenzied industrial activity. So, in some senses, it is an achievement for the state that Sesa Goa Ltd (SGL) is listed on the Bombay Stock Exchange's (BSE) forward list — that group of select companies in whose shares speculation is officially tolerated.

On the basis of expectations alone, SGL's scrip gained a handsome Rs.400 last fortnight on the BSE, up from Rs.260 in June. According to a leading broker though, 50 per cent of this rise is based on fundamentals and therefore justified. The rest is purely speculative.

For the three decades and more that SGL has been in business, it has been engaged in mining and export of iron ore. The company accounts for 15 per cent of India's total iron ore exports and has the rare distinction of being the only public limited company in that trade. About 90 per cent of the company's Rs.94 crore turnover last year came from exports of iron ore. But this proportion is going to change in the coming years.

Changing government policies over the years have helped the company on its way. And now, more than ever, as SGL's Italian managing director Antonello Girardi says, "the government's policies are in our favour. We have to reciprocate and hence the plans to increase the quantum of exports, expand and diversify in our business."

Till 1980, SGL was a wholly-owned subsidiary of the Italian steel giant Finsider SpA which, in turn, is a subsidiary of the IRI group owned by that country's government. Being a 100 per cent FERA company, SGL was prevented from diversifying into other areas. But a year later, Finsider diluted its equity stake to 40 per cent, paving the way to diversification.

The first foray outside mining and exports was into constructing barges for itself. With time, this was broadened to construction and [illegible] pair of small ship vessels and barges f third parties. Thou this activity did not r flect directly in t company's turnove in terms of any gre increase, it definite cut down shippi costs for its ow exports.

The major dive sification came in la 1988 when the Centr decided to allow pr vate sector companie into pig iron produc tion. SGL responde quickly by drawing u plans for a 150,000 tonnes-a-year lo phosphorus pig iro (LPPI) plant. The firs phase of this project comprising a 90,000 tonnes-a-year plant

Girardi: "policies are in our favour"

SGL's mines: dim[illegible]ing importance due to diversification?

ing Rs.29 crore, is ing completion. It produce pig iron a phosphorus tent of 0.06 per , as against the ent industry best .12 to 0.2 per cent g produced by the inga Iron Works in ssa.

When this plant — first major pig iron ject in the private or — goes on am by mid-tember, SGL will be l set on its way to a nover of Rs.125 re by March 1992. erine Frank, the npany's finance director, expects that full production, it will add Rs.60 re to SGL's turnover every year". And ardi adds, "This diversified business l support the company in the lean rs of the iron ore business cycle."

Girardi says, "We could export some iron, but since it is not a sufficiently ue-added product, we are focusing on ing up a foundry that will use it to ke complex castings." P.F.X. D'lima, irector of the company, explains that me European buyers of engineering ducts have re-ested SGL to supply mplete machining. says, "We will ke machine cast ducts as per their cifications. There l be considerable ue-addition in these ished products and r export earnings l go up."

SGL had originally nned to set up the ire capacity with o blast furnances in ingle phase, but has ce revised the plans. rardi says, "We will w go in for a foun- y after the first ase of 90,000 tpa s stabilised. The pacity will be in-eased by installing a cond blast furnace ly after that. The xt stage would be to set up a sinter plant." Technology for the first blast furnace has come from Tata Korf, the Indian associates of Korf, Brazil.

Sawant, Frank, Girardi and D'lima: the core management team

For all practical purposes, SGL has an assured market for its pig iron, the main raw material for foundries which make iron castings. Today, the total estimated demand for pig iron is 2 million tonnes (mt) a year, whereas indigenous supply from large integrated steel plants varies between 800,000 and a million tonnes. With around 400,000 tonnes being imported — at a landed cost of Rs.8,100 a tonne, after devaluation — there is still unsatisfied demand for 600,000 to 800,000 tonnes each year.

Total demand is growing at 20 per cent a year, and is expected to reach 3.5 mt by 1995. Against this, there are 11 proposals for new plants with the central financial institutions, with aggregate capacity of 1.1 mt.

The main raw materials for pig iron are iron ore and coke; about 800 kg of coke and 1,400 kg of ore go into every tonne of pig iron produced. The iron ore will come from two SGL beneficiation plants adjacent to its pig iron plant at Amona in Bicholim, north Goa. The two plants have a combined processing capacity of 2.1 mt. The coke will have to be imported.

SGL owns 21 mining concessions spread over 1,570 hectares; of this, 860 hectares have been prospected and have proven reserves of over 100 mt of ore. It exported 3.5 mt of beneficiated ore worth Rs.90

The pig iron plant: assured market thanks to growing demand

crore last year. Of this, 1.3 mt was produced by the company's own mines and the rest bought back from mines operated on behalf of others.

Twenty years ago, SGL's ore was exported only to Japan. "Today, although the Japanese are still valuable customers, our ore is also being shipped to Germany, Holland, Italy, Belgium, France and Romania," says Frank. When the pig iron plant, and later the foundry comes on stream, these exports will become consolidated, and better still, in a value-added form.

On the mining and ore export fronts, however, SGL's performance is expected to remain static at 3.7 and 3.5 mt a year, respectively, atleast for some time to come. The problem lies in the fact that the company does not own a transhipper, as a result of which it is dependent on outside transport for movement of its ore. Under the present circumstances, the figures mentioned are the optimum. Soon, however, the situation should be rectified. D'lima says, "We have decided to acquire a transhipper and last week we received a clearance from the surface transport ministry for that."

Other than that, things are looking up for SGL, and the mining industry in general, in more ways than one, what with the government's recent policy announcements. First, devaluation and the resultant 40-per-cent appreciation of the dollar's value promises a bonanza, not to mention the 7 per cent price hike in iron ore allowed over 1990-91 prices. Sec profits from exports of processed erals and ores now enjoy the benefi section 80 HHC of the Income Tax and are therefore free of any tax. Say nance director Frank, "This will be a cable for the assessment year 1991 Thus, Rs.4.25 crore that we have vided for tax in the year ended Ma 1991 will be now adjusted and adde our pre-tax profits."

A third benefit accrues from the import-export policy. Says Frank, "S ting 4 April 1991, whatever we have ported will be eligible for Exim scri Even going by last year's figures, company will be eligible for Exim sc worth more than Rs 30 crore. Says C ardi, "This will make it easier a cheaper for us to import the coke we ne and bring down the manufacturing co of pig iron."

The combined effect of these benef coming on top of four years of unint rupted growth for SGL will, as a close co petitor puts it, "have a rather mi boggling effect on SGL's accounts". A ready, the turnover for year ended Mar 1991 is up from Rs.39.43 crore (Mar 1988) to Rs.93.48 crore. During the sa period, the profit after tax skyrocket from Rs.84 lakh to Rs.5.46 crore, pushi the earning per share (EPS) up ten times cross the par value at Rs.10.62.

With the impact of the pig iron proje rubbing off on the second-half accoun of the current year, earnings are sure increase further. In fact, the compan hopes to generate enough earnings in th very first six months of the new project operations itself to be able to service th enlarged capital after the conversion SGL's partly convertible debentures an issue of fresh equity to principal share holders in February 1992. The company' equity will increase from the existin Rs.5.14 crore to around Rs.7 crore at tha time.

For now though, there is a shortage i floating SGL stock on the BSE. And with bul operators hell bent on trapping the bear by not giving them an opportunity t cover their positions — as they did with the ACC scrip last year, and pushed it up to Rs.2,000 a share — the SGL share could well go through the roof in the weeks to come.

As it stands today, SGL may appear a speculative scrip but its ambitious plans look likely to prove it strong on the fundamentals too.

■ LANCELOT JOSEPH

TOSHIBA ANAND BATTERIES

Time to say *sayonara?*

The pioneer in metal jacket cells in India is going through a rough patch. The fabled Japanese management techniques having failed, it has become a BIFR case again

The Japanese wizardry that turns any enterprise they touch to gold doesn't seem to work here. And now, over a year after taking control of the management of the ailing 21-year-old Indo-Japanese venture, Toshiba Anand Batteries in Kalamassery, Kerala, the Japanese are about to throw in the towel. Neither their fabled management techniques nor a bail-out infusion of Rs.10 crore from the parent Toshiba Corporation has been able to turn around the loss-stricken company.

With total accumulated losses nudging Rs.14.24 crore by end March 1991, the company had no option but to hobble back to the Board for Industrial and Financial Reconstruction (BIFR). While the disappointed Japanese rue that they missed roping in ITC for marketing support, the 500-odd workers of Toshiba Anand are restive about their prospects.

Not so long ago, however, nothing appeared impossible to Yukio Akashi, the 55-year-old bachelor of law, who left his post as vice-president and general manager of Toshiba Battery Co, Japan to take over as managing director of Toshiba Anand in late April 1990. He thought that tightening management control, fixing technical hitches and urging the workers to increase productivity would do the trick. Today he is a wiser man. Says Akashi: "I am at a loss, for everything seems to have gone wrong. Then I was confident, perhaps because I didn't understand the ways of the Indian economy. Though we made improvements in production, we couldn't increase sales."

For Toshiba Anand, which was set up in 1970, poor sales is a recent ignominy. The company, which pioneered the metal jacket dry cell in India, maintained a fair level of profitability till around 1985 — when, on sales of Rs.20 crore, its gross profit touched Rs.1.18 crore. But since then things have moved only downhill.

The company could not meet the increasing competition at the market place. Its product image also took a beating on account of a large number of rejections. Sales slumped, production fell and losses began to mount (*see table*). From a high 90 per cent in 1983, capacity utilisation dropped to 47 per cent by 1988-89. And by March 1989, the company's peak net worth (Rs.2.04 crore in 1987) had been eroded to negative levels. The company was thus forced to apply to the BIFR for a rehabilitation package.

After the first BIFR hearing, chairman C.L. Anand (the Delhi-based entrepreneur who also promoted Punjab Anand Batteries and Punjab Anand Lamp Industries) talked to his long-time collaborators Toshiba Corporation. The Japanese giant (ranked the 24th largest manufacturing corporation by Fortune in 1990) agreed to pump in Rs.10 crore — nearly ten times Toshiba Anand's equity capital — to bail out the company. The help came in the form of redeemable non-convertible preference shares for ten years, which made the company's net worth positive once more, lifting it out of BIFR's purview.

Akashi: disappointed but wiser

Will Toshiba Anand ever stand tall again?

Along with Akashi, Toshiba deputed Yasuo Imashiro as chief engineer and wholetime director for five years. It also flew in Japanese engineers who overhauled the equipment. Production recommenced in the first week of June 1990 and, for the next two months, capacity utilisation was reasonably high at 50 per cent. The Japanese hoped to touch 100 per cent by October 1990.

That, however, was never to be. Instead, the company closed that fiscal year with a loss of over Rs.7 crore. Much of this, claims the

A Tradition of Engineering Excellence...

... IN SERVICE OF AN ENDLESS ARRAY OF VALUED CUSTOMERS

There is always a way where there is WIL

WALCHANDNAGAR INDUSTRIES LTD.

WALCHANDNAGAR : 413 114, MAHARASHTRA

anagement, could be traced to the Gulf ar which pushed up the costs of raw aterials (especially zinc), 44 per cent of hich is imported. Toshiba Anand's imort bill for 1990-91 was over Rs.4 crore.

But, undeniably, this is a generic probm affecting all battery makers. Despite hat, say industry watchers, the increased emand following a good monsoon and alling zinc prices has made battery anufacture more profitable. Indo Naonal, for instance, made a net profit of s.1.61 crore on sales of nearly Rs.90 rore last year. Similarly, Lakhanpal ational reported a profit of s.2.49 crore on sales of s.81 crore.

Therefore, Toshiba And's failure cannot be atibuted solely to poor arket conditions. True, as e management stresses, beg the smallest player in the eld makes it particularly ulnerable. With a market are of only five per cent, oshiba Anand cannot comand the economies of scale njoyed by Union Carbide narket share: 50 per cent) nd National (market share: 8 per cent). Yet, the fact reains that the little it prouced bombed in the arket. Even after the entry f the Japanese, about 5 milon Toshiba Anand batries came back to alamassery as rejections.

And to top it all, the proised marketing support by TC never materialised. The garette giant had three years ago taken ver Punjab Anand and had promised to xtend full marketing support to Toshiba nand as well. But stung by the Punjab enture where it lost over Rs.7 crore, ITC acked out. Says a disappointed Akashi: We expected something from ITC."

But the company's troubles began uch before this marketing failure. Durg 1986-87, Toshiba Anand altered its anufacturing process from the conventional 'paste-line' technology to the paper-line' one, to permit greater automation and more production shifts. The attery mix formulation was also hanged from ammonium chloride to inc chloride. But the imported second-and reconditioned equipment did not abilise and the technology did not adapt self. The result was excessive wastage and piles of dead cells. Recalls a former top executive of Toshiba Anand: "Every morning our job was to send telexes to Tokyo complaining about the low current output from the batteries we made."

Some engineers claim that Toshiba Anand's technology is not suited to tropical conditions. To revamp the manufacturing process, the company will have to ship the existing machinery back to Japan. That would be disastrous for Toshiba's image. That is why, claim these critics, Toshiba Anand is still tinkering around with the present technology.

A Toshiba Anand worker: worried about the future

Meanwhile, during the festive occassion of Onam, the company's workers are getting worried, understandably so. With the management publicly declaring that the company will have to close down in a couple of months unless BIFR bails it out, trade unions have begun rolling up their sleeves. Says S.C.S. Menon, president of the Toshiba Anand Batteries Employees Union: "This crisis could have been averted. We are prepared for sacrifices. We agreed to increase the work norm to six-and-a-half hours. We have even postponed discussing our long-term settlement which expired two years ago."

What irks the workers most, as they told *Business India*, is that the management is not responding with similar sacrifices, nor is it displaying any signs of financial discipline. They allege wasteful expenditure in purchase of raw materials, for instance, and few curbs on managerial expenses. The management, for its part, dismisses these charges as merely an extreme expression of the workers' apprehension about their future.

As the management waits for a call from BIFR, Akashi is hopeful: "This time we expect something from the Indian side." The message is clear: everything now hinges on BIFR's revival package, which in turn, depends on whether it can rope in an Indian partner. Only an existing player can be expected to do well with Toshiba Anand.

At any rate, for the Japanese, the foray into Kalamassery has been a sour experience. Akio Morita, the visionary cofounder of Sony, claims there is no magic about Japanese business success. In his words: "The most important mission for a Japanese manager is to develop a healthy relationship with his employees, to create a family-like feeling within the corporation, a feeling that employees and managers share the same fate." By that token, Toshiba has clearly failed at Kalamassery. Not only is Toshiba Anand on the verge of breaking up as a family, and its employees do not want to share the same fate as the management.

AGARJUNA SIGNODE LIMITED

Holding things together

fter a spectacular turnaround, this Hyderabad-based company is now oised to soar even higher as ITW, USA, increases its stake in the company 51 per cent and brings with it a promise of ever better technology and reater profits

ood ideas know no boundaries. S. Bhattacharya, the managing director of the Hyderabad-based Nagar-na Signode Limited and John Nichols, hairman & chief executive of the highly uccessful Illinois Tool Works, in the US, ve thousands of miles away from each her but share the idea of a 'cellular cor-oration', a corporation that is structured the form of individual cells each capable independent growth and yet interdepen-ent in their functioning. The $2.2 billion W has 90 different divisions, while the s.30 crore NSL boasts 22 divisions, both g and small.

Nichols and Bhattacharya also share a roduct idea: they manufacture things that old things together — screws, nuts, bolts, dhesives, steel straps, etc. Both men took ver ailing companies and engineered ectacular turnarounds. Not sur-risingly, Nagarjuna Signode and ITW are rporate partners who are now looking to enlarge their area of cooperation. As a prelude, ITW will first increase its present 30 per cent stake in NSL's Rs.3.6 crore equity to 51 per cent, taking advantage of the recent changes in the foreign investment policy. This will be followed by an accelerated transfer of technology and expansion of product lines.

In 1984 when S. Bhattacharya, an IIM graduate, then just 37 and fresh from stints at Advani Oerlikon and Larsen and Toubro, took over at NSL, the company was bleeding all over. Its impressive list of promoters — apart from the Signode Corporation (which in 1986 was bought over by ITW), the Nagarjuna group with a 30 per cent stake and the International Finance Corporation with a 11 per cent holding — had meant very little. On sales of Rs.4.25 crore in 1984, its loss amounted to Rs.2.01 crore.

"In turnarounds people run helter skelter in panic. I gave the company focus," says Bhattacharya describing what he has achieved in NSL in the last six years. On sales of Rs.30 crore for the year ended March 1990 net profit stood at Rs.3.7 crore. This year which will end on September 30, sales are expected to go up by 30 per cent and profits by 50 per cent. Exports to countries like Singapore, Hongkong, Sri Lanka, Dubai and Japan is expected to contribute Rs.8 crore to the turnover.

Bhattacharya pushed for growth by cutting back on customers at the low end of the market, like jute and cotton dealers, and concentrating on providing packaging services to more upper-end industrial customers. More importantly, he rapidly expanded the company's product range from just one — high tensile steel strappings — to seven, not only in the field of industrial packaging but also in the two other areas of industrial adhesives and industrial testing. In 1986 Signode Corporation, NSL's original partner, was taken over by ITW and the Indian company suddenly had a huge variety of high value-added products to choose from to manufacture here. Says S. Samarapungan ex-chairman, SAIL, who was chairman of NSL during the crucial 1986-90 period, "The important decision was whether to go in for low value, low margin dealership products or high value, high margin, specialised market items: They opted for the latter."

Packaging systems, which presently contribute fifty per cent of the company's turnover, consist of high tensile steel strapping systems, carton packaging systems and automatic power strapping systems. The ITW-Paslode pneumatic nailing system replaces the hammer with a gun which shoots out nails, thus resulting in savings in time and labour and allowing for precision nailing.

NSL's steel strappings are pitted against some 87 competitors who

SL, with ITW, is a pioneer in non-destructive metal testing

ARE YOUR CABLES SAFE?

ONLY UNISTAR®
WITH THE WIDEST RANGE OF CABLES OFFERS
FIRE PROTECTION

AVOID FIRE RISK AND LOSS OF LIFE, DUE TO SHORT CIRCUITS

Unistar cables are manufactured from quality inputs, under the supervision of an advanced quality assurance department, strictly adhering to Indian Standard and International Standards specifications. The range of cables includes:

FLAMUNI FR

(Flame Retardant Cables)
With reduced smoke and gas emission; will not propage flame in a fire situation.

FLAMUNI HF

(Halogen Free Low Smoke Cables)
Specifically designed, range of flame retardant miniature and control cables, offering low smoke and low corrosive gas emission — characteristics. Ideally suited for use with instrumentation and electronic equipment where exposure to corrosive gas generated in a cable fire may cause extensive corrosion damage to the delicate equipments installed.

FLAMUNI FS

(Fire Survival Cables)
Specially designed fire resistant cables for use in situations where it is essential to maintain emergency power during and after a fire to enable a controlled shutdown of process equipment and orderly evacuation of personnel.

Other Unistar Cables are:

- PEX Power Cabes LT/HT/EHT
- PILC Cables MIND/Draining
- PVC Power and Control Cables
- Elevator Cables PVC/Rubber
- Railway Signaling and Loco Cables
- Aircraft Wiring/Airfield Lighting Cables
- Mining Cables Fixed and Trailing
- High Temp. Silicone/Fluoroplastic Cables
- Cil Exploration Cables (Rig and Data — Logging)
- Welding Cables GP & HR
- Ship Wiring Cables
- Nuclear Radiation Resistant Cables
- DC HV Precipitator/X-Ray Cables
- High Frequency Cables
- Audio/Video/RF, TV, Microwave Cables
- Multi Pair Screened Instrumentation/Data Cables.

clude the likes of Atma Steels, Kamani teels and Southern Steel. NSL commands 35 per cent market share, with a 15 to 20 er cent premium in price. Says a senior fficial of the Hyderabad-based South-rn Steel, "Because of its consistency and s quality supplies, Signode has carved ut a niche in this market." Other prod-cts being added in packaging systems in-lude angleboards and galvanised straps. ngle boards provide corner protection, reater stacking strength and reduce ackaging cost when used with stretch lm. Galvanised straps are used for pro-ction against salt water erosion. The ompany has also moved into stretch rapping systems, so called because as ae film is being applied, it is uniformly retched, preventing abrasions and obvi-ing the need for buffer material. As the mi-automatic stretch wrapping system very simple to operate, it is cost effec-ve and also reduces labour.

n the field of quality assurance, NSL has installed systems ranging from small por-ble units to complete tailor made units to etect flaws and metal fatigue in forgings nd castings. Customers for this facility in-lude the likes of Indian Airlines, Bharat orge, HAL, etc. ITW Magnaflux, in fact, has een a pioneer in the field of non-estructive metal testing.

. A year and half ago, Nagarjuna Signode ntered the field of high performance ad-esives and sealants for household as well major industrial use. Another area the ompany is looking at is electronics. Last onth ITW's president of the switches divi-on, C.B. Waud and controller, Richard Magnuson, were in India exploring the ossibility of commencing production of pecialised electronic switches which are rrently imported by NSL. "The labour st in the manufacture of these switches is gh and it makes sense for us to produce it India to meet our demand in Asia," ex-ains Waud. ITW's switches find applica-on in telecommunications, defence and edical equipments.

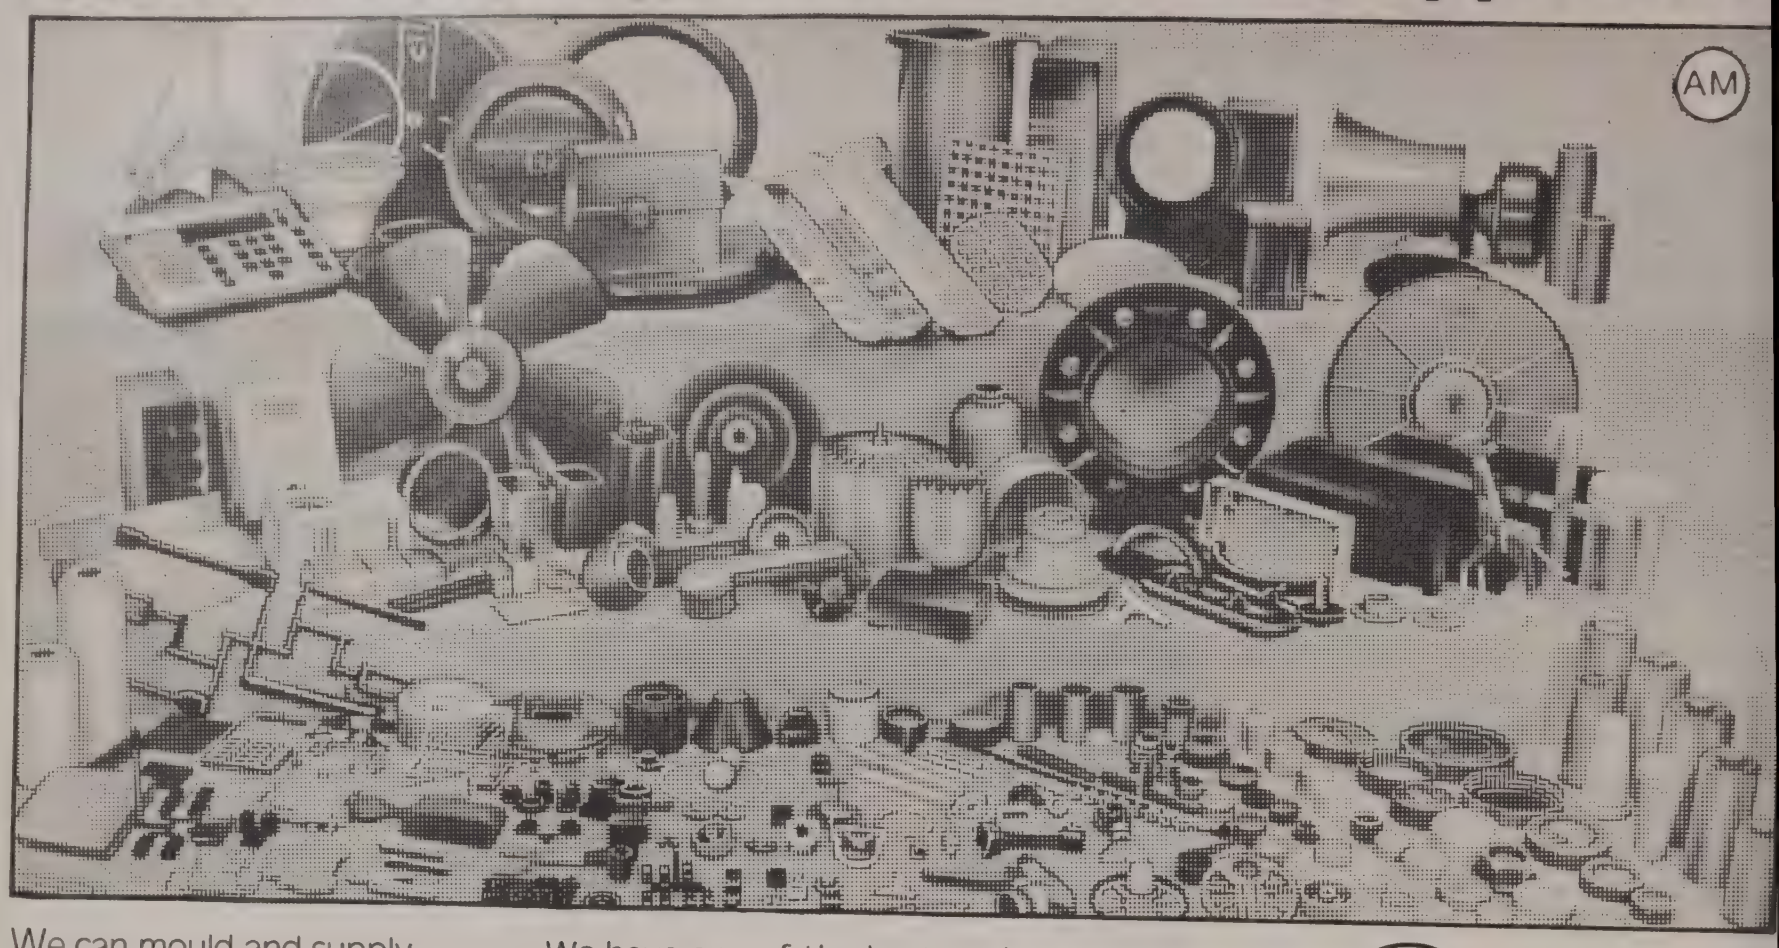
In a vertical integration move, NSL has cently put up a cold-rolled steel plant at udra, near Hyderabad. The crucial raw aterial for this, hot rolled coils, has been pecially developed at SAIL, unlike other eel plants who import this raw material. This vertical integration will help us keep xible production schedules to meet the ternational demand for steel strap-ngs," says Bhattacharya.

To partly finance the vertical integra-on and diversification, NSL made a Rs.11 crore rights issue recently; this was over-subscribed several times. This is not sur-prising as the Rs.10 share, quoted at Rs.8 four years ago, is presently being quoted at around Rs.140. Nagarjuna Steels, with a 30 per cent shareholding, have picked up the rights but are in the process of disinvesting.

The market is rife with speculation as to why the Nagarjuna group is disinvesting from a blue chip company. A member of a financial institution involved in the entire deal explains that at this critical moment this is an appropriate decision for the Nagarjuna group to take. The group is set-ting up a Rs.785 crore fertiliser project and has modernisation plans for Nagarjuna Steels, while another company, Nagarjuna Coated Tubes, is before the BIFR with accu-mulated losses of over Rs.12 crore. In fact, the financial institutions have laid a pre-condition that institutional loans due from Nagarjuna Coated Tubes must first be paid off by Nagarjuna Steels (being one of the promoters of NCT) before any loans for its modernisation can be sanctioned. "Taking the rights and then disinvesting from NSL seems a sensible thing to do for Nagarjuna Steel," says a Hyderabad banker.

ITW, USA, is, on the other hand, keen to increase its shareholding to the permissible 51 per cent as it rates NSL as a stellar per-former among its world wide associates. ITW is keen to transfer technology and add more products to NSL. And there is no doubt that in the coming years ITW will play an increasing role in the operation of NSL. In fact, Bhattacharya, over the years, has looked upon ITW and its chairman John Nichols as role models for his company.

Nichols took over the 78-year old Sig-node Corporation in 1986 at a time when its growth curve was depressingly flat, with early patents expiring and Asian competi-tors taking over its traditional markets. He employed the same technique to make a success of Signode as he had done at ITW itself — emphasising independence among managers expecting them to come up with new ideas and implement them without any interference. Basically, he was turning them into independent entrepreneurs within the company. ITW's engineers in each division talk to customers rather than leave anything to head office marketing men.



Magnuson, Waud and Bhattacharya: interdependence through independence

Bhattacharya echoes the same senti-ments when he says, "We want to stay close to the customer. We want our man-agers to develop as entrepreneurs and take risks." Organisationally, NSL consists of 22 decentralised divisions. Says N. Vi-jayraghavan, vice-president, corporate de-velopment, "We are a conglomerate of strategic business divisions with small op-erating units." Bhattacharya's alliterative philosophy of competence, consistency, communication and commitment forms the corporate glue.

Bhattacharya is full of plans for NSL and is a frequent visitor to ITW's plant in Illinois. "We hope for a 50-per-cent growth rate in the next three or five years, with a focus on existing products." In other words, stick to what you know, and grow.

POST GRADUATE DIPLOMA IN MANAGEMENT

(A Distance Learning Programme)

Incorporating DIPLOMA IN MANAGEMENT,
Recognised by Govt. of India

AIMA's Post Graduate Diploma in Management is aimed at people who are in growing in their jobs but are constrained by various reasons to join a full time programme. Such people can now look forward to the additional advantage they would have received at a management school. Today there are more than 2,000 Graduates and 10,000 enrolled in the AIMA Programme.

The 3 Part Post-Graduate Programme, may be completed in 3-7 years. A student may opt to complete two parts and receive Graduate Diploma in Management.

Eligibility

Graduates with minimum three years of Supervisory/Executive work experience and at least 25 years of age as on April 1, 1992.

PROSPECTUS

For April 1992 Session available for Rs.30/- (crossed IPO/DD) in favour of "AIMA, New Delhi".

Also available on cash payment at AIMA and Local Management Associations.

ADMISSION TEST

On Sunday, November 24, 1991 at 1430 Hrs. (2.30 hrs. duration).

OVERNMENT SECURITIES

Ending speculation

he RBI moves to curb the unusually high volatility in the market by ining in brokers and banks

A circular issued to banks recently by the Reserve Bank of India could spell virtual ban on trading by securities bro-ers. The RBI order also seeks, among ther things, to prevent banks from in-ulging in any speculative activity while ealing in government paper. It has ob-cted to four types of transactions that ne banks currently engage in. These eals include:

Ready forward deals at rates which ave no relevance to market rates (that is, ll today with an understanding to buy ack at a future date at a price deter-ined today).

Double ready forward deals (two ready rward deals involving the same securi-es but two different banks).

Sale transactions by issue of bank re-ipts (BRs) (a token issued by banks to void physical transfer of securities) with-ut actually holding the securities; and le transactions by issue of securities eneral ledger (SGL) forms (an account aintained by the RBI for each bank for ansactions in securities) without having fficient balance in their SGL accounts.

The new controls

- Banks should have no short positions in securities.
- Outright ready forwards or securities general ledger entries should be reflected on the same day in the investment accounts of banks.
- Transactions between two banks should not be routed through brokers.
- If transactions are through brokers, this should be clearly reflected in the bank receipts.
- No bank receipts should be issued without securities.
- Bank receipts should be issued in the format devised by the Indian Banks Association.
- No bank receipt should be issued in favour of bank constituents (clients) or bankers.
- Any bouncing of a delivery order for securities should be reported immediately to the Reserve Bank.

• Issuing BRs/SGL forms on behalf of broker clients without safeguarding the bank's interest. (Since ready forward deals are often done without insisting on physical delivery of securities involved, there are chances of deals occurring which are not backed by securities).

Trading in the securities market is not a new activity. Says Madhur Morarka, Batlivala and Karani, the oldest firm dealing in money market instruments, "Banks need securities on an on-going basis to maintain their statutory liquidity ratio with the RBI. With aggregate investments worth over Rs.80-90,000 crore in government paper bearing very low and fixed interest, it is also imperative for banks to improve yields on them through trading."

What upset the RBI was the high volatility this market witnessed in the past few months. The price of year 2010 paper of face value Rs.100 (of discounted value Rs.98.50) used to fluctuate in the 30-40 paise range till last year. This year suddenly the band has been as wide as Rs.2. The yield on securities thus jumped up to 3 per cent a fortnight or 72 per cent on an annualised basis. Says a banker, "I do not see any extraneous reason for such wide variations." A change in the coupon rate or tight money market conditions would have perhaps justified wide fluctuations. Obviously, someone who was interested, was rigging the price up. The volatility is high even by a trader's standards. The RBI's worry over this volatility thus, is naturally justified.

Bankers attribute the volatility to some brokers who have over time graduated to taking positions in this market. Harshad Mehta of Growmore, Delhi-based Naresh Agarwala, Batlivala and Karani and CIFCO are a few active names that are being mentioned. But taking positions per se is well within the rules. Even banks like Bank of America, Citibank and Grindlays or SBI take positions. But when a broker takes position, his role as a broker gets diluted. Says a senior banker, "The value addition done by a broker is in giving unbiased opinions to the banks. When the broker himself takes a position, he no longer remains unbiased."

Having been directly hit, brokers will naturally crib. But by and large, banks are mighty pleased about the RBI order — nationalised banks because they no longer need to be afraid of being exploited by brokers (though they forget that foreign banks are equally shrewd); and foreign banks because they will have a field day in the absence of any worthwhile competition (although they will have to work harder as no front will be available to them for negotiating their deals).

Nationalised banks, barring a few aggressive ones like Canara Bank or SBI, are not known to have much of the imagination required in structuring deals for trading in securities nor do they have the freedom to utilise that imagination, their managements being themselves unimaginative or bureaucratic.

Says a senior banker, "The value addition done by a broker is in giving unbiased opinions to the banks. When the broker himself takes a position, he no longer remains unbiased"

However, the method by which the RBI has sought to control the chaos has been questioned by almost everyone. Dealers brand it "a retrograde step in the era of liberalisation". Foreign bankers defiantly say that the RBI restrictions will only increase the cost of routing deals in securities rather than control them. Banks will also have to upgrade their infrastructure now that they will have to deal with other banks themselves in the absence of brokers, while brokers will try to stick to this high returns pasture by involving more banks and bankers in the deals.

A more effective way could have been to intervene through the price mechanism or by mopping up excess stock of securities. Or is it that the RBI needs a couple of centuries to get over its old, old habit of clamping controls at the first whiff of questionable behaviour?

■ ALPANA KILLAWALA

The tedious TDS

The government can propose, but depositors are bound to depose this proposed amendment, not directly, but through canny planning

A proposed amendment to the Income Tax Act, which requires banks to deduct income tax at source on interest in excess of Rs.2,500 against deposits, has created a flutter in banking circles. The government had made an announcement to this effect while presenting the budget in Parliament last month.

Since then, the Reserve Bank of India has received several long communications from banks, listing difficulties the amendment will bring with it. Based on these, the RBI is expected to make a representation to the government shortly.

The proposal seeks to amend subsection 3 of section 194A of the Income Tax Act. As per this, tax deduction at source (TDS) is 10 per cent, with a surcharge of 12 per cent. On this basis, bankers calculate an effective rate of TDS at 11.2 per cent. Therefore, TDS will apply to all deposits of Rs.19,000 and more.

Simple matter

But, people with larger deposits normally find ways and means of getting around their tax liabilities through shrewd tax planning. They will do so again. It will be a simple matter to break up large deposits into smaller components so that each does not earn interest in excess of Rs.2,500.

The more canny depositors will also spread the smaller accounts out over different branches. It will then be the responsibility of bankers to keep track of an individual's various accounts. This confusion arises because the proposed amendment does not clarify whether TDS is applicable per branch or per bank. "The Central Board for Direct Taxes will have to clarify this. It should restrict it to branches for administrative convenience," says an official of a nationalised bank. In any case, under the existing law, the branch is considered a unit for purposes of calculating TDS against salaries.

The new amendment will only mean more administrative headaches for banks; what with banking staff having to service more accounts, and calculate TDS and issue certificates for each one. As an assistant general manager in a large nationalised bank points out, given the fact that as many as 35 per cent of bank deposits are of this size, "this will be a herculean task and most of it will be unnecessary".

For the government, there will be no real gain in terms of increased tax revenues. Yes, it will bring in some short-term funds, through immediate tax receipts. But, once the assessees break up the deposits and file their tax returns, such funds will have to be refunded.

Claiming such refunds is a simple ter of furnishing a tax exemption dec tion attested by a gazetted officer. latter sign such documents, which drawn up by the depositor, in a rou manner. If the certificate then prove be false, who will be held respons wonders an official of the Punjab tional Bank.

The mere calculation of TDS will me monumental headache for bankers majority of bank deposits are either curring or reinvestment deposits and terest is credited to the account quarte half-yearly or yearly. Therefore, on w periodicity will the TDS be calculated paid to the government? Quarterly? H yearly? Yearly? Or at the time maturity?

Contractual obligations

Another problem will crop up with co tractual obligations. At the time of taki a deposit, a bank undertakes to repay certain amount. For instance, on a recu ring deposit of Rs.1 lakh for five yea the bank contracts to pay back a lit over Rs.1.89 lakh at maturity. After T the final payment would be reduced Rs.1.77 lakh. A bank official asks, "W will bear the difference?"

That is answered simply enough, a least in the case of new accounts: the d positor. But problems are bound to cro up with existing accounts where the d positor could easily take the stand th the bank is reneging on its contractu obligation to repay the agreed amount.

The matter gets further complicated i the case of joint accounts. The PNB offici asks, "Whose liability is it? The first ac count holder or one of the joint accoun holders?"

Significantly, the proposed amend ment clashes with section 80L of the In come Tax Act. This section holds tha interest of up to Rs.7,000 earned on bank deposits is tax exempt.

The difficulties seem to be endless; with time, they can all be sorted out. But, a H.M. Rama Rao, chairman of the privately-owned Karnataka Bank Ltd says, "Exemption from TDS on interest was among the very few attractions for bank deposits. Now with that too taken away, the public will be discouraged to save with banks."

■ ALPANA KILLAWALA

Times, they are a-changing

Give us an organisation of revolutionaries, and we shall overturn e whole of Russia!" wrote Lenin in his unding essay on Bolshevism in 1902. e was not offering an empty threat. Fifen years later, on 7 November 1917, nin did 'overturn the whole of Russia'. t little did he know that history would do his work within a generation.

The longest lasting modern dictatorip of the nomenklatura is now on the rge of collapse. The masterfully intercking system consisting of the governent, the party, the work-place, the litary and the secret police is about to dismantled. The economic counterrt of this political power structure — e total state ownership of the means of oduction and central planning — is stined to find a burial with Lenin's itues.

nal phase

was in June of 1988 that the final phase the inner party struggle really began. orbachev had called the All-Union nference of the Communist Party of e Soviet Union (CPSU) after a lapse of 49 ars! It is here that Boris Yeltsin, a mavck from Moscow, stood up and castited his former mentor, Mikhail rgeyevich. He called him "weak-kneed, nfused and ahistoric". Stung by eltsin's attack, Gorbachev responded in e following words in his concluding adess to the Conference.

"What I cannot accept, however, is oris Yeltsin's contention that we have unched perestroika... without an inpth analysis of our history or of the rty's failings, that our perestroika is thing but words."

History has borne out Yeltsin's conrns and suspicions. Gorbachev has resed to see that the entire communist ucture had become unviable in the prent times. He had refused to believe that ere 'restructuring' (*perestroika*) of the onomy and simple 'openness' (*Jasnost*) were just not enough. He had rgotten that the greatest tactical ength of the Leninist ideology is its dicm that 'the end justifies all means'. And th the communist party still intact and e KGB still in place, Gorbachev should ve known that a few self-righteous conrvatives could still seize the instruments power. Their ostensible reason could be to save the 'dictatorship of the proletariat'.

In fact, in December 1990, Vladmir Kryuchkov, head of the KGB, had publicly warned that his agency would not hesitate to unilaterally defend the 'foundations of the Soviet order'. Yet, Gorbachev remained blind to the realities of history. Now, one can only hope that the shock of the failed coup has severed Gorbachev from his Marxist-Leninist anchor and has given the final shot in the arm to those who cherish real democracy in Russia.

The crux of the future lies on the economic revival of the nation. However, the current situation is extremely grim. Production has slumped, inflation has increased in leaps and bounds, hard currency reserves have plummeted and there is even a threat of famine. Gorbachev's refusal to make fundamental institutional changes in favour of markets and private ownership, and his constant compromises on economic reforms with the conservatives within the Party, has led to the current impasse.

Can only hope that the shock of the failed coup has severed Gorbachev from his Marxist-Leninist anchor and has given the final shot in the arm to those who cherish real democracy in Russia

Initial enthusiasm

For example, not so long ago, Stanislav Shatalin, an economist of repute, placed before Gorbachev a 500 Day Plan for economic recovery. It contained a radical programme to marketise, privatise and globalise the Soviet economy. Yet, Gorbachev abandoned the Plan after showing initial enthusiasm. It was later known that Ryzhkov, the conservative communist ally of Gorbachev, opposed the Shatalin Plan tooth and nail and Gorbachev succumbed to Ryzhkov's threats, beating a hasty 'political retreat'.

In April of this year another effort to radically liberalise the Soviet economy was placed before the public by Grigory Yavlinsky. This programme, popularly called the Nine Plus One declaration, had an unique feature. It was developed by Yavlinsky jointly with several eminent economists from Harvard University.

Unfortunately, on 17 June, the conservative prime minister Valentin Pavlov opposed the Nine Plus One programme on the floor of the Supreme Soviet. In populist jargon he said that Harvard economists are "ignorant of the Soviet life and Soviet attitudes. They have their own criteria, values, and conceptions.... We cannot count on their ability to give us answers."

Pavlov is now under arrest while Yavlinsky has just been included in the economic committee headed by the prime minister of the Russian Republic, Ivan Silayev. There is now hope that the Nine Plus One declaration will be brought to the front burner. With the wide support it enjoys among the G7 nations of the world, this declaration (often called the "Window of Opportunity") may well become the nodal point of economic reforms in the Soviet Union.

The future of the Soviet society and its economy remains unclear. But one thing is certain. Marxian economic thinking has just been orphaned and as Leningrad changes its name back to St. Petersberg, we will all have to re-think our own perspectives on global political economy. The question that will remain, however, is: can Gorbachev and Yeltsin tap the vast physical and human resources of the Russian people through fundamental systemic changes and bring about a new economic revolution by the turn of the century?

Doomsday of an empire

The people of the USSR have reached a consensus on the centrality of democracy and the irrelevance of communism in their lives

The 60 momentous hours that shook the world ended with the indubitable triumph of democracy over dictatorship. The reactionaries who tried to turn the clock back failed pathetically, and only succeeded in consigning themselves and their miserable cause to what Trotsky graphically termed the dustbin of history. The scenes around the Russian Parliament, the Leningrad Soviet and before the dreaded Lubyanka — of people intoxicated with the spirit of democracy — will forever be engraved in the memories of those who value liberty; and will provide the Russian people with a new and striking icon minted in the furnace of repression.

The most important conclusion to be drawn from this episode is a reaffirmation of the importance liberty and freedom occupy in the human condition. It is also a resounding vindication of the merits of federalism as a system of political organisation. The chaos prevailing today owes much to the centralisation of power and the apotheosis of central planning as a means of creating a state. We, in India would do well to learn from this and adopt a more decentralised political and economic system to foreclose further regional and secessionist tendencies.

Gorbachev, having let the genie of democracy out of the bottle, made a decision which has proved irreversible. The plain fact is that a consensus has been reached by the people of the USSR on the centrality of democracy and the irrelevance of communism in their lives, this consensus being reached in the face of much pain and privation suffered in the tortuous transition from an unfree to a free society, from a centrally planned economy to, hopefully, a market economy.

It has often been suggested that historically the Russians, having missed out on the Englightenment and having not thrown up a significant middle class liberal elite, are somehow unfit for and antipathetic to democracy. It has also been argued that they have been too enamoured with their empire, originally expanded by the Tsars and further added to and consolidated by the Comrades, that they were loath to give up the patrimony of their ancestors and not prepared to witness the vivisection of Mother Russia. All these apprehensions have been demonstrably disproved in a populist uprising of soul stirring dimensions which the purblind and grey junta behind the coup never had the imagination to anticipate.

In a sense the coup was necessary. The irony that Gorbachev, a former head of the KGB and head of the Communist Party, was a moving force behind perestroika and glasnost was something not lost on the West. In fact, too much diffidence and hesitation attended decision making, there were always weasels who kep minding the reformers, "Don't go to or you'll upset the KGB, the party army." Eduard Shevardnadze, a fo foreign minister, was one who hac courage to point out the implicatio going too slowly. His ire was provoke the brutal manner in which the Tbilis rising was crushed by the Soviet mil machine and he prophesied the cor coup. In his resignation speech, he ferred to his resignation as his "contr tion, if you like my protest, against onset of dictatorship". This presentin was based on the manner in which military and the party had co-operate emasculate the institutions of perestro without understanding its ramificati and the disturbing degree to which G bachev had appropriated perestro personally, compelling his opponents

Yeltsin: providing a massive fillip to perestroika

ck perestroika when attacking him.
his power game was played against
backdrop of a rapidly deteriorating
nomy — the GNP of the Soviet Union
ining by around 20 per cent last year
nd the onset of virulent ethnic strife.
s uncertainty induced paralysis at the
rt of the government, while the palpa-
constraints imposed by the KGB and
army ruled out the possibility of the
ssive foreign aid Gorbachev was rely-
on to fuel further reform. The over-
elming victory of Boris Yeltsin over
olai Ryzkhov, the establishment's
didate, for the presidency of the Rus-
Federation should have provided a
ssive fillip to perestroika. The fact that
idn't only underscores the ambivalent
wer structure: it also reinforced the fact
t Gorbachev lacked the legitimacy of a
pular mandate. The key factor in the
wing power equation was not just
trol over the army but also popular
port. If it has been remarked that the
mpetent conduct of the coup owes
re to the Marx brothers than Marx
l Engels, it was perhaps because of dis-
eements in the junta on the coup's pur-
e and ambivalence over the methods
e employed. It was also because of the
ation of the conspirators from society
arge, that they were genuinely igno-
t as to the real sentiments of the Soviet
ple. The confrontation then was nec-
ary, if only to purge the system, to re-
ve the source of paralysis.
Now if the party is over, in both senses
he term, in the famous words of Lenin,
"hat is to be done?" If the ham-handed
p has greatly strengthened the hands
the reformers, the political and eco-
mic problems remain as implacable as
ore. And in a sense the reformers do
have the scapegoat of the communists
blame for any obstacle in pushing
ough what has to be done. Whilst the
nomy figures prominently on the
nda of reforms, the first important
p is the shedding of the last of the great
rld empires, the Russian empire.
The important union treaty which pre-
itated the coup, involving the rework-
of relations between the Kremlin and
Soviet republics requires to be signed.
is is necessary since democracy is im-
ssible as long as ethnic groups that de-
nd sovereignty are under central rule.
is not possible to have liberty in Mo-
w and repression in Riga. Aware of
s, Yeltsin is anxious to structure a rela-
nship where the Soviet Union is re-
ced to dispensing largely formal
functions, and independence is conceded to the republics that demand it. The eminent historian, Richard Pipes, remarks, "Russia offers us the unprecedented spectacle of an imperial power extricating itself from empire in order to gain democratic freedoms for itself."

However, the problems will not just end with the execution of the treaty. Russia and Kazakhstan are the only republics which are anxious to sign the treaty as is. Seven other republics including the Ukraine (the granary of the Soviet Union), Byelorussia and the five Central Asian republics have not agreed on the terms of the treaty. And six states, including the Baltic states and Moldavia, Georgia and Armenia, have openly rebelled and are not interested in remaining within the new federal structure, preferring outright independence.

Gorbachev with a team of doctors: finding the right medicine?

What lies ahead are enormously complicated negotiations. Daniel Abele, a researcher at the Woodrow Wilson Centre, suggests that this process will involve the resolutions of questions such as "Who owes what to whom", as well as a whole host of territorial claims which have been frozen for the last 50 years. For example, he continues, "The Soviets have built a lot of industry, nuclear power stations and seaports in the Baltic states. They will want to be compensated and the Baltic leaders will argue that these were built with the blood and sweat of Latvians, Estonians and Lithuanians."

All this will make the inflow of much needed foreign investment difficult. For example, Chevron set out three years earlier to develop oil resources in Kazakhstan and negotiated concession rights with the Soviet Union. Now the Kazakhs say, "No, this is our oil, not the Union's. Some new arrangements will have to be made."

The point is that it is not very sensible discussing reform of the Soviet economy if the Soviet Union is likely to fragment in the coming months. The economic dislocation liable to result from the political fragmentation will be horrendous in the short term. In any case the Soviet harvest is likely to be less than last year's, and grain stocks are down to 20 million tonnes in contrast to the 70 million tonnes necessary. The price of grain is due to rocket over fourfold in the course of the year. There are also likely to be massive shortages on account of the fact that the communists used to force students and soldiers to harvest crops. Without this compulsion the harvest may not come in. To cap it all, the oil industry, one of the Soviet Union's great foreign exchange earners, is in such poor shape that the Soviets may be required to import oil this year.

The chairman of the State Bank, Victor Gerashchenko, announced that over 80 billion roubles' worth of notes were required to be printed to cover the budgetary defecit. This arose because of the "War of the Budgets", the refusal of

republican governments to hand over tax revenues to the federal government. Industrial production is still in decline, up to 6 per cent until July.

These apparently insurmountable problems will be exacerbated by the break-up of the union. The self-sufficiency of the state will end, well endowed republics will seek to make their own arrangements with the outside world, and the poorer ones will be mired deeper in poverty. The entire system is unravelling, the inefficiencies, the lies and falsehoods being mercilessly exposed.

Two questions arise. Is it sensible to support Yeltsin in his reforms with something more than lip service? The second question is: if so, how? And what can India do? What is being witnessed has the makings of a major calamity on a scale unprecedented. Clearly massive aid may need to be given to avoid famine and starvation resulting from the dislocation of the economy. In this light, the promise of nearly US $25 billion in aid by the Group of 7 will be welcome.

In any case, the coup has demonstrated the fragility of perestroika and the need to cushion the transition process. This factor may explain why Gorbachev could not move ahead with reforms like the economic agenda recommended by economists such as Shatalin, since these reforms would involve further price rises and massive unemployment in the short term.

It is debatable whether the West should have agreed to finance Gorbachev on the basis of his adopting the Shatalin plan. Perhaps the West has an interest in seeing the fragmentation of the Soviet Union. But the Soviet leaders must acknowledge their deficiencies, eg, the lack of technical know-how, and information about the economy.

Neither Yeltsin nor Gorbachev has any real understanding of how a modern economy functions. The proposed treaty with the Republics illustrates this poignantly, there being no provision for centralised monetary control, nor a satisfactory formula for revenue sharing powers, nor expenditure responsibilities as in the Indian Constitution. There is no wholesale private trading structure in the USSR, making the development of private agriculture and industrial production impossible. Neither is there a proper conception of private property rights, let alone company legislation. In the absence of these lacunae how can the Soviet Union develop into a market economy?

The other deficiency is the absence of any work culture or entrepreneurial spirit. As the joke goes, "We pretended to work and the government pretended to pay us." The only entrepreneurship that exists on any scale in the Soviet Union is in the black market. There is woeful lack of a foreign trained expatriate elite such as China and, to some extent, India has. Information systems require to be set up, technology requires upgrading, small businesses need to be encouraged to promote economic decentralisation and nurture a risk taking spirit, starting with agriculture. It is surely a disgrace that an economy with the resources of the Soviet Union is unable to feed itself. There suggestion that in certain areas such railways, for example, India can prov valuable technical and administrat experience.

Gorbachev and his people: no expat elite

In fact, for India, the collapse of centralised Soviet state may represent enormous opportunity in terms of exp of trained manpower and business ski Indians, particularly those in the Sov Central Asian republics, are very popu because of the cultural influence of Hir movies, and Indian business should ca italise on this goodwill. Ultimately, t turmoil in the USSR may put paid to o existing treaty arrangements in so far the Soviets may not be in a position to d liver some of the goods presently e ported. But this should not blind us to t fact that many of the republics will soo be open for business and on terms whic may prove more attractive than those th Kremlin ever offered.

It is tempting to draw conclusions fro the Soviet experience and apply them t India's. However, in economic terms n Indian government ever sought to exte minate the entire capitalist class as oc curred in Russia and that too laterally The Indian economy has been rightl likened by *The Economist* to a caged ti ger, but at least there is a tiger. This is no the case with the USSR. Furthermore India is a democracy and our govern ments have the legitimacy to pass legisla tion appropriate to our circumstances. As the Soviet Union is a totalitarian empire its transition pangs will be so much the greater.

■ JAVED GAYA

Whose interests does the CPSU express?

Perhaps the junta did not act without some basis, as a survey conducted last month shows. It suggests that the CPSU may be down, but it is certainly not out. However we cannot vouch for the accuracy of this survey in the methodology it employs.

On 7 to 17 July 1991, the Soviet Centre for Public Opinion and Market Research randomly polled more than 2,000 people in 33 cities and 17 rural districts of the country. This was published in the 28 July issue of *Moscow News*, an important paper of the liberals. When asked whether the CPSU enjoyed a great influence in their district or city, a majority of the respondents — 52 per cent — replied in the negative. Sixty seven per cent perceived the CPSU as working in the interests of the state and party apparatus; barely 12 per cent thought it was concerned for workers. Almost half the sample viewed the CPSU, as representing conservative forces. As for the future of the CPSU, 36 per cent felt that it should be disbanded. A third said it should be turned into one of the parliament parties. About 11 per cent felt that it should reassume its guiding and leading role in society.

Source: Moscow News, *28 July 1991*

Produce first, exit later

Great changes have been set afoot in recent weeks in the spheres of economic, trade and industrial policies. Implementation of these changes in their true spirit will call for dedication, cohesion and steadfastness in all segments of society. The people at large, and particularly in industry, must be infused with, to quote the finance minister an "animal spirit" — if these reforms are to work. Fundamentally, the human resource would make the difference between success and failure. It is therefore vital that the fourth leg of reform — namely of industrial relations and labour legislation — is carried out as a matter of urgency.

Unfortunately, debate in this area is now focused almost exclusively on the issue of "exit policy". The air is rife with contention, with businessmen dreaming of an Indian industry unfettered and unbound, while labour leaders dread an era of closures and increasing unemployment. There are elements of truth in both scenarios. Still, the danger is that the emotions unleashed over the exit policy issue will block rational discussion of any other equally important measures which are urgently required to unravel our complex labour legislation. That would be an opportunity lost. It is not popular to quote Lenin these days, but his famous question is apposite: "What is to be done?"

Overcoming hurdles

Perhaps a way out is to adopt what may be termed "the examination strategy". Every student knows that a successful approach in an examination is to tackle first the least difficult questions. This leaves him the time, concentration and above all the confidence, to grapple with the remaining and most difficult part. To break this impasse, let us postpone the exit policy for a few months and look at some fairly simple reforms in labour legislation that are more feasible and which can immediately increase output and productivity.

The Indian Factories Act, written in 1948, contains outdated clauses on prior permission for changes in working hours and for overtime work. These seriously restrict the flexibility of units to enhance production in response to demand, domestic or export. While the provisions in this Act concerning the aspects of safety, health and working environment should be retained, indeed strengthened, there is no reason why a state body should decide on who should work how many hours and what they should be paid for it. Surely, these are best left to each unit to decide through employer-employee agreement.

Consider holidays. We already have the world's largest number of paid holidays not counting the partial and sectional holidays and the generous leave provisions. In our country, where the maximum utilisation of installed capacity should be a fiat, the increasing resort to declaration of holidays under various enactments by the government is totally counter-productive. There have been recent examples of *bandhs*, *hartals* and large-scale work stoppages, directly or indirectly supported by state governments. Paid holidays have been declared when no work was done due to curfew restrictions. Such actions dilute the principle of 'no work, no pay' and send a signal that work and production are not only secondary, but the sole responsibility of one section of society. Why can we not limit national holidays to two or three per year and let each unit decide for itself, without a government diktat, the number of religious and other holidays it will observe? This will be at least a first step towards creating an improved work ethic in the country.

We already have the world's largest number of paid holidays... In our country, where the maximum utilisation of installed capacity should be a fiat, the increasing resort to declaration of holidays under various enactments by the government is totally counter-productive

Flexing rigidities

Similarly, our labour legislation reflects an obsession with permanent full time jobs as the only conceivable mode of industrial employment. Other forms of work such as part-time, seasonal, fixed-duration contracts, retainerships, apprenticeships and training assignments are viewed as thinly disguised and exploitative substitutes for full-time permanent employment. Enactments such as the Contract Labour Act in particular, have blocked true employment creation by ignoring the reality that modern manufacturing technology requires, increasingly, specialised services best provided by qualified agencies competent in those areas. All the skills necessary cannot possibly be engaged wholetime by a single unit. Such inflexibilities in our laws, have driven the large industrial sector to substitute capital for labour wherever possible, and shy away from further employment. This is a tragic irony. These rigidities must go, so that future employment at least is responsive to economic needs.

There is need for much more deregulation, but even a dent in these three areas (where there is hope for consensus) in the next few months can produce an immediate and significant surge in productivity, without traumatic dislocations. Further, an important message will be flashed: that there is no easy way out, a soft state cannot produce hard results. But, also that reforms are possible; that they can work and reasonably soon; that there is life after liberalisation. The time will then be ripe to tackle the exit policy, for this issue cannot be ducked for all time. Hopefully, with some successes behind us, we shall be able to address the last question in the examination paper with confidence.

Rational use of the public airwaves

Most of the nation's metros have three to four broadcasting stations for dio and two for television. Yet, there is clear purpose set for each channel, ere is duplication of programming and e basic needs of the populace are not et from these abundant resources.

For instance, take traffic congestion formation. None of the radio stations day tell the motorist that there is traffic ngestion at a certain point ahead be- use of an accident or that the impend- g visit of some public official is holding traffic on a certain long section of the ad, but that a certain alternative route relatively free and is recommended for e. Similarly, none of these channels will ll that same motorist that there is mon- on flooding ahead at a certain point d that he may as well head home in- ead of making a valiant effort to get to ork only to reach at closing time.

eplorable service

nis is not some elitist requirement. The me holds even more strongly for the randed rail commuter who is forever in e dark about what is happening ahead, d the housewife who does not know in lvance that milk deliveries or water sup- y are likely to be curtailed the next orning because of some flash strike or ater mains burst. Equally, for the night ift worker striving to stay alert after the dio service has shut down at midnight earlier, and the music lover looking for me uninterrupted concert music, the rrent less than 24 hours' programming, hich is moreover patchy and inter- pted at short intervals by endless talk out drab subjects, leaves much to be sired. The problem is not confined to dio; unresponsive and inadequate tele- sion programming is an important fac- r behind the rapid growth of closed rcuit and satellite-based programming the larger cities.

The basic need is for radio and televi- on channels to be viewed as public in- rmation resources and not purely dvertising or propaganda media. A ra- onal approach to the use of these re- ources can be illustrated by a proposed attern of usage for the four radio chan- els in the metros; similar usage for the levision channels can be devised.

adio channel one. This can be used primarily as a broad-based public information channel. Normal programming could be regional popular music (eg, today's *Vividh bharati*) which is easily interruptible for important announcements as it tends to be short pieces of three to four minutes duration. This is the channel to which all control rooms such as the traffic police control room, the fire-brigade control room, the railways control rooms, etc should be linked up by hot lines for regular and timely announcements as a matter of routine. An hourly news bulletin of national news can also be broadcast here, given the interruptible nature of the programming. This channel would address the needs of the stranded car commuter and the stranded rail commuter and all those persons that were referred to above who are desperate for a clue that explains their unpleasant predicament and suggests ways around it.

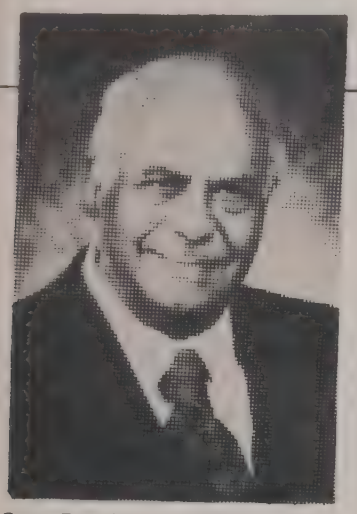
> For the night shift worker striving to stay alert after the radio service has shut down and the music lover looking for some uninterrupted concert music, the current less than 24 hours' programming... leaves much to be desired

Radio channel two. (eg FM channel in Hindustani classical areas). This would be primarily meant for Hindustani classical music. A stress on concert recordings with uninterrupted play of an hour or more will allow the full splendour of this music to be appreciated, without abrupt termination for reasons of time or for news broadcasts or talk shows and documentaries. Nothing is more annoying than to hear one's favourite singer have his exposition of a raga terminated abruptly just as the mood has been created. This could even be a national channel as this music is appreciated by over two thirds of the country.

Radio channel three. (eg, FM channel in Carnatic classical areas). This can be used primarily for Carnatic classical music. Similar reasoning as for channel two applies. This too could be a national channel given that a third of the country appreciates it.

Radio channel four. Where this exists, this could be used to provide more exposure to the population on world happenings and international music. Use of international programming (with voice overs in each regional language if necessary) would permit contemporaneous information to be broadcast. Depending on time of day, programming could be aimed at children, housewives, rural folk and so on, but probably limited to a few categories of persons to avoid a meaningless melange of programming.

At least one of these channels must be run round the clock. The number of professions and situations where persons have to be awake and alert at night is large and growing daily; a seven to eleven approach which may have been relevant in more leisurely times is not so now. Examples are airline pilots, railway drivers, guards, bus drivers and conductors, policemen, fire brigade personnel, air-traffic monitors, sea traffic monitors, customs officials, and so on. Moreover, insomniacs and the sick would find these channels a good source of support at odd hours of the night or early morning.



The above is just an example of rational planning in the use of the national airwaves, and not a magical formula. The word 'rational' is the key: various needs are addressed sympathetically and appropriately (eg, long uninterrupted play for classical music, short lively programming for the popular channel, etc). Duplication is to be avoided in such a rational approach as well as information gaps.

CHAIRMAN'S SPEECH

Cav. Dr. G. K. DEVARAJULU

Speech delivered by
Cav Dr G K DEVARAJULU,
Chairman,
at the 28th
Annual General Meeting
of the Company
held on
22nd August, 1991.

LMW

Ladies and Gentlemen,

I have great pleasure in welcoming you all to the 28th Annual General Meeting of your Company.

ECONOMIC SCENE

Textile industry in India is well-known for its cyclical ups and downs. After the longest crippling recession of 7 years, past 3 years marked an upswing registering a new high in production, domestic sales and exports. Textile machinery industry also reflected this buoyancy. The turnover for the industry rose from Rs. 531.80 Crores in 1989-90 to Rs. 998.37 Crores in 1990-91 - a phenomenal rise of over 90%.

The production of spinning machinery has gone up by 119% over the last two years, both in terms of value and quantity : from 0.9 Million Spindles in 1989-90 to 1.8 Million spindles in 1990-91 with corresponding increase in back process machines.

But this buoyancy is no more. Due to the acute shortage of cotton, contributed by a poor crop and an untimely export, the prices have climbed up to uneconomical levels thus rendering the exports of yarn unprofitable. In the face of an anticipated famine for cotton during the end of this year, mills may prefer to convert the available funds for their working capital requirements, rather than for lifting of new machinery.

Another disturbing factor that continues is the spiralling increase in the cost of raw materials and components. The very high level statutory levies like Central Excise and Sales Tax, the devaluation of the Rupee by 20%, regulatory measures like cash deposit for opening a Letter of Credit, increase in the interest rate of import credit are all bound to hike the cost of production which will render any investment in capital equipments beyond the reach of average mills. The impact of abolition of the Cash Compensatory Support and the insistence of imports through REP Licences will affect the profitability of exports and also increase the cost of imported inputs.

Government of India's liberalised Industrial Policy contains many bold initiatives like scrapping of industrial licensing, removal of mandatory convertible clause of term loans from financial institutions into equity, liberal approach to foreign investments etc. This is a welcome package. There is a greater reliance on the market, a bold attempt at deregulation and a desire for modernisation and globalisation.

On the other hand, the Budget served a few punches. The increase in Corporate taxation and the reduction in depreciation rates would result in increased tax liability.

However, I note with satisfaction that the Tamilnadu Government has taken initiative to give the much needed boost to the industries in Tamilnadu and I am sure the increased subsidy, tax holiday, deferment of Sales Tax will go a long way in this regard.

PERFORMANCE & PROSPECTS

Profits and Dividends

During the year under review, the Company has achieved a turnover of Rs. 269.53 Crores and a net profit of Rs. 15.91 Crores. These results were achieved mainly due to the flexibility in the product line, effective cost control measures at all levels in spite of an upward spiral in the cost of inputs.

Your Directors have recommended a Dividend of 30%.

Textile Machinery Division

Technology Upgradation : In line with its established policy of upgradation of technology, during the year under review, your Company has introduced new Mixing Bale Opener, Unimix and Bale Press and manufacture of advanced version of Open End Rotor Spinning Machine in collaboration with M/s Schubert & Salzer is on.

Customer Service : The Customer Service Cell is continuing its good work in spare parts sales, service and training of mill personnel.

Exports : During the year under review, your Company again set a new record with a turnover of Rs. 40.57 Crores.

We have bagged top level National Awards from the Textile Machinery Manufacturers' Association and Engineering Export Promotion Council.

Joint Venture

Government of India has approved your Company's investment in M/s Pugoda Textiles Lanka Ltd., Sri Lanka. The performance of the Mill is satisfactory.

Machine Tool Division

During the year under review, the Machine Tool Division has marketed 24 nos of CNC Lathes and Machining Centres. The products are well received.

Industrial Relations

Industrial relations throughout the year was cordial and the excellent results were achieved with the whole-hearted co-operation of employees at all levels.

ACKNOWLEDGEMENTS

The unstinted help and support we have received from the Central and State Governments, Financial Institutions and our bankers have contributed significantly to our operations. I gratefully acknowledge their assistance.

To my colleagues on the Board, I am grateful for their valuable advice and support.

I wish to record our regard to the memory of Padma Bhushan K. Sreenivasan, Director, who passed away on 5-7-1991. His advice and service to your Company will always be cherished.

Our Collaborators, M/s Rieter Machine Works Limited of Switzerland, M/s Mori Seiki Co Ltd of Japan and M/s Schubert & Salzer of Germany and our Selling Agents, M/s Voltas Limited, M/s Super Sales Agencies Limited and M/s Alfred Herbert (India) Limited have played their role admirably in achieving these results. To them I extend my heartfelt thanks.

In the final analysis, the vital resource in any organisation is its people. I thank the employees for their commitment for the Company's growth.

May Goddess Lakshmi continue to bless and guide us in all our endeavours.

Thank you all for gracing this occasion.

Note : This does not purport to be the proceedings of the Annual General Meeting

he final inspector

hn Naisbitt and Patricia Aburdene, n *Megatrends 2000*, sum up what they nd in seven years of research with this tement: "Recognition of the indi-ual is the thread connecting every nd described in the book." They talk of e age of the individual" and tell us that nen the focus was on the institution, ividuals got what suited the institu-ns; everone got the same thing. No re. With the rise of the individual has ne the primacy of the consumer."

here is an urgency to graduate from ss marketing to database marketing ... ting close to the customer. After all, basic quality mission of a company is make products (goods and services) ch meet the needs of the users. Such ducts can create sales while avoiding nage to society. This mission of satis-ng the needs of the users provides the iic definition of quality: quality means ess for use.

sponse-driven

ss marketing is synonymous with ativity-driven products, passive con-ners, advertising monologue and con-rmance to specifications. On the other d, database marketing is response-wen, involves active participation of consumers, requires contunuous con-ner dialogue and is based on "fitness use" quality.

SO 9000, while excellent for conformance to standards, does not address the subjects of customer-driven quality and continuous quality improvement

ndian companies wishing to export d to build their strategies around fit-s for use and capable processes, as op-ed to the restricted strategy of quality ndards such as the ISO 9000. ISO 0, while excellent for conformance to ndards, does not address the subjects customer-driven quality and contin-us quality improvement. In the final lysis, the latter achieves sales.

he ISO 9001, 9002 and 9003 stan-ds are applicable for external quality urance purposes for contractual situa-ns. ISO 9001 is to be used to ensure conformance to specified requirements during design and development, production, installation and servicing. ISO 9002 is used when only production and installation conformance are to be ensured. ISO 9003 is the least detailed standard and only requires that conformance in final test and inspection be ensured.

ISO 9004 contains guidance on the technical, administrative and human factors affecting the quality of products and services. This standard is for internal use only and is not to be used in contractual situations.

Essentially, the objective of ISO 9000 is to provide a customer an assurance that an appropriate management system is in place. However, the adoption of a standard does not change the contractual requirements, to produce a product or provide a service of the required quality. It only assures the customer that the supplier is following certain guidelines supported by documentary evidence that the quality requirements are being met, provided that all the rules are well implemented.

Also, the standards are common to all suppliers regardless of their industry base, their company size and what portion of the company is being registered. They are essentially generic in nature and represent the minimum requirements for an effective quality system to assure that the product will meet customer requirements. Therefore, are the standards a remedy for poor quality? Do they ensure that customer needs are being satisfied?

Unfortunately, the answer to both questions is no. This is because, as mentioned earlier, the standards are only guidelines to industry to follow a certain documentation methodology. They also do not specify how to document a quality system. In effect, the system does not ensure that its adherence will lead to quality leadership.

Trendy thing to do

In fact, many Indian companies would very easily qualify for the ISO 9000 accreditation as they already conform to nearly 75 per cent of the requirements. The only difficult part is getting the documentation right. It seems many companies are going in for the ISO 9000 accreditation because it is the trendy thing to do. In reality, there is no evidence to show that any company has achieved world-class quality simply through the application of these concepts. The accent is on ISO 9002 in India. Globally it is ISO 9001 and 9003.

Unfortunately, there is a widely-held belief amongst engineering industries, in particular, that all that is necessary to boost exports is to achieve ISO 9000 accreditation. Actually, the achievement of these standards should be seen as the minimum requirement to be successful globally. If a company is not capable of getting an accreditation relatively easily, then it is in serious trouble with regard to exports.

Are the standards a remedy for poor quality? Do they ensure that customer needs are being satisfied? Unfortunately, the answer to both questions is no

In sum, all the rhetoric of the ISO 9000 has to be seen in the right perspective. Quality standards can never be static if they are to be effective. Customer preferences and quality goals are constantly changing. Therefore, a company hoping to be best-in-class with regard to exports cannot pin its hopes only on the ISO 9000. It will have to address issues that pertain to continuous quality improvement and customer-driven quality planning in order to be really successful in a competitive changing world. Companies must realise that the final inspector is the customer.

GUJARAT STEEL TUBES

Jammed tight between unions

On the morning of 15 July, the workers and staff of Gujarat Steel Tubes found the gates of the company's factory in Ahmedabad closed. A lockout had been declared by the management, allegedly triggered off by an illegal strike on the previous day by the new and as yet unrecognised union, the Gujarat Mazdoor Sabha. The lockout continues with neither the management nor GMS leaders willing to relent on their positions.

At the heart of the controversy are the six-month-old demands of the GMS, seeking recognition and implementation of a fresh charter of demands for the workers of GST. This, according to chairman and managing director Apoorav Shah, "is impossible" to accept. In effect, the new union was challenging the supremacy of the recognised GST Mazdoor Sabha, and the validity of an agreement relating to wages and other demands the latter signed with the management on 24 September last year. GSTMS president Ajit Khanderia, says, "The benefits under the settlement, valid for three years from 1 January 1990, are already being availed of by all the workers of the factory."

The current union trouble at GST has a spot of history behind it. In May 1990, after several failed attempts, white collar workers at GST were organised into the Gujarat Steel Tubes Employees Union by Mukul Sinha, a well-known union leader of the region. Sinha, a die-hard leftist and a practising advocate, strengthened his position in GST by negotiating a five-year wage settlement for the 405-member GSTEU in November 1990.

Seeds of discontents

"The terms of this agreement sowed the seeds of discontent among the shop-floor workers," says Sinha. The new remuneration package provided more perks to the employees owing allegiance to the GSTEU — including peons, drivers, watchmen and gardners. This was something the rest of the labour had failed to get through Khanderia's union. To get the workers, "who are certainly more deserving", similar salary terms, Sinha formed the GMS in January 1991. He says the union today enjoys the support of 900 of the 1,200-odd workers of the factory. Khanderia, of course, refutes that strenuously.

For the management, a deal with GMS would have meant further financial commitment to the tune of approximately Rs.65 lakh, over and above the additional burden of Rs.1.5 crore taken on i earlier settlement with GSTEU. For a pany already saddled with loss Rs.3.45 crore in fiscal 1991, this was order. "Add to this," says Apoorav S "is a recurring loss of turnover of n Rs.2.5 crore per month since Febr this year due to the labour u mounted by GMS."

On 31 January, say office beare GMS, the management made about workers owing allegiance to GSTMS natories to a new settlement of additi benefits. Sinha reacted with new co tions: either the management sits ac the negotiating table and agrees to election to ascertain the majority clai GMS, or it lifts the lockout uncondition and gives full back wages since closu

Uncompromising stands

Apoorav Shah's stand is just as unco promising. He says that, in Guja under the Industrial Dispute Act, it is mandatory for any management to r ognise a union. "We have been deal with the GSTMS in good faith and therefo the issue of recognition (for GMS) is valid," he claims.

Meanwhile, at the time of going press, the Ahmedabad High Court h admitted two writ petitions filed by on 23 August. The union had pleaded tion against the company, the state go ernment and the state labour minist Ram Singh Parmar. Says Sinha, "Our i formation is that the labour commi sioner has recommended a lifting of t lockout, which the minister is reluctant implement." An interim order passed a division bench of the High Court on th same day has directed the state gover ment to take a view on the matter befo 29 August, when the court will meet aga to give a final order on the matter.

For all practical purposes, this appea to be a fight to the finish. But the questio is: has GST's restive labour, caught be ween a conventional and not-so-generou management, as widely described by in dustry circles in Ahmedabad, and an ol static leadership in Khanderia, made th right choice in Mukul Sinha as the ne champion of their cause? Sinha, after all is considered a hardliner who "bargains in the spirit of I and we rather than us".

EFENCE EXPORTS

Loading up, aiming high

harad Pawar hopes to make India a major player in the global arms azaar but a number of constraints could constrain him

ast fortnight, defence minister Sharad Pawar virtually sprung a surprise hen he announced at a press conference Bombay, the decision of his ministry to ter the global arms bazaar in a big way. efence exports last year were Rs.78 ore and is expected to reach Rs.120 ore in this financial year. Our target is reach Rs.500 crore in a few years, said e minister.

Though Pawar's statements raised any eyebrows, this is not the first time at the government is making its inten- on of entering the area of defence ex- orts in a big way. In late 1988, the then fence secretary, T.N. Seshan, had first nounced that such a move was being nsidered. Then defence minister K.C. nt had also let it be known that an au- nomous defence export corporation as being set up. When the Rajiv Gandhi vernment fell in 1989, the cabinet had fact cleared the proposal for produc- on and even had a name for it: Indian efence Exports Agency (IDEA). But un- able governments thereafter for a year d a half meant IDEA remained just that. ccording to official sources, the pro- sal, slightly modified, is once again be- re the cabinet and, given Pawar's new und interest, is expected to be cleared ry soon.

Interestingly, this is not the first time e government was showing interest in porting defence wares. In 1976, at the ight of the emergency, an export cell was created in the ministry of defence under a major general. He was given a free hand and within two years exports rose to Rs.25 crore. (The items sold and the countries to which they were sent are still classified secrets). But thereafter, some of the 'expenses' incurred by the general came under scrutiny and he was removed. His successors were too cautious in their ways and could not keep up the pace and the exports fell once again.

Pawar: enthusiasm and initiative

Even if the long-pending proposal is cleared shortly, India's forays into the global arms bazaar is not likely to be easy. The words 'defence exports' conjures up an image of combat weaponry. But of the so-called 'defence exports' of Rs.79 crore from the country in 1989-90, Rs.56.11 crore came from Bharat Earth Movers Ltd which makes mainly earth-moving equipment.

India's ordnance factories which are the mainstay of the country's arms production exported virtually nothing, although the latest annual report (1990-91) of the defence ministry says that a number of enquiries are flowing in from foreign buyers. "An export order of Rs.14 crore has been secured which will be executed in the next two years," says the report.

Additional secretary in the department of defence production, M.K. Abdul Hameed (Pawar was not available and defence production secretary N. Raghunathan was abroad) explains that there is no attempt by his department to hoodwink anyone. "The country is in the midst of a foreign exchange crunch and like other sectors the defence would also like to make its contribution towards augmenting the forex kitty. Therefore, an attempt is being made to export whatever is feasible from the defence sector. Moreover, with a resources crunch, it will be difficult to pay for the modernisation of ordnance factories without exporting part of their wares," he says.

The defence ministry has already made

Ordnance factories: wrapped in mystery

Last week a delegation from the CEI met Sharad Pawar suggesting part privatisation of the country's ordnance factories or, at least, that the private sector be permitted to use part of the spare capacity of the ordnance factories. Pawar seems to have been quite enthused by the proposal and ordered the setting up of a committee to examine it. Interestingly, two years ago there was a move to privatise some of the ordnance factories. But nothing came of it. This time also nothing may ultimately emerge as defence ministry officials are not too keen on it.

Nothing much is known about the ordnance factories, which form the backbone of India's arms production set-up. This is because, quoting the Official Secrets Act, the government declines to reveal anything substantial about them. There are 39 ordnance factories located in different parts of the country. The first one was started in 1801 at Cossipore in Calcutta, and at the time of Independence there were 17 of them. The value of production of these factories, which are managed by an ordnance board located in Calcutta, totalled Rs.2,570 crore in the financial year 1990-91. This is up from Rs.1,609 crore in 1986-87, through Rs.2,338 crore in 1989-90. But the total value of investment is not known.

Wide range. The range of products of the ordnance factories include field guns, anti-aircraft guns, anti-tank guns, mortars, various small arms and ammunition for weapons and guns, rockets, projectiles, bombs, grenades, infantry combat vehicles, battle tanks, transport trucks, patrol vehicles, high altitude and combat clothing, leather items, parachutes, a variety of knitted and woven items, light floating bridges, etc.

Though the primary objective of ordnance factories is to equip the armed forces, they sell various kinds of equipment to the railways, public sector organisations like Coal India, the police and the BSF. In 1989-90 such sales amounted to Rs.58.90 crore.

Presently the ordnance factories are in the midst of a big modernisation programme. As many as 26 programmes involving an investment o Rs.2,897 crore are currently on. Ac cording to defence ministry source this will go a long way in reinvigora ing ordnance factories, but not every body is sure. Says G.C. Katoch formerly additional secretary and fi nancial advisor to the defence minis try, "The problem of ordnance factories is that many of them, espe cially the older ones, are grossly over manned and therefore productivity is low. However, qualitywise their wares are fine, because they have to match up to rigorous army standards."

And former heavy industries secretary D.V. Kapoor says, "Being departmental undertakings, nobody knows how much it costs to produce which items. There are no balance sheets and profit and loss accounts. Had it not been for the fact that the user and producer are under the same ministry, the army would probably not have bought the Shaktiman trucks rolled out of the ordnance factory at Jabalpur. Defence ministry officials however reject the charge that they do not have detailed costings but refuse to furnish figures.

a list of thrust items it will try and push into the export markets. This includes ammunitions, communication equipment, subsystems for aircrafts, airborne systems, uniforms, earthmovers and software. According to official sources, it has also been decided to participate in defence fairs and send delegations abroad to assess the demand for defence wares. A decision has also been taken to engage 'outside agencies' (euphemism for arms agents) if required. For the first time, even spares and stocks from the stores of the armed forces (in technical parlance called 'service inventories') are to be sold. But the ordnance factories have to undertake to replenish the stocks within a stipulated time frame.

But all this is hardly expected to realise Pawar's dreams. As G. Balachandran, a defence expert, points out: "The real money is to be made by selling hard arms but most of the items on the priority of the ministry seems to be of a 'non lethal' variety. And as far as the 'lethal' arms are concerned, like ammunitions which the government is prepared to sell, nobody in the country has real expertise to hawk them abroad." Projects Equipment Corporation, which is now the nodal agency for arms exports, has neither the expertise or infrastructure for this. Besides, there is also the question of providing finance to the buyer. Says Amit Gupta, a defence expert at the University of Illinois, "Major defence deals are linked up with credit, which we cannot afford to offer. This is another major constraint".

Defence equipment: sophistication suspect

G.C. Katoch, former additional secretary and financial advisor to the defence ministry, says that there could be another important constraint. Defence goods selling, he says, requires a certain amount of flexibility, including perhaps payments of kickback which might not be possible in the Indian government's case. But there is a way out. Says Jasjit Singh, director, Institute of Defence Studies and Analyses, "The Chinese example is instructive. They export $2 billion worth of arms every year. But most of them are through offshore companies they have set up in Hong Kong, some of them in partnership with foreign companies. This way, they ward off questions that may be asked within their own country on a mechanism to do so."

The other obstacle that could come in the way of exports is India's political leaning. India being a non-aligned country, a high sales pitch of weaponry must also require clearance from the foreign ministry. This is because, from the foreign policy angle, sales of weapons to some countries may not be desirable. So on the whole, despite his enthusiasm and initiative, Pawar does not have an easy task on hand.

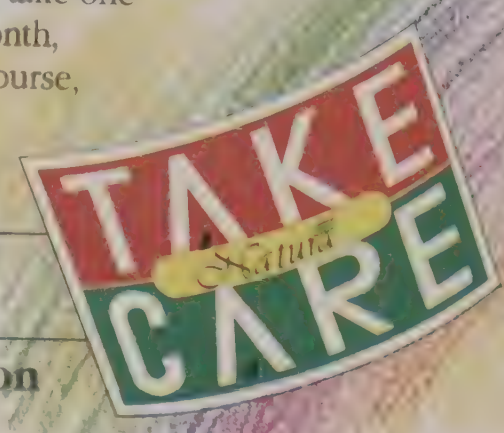
Does the price of success have to be your health?

Success is no doubt rewarding and gratifying. But, is that all success brings in? It also introduces a new lifestyle. Too many late nights, meals on the run, the cocktail circuit, the inevitable rich food... Not to mention the challenges of work. Pressures, deadlines, anxiety, travel, tension and so on.

As steadily as you are building up your career and business, you're also building up your cholesterol and triglyceride levels. And you know, this is bad for your health and you have to shed them off. But do you have the time? What with your job needing all your time and your family also clamouring for the same. And at the end of a tiring day, you wonder if it might all tell on your health one day. The health on which your continuing success and the future of your beloved family depend upon. Does the price of success have to be your health?



Take heart. Nature has the right prescription for you -- Allium Sativum and Shorea Robusta, two safe and effective natural lipid regulators. Brought to you as TAKE CARE, a health capsule, by Natura. Starting today, take one TAKE CARE everyday. At Rs. 57.90 for one full month, it's a small price to pay for your success. And of course, your health.

INTRODUCING

Nature's very own prescription

Available with your neighbourhood chemist.

MAA COMMUNICATIONS 1001

AA COMMUNICATIONS

Orchestrated growth

he decade-old MAA Communications has emerged as Bangalore's ading one-stop ad-shop

ay was celebration time at MAA Communications. On its 10th anni-rsary, it toasted the fact that it is the rgest advertising agency headquartered the garden city of Bangalore. With a pitalised billing of Rs.25.50 crore in 90-91, MAA also epitomises the one-op-ad-shop fad that emerged in the ghties. Its spread of services (which the ency calls a communication orchestra) corporates financial advertising, public lations, video communications, spe-alised software and computerised ser-ces and direct marketing.

MAA has had a chequered history. Its ots go back to 1960, when Ayaz S. Peer-oy, former managing director of Hin-stan Thompson Associates, started

unty Peerbhoy: quick to enter new areas with growth potential

arketing and Advertising Associates in ombay. Having attracted some of the st advertising talent, Peerbhoy felt the ed to set up an office in Bangalore. His ns, Sajid and Bunty, handled the Bom-ay and Bangalore offices respectively.

echristening and after

May 1981, MAA split into two, with unty assuming independent charge of AA (South) and Sajid renaming the ombay operations Speer Communica-ons. The client portfolio too was bifur-cated regionally with southern accounts being handled at MAA (South). In April 1988, the regional focus was removed from its name and it was rechristened MAA Communications.

Capitalised billings in the last five years have more than doubled — from Rs.10.2 crore in 1987 to Rs.25.5 crore in 1990-91. Creative director Sadiqa Peerbhoy, Bunty's wife, regarded as a driving force behind MAA, feels that perhaps growth did come a bit too fast, too soon. "But," she says, "in the last three or four years, we've been trying to consolidate."

One of the agency's more successful and aggressive divisions is Corporate Voice, the specialist financial advertising cell set up in 1985. From billings of Rs.23 lakh in the first year, the total business of this division has grown to Rs.1.97 crore. B. Madappa, president, Corporate Voice, asserts, "We are no longer a regional operation." Industry observers, however, say the agency has yet to acquire a national profile.

While several new companies have sprung up and a handful of others have relocated their headquarters in the city in the eighties, MAA has maintained its client portfolio comprising mainly old faithfuls, TTK group, Lakshmi Mills, Canara Bank and Enfield. TTK is the oldest client, its Prestige pressure cooker and condom accounts being handled by MAA all these years. Big spending multi-nationals like Brooke Bond and Lipton have stayed with their own agencies.

Industry insiders differ widely in their assessment of MAA. Amongst the ad-mirers is Anil Karumbaya, regional di-rector, Dattaram Advertising. "Bunty has always been quick to identify and en-ter new areas which hold a potential for growth," he says. However, S. Banerjee, director, R.K. Swamy, feels that the agency has grown erratically in the past few years.

Bouquets and brickbats

Indeed, not all MAA's subsidiaries are performing well. For example, the public relations division set up in 1987 has not quite taken off. Bunty's defence is that "clients are not prepared to spend on this activity." In contrast, the two-month old direct marketing division has signed some major contracts, in banking, heavy engi-neering, computer software, telecom-munication and garments. Odyssey, the full-fledged video production unit, broke even in 1989-90 with a billing of Rs.1.75 crore, followed by Rs.3.5 crore during 1990-91. The three-month old print and production division has picked up busi-ness too.

At present the agency is exploring a less developed segment, RAMMS — retail adver-tising, merchandising and marketing ser-vices. Kumar Vaidyanathan, manager, operations — RAMMS, explains that apart from advertising the retail outlet, they will be dealing with in-store promotions and store-image exercises. Much of the advertising churned out today fails to motivate the potential customer to make a bee-line for any particular store. Is MAA banking on the right business? R. Sridhar, vice-president (south), Mudra Communications, reckons that in this area, Bangalore has more potential than any other cities in the south.

As the agency gets set to expand its net-work beyond its southern stronghold, the lessons learnt from the past should chart its future course. As Bunty asserts, "We don't want unplanned growth. Nor do we want to bite off more than we can chew."

■ DEVAPRASAD PUROKAYASTHA

Setting the pace

S. Venkitaramanan, the governor of the Reserve Bank of India since December 1990 is not among the more high-profile of the distinguished men who have headed the country's central bank. But his tenure comes at a very crucial juncture with the economic crisis facing the nation and the momentous changes that are currently under way. Six years ago in 1985, when the Rajiv Gandhi government embarked on an economic liberalisation programme, the 60-year-old administrator played a key role as the country's finance secretary. In a rare interview to the press, he took time off last fortnight, between negotiating with the IMF and inaugurating the Canbank Factors limited, to speak to *Business India*'s Alpana Killawala on a wide variety of issues relating to the economy, the Reserve Bank and his role as its governor at this crucial juncture

Now that you have seen the banking system from inside, what according to you are the most glaring problems facing it?

The first problem is that our banks are undercapitalised. The capital needs to be raised from the current 4 per cent of the asset value to 8 per cent. This means that the additional capital will at present have to come from the government. But the government in turn wants to retain this capital (as additional SLR). Thus, it will not be an effective addition to the equity. I personally feel that we should adopt the financial engineering technique adopted by France, which is quite innovative — of having cross holdings. President Mitterand was caught in a dilemma of two no's: no nationalisation and no privatisation. When Credit Lyonnais faced a problem of inadequate capital, they asked the state-owned automobile giant Renault to hold shares in Credit Lyonnais and took shares in that company in return. There were no ideological barriers in letting banks hold shares in companies. As a result, Credit Lyonnais now has a good equity base and there is no cash outflow.

Secondly, the work culture is poor, from the point of view of staff and atmosphere. Some people mistakenly think that public ownership gives everybody a right to intervene in the functioning of banks. The board of directors also sometimes intervenes in banks' day-to-day management. Then again, the management too faces difficulties, as there is no definite yardstick to measure their performance. Transparency, accounting standards and performance criteria are urgently required for banks.

How do you propose to overcome these constraints?

My predecessor had started action plan meetings with bank managements. Structural problems of the banks like capital inadequacy and accounting norms are being covered by RBI instructions. As regards inspection and supervision, the RBI has set up a special group to ensure that the inspection of banks is improved.

Who are the members of this group and what are its terms of reference?

There are some in-house people in the group, and also some expert bankers. The group is also advised by a few auditors. It will look into models available abroad and will talk to other central banks to check their experience. The idea is to make the supervision machinery function better and equipped to handle incipient cases of weakness in banks before they become endemic.

Is there any time-frame in front of the group?

The group was set up in May and we should receive its report by September.

Many bankers think your action plan meetings amount to interference by the RBI.

Initially, I think, these meetings had a role to play. But action plans were not visualised to be an instrument for interference. For action plan meetings, we set certain broad targets. We have continued these meetings as review meetings as review meetings to familiarise ourselves with the problems of banks. It is true that the RBI should not look at individual loans.

How do you propose to improve the inspection and supervision of banks?

It is not that we do not have an established inspecting system but at times they are at too long intervals and have not been able to detect critical cases. I believe managements should have the freedom to function independently but there should also be proper inspection and supervision. Autonomy accompanied by adequate supervision should be the order of the day. And those who do not perform should be dealt with. If there is interference in their functioning all scope for innovation is lost.

Inspection and supervision should be done

An IAS topper from the 1953 batch, the 60-year-old administrator is an M.Sc. from Kerala University and holds a post-graduate degree in Industrial Management from the Carnegie Mellon University, Pittsburgh, US

by people who are themselves accountants and know banking methods. They should concentrate on real issues and not merely on procedures. That will bring in responsibility. And that can happen only if there is no interference.

This also goes hand in hand with what I have suggested earlier: a re-look at the role the RBI and the government representatives have to play on the banks' board of directors. A controller cannot be on the board. If a controller is also on the board then he will have a tendency to interfere in the bank's functioning.

The point is that no system can be foolproof. There are bound to be some failures. If supervision is perfect, risk of failures could be averted. Perfect supervision requires perfect information and predictability. If that existed then the Bank of England would not have had problems with the BCCI and the Fed Reserve would not have had an S&L crisis. These cases show that crooks can circumvent all rules. But I agree that the supervision has to become more alive to such possibilities. Supervision is necessary regarding the purpose of loaning, loan policy of banks, their loan appraisals. Supervision should be more purposeful and not a mere routine exercise.

You are known for your favourable approach to liberalisation. But the banking sector is yet to experience the speed in liberalisation with which you are identified.

Why do you say that? We have lifted a number of restrictions. We think banks should function according to their commercial judgement. We do not interfere in banks' functioning in a detailed fashion now. Nor did my predecessor. But our credit policies have had to become tight because of the current financial situation. By liberalisation we mean that the bank managements should be allowed to freely operate. We have tried to enlarge the sphere in which banks can function. We have, for instance, liberalised branch licensing policy and allowed swapping of branches. While framing this policy we have to move along with government policy. Similarly, on loan sanctioning I do not think there is any RBI control. Banks are also allowed to open subsidiaries provided the activities they take on are not totally unrelated to their main activity.

I don't think that you can identify a person to be liberal or not liberal. One has to change in relation to circumstances. I think being liberal is not only one's mental attitude but depends a lot on the system. Perhaps, bank chairmen would be in a better position to answer this question.

In the past few years, mutual funds, particularly ones which are bank subsidiaries, have succeeded tremendously in garnering public savings. How do you think they should be regulated?

The mutual funds, though not regulated by the

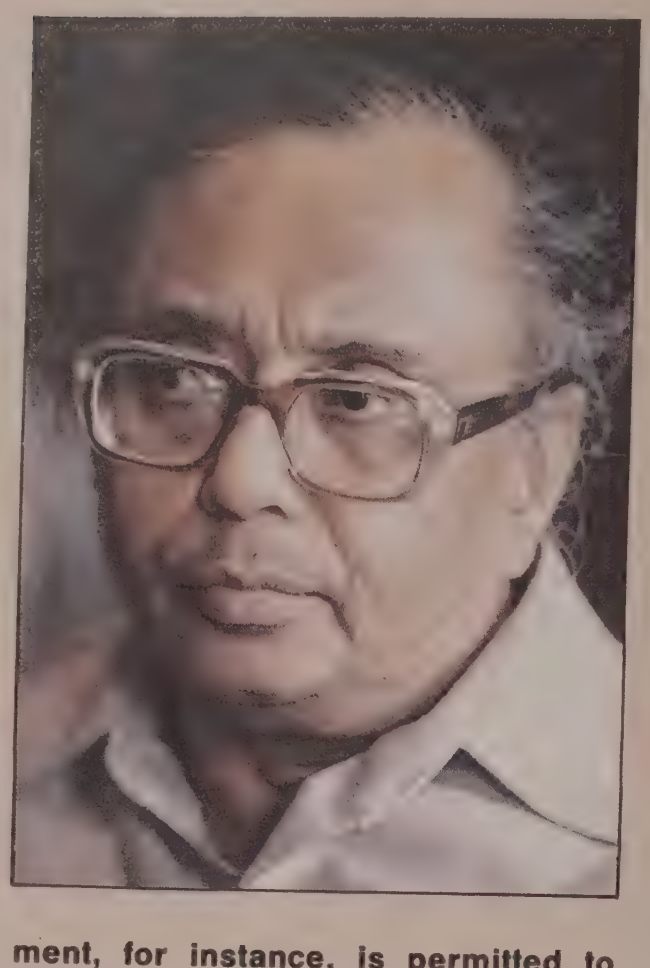
RBI, are regulated by the SEBI and they operate on the basis of the draft guidelines issued by it. True, the RBI, as the monetary authority, cannot wash its hands off mutual funds. The line between the RBI and SEBI should be clearly demarcated. SEBI has been created to regulate mutual funds and the stockmarkets. But so far as banks are responsible for the mutual funds sponsored by them, the RBI will also have to get into the act, as the funds might then fall under the ambit of banking regulations.

The overlap in the RBI's and SEBI's functions will have to be sorted out through a dialogue and I am sure that is taking place.

Besides, being the monetary authority, the RBI still has to have control over the movement of funds.

Yes, the RBI should lay down broad monetary policies and guidelines. The detailed supervision of mutual funds should necessarily be with SEBI. The central banking authority does have the right to call for information from non-banking financial companies but this should not be overdone or, otherwise, the RBI system will become overloaded. The right to call for information should therefore be clearly defined.

Growing disintermediation has reduced the banking sector's importance in the past two years.



I would not say that. The magnitude of bank deposits is still very large.

But that is because there is a large untapped potential, especially in the rural areas. The growth rate in bank deposits has clearly shown a declining trend in the past two years.

That is because there is no level playing field.

How do you propose to rectify this?

The answer to that lies with the Narasimham Committee. But everywhere, the saver has a menu of options to choose from. And I don't think one can compel the saver to choose any particular mode of saving. Banks have certain rights which the mutual funds don't have. We must allow the saver a variety of savings options. From the depositor's viewpoint, I think mutual funds are a good development.

The present policy seems to discriminate against banks. Portfolio management, for instance, is permitted to brokers but not to banks.

The basic objection of the RBI to portfolio management by banks is that if banks are allowed this, it would clash with interest rate discipline. But I am willing to look at it.

How do you propose to give more autonomy to banks?

Autonomy for banks should come from both the government and the RBI. This is at present being looked into by the Narasimham Committee.

How is the selection done for top slots in banks?

We try to choose from the best. We look at the talent available within the industry and we also look at experience available outside. To the extent possible, we try to get somebody from the industry itself so that the people inside don't feel neglected. We try to reward good performance also. There is a need for a succession plan in banks. This, again, is a matter for the Narasimham Committee to look into.

There is a lot of debate on privatisation of banks. What is on the cards on this front?

Basically, we are not in favour of privatising banks. Given our social imperatives the ownership of banks cannot change. And politically too, it does not seem likely. But we would like banks to be more open to pressure from consumers and depositors.

How do you view our current econo and balance of payments positions?

Relaxation of import and credit curbs pends on macro economic developme The economy as a whole is a net impor Net imports of goods and services ar the extent of $7 billion every year. The nance minister is trying to set the ba ground for a radical transformation increase exports. And if necessary, to crease imports. But this will be a functi of price. What we are doing now is, in absence of adequate tools, adopting broad brush approach to cut down i ports. We are protecting debt service, troleum and other essential imports a have cut all other imports through impo curbs. Yet, in the long-term, we know t can be harmful if continued. Once the serves are built up, then we can allow t curbs to roll back and exports sur forward.

The present measures are only settin the stage. Productivity and modernisa tion have a role to play. Balancing equip ment is also needed, as creating ne capacity by itself is not adequate. W need to add to our exchange reserve Foreign direct investments are not th only answer. FDIs are necessary insofar a we want to add to the reserves in a man ner that does not add to our debt lia bilities. If there is a pool of $50 to 6 billion of FDI floating in the world, w should get our share. The world is no waiting for us.

How do you view the current attitude o the multilateral donor agencies towards India?

They, including the IMF and the World Bank, have other demands. For the last six months we have been trying to restore India's past status with the international lending community. And with the measures that we have taken so far, I am sure, it will not take too long to recover our credibility. Some of the steps taken will reverse such capital flight as there has been.

Right now we are in a crisis management situation. We are more like a traditional cash manager with an eye towards the till. Until that is changed, our approach cannot be broadbased. The measures taken so far are necessary but not enough. Many further measures are needed still. The productivity of the services sector has to improve, as also of the entire economy. For this a very flexible and innovative approach is required on the part of the government, the banks and politicians.

The Power of Technolog

DOWELL & CO

Piggyback strategies

e company's brand extension strategies have added to the success joyed by its whisky

he marketing men at Bangalore-based McDowell & Co are on a bit of a high ese days. After all, they pipped their mpetitors to the post last month, when ey hit the Indian made foreign liquor rket with a packaging first: polyylene terephthalate (PET) bottles. And me September, McDowell's various ands of whisky and brandy will be dily available in these light weight, unakable containers that are preferred rldwide — even by the likes of Chivas gal and Johnny Walker.

The launch of the new pack, caps other achievement. This year, the comny's best-selling whisky, McDowell o.1 joined the ranks of leading world ands like Suntory and Johnny Walker ack Label, when it earned the distincn of having sold more than a million ses.

orking wonders

deed, the overwhelming success of this and prompted the company to extend brand name to its brandy and rum as ll. This brand extension has worked nders on the sales figures, according to alyan Ganguly, McDowell's senior e-president for sales and marketing. The image of McDowell No.1 has bbed off on our rums," he says.

This is no coincidence; it is a result of anned piggyback marketing strategies. eticulous preparation preceded the unch of McDowell's rums last October rough the company's vast 21,000ong dealer network. Long considered a wn-market drink, rum was beginning get popular with the yuppie crowd. quor manufacturers were quick to spot e new preference.

McDowell's president, S.S. Gandhi ys that this trend prompted the comny to commission the Indian Market esearch Bureau to undertake a survey. e findings provided positive pointers. unger people were swinging towards e armyman's favourite drink and they re also convinced that quality-wise dian rums were good enough. As a conquence the demand for rum was grow- at a steady clip, 10 to 15 per cent nually. And, as Ganguly says, "We felt that there was scope for expanding the market."

The launch of McDowell No.1 Celebration rum was perfectly timed too, as a spokesman of arch rival Khoday Distilleries, points out. Khoday's Hercules, the reigning brand in the rum segment was facing supply constraints and there was a vacuum in the market. Also, as it happened, Mohan Meakin the manufacturer of Old Monk rum, was preoccupied with staving off a takeover attempt by the Delhi-based Jagatjit Industries Ltd.

Rum was beginning to get popular with the yuppie crowd. McDowell's president S.S. Gandhi says that this trend prompted the company to commission a survey. The findings provided positive pointers

Unsurprisingly, tipplers took to the new brand right from the start. It sold 150,000 cases in the first six months alone, with Kerala and Maharashtra accounting for the bulk of the sales. In recent times, other liquor makers following McDowell's trail have taken the rum route. But industry observers are not convinced that the market will expand very much more.

U.B. Bhat, marketing consultant with H. Dasappa & Co, a liquor company in Bangalore, does not think that McDowell has been a runaway success in the rum segment. He points out that McDowell's ambition of expanding the rum market has remained just a fond hope. Volume sales haven't jumped dramatically and the market size has remained at around Rs.65 crore.

Ganguly, however, asserts that McDowell has sold twice as much as it had expected to; a total of 175,000 cases against a target of 80,000. In fact, the success of McDowell No.1 Celebration prompted the company to launch the well-accepted white rum called McDowell No.1 Caribbean.

Having pulled off the brand extension on rums, McDowell's marketing team is putting the finishing touches on yet another. On the anvil are two more launches, that of gin and vodka. These too will be in the McDowell No.1 brand category. The McDowell marketing team obviously believe it's better to have one too many.

RETAILERS OF MADRAS

Selling middle-class dreams

The consumer boom is alive and well in Madras — thanks to a trio of enterprising retailers and their innovative selling ways

Marketing pundits have been prophesying doom for the consumer durables industry this year. Seeing inventories pile up, manufacturers of televisions, refrigerators, air-conditioners and the like have begun pruning their production as well as sales targets. In these hard times, the logic goes, the hard-up consumer will postpone all major buying decisions.

So much for conventional wisdom. For in the southern city of Madras the consumer boom is alive and doing quite well. V.G. Paneerdas & Co (VGP), Vasanth & Co, and Vivek & Co, the city's three major retailers are thriving, as consumers continue to flock to their numerous showrooms. This trio has no dramatic dip in sales to report and they doubt whether the bust is indeed round the corner.

They should know. The past decades have seen them emerging as the retail monarchs in their southern citadel. They have both watched and contributed to the growing yearning of the Indian middle class for a better lifestyle. Such aspirations have been translated into demand for those very products that these retailers have to offer.

The owners of all three migrated to Madras in the fifties and sixties with little or no capital and certainly without any formal training in the nuances of marketing. Native intelligence and a burning ambition to make good was all they had going for them. Today their modest beginnings are a thing of the past with manufacturers vying for space on their showroom shelves. Says L. Ganesan, managing director, Citizen Washing Machines, makers of the Washotex brand, "They are important dealers who sell on their own reputation."

The pioneer amongst them is V.G. Panneerdas who, along with his brother V.G. Santhosham, moved to the big city to seek his fortune in the fifties. Today VGP has four large retail outlets in Madras, eight in smaller towns in Tamil Nadu and a showroom each in Bombay and Bangalore. The range of products that they sell is vast, from pots and pans to the biggies — VCRs, washing machines and refrigerators. The combined turnover from their stores last year was Rs.30 crore

They started out small, as tea-owners. Their clientele was largely the lower-income group and the bro noticed that people had a strong desi purchase but not the means to do s 1955, recalls Santhosham (Panee died a while ago), the VGP brothers st upon the idea of selling timepieces o instalment basis. Each timepiece priced at Rs.16, with a down paymer Rs.4 and six monthly instalments of R They went door to door on their bicy offering this deal.

The response was overwhelming. soon their customers started clamou for more goodies. A years down the road, brothers felt the need establish a showroo Scrambling around funds, the enterprising rustled up Rs.10,000 purchase their first re outlet at Saidapet, which those days was conside a low-level suburb Madras.

Photos: Ravi Shankaran

Santhosham of VGP: the retail monarch of the south

Business grew steadily. A major turn ing point came when the VGP brothe landed the Murphy radio agency in 195 (eternally grateful, Santhosham ha named one of his sons, Murphy Das). Fo the next ten years or so VGP consistentl won the first prize for Murphy's all-Indi sales. The brothers found various innova tive ways of promoting their products They were the first in Madras to hire wal space along the railway stations to adver tise. They conducted what they cal "mobile fairs" — they filled mini van with treasures like wall clocks, pressure

santh: ever willing to implement different ideas

okers and irons, and roamed the rural artland.

Over the years, many VGP employees ve branched out on their own. The ost well known is H. Vasanth Kumar of santh & Co. "My inspiration is VGP," mits Vasanth candidly. In the early enties he began his career as a door-to-or sales canvasser for VGP. By 1978 he d decided to strike out on his own. His pital: a bicycle and a Rs.8,000 loan. To-y he is the proud owner of 15 show-oms, seven in Madras and eight others attered in Tamil Nadu, Pondicherry d Bangalore. His sales turnover for 90-91 is Rs.14 crore and he hopes to uch the Rs.20-crore mark this year.

"I started with selling wall clocks, fold-g tables and chairs," he recounts. Clon-g VGP, he too offered these on easy stalments. A couple of years later asanth started fabricating steel furni-re in a small shop. The eighties, being e boom period for TVs, saw Vasanth tempting to add them to his product nge. "Between 1982 and 1985, I ocked at the doors of Dyanora and lidaire dozens of times. In 1983, the anaging director of Solidaire relented d gave me a dealership in some far ng suburb of Madras," he recalls. To-y he is the largest dealer for Solidaire. ys Ravi Prasad, director, marketing, lidaire, "Vasanth has this burning de-e to prove a point and break all re-rds. He is ever willing to implement different ideas." By 1985 various other dealerships began to come his way without too much struggle.

The innovative tack that Vasanth took was to go for institutional sales of consumer durables by tying up with a finance company, the Coimbatore-based Sakthi Finance. Vasanth's major breakthrough was when he sold 900 colour TVs (CTV) to Ashok Leyland for Rs.90 lakh. Riding the boom, Vasanth was able to get bulk orders from government departments and co-operative stores. The boom was shortlived, he admits candidly, and ended when buyers began to default on payments. Consequently, the ratio of 60 per cent institutional sales and 40 per cent cash sales in the eighties is now reversed and bulk orders account for only 25 per cent of total sales.

The other retail success, Vivek & Co was started by B.A. Lakshmi Narayana Setty, a young engineer from Karnataka who moved to Madras with a similar dream of making good. In 1965, Lakshmi Narayana set up a small appliances shop which stocked a mix of products like irons, folding chairs, tube lights and so on. The shop was located in the crowded Royappettah area which was full of small traders and provision shops. Unfortunately, Lakshmi Narayana died young, and it was left to his four brothers to build up the business. Today Vivek & Co's three large showrooms in Madras have a sales turnover of around Rs.18 crore.

Narayana's elder brother, B.A. Kodandaraman, who eventually left his home state to pitch in with his brother's fledgling venture recalls the old days. Their big pitch was to collect instalments on a daily basis. "If a product cost Rs.100, we would collect one rupee a day." This apparently caught on in a big way. Later, when the entrepreneurs tried to expand, they too faced problems securing dealerships and were, in fact, turned down more than once by Usha. "Today dealerships come knocking on our doors," says Kodandaraman with a smile.

Between 1969 and 1980 Vivek opened three big showrooms in Madras. The pride of their chain is clearly the one at T. Nagar which is a total of 30,000 sq feet spread over three floors. It was inspired by Kodandaraman's visit to Singapore and he says that it marks "the change in our focus from quantity to quality." In 1989 their show piece got the best IMM Bajaj display award, a fact Kodandaraman takes great pride in.

Vivek's unique selling proposition is its New Year sale. On that day, products are offered to consumers at cost price. So popular is Vivek's New Year sale that customers start queuing up from the night before. On New Year's day this year, Vivek notched up record sales of Rs.120 to 150 lakh in 10 hours.

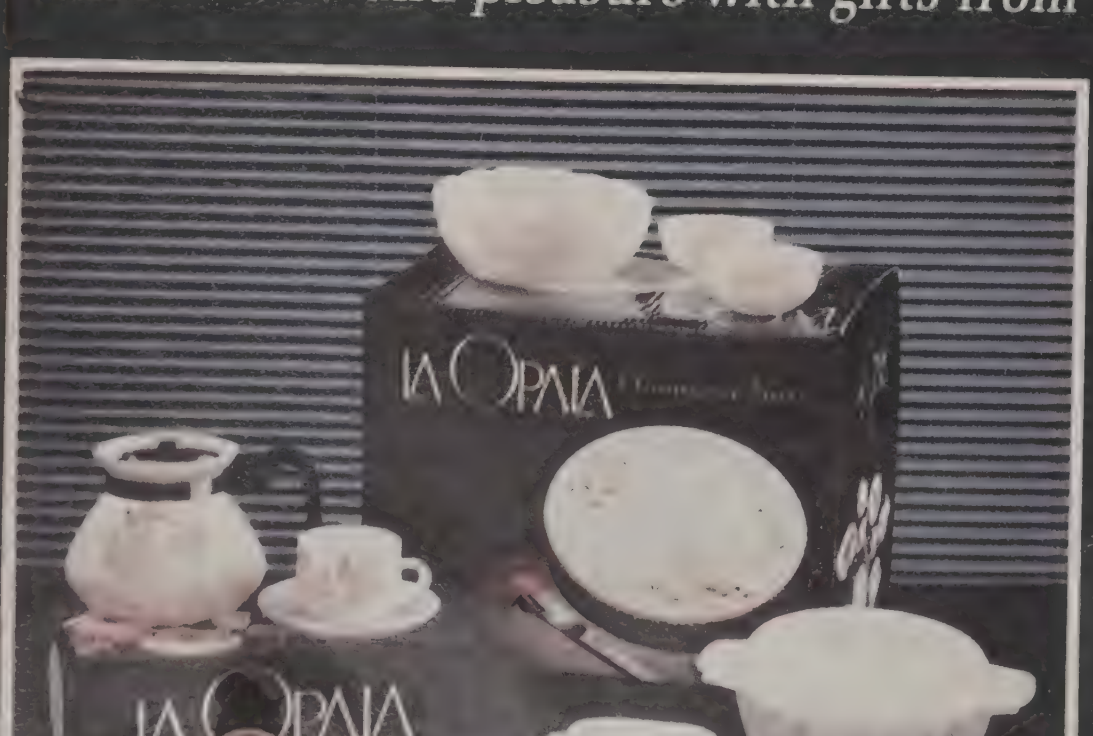
The growth and success of these retail ventures is in step with that of the consumer durables industry in the country. During 1965-66 Vivek had an annual turnover of just over a lakh of rupees. Today daily sales average around Rs.6 lakh. Refrigerators which were a luxury item during the seventies are considered necessities today. The buying preferences of the middle class, these retailers all concur, is colour TVs, refrigerators and washing machines, in that order. Of course, pressure cookers, mixers and steel furniture are perennial sellers, but the products of the future are washing machines and microwave ovens, they all feel.

Over the years these retailers have seen their margins being compressed. The

customer is more savvy and always on the lookout for a bargain. Santhosham recalls the days when radios used to command a 30 per cent margin. Vasant remembers buying wall clocks for Rs.125 and selling them at Rs.225. Compare

Kodandaraman: dealerships come knocking at the door

that, he says, with the 2 per cent they get on colour TVs today, though of course a CTV is a much higher priced product. "We make a gross profit of 6 per cent and a net profit of between 1 and 2 per cent," says Kodandaraman. The drop in margins have been made up by pushing up volumes. Instalment sales account for a quarter of their total turnover.



These are all tightly-run organisations with the owners willing to put hours of work a day. Their su lies in the fact that they unders their customers, have excellent vassing and collection machi They all have their own hire chase and leasing companies to their products on instalm though such sales account f fourth of their total turnover.

These retailers operate on gut rather than on scientific analysi sophisticated research. Custon walking into their stores, wh range in size from 2,000 square to 30,000 square feet, can be assu of a friendly, personal service, w the owner himself being qu accessible.

All three retailers have expand much beyond the narrow bases fr which they began. VGP has mov into real estate and hotels. Vasan is into poultry farming and Vivek realising an American dream: co structing a 60,000 square foot supe market. What remains unchanged is th business philosophy which they still su scribe to: make people spend money b without cheating them.

TOOK MORE THAN 400 YEARS TO MAKE
HIS CONFERENCE FACILITY AS STATELY AS THIS

Prince Azam Zah Bahadur arriving with entourage, Hyderabad, 1936.

At the Krishna Oberoi, you get much more than an impeccable conference.
You get the stately legacy of a city more than 400 years old. Hyderabad, with its unchanging traditions is bound to leave you in awe.

When not conferencing, you can lose yourself in the romance of Hyderabad's famous Forts and Palaces. The Qutub Shahi Tombs, Golconda Fort and the Salarjung Museum are an experience in themselves. And of course no visit to Hyderabad is complete without a visit to the majestic Charminar.

Back at the Krishna Oberoi, the facilities are in keeping with the stately traditions of Hyderabad. Luxurious rooms, Presidential suites with private swimming pools and speciality restaurants with a charm of their own.

The conference facilities themselves are rated amongst the best in India. Multiple conference rooms that can accommodate from a few to several hundred delegates. A conference co-ordinator who is always at hand and a Business Centre with specialised equipment.

It certainly takes several hundred proud years and unfailing expertise to build a perfect back-drop to a great conference.

The Krishna Oberoi

"Why do I prefer the Daily Thanthi for reaching Tamil Nadu?"

"Because half of the opinion leaders in Tamil Nadu don't read English dailies."

தினத் தந்தி
DAILY THANTHI

Some advertisers choose the leading English daily in Tamil Nadu, because in their perception it effectively covers opinion leaders.

Here are some facts that are loud and clear:

First, 50% of the opinion leaders in Tamil Nadu – socio-economically forward people – don't read any English daily.

Second, as many as 2,70,000 opinion leaders read the Daily Thanthi.

And third, the cost of reaching each of these opinion leaders through the Daily Thanthi is as much as 42% lower in Madras city than through the leading English daily.

The Daily Thanthi is as effective in other vital segments too – people with a monthly income of Rs. 2,000 and above, officers, businessmen, executives, professionals and graduates.

So, when you think of corporate, financial or business advertising in Tamil Nadu, it pays to prefer the Daily Thanthi.

Because no other daily, Tamil or English, gives you such quality readership, with such cost-efficiency.

ST BENGAL FISHERIES

bountiful harvest

a state where even established industries have not performed well, the eries sector has and now West Bengal is going all out to exploit tively untapped resources

est Bengal is today the number one state in fish production in the coun- Yet, till about the early eighties, pro- ion of fish was low. Recently, nmoy Nanda, the West Bengal fish- proper planning. We started with a proper strategy for development." It was about this time too that an inland fisheries project was launched with World Bank assistance. The scheme was from a meagre 1,582 in 1981-82.

"In 1990-91, West Bengal's total fish production came to 680,000 tonnes with a per hectare productivity of two to three tonnes. By Indian standards this is the highest," says a beaming Nanda. What he is really happy about is the state's achievement in the production of marine fish as well. Says Nanda, "The coastline in West Bengal, as you know, is only 80

Photos by Goutam Chatterjee

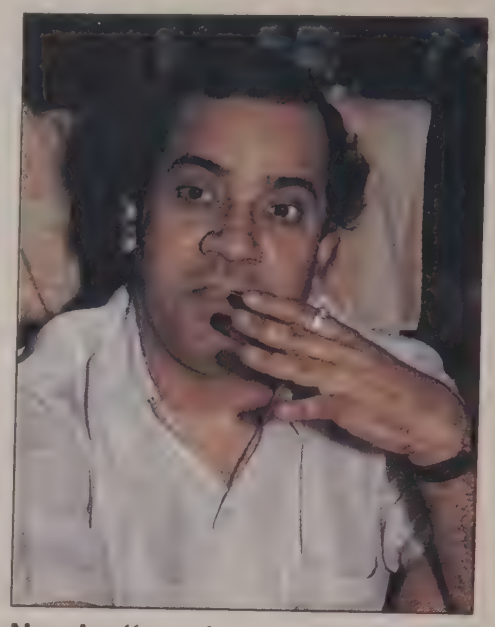
nkarpur fishing harbour in West Bengal: high productivity despite the limited coastline

s minister walked away with the tro- for achieving the highest ductivity in the state's fisheries sector, he National Productivity Council's ual award giving ceremony in New hi. Needless to say, West Bengal won prize for the fifth year in a row.

n a state like West Bengal where sev- established industries have not per- ned well, the fisheries sector has had eptional success. "There is nothing sterious about our success," says nda, "till about the late seventies or y eighties, the fisheries sector had no launched in five states simultaneously — West Bengal, Orissa, Madhya Pradesh, Uttar Pradesh and Andhra Pradesh.

But according to Nanda, West Bengal snapped up the lion's share (almost Rs.90 crore) of the Rs.150 crore allotted for the scheme, "because we had well-defined plans and programmes which we efficiently translated into action". When the scheme was launched in 1981-82, the total water surface area that was covered was 168.34 hectares. Today it is 79,667.38 hectares. The total number of beneficiaries has also crossed the 250,000 mark km. With this limitation, we have produced 125,000 tonnes of marine fish. This again is the highest production." West Bengal has also achieved the highest production in marine fish for the second consecutive year.

The turnover of this sector in West Bengal has grown tremendously too. Today the fisheries sector accounts for a business of Rs.1,300 to Rs.1,400 crore. "This undoubtedly forms a very important part of the state's agricultural economy," says a senior officer of the state fisheries directorate. Remarkably, from



exports alone, the state earns about Rs.100 crore. "In 1990-91, we have exported Rs.98 crore worth of prawns, mainly to Japan," adds the senior officer. Now, with the present government emphasising exports, fisheries will naturally be a thrust area in the coming years.

The ultimate objective of the state government's plans and programmes is the maximum use of available water resources. These include social fisheries, wetland preservation, and the rehabilitation of poor fishermen. Says Nanda, "Under the social fisheries scheme which we launched three years ago, our principle has been to breed fish wherever there is water." The Inland Fisheries Act 1984 permits authorities, typically village *panchayats* in this case, to take over the possession of any fallow water area that is lying vacant and lease it to fish farmers for 20 years.

But what has boosted production most is the emphasis on wetland management by the state fisheries department. With water resources the world over declining steadily, the department has striven to create an awareness that preserving water resources is synonymous with maintaining an ecological balance. Since 1987, the state government has been observing the first day of the Bengali month *Ashar* (generally 15 or 16 June) as wetland day.

This apart, there have been concerted attempts to improve fish farming technology. An integrated approach has been used. Extensive training programmes have been introduced at three different levels (blocks, districts and state) — 15 days at the block level, one month at the district level and three months at the state level. Trainees are taught to manage fish ponds, determine the right water levels in which particular species flourish, and construct different types of tanks for different varieties of fish. The state has trained 149,488 farmers so far. Yet this number is not enough if the Eighth Plan target of 900,000 mt of fish production has to be met. To boost production, fish are now harvested in three lots a year — just as agricultural crops. "Until recently, fish were caught mainly during the monsoon. But now our idea is to breed fish throughout the year. Broadly three cycles have been fixed for fish production; March-June, July-September and October-February," says an officer in the fisheries department. Different varieties of cross-bred fishes are grown during non-traditional periods. Three to four different species of common carp, like gold, silver and grass carp are very popular.

The West Bengal fisheries department which has a budgetary allocation of Rs.11-12 crore a year has different financing schemes for different categories of farmers. Also finance flows from nationalised banks under refinancing arrangements from NABARD, and the National Cooperative Development Corporation. Financial assistance is given to farmers to help them acquire the latest fishing devices like mechanised boats and other requisites.

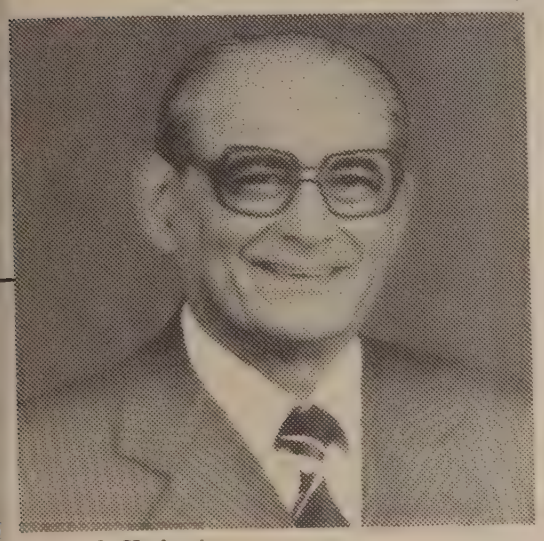
Nanda: "emphasis on strategy

world. It is used r
to promote bette
gen circulation i
water of inland po
reservoirs in the
hours of the mo
when oxygen is nor
in short supply.

It is the assessme
the fisheries depart
that once aerators a
troduced in the
they are likely to
prove productivity
least three times. T
enough to justify a
vestment of Rs.20,0
Rs.25,000 on inst
tion of aerators in a pond. The fish
department will finance these mach
and the fishermens' cooperative will
it.

Says Nanda, "Our motto for the

Aerator machines: the latest in pisciculture technology



At present, there are over 7,000 mechanised boats in operation, mainly in the two fishing harbours at Shankarpur in Midnapore (built at a cost of Rs.6 crore) and Frezarganj in the south, 24-Parganas (cost, Rs.4 crore). The majority of these are financed by the government under one scheme or the other. The department is also financing the introduction of aerator machines in the state. This mechanism is the latest in fishing technology in the

eries sector has been: create employmen
uplift the rural economy, maintain ec
logical balance and grow more protei
food. We have been successful so far. Bu
this is not the end; we have to go ahead
and achieve more." Given the revival i
the fortunes of the sector over the last de
cade, it looks as if the favourable out
come Nanda hopes for is a definit
possibility.

KOTHARI INDUSTRIAL CORPORATION LIMITED

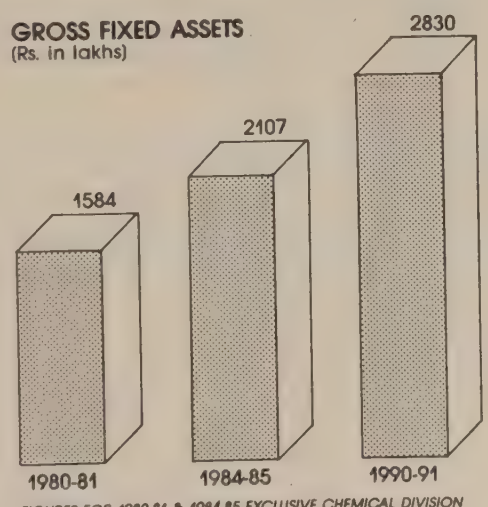
Regd. Off.: "Kothari Buildings", 114 Uttamar Gandhi Salai, Madras 600 034.

Dr. D. C. Kothari

A DECADE OF PROGRESS, EXCELLENCE AND PRODUCTIVITY

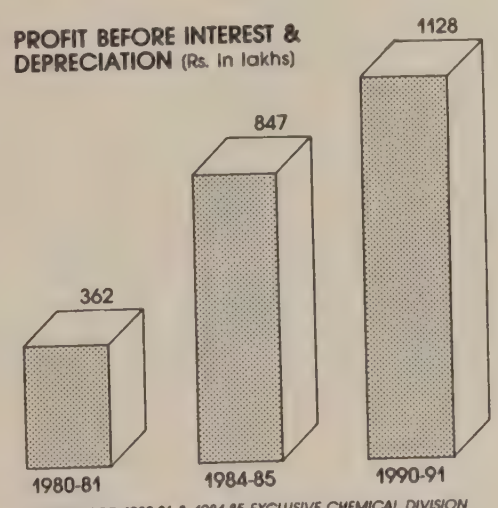
KICL

Pradip D. Kothari



The Solid Foundation

- A pioneering spirit which has nurtured the growth of the Kothari Group born way back in 1918 into a multifaceted industrial conglomerate
- A clear foresight to venture into areas of long term stability and growth such as Textiles, Fertilisers, Plantation crops, Granites, Information systems, Leather and Steel
- A firm commitment to participate and contribute towards improvement of social environment through imparting of job oriented education to unemployed youth, undertaking employee welfare and community development activities such as medicare, housing etc.
- A deep passion for higher productivity year after year through continuous research and modernisation to maintain the high performance standards in the industry
- A dynamic outlook to manage agriculture as an industry inculcating a spirit of entrepreneurship to farmers, along with constant updating of information technology and management skills reducing cost and improving efficiency

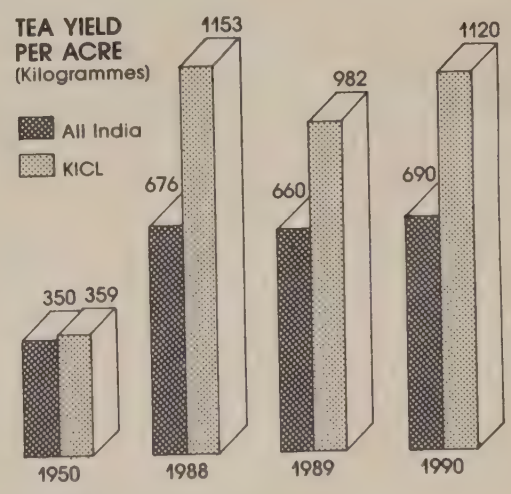


The Steady Growth

- An impressive increase in turnover from Rs. 38.69 crore in 1980-81 to Rs. 83.71 crore in 1990-91
- A smart improvement of profit before interest and depreciation from Rs. 3.62 crore to Rs. 11.28 crore during the decade
- A significant growth of gross fixed assets from Rs. 15.84 crore to Rs. 28.30 crore is the same period
- Notable achievement in plantation management with yield per acre reaching 1120 kgs in 1990 as against an all India industry average of 690 kgs
- Steady improvement in textile operations through modernisation, reaching a production level of 65 lakh kgs in 1990-91 valued at Rs. 50 crore
- Substantial expansion of fertiliser operations with all round production increase
  - Sulphuric Acid from 17000 TPA to 28000 TPA
  - Super Phosphate from 35000 TPA to 75000 TPA
  - NPK Mixture from 23000 TPA to 38000 TPA

  between 1980-81 and 1990-91

FIGURES FOR 1980-81 & 1984-85 EXCLUSIVE CHEMICAL DIVISION FIGURES SINCE IT HAS BEEN SOLD SUBSEQUENTLY TO M/s. SPIC



FIGURES FOR 1980-81 & 1984-85 EXCLUSIVE CHEMICAL DIVISION FIGURES SINCE IT HAS BEEN SOLD SUBSEQUENTLY TO M/s. SPIC

- Well planned diversification into exports of Leather and Granites

The Optimistic Future

Continued growth through modernisation and expansion

- Rs. 9 crore modernisation for textile division
- Rs. 1.2 crore replanting and infilling programme for plantation division
- Rs. 2 crore modernisation-cum-expansion plan for fertiliser division
- Rs. 4 crore 100% EOU for granite processing
- Rs. 50 crore pig iron manufacturing unit as a joint venture with TISCO

Bondage Grows

In this journey towards prosperity the shareholders have stood by us with their financial and moral support. KICL acknowledges this valuable support and has always rewarded them with consistent dividends and performance. We are sure that this mutually beneficial relationship now entering the third decade will further strengthen and grow in the years to come.

The Company's 22nd A G M was held on 27th July, 1991 and was widely attended.

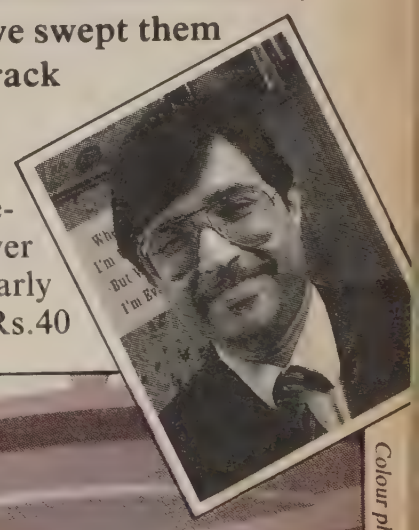
Striving with a maxim: Product Excellence, Business Integrity and Commitment – Always



TREPRENEURS

Then and now

e rags-to-riches tale, the quintessence of the nerican Dream, has a universal fascination. Such ries fan the eternal hope that ordinary people can, dint of initiative, hard work and with luck on their e, transform their once humble lives. Which is why, r "Enterprise" section, a regular feature in the gazine since the first issue, is both widely read and nerates tremendous reader feedback.

om Ajit Singh of Associated Capsules (written about the 27 February 1978 issue) to B.G. Shirke (in our evious issue of 19 August,1991) we have featured 173 ch successful entrepreneurs and their companies. An portant criterion in selecting these small-time, coming businessmen had been the potential they had displayed to make it big. And the majority of them have lived up to our expectations.

This update on our old stories focuses on what it took an entrepreneur to jump from the small mould to the big league. The selection portrayed here is by no means comprehensive. Neither does it tend to be representative of any particular kind of "Enterprise" story. What is common to these entrepreneurs, however, is their continued drive to excel in their original (or new) fields. And their doggedness in overcoming hurdles. Success has brought with it new kinds of problems. But in their characteristic fashion, these enterprising businessmen have swept them aside to continue on the winning track

Colour photos: Palashranjan Bhaumick

Sheth: great entrepreneurial drive

or three long years he searched. From Alibag to Pune and from Goa to Nalk. And then Bhalchandra Vishnu tey found his dream site: a vast exnse of undulating greenery, 20 minutes m Karjat on the Central Raily. The result is Tunnel Top, a ni hill station with 450 farm uses for the well-heeled. For tey, the man who revolutionised photo copying business in the ntry, the foray into land develment has been a successful diversication. Trained as an architect, tey found the new vocation "a me coming of sorts".

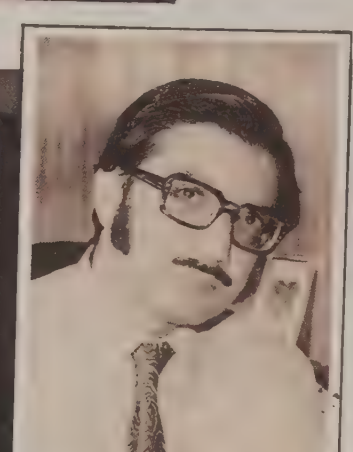
When we first wrote about Datey *usiness India*, 13 October 1980), company operated profitable erox centres" in eight prominent siness areas of Bombay. But er, intense competition — sulting from the similar mushoming businesses all over the ace — and a prolonged strike by 200 employees under the banner Datta Samant's union, made atey think again about expanding s network. He shut down four of s outlets and diversified into real tate by developing plots at eight differt places in Lonavala. Now Datey is deloping land at Umbergaon and Deheri the Maharashtra-Gujarat border. The rox business gave him a modest turner of Rs.75 lakh annually; with his new ray, Datey's companies are doing busiess worth Rs.4 crore every year.

Asghar Patel has also diversified but on a much grander scale. Starting with Patel Roadways (*Business India*, 27 April 1981), he later set up a transport education institute, aimed at drivers as well as other budding entrepreneurs wanting to set up their own transport companies. The next foray was into exports, mainly to the Middle East and after that, into construction. A finance company followed and very recently, a courier company. The House of Patels, as the group is now grandiosely called, employs 1,500 people and over the last one decade, its turnover has increased nearly eight times to Rs.40 crore. "More than 80 per cent of our plans have been implemented," says Patel. "Next on the agenda is moving into sea and air cargo."

Diversification, however, is not the only change that the entrepreneurs have brought about in their businesses. Some have expanded their capacities. Others

have taken to the back seat and handed over the day-to-day running of their businesses to professional managers. A good many have aimed at the ultimate in today's business — exports. But irrespective of their current status, our old entrepreneurs still retain the qualities that helped them change the course of their lives — confidence, innovation, adaptability, perseverence and an ability to think big.

Thus, last fortnight, when Lalit Sheth of Raj Travels (*Business India*, 25 February 1985) ambitiously announced that he was taking over the marketing function of Continental Aviation, the air taxi service which had been grounded even before it took off, there were many sniggers all around. But not from people familiar with Sheth and his legendary entrepreneural drive. Starting with a rented table and telephone in Bombay's central business district at Masjid Bunder, at the age of 19, Sheth soon made Raj Travels a leading travel agency and overseas tours operator with billings of Rs.3.5 crore. Today, Raj Travels (turnover: Rs.18 crore) operates from 17 branches, employs 189 people and apart from the air taxi business, has concrete plans to enter the hotels business. Properties in Pune and Baroda have been acquired through a new company, Raj Executive Holidays Ltd.



Saraf: "We have kept up with the times"

Balsara: admitting his mistakes

If an insatiable quest for growth has driven Sheth, then the ability to adapt to changing business mores has kept Vishwambharlal Saraf on an even keel. The son of the founder of the Remi group of companies (*Business India*, 21 October 1985), says they are still in the running only because they have kep with the times. He el rates: "Earlier we hesitant eve advertise as we f to understand th turns we would after spending thousa Similarly when we pu our new plant, we thoug was a waste of money to fat salaries to well qualified sonnel, especially since we ha started production." The new- Remi has seen sales double fr Rs.26 crore to Rs.54 crore; it has panded its product range from f and mixers to manufacturing sea less pipes with German technolo And family members are no lon inducted — all recruitments are qualified professionals.

Change, however, is called for few years down the road. I tially, the single most importa quality every newcomer must ha — and often displays is confidence, whi Ajay Mathur, mana ing director of Sume Machines Pvt Ltd - formerly Power Contr and Appliances Lt (*Business India*, March 1984), possesse in plenty. When h wanted to expand an modernise rapidly, wel wishers cautioned hir to go slow. Say Mathur, "The biggest mistake you ca make is to let what people say come in th way of your dream." Today, his impa tience has paid off as the group's turnove has jumped from Rs.26 crore in 1983-8 to Rs.100 crore in 1990-91. Known ini tially for its sturdy mixers, the company now also manufactures washing machines and vacuum cleaners. "Our target audience has always been the housewife and we prefer to stick to the knitting," says Mathur.

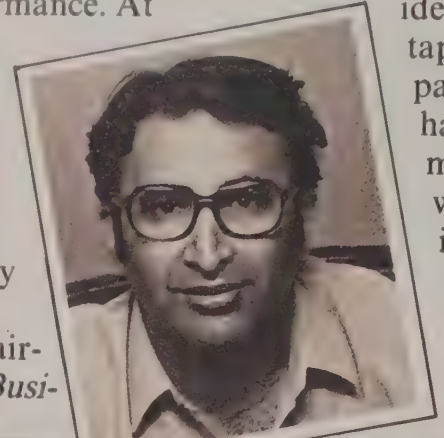
In the case of Kishor Vyas and his Inductotherm (India) Ltd, (*Business India*, 24 March 1986) the most visible change is not the fact that the company now boasts of healthy reserves of Rs.7.5 crore or that it has expanded the product range to manufacture induction melting furnaces of upto six tonnes. What really stand out are the unique human management prin-

es followed by this medabad-based company. fit sharing has been introed right upto the shopr level. Since the last three rs, all increments e been based on rterly appraisal ms that all employees required to fill in. So it not much of a surprise en the Ahmedabad Manment Association recently ferred upon Vyas its "Outnding manager of the year" ard.

For some entrepreneurs, it the innovative streak that pelled them faster ford. When Asghar Patel disered increasing delay in the ivery of goods, his finance mpany started advancing ns to drivers for the purse of new trucks. This sinmove had three immediate outs: the drivers, now ck owners and making out Rs.5,000 every month tead of their previous salary of .1,500, started delivering goods on ue; the depots of Patel's transport comny began handling more goods and fily, the profitability of both, his finance

Patel: big diversification plans

as well as transport company, improved. Similarly, Sumeet Machines has been able to save a lot by cutting down on advertising. Instead, they are concentrating on product demonstrations at dealers' outlets. "Seeing is believing," says Mathur. Again, among the future plans of Naushad Padamsee, managing director of Eagle Flask Pvt Ltd (*Business India*, 19 January 1984), is the establishment of an industrial estate. Here, local entrepreneurs will manufacture various components for the company's products — and these are now many. Eagle, which was earlier only into vacuum flasks, now also makes tea, coffee and dinner sets, thermoware, household electrical appliances and stainless steel vacuum flasks. Naturally, turnover has soared from Rs.7 crore to Rs.60 crore.



Mathur: great deal of confidence

While Eagle has come a long way from its humble origins on Bombay's Chakla Street and now has plants in Talegaon, Ferozabad and Madras, the same kind of national expansion is not true of south-based enterprises. Following the trend set by the bigger southern companies, these entrepreneurs have preferred to stay in familiar territory. Thus, the Washotex group (*Business India*, 1 December 1986) has doubled the production of its washing machines to 9,600 machines per annum in the last five years but these are being sold exclusively in the south (70 per cent in Tamil Nadu and the remaining in the other three states). But one Tamil Nadu-based entrepreneur did attempt to make his presence felt in the north. Hibeam Electronics (*Business India*, 6 December 1982), later known as Solidaire India Ltd, tried setting up a manufacturing unit in Chandigarh but gave up the attempt in August 1983. The reason: "We were south Indians trying to make a break in the north and it was very difficult," concedes managing director A.S. Ramana Prasad.

Nevertheless, while remaining within their narrow domain, these south-based entrepreneurs have put up impressive performances. Gem Granites (*Business India*, 11 October 1982), whose turnover has increased to Rs.42 crore from Rs.3 crore when last written about, continues to retain its dominant position as the largest exporter of granite from India. This, despite some tough barriers. "It has not been a bed of roses all along," admits R.Veeramani, the lawyer-turned-entrepreneur, who is the chairman of Gem Granites. "The state government has not been consistent with its policy regarding the grant of mining leases. This industry also remains very capital and power intensive." No wonder Veeramani is chalking out diversification plans into hotels and yarn exports. Two new companies — Gem Holiday Resorts Ltd (GHRL) and Gem Spinning and Weaving Ltd (GSWL) — have been floated.

Madras-based pump manufacturer Autolec Industries Ltd (*Business India*, 11 February 1985) too has been growing

at a steady pace. Turnover increased five fold in the last five years to reach Rs.15 crore. "We have been continuously exceeding targets set for increasing turnover and market shares," claims managing director K. Vasudevan. He cites involvement of staff at all levels and detailed, conservative planning as the main reasons for Autolec's good performance. At 68, Vasudevan is still the quintessential entrepreneur. "I feel I have not achieved much yet. I am impatient and dissatisfied by nature and this has acted as a spur to growth. I am certainly not smug about my success."

Even Mohanbhai Patel, chairman, Patel Extrusion Group (*Business India*, 27 February 1984), doesn't take his success for granted. Patel's company is today the premier manufacturer of extruded aluminium tubes and counts Johnson & Johnson, Colgate Palmolive, and Glaxo among its major clients. "After all, success is relative," he philosophises. "There are so many others who worked as hard as I have but did not get the same rewards." Subhash Dandekar, managing director of Camlin Ltd, (*Business India*, 3 August 1981) takes a much more practical view: "Success has helped us to strengthen our manufacturing capacity, extend our marketing facilities and expand our network."

Dandekar: now helped by the entire family

Small achievements inevitably lead to the desire for bigger ones. And our entrepreneurs are no different as they chalk out their future strategies. Alkem Laboratories (*Business India*, 25 March 1985), which has made a name for itself in pharmaceuticals, plans to move into cattle and poultry feed, agrochemicals and veterinary products. Solidaire is toying with the idea of moving into video tape decks and audio compact discs. Camlin, which has diversified into pharmaceuticals of late, now wants to concentrate on its main strength — writing products. Hence its accent will be on increasing the sale of mechanical pencils and introducing new products like gold and silver markers. As a result of the increased activities, other Dandekars — including the wives and the aunts — are now actively involved in the family business.

Though they can be regarded as role models for the new generation of businessmen, our entrepreneurs too have made their share of mistakes. Datey rues the fact that he concentrated only on the technical aspects of his business while neglecting finance. But he is now making amends — he has employed one chartered accountant and three senior accountants who report directly to him every day. According to A.R. Balsara, chairman and managing director o sara Hygiene Products (*Business I* 28 April 1980), the biggest mistak company made was to introduce flu toothpastes Ace and Prize. The proc had to be withdrawn from the ma within a year of their launch becau the fluoride controversy.

Like many others, Datey and Bal could pinpoint their shortcomings take corrective measures. But others not so lucky. As a result of the cut-th competition in the home entertainm electronics market, high-fliers like A (*Business India*, 8 November 1982) Cosmic (*Business India*, 31 August 19 have now fallen on hard days. For same reason, the one and only Torto Coils has lost much of monopolistic market sh to a host of me-too pr ucts. Otoklin (*Busin India*, 10 September 198 once the supplier of ind trial filters to big guns li TISCO, BHEL, ONGC and RCF, la became a sick compar And labour trouble plagu Unichem (*Business India*, October 1981).

If given another chanc will some of these not-s successful entrepreneurs able to chart smooth courses for themselves? F that matter, will some of ou high flying winners be ab to repeat their successes Samprada Singh, managin director of Alkem Labora tories feels that the mai constraint today would b organising finance. An Mathur of Sumee Machines says, "Ten years ago, busines was difficult because of bureaucracy. To day, thanks to competitors playing dirty tricks, getting into business is like com mitting *harakiri*."

Despite the odds, these entrepreneurs feel that there's still place for someone who wants to have a serious shot at it. Perhaps Patel of Patel Extrusion speaks for all of his ilk when he says, "The sky is the limit for someone who is willing to work hard." But sweat of course is no substitute for vision and intuition without which none of these enterprises could have got off the ground in the first place.

The Institute

The Institute of Chartered Financial Analysts of India was established as a non-profit educational society with the active collaboration of the Institute of Chartered Financial Analysts, Virginia, USA to satisfy the public need for competent financial analysts and investment managers by establishing educational standards in the field of financial analysis, training of people, conducting examinations, and awarding the designation of the Chartered Financial Analyst.

The Charter awarded by ICFAI is fast emerging as a symbol of professional excellence. Currently there are 74 CFAs, occupying senior positions in banking and corporate sectors. By 1991-92, the number of CFAs is likely to be around 100. Leading institutions such as RBI, IDBI, UTI, ICICI and IFCI reimburse the CFA Programme fee to their staff. ICFAI is a member of Asian Securities Analysts Council, Japan.

(Current enrolment exceeds 16,000)

The CFA Programme

The CFA Programme is a three year training programme primarily focusing on financial analysis and its application in three broad areas: Corporate Financial Management, Investment Management and Financial Services.

The CFA Programme is divided into three levels :

Preliminary Level

Financial Accounting	Quantitative Methods
Financial Management	Economics

Inter Level

Economic Legislation	Security Evaluation
Management Accounting	Project Appraisal

Final Level

Adv. Financial Management	Investment Management
Financial Services	Indian Financial System/
	International Financial Mngt.

Eligibility

Graduation (any discipline). Final year degree students can also apply. The applicants are required to qualify at the Admission Test (Date: Oct. 13, 1991) to be conducted at 25 centres. Certain categories of applicants such as CAs/CWAs/ACSs/MBAs/CAIIBs/First Class Graduates/First Class Post-Graduates are exempted from the Admission Test. Candidates with specified qualifications such as CA/CWA/ACS/MBA/CAIIB are directly admitted into the Preliminary Level. All others have to successfully complete the Foundation Course, to become eligible to take the examinations of the Preliminary Level.

DCM SHRIRAM INDUSTRIES LTD.

Speech by Dr. Bansi Dhar, Chairman at the Annual General Meeting of the Company held on August 23, 1991 at New Delhi.

DR. BANSI DHAR

It gives me great pleasure to extend to you all a very warm welcome to this Annual General Meeting of your Company.

The Directors' Report and the Audited Accounts of the Company for the period ending 31st March, 1991 have been with you for sometime and, with your permission, I will take them as read.

Pursuant to the approval by the Delhi High Court of the Scheme of Arrangement for DCM Ltd., your company comprises of Daurala Sugar Works, Shriram Rayons and Hindon River Mills. This was the first year of operations after the restructuring and we have achieved satisfactory results. Consequently, your Directors have pleasure in recommending a dividend of 20%. I am confident that in the years to come, your investments in this Company will continue to appreciate.

BOARD OF DIRECTORS

DCM Shriram Industries being a new company, one of the first steps we took after restructuring was to strengthen the Board of Directors with the induction of eminent people with vast business and financial acumen. I am sure that your Company will benefit greatly by their experience.

One of our directors, Shri Om Prakash, unfortunately passed away recently. He lent his wide experience and maturity to the operations of the Company, and we shall miss his wise counsel and advice.

NATIONAL SCENE

During the past two years, the country has passed through a period of political instability and economic decline. The unfortunate and dastardly assassination of former Prime Minister Rajiv Gandhi earlier this year was a severe blow to the nation. Rajiv Gandhi's vision of a modern and vibrant India remains to be fulfilled, and I am confident that the people of this country will continue to strive to achieve this goal in the forseeable future.

We are today at the crossroads and it is important for all of us to forget our differences and work for the common interest of the country. It is also important that leaders from all walks of life arrive at a consensus on major economic issues rather than taking narrow parochial stands, so that the Nation can once again progress in the face of global competition.

In trying to find the right path, we could do well to learn from the recent transformations taking place in Russia and Eastern Europe, which confirms that a market led economy is in the larger interest of the country. Political will and courage of the highest order is required to give shape and implement pragmatic policies which are the need of the hour. A silver lining is the fact that the Indian economy and its people have; from time to time, demonstrated remarkable resilience and strength in face of adversity.

The Govt. is displaying sagacity and maturity in dealing with the problems and has already taken some bold steps to bring back the economy on the rails. The new Industrial Policy and the measures in the recently announced Budget are intended to remove some of the structural imbalances. These need to be followed up and accomplished quickly. One hopes that the process of unshakling the industry from the "Permit Raj" will continue.

Some measures that could help to overcome the problems and accelerate economic growth are:

(i) The progress that the country has made is being eroded by population explosion. The resultant tensions are leading to a deterioration in law and order situation. There is an urgent need to evolve a long term POPULATION POLICY which would arrest the growth in numbers and help improve the quality of life of the common man.

(ii) We cannot achieve a significant increase in exports in each and every industry sector in a short period of time. With an approach of selectivity under which a filip is given to selected thrust areas, the country could earn valuable foreign exchange rapidly. India is endowed with vast agricultural potential, natural and mineral resources and good technical and managerial manpower. These could be mobilised for rapid growth of exports. This will also create new employment opportunities.

(iii) Industrial development is a key to economic growth of the nation. The developmental institutions have to ensure adequate and timely availability of finances. Some recent reports about tightening of debt: equity ratio and promoter contribution norms are disturbing. Instead of encouraging growth, such steps will only retard it. If these steps are taken due to scarcity of funds with the developmental institutions, it may be desirable that these institutions divest their substantial holdings in the equity of various private sector companies.

OPERATIONS

Friends, you would naturally be interested in knowing the plans of the company. The units have been in operation for decades and it will be our endeavour to utilise their inherent strength, goodwill and reputation to achieve growth through expansion, technology upgradation and diversification.

Daurala Sugar Works is the oldest operating unit of the undivided DCM Ltd. The plant was set up in 1932 but in spite of its age, it is today one of the most modern plants in the country with a crushing capacity of 5800 TPD. We have applied to the Govt. for expansion of the capacity to 8000 TPD.

At Daurala, we also produce alcohols and a range of fine chemicals and drug intermediates. This complex is the nucleus around which we are pursuing growth in these fields. Work is in hand on a drug intermediate project. It is proposed to implement this through a new company, Daurala Organics Limited. Commercial production is expected to commence by the end of 1992.

Shriram Rayons, the second unit in our fold, was started in 1965. The demand for rayon tyre cord has been declining over the years. Your management has put in concerted efforts to identify pockets where Rayon Tyre Cord can still be used. We have been successful in developing markets abroad and the unit has been able to improve exports in the face of international competition.

This may be a short-lived market. We are therefore endeavouring to look at other areas where we can take some synergy advantage for furture growth. Towards this end, we are actively pursuing a Nylon Tyre Cord project which will utilise part of the infrastructure already available. Necessary Government clearances have already been obtained. In order to make use of surplus viscose capacity, we are also looking at the possibility of manufacturing Rayon Filament Yarn.

The third unit, Hindon River Mills was established in 1972. After restructuring, our efforts to upgrade the plant and marketing operations have begun to show results. I am glad to inform you that we are now able to export yarn once again. Much more needs to be done to further improve the performance which will include replacement of some machinery with more modern ones.

The new policy initiatives taken by the Govt. will open up new opportunities in the face of international competition. Businesses will have to optimise the utilisation of resources, improve quality, bring down costs and endeavour towards fuller utilisation of human potential. In such an era, investment decisions and the quality of management would be crucial to the success of any business. I would like to assure you that your Management is fully alive to these vital issues.

ACKNOWLEDGEMENTS

Before concluding, I would like to convey my sincere thanks and gratitude to my colleagues across the company for their dedicated efforts, the Financial Institutions and our Bankers for their whole-hearted and unstinted cooperation even in the most difficult of times, the Govt. of India and the State Govts. of U.P. and Rajasthan for their guidance and support.

I finally extend to you, dear Shareholders, my sincere and heartfelt gratitude for your continued confidence and encouragement.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

ecoming irrelevant?

current objective of GATT suffers from a lack of realism in trying to ide market access to all on equal terms

deadlines set by the disputing par-s have come and gone. The world, ver, is still witness to the long-drawn phase of the eighth round of nego-ns of the General Agreement on fs and Trade (GATT), a phase marked sturings that threaten to tear apart ery fabric of this trade apparatus. contentious Multi-Fibre Arrange- which was to end on 31 July has given an unconditional extension by her 17 months, notwithstanding the sts lodged by countries like India akistan.

ny is it that a hitherto fairly success-t of trade rules evolved as a result of rounds of negotiations over 40 plus should be subject to such conclu-? Will the extended Uruguay round he end of such travails or is GATT rably moving towards becoming an vant piece of economic quasi-ation?

e basic objective of GATT is to provide e and predictable conditions for et access to all and on equal terms. n that the membership of GATT is now ing at 100, with well over a quarter g developing countries where condi- are far from stable, that objective is d a lofty one. Yet, with China and oviet Union slated to join the body, ms like membership in GATT is an at-ive proposition to the relatively poor state-dominated economies.

onically, the GATT rules are becoming seful, due to the success of GATT in the years when liberalisation of average f levels took place. The creation of Trade Areas thanks to Act 24 of GATT lted in the exemption of half the d trade from GATT's purview.

he second cause for the declining im-ance of these trade rules is the lack of tions associated with non-pliance to their substance. There is a strong lobby for each product, be it e US or in the European Commu- which, with total immunity, pushes overnment for subsidies, support s and the like. All these run counter e very tenets of GATT as a body with an ctive towards rule-oriented competi-. It is this very protectionism in the form of the Common Agriculture Policy of the EC that threatens to deadlock the eighth round now in progress for over four years.

Equal access to market does not by itself guarantee equal competition. For example, in the absence of a local manufacturing plant, marketing office, etc, a foreign producer cannot compete meaningfully with a local producer of goods of the same standard. In view of this, the current round of negotiations has on its agenda the establishment of rules and procedures for trade-related intellectual property rights, trade-related investment measures and trade in services. Given EC's 1992 programme and the importance of the above three areas for other developed economies, these have come to occupy a degree of pre-eminence in the current round. However, the developing countries, most of whom have in any case shown scant respect for liberalisation in the areas of investment and services, are arguing that GATT should take up expansion of liberalisation in agriculture, textiles and the like. Thus the conflict of sectoral interests between industrialised and developing countries forms the third problem.

Yet another hurdle is GATT's complex legal system. Presently GATT has about 200 multilateral trade agreements and hundreds of customs union and free trade area agreements. Although the current Uruguay round has established a total of eight negotiating groups to improve upon GATT as a legal framework and as an institution, there is the ubiquitous 'grandfather cause'. This allows for retention of legislation that existed before ratification of GATT, but that comes into direct conflict with GATT obligations, the signing of codes, side agreements and protocols, etc.

What we have, as a consequence, is a really complex international trade law that does not lend itself to easy administration. In addition, a number of developing countries are exempt from GATT obligations due to the balance of payments clause. The fragmentation of GATT as international public law and the different degrees of applicability of its obligations to different member countries do hardly lend it much credibility. Therefore, the slow but steady erosion in its value, is inevitable.

We have seen quite clearly the phenomenon of regionalism emerging all around. This contributes to stable rules for market access but at a regional level. The European Community, the Free Trade Agreement between the US Canada and Mexico and certain multilateral economic arrangements in Asia are natural manifestations of regional economic interests born of stronger regional ties and a higher volume of trade. And a weak global multilateral agreement would only push countries towards seeking more regional understandings, derailing in the process institutions such as GATT.

Mercifully, it is no more debated by civilised nations whether public international law is law at all. However, any law is only as good as it is enforceable. In that sense, GATT remains only a statement of honourable intentions with several hundred exceptions in the form of side agreements. In its 'substance', it is not a law in the sense of a UN charter or a nuclear non-proliferation treaty, just to take two examples of a single unified law. Given the subject that it seeks to address, it can never become a single uniform law for one hundred and odd countries and thousands of goods and services.

GATT may yet survive our generation but the unrealism of its current objective (providing market access to all on equal terms) is now beyond question.

■ K.S. RAGHAVAN

The developing countries, most of whom have in any case shown scant respect for liberalisation in the areas of investment and services, are arguing that GATT should take up expansion of liberalisation in agriculture and textiles

The author is general manager, COSL, Bombay, currently posted at Zurich. The views expressed herein are his own

After the Gorby scare

The stockmarkets around the world quickly recovered with the demise of the Soviet coup. The Deutsche Mark gained ground as confidence returned, and the dollar fell by 3 pfennigs. The pound sterling, too, lost ground from DM 2.9325 to DM 2.9400. In London, the FTSE index rose to a record high of 2,623, after losing 80.5 points during the coup. In Frankfurt, Tokyo and Paris, too, stockmarkets continued to consolidate gains after the return of Gorbachev. Wall Street, after an initial surge of 88 points on 21 August, calmed down to a more sedate pace on the following days.

Salomon scandal

Salomon Brothers, the leading Wall Street securities firm, is in the throes of an unsavoury scandal involving illegal manipulation of government securities. The US Treasury Department has restricted the firm from dealing in treasury bonds and participating in bond auctions. Top people, including the chairman, vice-chairman and president, have resigned following their failure to report the illegal transactions for four months. Two managing directors have been sacked. The firm's status as primary dealer for the New York Federal Reserve, however, stays unchanged for the time being.

The Polish affair

Financial scandals seem to be sweeping the world. In Poland, another fraud has come to light. This time, Janusz Sawicki, the country's chief foreign debt negotiator has been dismissed. He headed the now disbanded Foreign Debt Servicing Fund, the focus of the controversy.

The fund, set up in 1989 to channel hard currency from the treasury to service the country's foreign debt, has been accused of buying back Polish debt of $280 million from private banks in the secondary market at a discount. Under the debt structuring programme, Poland was to refrain from such purchases. The fund's managers have also been accused of embezzlement and $133 million cannot be accounted for. Sawacki, however, denies personal involvment in the affair, saying that he had sacked the managers concerned last year.

Scam after scam

The Toyo Shinkin bank, an Osak cooperative, is the latest skeleton out of the Japanese banking close on the heels of a series of fraud s involving securities houses and ba Toyo Shinkin caper involves the Y342 billion fake deposit certific an investor, Nui Onoue, which s as collateral to obtain loans from financial institutions. In a bid to run on the bank, the Bank of Jap the Ministry of Finance pledged s to the bank. The news of the affa the stockmarket reeling, and the index dropped 113.67 points. It als up pressure on the finance minis resign. But he has not put in his p yet.

Healthy signs

The Dutch group Philips, which suf heavy losses last year, has recovered improved financial results for the se half of this year. The group's net inc rose to Fl 322 million, up 86 per cen the same period last year. Medical

and components were the money
ning divisions, while consumer elec-
ics and lighting showed a drop in
its. Regionally, Asia, Latin America
Europe have done better, while the
h American operations have almost
hed break-even point.

imming Jaguar

d Motor Company's Jaguar subsi-
y is planning to lop around 2,000 jobs
n it's workforce of 10,500. The com-
y laid off 1,800 workers earlier this
, and is discussing the further cuts
trade unions and employees. With
k automobile sales in Britain and the
the Ford subsidiary lost 66.2 million
nds in 1990 and has been cutting costs
several months

ıditors in the dock

e Waterhouse, one of the world's
est accounting firms has come under
ck for its involvement in the BCCI af-
. Price Waterhouse audited the ac-
nts of the bank for three years, and
e it a clean chit up to 1989. Subse-
quently, the firm investigated the BCCI on behalf of the Bank of England, and discovered the fraud. The firm is under fire from other accountancy firms, and the Labour Party in the UK, and has been sued by a depositor from Oman. The Omani investor, Mohammed Khasruzzaman has accused the firm of misrepresentation and negligence in approving the bank's statements. Price Waterhouse, however, is claiming that essential documents were hidden from them, although they had misgivings about misconduct.

Midland in a mess

The woes of the banking industry in the UK are unending. The country's clearing bank, the Midland Bank, reported losses of almost 71 million pounds in the first half of the year. Chairman Sir Peter Walters admitted that the loss was 'unacceptable'. Midland's sorry state is attributed mainly to its large burden of bad debts. The bank provided 530 million pounds to cover loans to small businesses, which have been worst hit by the recession. Most problem accounts involve loans of less than 50,000 pounds. The bank reduced its dividend to a token 1.7 pence.

Down with the deficit

The US trade deficit for June was $4 billion, the lowest in eight years. In 1990, the June figure was $6.3 billion. The trade gap was lowered despite a 1.4 per cent fall in exports, as imports fell further by 3 per cent. The Federal Reserve Board also released a report saying that industrial production in July rose by 0.5 per cent, which was higher than expected. The reports boosted the value of the dollar, which passed 1.76 Deutsche Marks in New York trading.

Fares pared

The US airlines are on a fare cutting binge. Following the example of USAir, American Airlines slashed its lowest discount fares by 28 per cent on all domestic routes. United Airlines, Delta Airlines and TWA are also planning to reduce discount fares further, in some cases by almost 50 per cent. While every year sees a drop in the fares after the post summer rush, this year the cuts have come earlier and are deeper than usual. The airlines' move, say industry analysts, has been prompted by the economic recession.

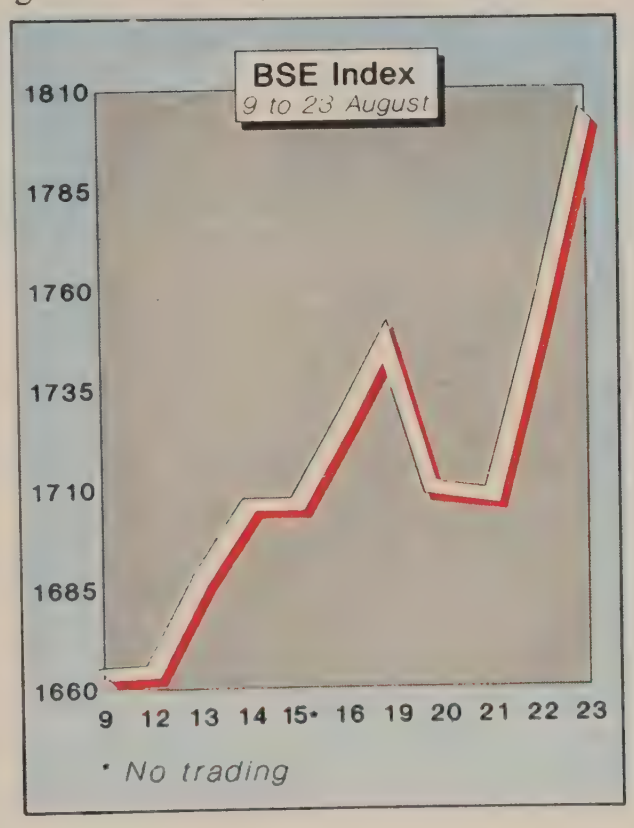
CKMARKET REVIEW

ash scrips on top

r the fortnight ended 24 August 1991)

	24 August	10 August	percentage change over fortnight	year
E Sensitive Index	1802.81	1663.57	+ 8.4	+56.6
E National Index	859.90	796.43	+ 8.0	+44.9
l (Rs.cr) fortnt. ended	208.50	212.11	− 1.2	+41.9

e seemingly effortless upswing of the market continued for the fortnight er review as the bull market entered eventh month. The 'Gorbachev ef- ' was visible in world markets which by about 5 per cent. But even before ple outside the USSR could learn to "Gennadi Yenayev", Gorbachev was k and so was the upswing in markets ldwide.



he market was primarily influenced nnouncements at the annual general tings of the market leaders, Tisco and o. The news was encouraging, Tisco ouncing that turnover was up a dy 16 per cent for the first quarter n profits likely to rise similarly. The p recorded a modest price rise of 3.8 cent to Rs.246 over the fortnight. l being one of the industries which is kely to perform well, news of Tisco's quate performance far exceeded the ket's expectations.

od going. Meanwhile Telco an- nced that turnover for the first four nths was up by 28 per cent and exports well up by 45 per cent. The company raised LCV prices during the fortnight, king the second such rise in the last months. Telco closed the fortnight at 318.75, up from Rs.281.25 (+13 per t).

eliance stayed firm at the top slot in ding volume that it had reached in the t week of August. Volume averaged 19 crore per day, followed by Tisco's 15.75 crore. The scrip closed at 194, up from Rs.176 (+10.2 per cent). anwhile, Reliance Petro slipped to 27.50 from Rs.29 as expectations ut the likely merger at an exchange ra- of six Petro shares for one of Reliance nged to a 7:1 ratio. This followed s reports, including the cover feature *Business India*, which highlighted the her than expected costs of implement- RPL's projects.

Larsen & Toubro, the focus of proxy lectors' eyes, was moderately traded over the fortnight, closing at Rs.153, up from Rs.147.50. Fresh speculative action will probably begin after the Ambanis' involvement is sorted out at the forthcoming EGM.

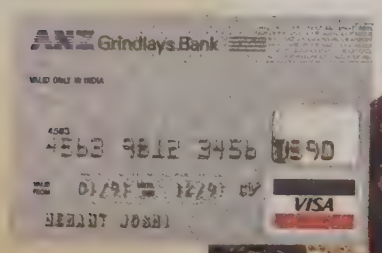
Colgate disappointed the market with a 3 for 5 bonus (the market expected a 4 for 5 bonus). The scrip which rose to Rs.365 on 13 August on news of the upcoming board meeting for bonus slipped thereafter to Rs.362.50 by the end of the fortnight. If the past is a guide to Colgate's behaviour, its shares will stagnate

until about six months after the scrip goes ex-bonus after which the ex-bonus price will rise to about Rs.300, thereby supplying a good return to the patient investor and frustrating the ones that rely on market timing.

Other specified shares in the limelight included Century and Sesa Goa. Sesa Goa closed the fortnight at Rs.651.25, up from Rs.437.50 (+48.9 per cent). Century closed the fortnight at Rs.7,300, up from Rs.6,625 (+10 per cent) on the news of its bonus approval by the CCI, thus disproving the view that high priced shares tend to underperform in the market.

If Sesa Goa's increase appears staggering, it ought not. Scores of shares, particularly those in the cash list, outperformed the market risers. It was, as a broker put it, the fortnight for cash shares. Unusually, the rise in the National Index almost equalled that of the Sensitive Index. Over 400 cash shares recorded new highs during the fortnight. Among them, Birla 3M rose from Rs.102.50 to Rs.180 (+75.6 per cent), Corn Products from Rs.46 to Rs.80 (+74 per cent) and Lan Eseda from Rs.31 to Rs.50 (+61 per cent).

Party time at the bourse. The scrips initially affected by the Soviet coup were shipping, tea and selected pharmaceutical shares — shipping, because the recent firmness in international freight rates has been partly due to large grain shipments to the Soviet Union from the US, and tea and several Indian pharmaceutical companies, because of heavy reliance on exports to the Soviet Union. However, these shares recovered smartly following the destabilisation of the coup. For example, G.E.Shipping fell to Rs.86 on 20 August, but recovered thereafter to close the fortnight at Rs.101.



The big question in the minds of marketmen at the end of the fortnight was whether the party was still on, and if so, how long this would continue. Interestingly, very few foresee a crash *a la* October 1990. The economy looks better now and the monsoons suggest that inflation — the most worrisome factor (economically as well as politically) — should fall.

But there has to be some level at which the market must "stabilise", ie, cease to rise at a spectacular rate and begin its normal behaviour of random movement. Sustaining the current price-earnings multiple of 27 clearly requires extraordinary growth over the next several years and not just this year. With the economy doing well and with the government liberalising, this is possible. On the other hand, many companies will not grow at a high rate and are, therefore, currently overpriced. In general, the older companies are probably better placed to benefit from growth. As such, further significant rises in the general market level seem less likely than a concentration on selected growth scrips.

WHEN YOU HAVE ARRIVED, LET YOUR CARD DECLARE IT.

THE MARK OF
A FAST-TRACK
EXECUTIVE

If you don't deserve the ANZ Grindlays Visa Card, then who does?

You have worked very hard indeed to get where you are in your profession, haven't you?

Well, why shouldn't everyone know it?

Respect is not all that the card gets you. It is accepted at over 15,000 establishments like shops, hotels and restaurants, which display the Visa sign.
You can buy just about anything on your card. For your home. For travel. For entertainment.

You can choose how you would like to pay. You can pay the entire bill at the end of the month. Or just 10% of the total outstandings. Or any amount over 10%.

Cash at 56 branches across the country. Show your card at any of our branches and you can get instant cash.

Your spouse, and children above the age of eighteen years can have their own cards, charged to your account.

You need not even have an account with our bank to get our Credit Card.

Now that you have arrived, claim the privileges you deserve.

Telephone or write to your nearest ANZ Grindlays Bank Branch or to:

Card Services Division, ANZ Grindlays Bank, 132, Mint Road, Bombay 400 001. Phone: 2623081, 2623082.

EXCHANGES

shering in egative benefits

e growing reliance on capital markets as raised the issue of efficiency of the ing stock exchanges. It is clear that e is considerable scope for improve-t. For example, only a fifth of the es on the Bombay Stock Exchange nation's premier exchange account-or two-thirds of total trade) are ac-y traded.

his may be because over 3,000 com-es are listed on the BSE compared with n 1980. The number of memberships however, risen by only 16 over this od to 489. Hence, the capability of ex-g brokers to service a much larger nu-r of shares has been reduced. It is not ommon, for example, to find up to w scrips being traded by a single er on the BSE trading floor.

eanwhile insider trading is rampant, ll investor service poor and investors ide the metros complain that trading me in the regional stock exchanges is thin.

proposals. These are the findings of igh powered study group" set up by government last year to study the es-ishment of new exchanges, under the rmanship of ex-UTI chairman M.J. wani. To counter the problem areas, report makes three distinct proposals. irst, it proposes the establishment of a onal system for clearing of transac-s and scripless trading (via a central-depository for shares). Second, the mittee has proposed linking the ntry's stock exchanges to allow for ef-nt inter-market trading under the is of the Securities and Exchange rd of India. This is to be set up via a e-tier market system of principal and onal stock exchanges and additional ling floors (ATF).

inally, it is proposed that four new ex-nges be established (at New Bombay, gpur, Gwalior and Chandigarh) in ad-on to an ATF at Lucknow. The one at v Bombay, to be called the National ck Exchange, will serve as a model and equipped with facilities for country-e accessibility.

herwani compares the NSE with the erican Stock Exchange of the US nex), placed between the BSE (India's sion of the New York Stock Ex-nge) and the proposed OTC exchange (like NASDAQ of America). According to him, several of the BSE's inefficiencies including the thin market for debt securities and the absence of markets for derivative securities such as options and futures, could be offset by the NSE.

However, the response to the committee's proposals has been mixed. While there is considerable support for national trading systems, there is less for the establishment of new exchanges, particularly the one proposed at New Bombay. The BSE, in particular, is disturbed at the prospect of its fortress being stormed.

Status of the BSE. This then raises the question of how effective the BSE is. M.R. Mayya, executive director, BSE agrees that there are a few wrinkles that need to be ironed out. Says he, " The solution to the problem is not to set up a new exchange." He prefers the process of "continuous reform", quoting, for example, the fact that the BSE has recently started using the PTI stock scan.

The proposed Over the Counter Exchange has other reasons to be disturbed about. The kind of hi-tech computerisation that the report talks about has already been planned at the OTC. Its chief executive, Ravi Mohan, strongly supports linking up the stock exchanges, but an entirely new stock exchange could, he feels, duplicate functions at the BSE, the NSE and the OTC.

The American experience where the Amex has decreased in importance is a pointer. The NASDAQ Fact Book claims that in 1979 Amex had 8.5 per cent of the share volume, while in 1989 this figure dropped to 4 per cent. Meanwhile, NASDAQ's share rose from 28 to 43 per cent (the balance was with the NYSE). Shirley Goldenberg, author of *Trading Inside the World's Leading Stock Exchanges of the World* says, "Wall Street is uncertain whether the NYSE or the NASDAQ will win in the slugfest, but there is no problem in pinpointing the loser. With the Amex squeezed between the NYSE's appeal to companies with upscale pretentions, and NASDAQ's appeal to the types of smaller companies that used to be listed on Amex, the Amex is becoming increasingly redundant."

Visualised in this light, it would seem as if the OTC has better chances of survival than the NSE. However, the government has already approved the Pherwani committee's report and asked the Infrastructure Leasing and Financial Services Ltd to initiate the establishment of the NSE.

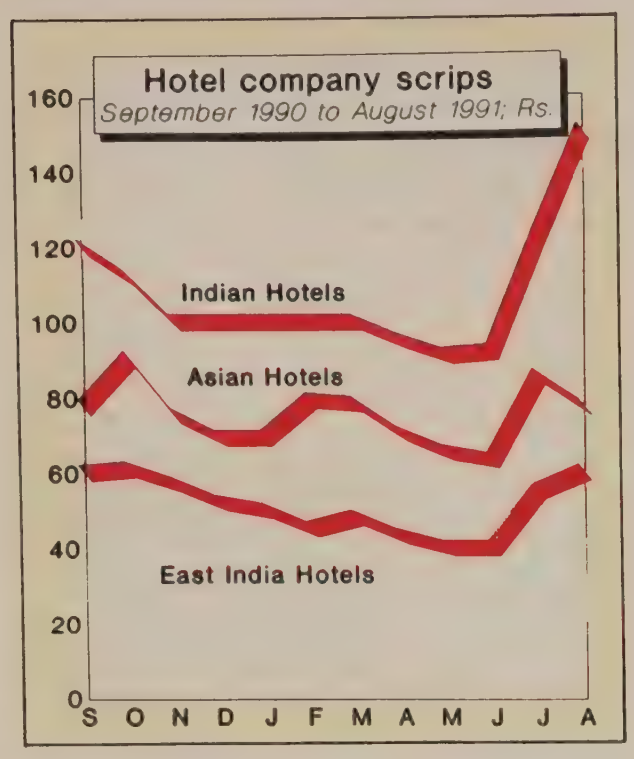
"OUT OF QUESTION"

When my secretary suggested I switch to Speed Post, I out-of-questioned her out of the room.

Later, better sense prevailed (she is a charming secretary, and quite indispensable) and I called her in to hear the details.

In brief, she said that Speed Post was as efficient, reliable and accountable as any other courier, much less expensive, with a much larger network. So there.

"Try it", I said gruffly. Famous first words. Now, we use only Speed Post. And every now and then, my secretary looks at me out of the side of her eye....



Maadhyam

e hotel industry

industry's performance tends to be onal. There is a lean period which from April to September when the pancy rate can drop as low as 50 per . The peak season from October to ch usually shows occupancy rates at er cent, at times even crossing 100 per . For a five star hotel in a metro to k even, an annual occupancy rate of er cent is required.

the year 1990-91, however, disrup- s at home and the Gulf war created oc in the industry. Tourist arrivals, ch had been increasing at an average of six per cent per year for the last few s, dropped by 0.5 per cent in 1990 and ign exchange earnings dropped by 24 cent. The north was hit the hardest. ording to Karumbaya, an executive mittee member of the Federation of el and Restaurant Association of ia, "For every empty hotel room in nbay, there were three in Delhi." se low occupancy levels caused the fitablilty of hotels to drop signifi- ly in 1990-91.

an Hotels. This is the smallest of the ka considered here, but the highest in ns of profitability. The occupancy rate his hotel dropped from 87 per cent in 9-90 to 60 per cent in 1990-91. Yet, the npany has managed a 36 per cent oper- g margin which is close to normal. As ch as 68 per cent of its earnings is in ign exchange. It has also paid off all oreign debt and its interest costs are ligible. Asian Hotels is planning a ma- expansion of 800 rooms in the next years in Agra (completely financed ough internal accruals), Jaipur and know. The scrip closed at Rs.77.50 on August, discounting earnings 15 times.

East India Hotels. East India Hotels is the second largest in the hotel industry. Turnover remained stagnant in 1990-91. During the year, the Oberoi Towers, the flag bearer in Bombay, had a fire which led to the closure of 600 rooms for over two months. The damage caused was estimated at Rs.10 crore. Earnings per share for the year 1990-91 halved to Rs.2.23. The scrip currently quotes at a year-high of Rs.60, which means a relatively high price-earnings multiplier of 25.75.

Indian Hotels. The largest five star chain in India with over 4,000 rooms in India and 3,500 rooms outside the country, found its occupancy rates falling by 20 per cent from the normal level during the period September to March 1991. However, according to a company spokesperson, Indian Hotels did not suffer as much because the fire at the Oberoi Towers caused all the reservations of that hotel to shift to Indian Hotels. "Even though this is not the way we would like to earn revenue in the future, this did help our bottomline," says the spokesperson. Interest costs for the year have increased significantly due to a 26 per cent rise in the debt. Pancha, the vice-president (finance) of Indian Hotels, claims that interest costs have increased because working capital requirements were higher. Besides, a low occupancy rate cannot cover high fixed costs that hotel maintenance incur. The result has been a drop in net margins from 8.14 per cent in 1989-90 to 6.10 per cent in 1990-91 (which is higher than the industry average of five per cent). The scrip quoted at Rs.150 on 26 August which is also its 1991 high. The PE ratio for the scrip is comparable to the market PE ratio at 25.

The current year. Things have improved this year. Most important, says an analyst, occupancy is back to normal levels. With the foreign exchange now more precious after devaluation, the industry is expected to achieve turnover rises of 40 per cent over the year 1990-91. An improved bottomline will follow. For example, if Indian Hotels can maintain its net profit margin at 5.7 per cent, profit after tax should rise from Rs.9.02 crore in 1990-91 to over Rs.12 crore for the current year.

SKF Bearings

For the year ended March 1991, capacity utilisation has fallen slightly, margins are down, dividend has been maintained at 15 per cent and Capital India the code name for their modernisation project is scheduled to be operational by end 1993.

"Demand still holds firm," says a confident Gordon Huddy, managing director of SKF Bearings, "While there is excess capacity and a cyclical recession the world over, Indian bearings manufacturers continue to do well."

Buyers of SKF's shares might agree. The share price currently quotes at Rs.2,775, near its all-time high and at a price-earnings multiple of 39. A look at the balance-sheet is less reassuring. SKF utilised 87.9 per cent of the installed capacity of 40.05 million bearings last year with sales near the Rs.200 crore mark.

Inventory tightened by 20 to 110 days but operating margins fell by 6 per cent and net margins by 44 per cent leading to an EPS of Rs.71.5 as against Rs.93 last year. Says a leading merchant banker of the SKF scrip, "Once Capital India is completed by 1993, turnover should rise to Rs.400 crore and gross profit to Rs.85 crore. The company will by then be in an unmatched position in terms of both local

upward trend, other segments like two and three wheelers and jeeps have registered a slight decline. Demand from the replacement market is, however, encouraging and the recent devaluation of the rupee has provided some protection against imports.

TRENDS

Hindustan Lever

For the six months ended 30 June, 1991, Hindustan Lever's net profit is up 27.62 per cent, while operating profits are up by 28.54 per cent from the comparable period last year. Net profit margins, at 5.55 per cent, have stayed almost the same as for the same period last year.

The company, which presently manufactures soaps and detergents, chemicals, personal products, and agriproducts, is setting up a Rs.10 crore factory in Maharashtra that will meet the worldwide requirements of Pears soap. Exports for 1990, meanwhile, were to the tune of

RESULTS ANNOUNCED

odfrey Phillips

ck price at Rs.460 soars way above the 90 high of Rs.247.50; the company ses the year ended March 1991 with a bonus; dividend payout of Rs.7.50 per are

e company logged a gross profit mar- of 4.3 per cent (2.1 per cent) on a turn- er of Rs.531.96 crore (up 14 per cent). an equity base of Rs.2.60 crore, EPS bled to Rs.45.19 (Rs.15.27). The divi- nd was Rs.7.50 per share (Rs.5.00) at a yout ratio of 16.6 per cent (32.7 per nt). The bonus will double the equity to .5.20 crore. The market price discounts rnings 10.2 times.

ndo-Asahi Glass

ross profit margin doubles while the EPS five times higher; 1:1 bonus announced d dividend per share doubled for the ar ended March 1991

do-Asahi manufactures sheet glass, tured and wired glass. On a turnover of s.55.35 crore, the company has posted a oss profit margin of 25.7 per cent (13.8 r cent). On a equity base of Rs.3.22 ore, EPS is Rs.27.80 (Rs.5.68) while divi- nd per share is Rs.4.00 (Rs.2.00) at a payout ratio of 14.4 per cent (35.2 per cent). The 1:1 bonus will take equity to Rs.6.44 crore. The scrip quotes at Rs.360, way past the 1990 high of Rs.240, discounting earnings 12.9 times.

Indian Rayon

Maintains dividend of 30 per cent; margins under pressure; Rajshree Polyfil, a division of the company, implementing a 15,000 tpa polyester filament plant in technical and financial collaboration with AKZO Fibres & Polymers-Enka of the Netherlands

For the year ended June 1991, the company's turnover has increased by 18 per cent to Rs.479.12 crore. However, margins have fallen; gross profit is up by 7 per cent to Rs.50.76 crore and net profit is down by 24 per cent to Rs.15.04 crore.

During the period under review, production of rayon filament yarn was the highest ever but sluggish market conditions, coupled with higher import duty on pulp and a 33-per-cent hike in excise duty on rayon yarn, has put pressure on margins.

Meanwhile expansion of the cement capacity was completed through installation of a second kiln. The carbon black plant achieved 101 per cent capacity utilisation.

Prestige Foods

Net profits up by 171 per cent; EPS edges to par value; dividend up three points to 18 per cent.

For the year ended March 1991, the company processed 1.08 tonnes of soyabeans, 24 per cent more than it did last year. This has pushed its turnover up by 15 per cent to Rs. 80.89 crore.

The company's exports were down 12 per cent, mainly due to the Gulf crisis. However, in the current year upto July 1991, export orders worth Rs.13 crore have so far been executed with more than Rs.10 crore orders on hand.

IN BRIEF

Vishva Electronics, a 100-per-cent EOU, is being set up at Ahmednagar by the Rs.15-crore Nayyar group of the same city to manufacture audio and video tapes and cassettes. This is the latter's first foray into manufacturing activity. The new company has entered into a technical collaboration with Magnetic Machinery of Hongkong; the latter plans to buy back at least 75 per cent of Vishva's production. Of the total project cost of Rs.22.83 crore, around Rs.14.25 crore will be spent on import of equipment.

Delhi-based **Parasrampuria Synthetics** proposes to put up a 100-per-cent EOU for producing cotton yarn with a capacity of 25,000 spindles. The unit, which will be set up in cotton rich Madhya Pradesh, is expected to cost Rs.43 crore.

Asian Tractors, having gone public last year, has commenced trial production in June 1991. Commercial production is slated for end-September.

Incab's new jelly-filled telecommunication project at Jamshedpur in collaboration with Ericsson Cables AB of Sweden is ready to commence commercial production.

G.L. Rexroth Industries has completed the third phase of its modernisation programme with the installation of three more CNC machine tools. This programme involved a cost outlay of Rs.1.50 crore.

Bombay-based **Shrenuj & Company** is setting up a jewellery manufacturing unit at SEEPZ in Bombay. In order to part finance this, the company plans to come to the capital market with a public issue aggregating Rs.17 crore.

Suman Motels has declared a maiden dividend of 12 per cent for the year ended March 1991. The company proposes to change its name to SM Industries as it plans to diversify into other businesses.

Soya Udyog has embarked on an expansion plan which will increase its solvent extraction capacity from 300 to 400 tonnes per day. For the year ended March 1991, the company has declared a dividend of 15 per cent.

Lunar Diamonds is setting up its second 100-per-cent EOU at the Noida Export Processing Zone. It will shortly tap the capital market to part finance this plan.

Hyderabad-based **Satyam Computers** is setting up a 100-per-cent EOU for software exports. The project's capital outlay is placed at Rs.15.9 crore.

Shree Rajasthan Syntex of Udaipur is planning a new project at a cost of Rs.22 crore to manufacture polypropylene multifilament yarn.

Metalman Pipes is embarking on a Rs.10-crore cold rolled steel strips project with an installed capacity of 12,000 tpa.

Alsa Marine and Harvests

This small company will now go public and join multinationals like Hindustan Lever and Britannia Industries for whom such business forms but a small part of their larger business.

Alsa Marine and Harvests Ltd was incorporated in September 1989 taking over the business of three partnership firms engaged in aquaculture, processing and export of marine products. AMHL now has its processing facility near Vishakapatnam, it has developed aquaculture on 16 hectares of its own land near Nellore and has leased its processing facilities at Cochin, Calcutta and Madras. The company's sales for the year ended March 1991 were Rs.21.8 crore (all exported) while net profit was Rs.87 lakh.

Alsa Marine and Harvests	
Issue opens	: 5 September 1991
Size of the issue	: Rs.2.84 crore
To Indian public	: Rs.1.86 crore
Instrument	: Equity shares of Rs.10 each
Promoters	: Altaf Pasha, Salim Pasha, Elias Sait
Project	: Expanding existing aquaculture and setting up new processing facilities
Cost of the project	: Rs.6.62 crore
Plant location	: Nellore, Calcutta, Vishakapatnam
Listing	: Bombay, Madras

The company has made several proposals — to develop another eight hectares of land at Nellore for aquaculture at an estimated cost of Rs.55 lakh, to set up a new processing plant at Calcutta with modern facilities including plate freezers (3,000 mt pa) fish processing equipment (2,500 mt pa) cold storage (300 mt pa) and the individually quick frozen (IQF) freezer (3,000 mt pa). Says Elias Sait, managing director, "It is the IQF which will enable us to have a better hold in the export market."

The expansions are in addition to the existing facilities and are expected to be set up by September 1992. Modernisation and expansion is also underway at the company's Vishakapatnam processing plant. Processed marine products consist of shrimps, lobsters, cuttlefish, squid, etc. Exports to Europe and Japan will constitute a major part of AHML's sales.

Technology upgradation being the key factor for an improved status in this industry, AMHL is now confident of facing up to competition from well-known groups like Tatas and Thapars.

There is very little government support to the industry but the new benefits accruing from the exim scrip are expected to add to profitability.

I. G. Petrochemicals

Promoted by Mysore Petrochemicals Ltd, I.G. Petrochemicals is a new company with turnover of Rs.29.59 crore and profit after tax of Rs.2.70 crore during the 15-months ended September 1990.

I.G. Petrochemicals is setting up a plant at Taloja, in Raigad district of Maharashtra to produce 45,000 tonnes a year of phthalic anhydride (PAN) at a cost of Rs.62 crore. Financial assistance and technical collaboration is to be provided by Lurgi of Germany which will hold 10 per cent of company's total equity of 19.61 crore while Mysore Petro keeps 35 per cent.

The plant, will be a 100 per cent EOU and the company has already entered into an agreement with a Hongkong-based associate company of Lurgi which will purchase 100 per cent of the company's production in the first year and 75 per cent in the subsequent four years.

I. G. Petrochemicals	
Issue opens	: 9 September 1991
Size of the issue	: Rs.10.61 crore
To Indian public	: Rs.6.56 crore
Instrument	: Equity shares of Rs.10 each for cash at par
Promoter	: S.S. Dhanuka
Project	: A 100 per cent EOU for phthalic anhydride (PAN)
Cost of the project	: Rs.62 crore
Listing	: Bombay, Delhi and Calcutta

Despite this marketing arrangement, the question most frequently asked is, will the company get a remunerative price? The world demand and supply position for 1992 are expected to match at 2 lion tonnes (mt) while in the foll year, the demand is expected to be s more than the supply.

S.S. Dhanuka, chairman of the pany however, is confident that hi plant can take care of the demand-s gap of about 70,000 tonnes. More according to him, I.G. Petrochem will produce PAN at prices which can pete globally because his technolo state-of-the-art. Besides, PAN is not a product from Dhanuka. Mysore Pe plant with 12,000 tonnes capacity ready producing PAN since 1976.

Shreyans Paper Mill

This existing paper manufacturing c pany is diversifying into another bo ing industry — cotton spinning. Shre Paper Mills Ltd is setting up a ring s ning unit of 24,960 cotton spindles fo

Shreyans Paper Mills	
Issue opens	: 3 September 1991
Size of the issue	: Rs.21 crore
To Indian public	: Rs.7.31 crore
Instrument	: Partly convertible debenture of Rs.300 each. Rs.200 will be convertible into five equity shares of Rs.10 each at a premium of Rs.30, nine months from allotment, Rs.10 will be non-convertible
Promoter	: D.K. Oswal
Project	: To set up a spinning unit for the manufactu of carded/combed industrial cotton yarn
Cost of the project	: Rs.37 crore
Plant location	: Ludhiana, Punjab
Listing	: Bombay, Delhi, Calcutta, Madras, Ludhiana

manufacture of industrial cotton yar Says D.K. Oswal, chairman and mana ing director, "The company hopes to e port at least 25 per cent of its productio to European countries."

Earlier, Oswal was the managing direc tor of Vardhaman Spinning and had als promoted Mahavir Spinning in the Shre yans group. Adhinath Textiles Ltd, manufacturer of woollen/worsted yarn i

sently a company in the SPML group. The company will import autoconers m Murata of Japan and Savio of Italy combers from Rieter of Switzerland cost of Rs.3.21 crore. The spindles are ng procured from Indian manufacers. A phased project implementation been followed. This has resulted in 00 spindles already being operational. other 18,000 spindles are expected to operational from October 1991 and project will be completed by -1992. The main raw material, cotton, l be obtained from Punjab, Haryana Rajasthan.

n the paper business, thanks to continus upgradation, SPML now has a capay to produce 20,000 tpa of paper. In the t three years the 100 per cent capacity lisation has resulted in a total income Rs.34.8 crore for the 18-months ended arch 1991 and a net profit of Rs.4.09 re for the same period.

According to D.K. Oswal, the comny has a higher profitability as its prot is agro-based. The management has ns to increase capacity to 30,000 mt a ar. However, this is to be made via the ceover of a sick unit at an investment st of Rs.20 to 25 crore.

After conversion of the present rights n public issue, SPML's equity capital will around Rs.6.5 crore. This is not high mpared to other companies with simiprojects.

The company has been paying continus dividend since five years but the acunting years have been changed twice, 17 months up to September 1989 and 18 months up to March 1991, in the t three years. The management expects boom to prevail in both industries and ojects a turnover of Rs.42 crore for arch 1992 and Rs.57 crore for March 93.

Maharaja International

ith convenient finance schemes bringg luxury appliances within the common an's reach, the production of refrigerars, washing machines, dishwashers, etc on the rise.

The Maharaja brand of home apiances like mixer-grinders, juicers, elecic irons, semi-automatic washing achines have been in the market for me years. Now the management claims at it is the country's second largest anufacturer of both washing machines and mixers.

The new project with an installed capacity to manufacture 250,000 refrigerators and 100,000 dishwashers a year, is being set up with technical collaboration from Siltal Casa, Italy. Commercial production is scheduled for end October 1991 this year.

The promoters are confident that their refrigerators of capacities with 165 and 240 litres will be on a par with the present market leaders with respect to quality as well as efficiency. The dishwashers, according to Hari Om Bhatia, director, have been adapted to Indian conditions. However, the price of a dishwasher will be prohibitive he says. Initially, the company will be importing critical components like the timer and programmer, compressors, heaters and the thermostat. The company hopes to offset the outflow of foreign exchange via exports. This is clear from the prospectus which states that government stipulations make exports mandatory.

Maharaja International	
Issue opens	: 9 September 1991
Size of the issue	: Rs.7.35 crore
To Indian public	: Rs.4.38 crore
Instrument	: Equity shares of Rs.10 each
Promoters	: Harish Kumar, Hari Om Bhatia
Object of the issue	: To set up a plant for the manufacture of refrigerators and dishwashers
Cost of the project	: Rs.11.35 crore
Plant location	: Alwar, Rajasthan
Listing	: Bombay, Delhi, Ahmedabad, Calcutta and Bangalore

The company was incorporated in August 1988 and, to date, no profit and loss account has been prepared. The group turnover for 1990-91 was Rs.25 crore. However, Bhatia predicts a turnover of Rs.100 crore for the company in the next three years. The company hopes to improve turnover through its new products which will fall into the higher price range.

The company is banking on its marketing network, a bit of brand loyalty and the fact that it is the first entrant in the market with dishwashers to help achieve its target.

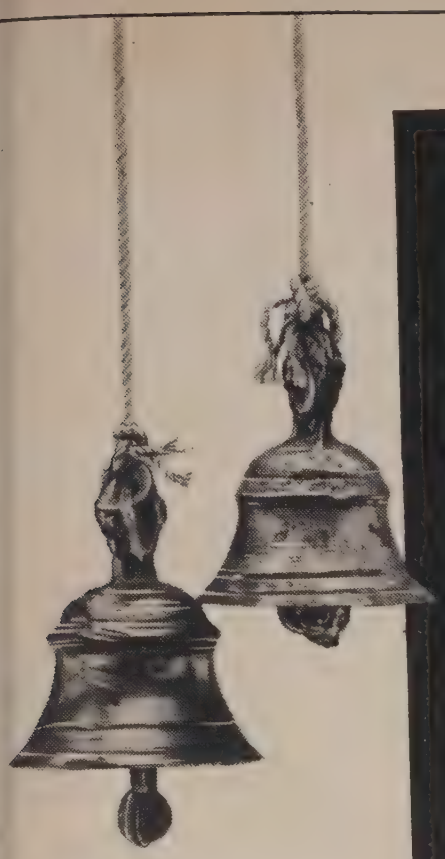
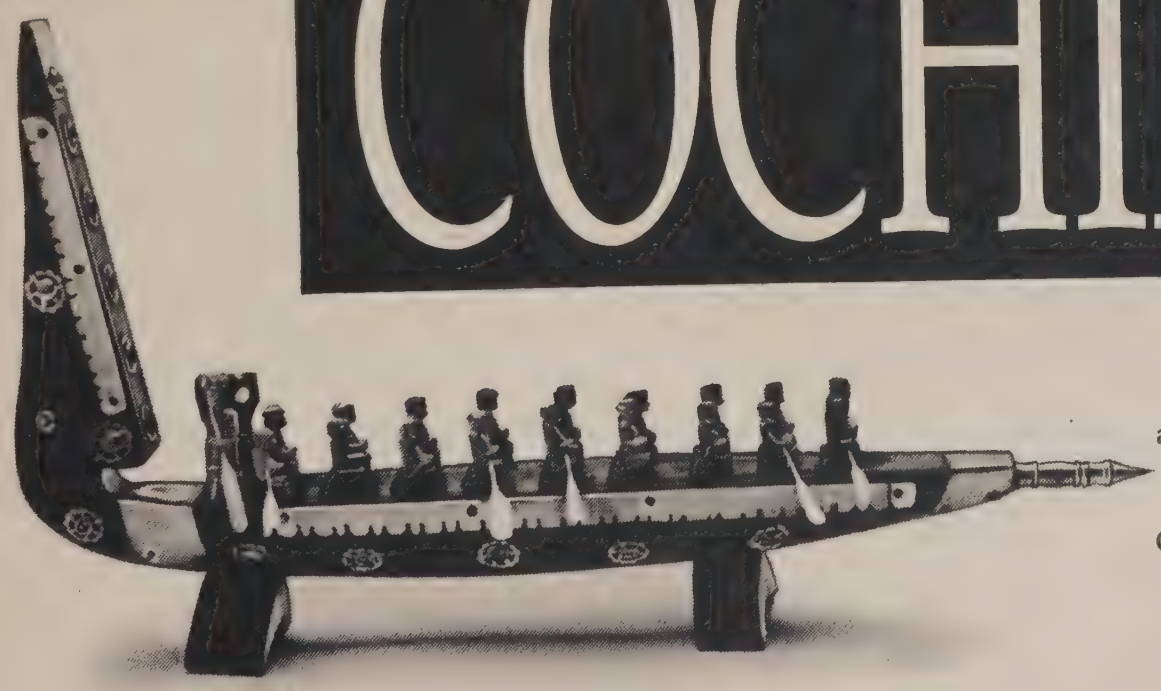
almost.

Take in a show at the Fine Arts Theatre. Improve your handicap at the Bolghatty golf course. Show off your cocktail-making skills at the Yacht Club. Sing shanties along with residents of the naval base nearby. Sneer at people who say Cochin is boring.



Kerala is India's only 100% literate state. Does that tell you something about the quality of schools, colleges and universities you'll find in Cochin?

If she's still reluctant, take her along to spend an evening with J.Negandhi, Vikas Rishi, Madhukar Mishra, Kapil Sahoo and Abhijit Bhattacharya. They'll tell her why they've never regretted their decision to leave a stuffy metropolis and work for Kancor in Cochin (Don't let us down, guys).



Kancor Flavours and Extracts Ltd.

HOW TO STOP YOUR WIFE FROM THROWING A FIT WHEN YOU TELL HER OF YOUR NEW JOB IN COCHIN.

At least once a year, do visit Guruvayur, the Dwarka of the south; Kaladi, where Adi Shankaracharya was born; or Trichur, "the town with the name of Lord Shiva". For God's sake.

Tell your wife you'll pick her up after your first day at work.

To go for a boat ride into Cochin's backwaters. Remind her to bring along the loaf of bread and jug of wine.

Does one get fresh vegetables, seafood and superbly stocked supermarkets in Cochin? Does the sun rise in the East?

MUST YOU RE-DO YOUR OFFICE FOR EVERY NEWCOMER?

Every time your employees increase in number, your office seems to decrease in size. Everybody is stepping on everybody's toes. ■ What your employees and you need is space. Space to think. Space to work. ■ But you can't keep building walls to suit their needs. Or break them down for that matter. ■ What you can do is Seccolor your office. Seccolor partitions and doors, apart from giving the much required privacy, keep out water, dust and noise. ■ Designed in Italy and made of pre-painted galvanised steel that never rusts, Seccolor partitions and doors are easy to install. And just as easy to dismantle. They also save you the bother of having an army of carpenters invade your office. ■ With Seccolor, your maintenance costs will be cut by 100% and energy costs by at least 30%. Fire resistant, they are guaranteed to last you a life-time. ■ Available in a variety of breathtaking colours and unlimited choice of material for panels, NCL Seccolor partitions and doors are the obvious answer to your problems. ■ For more information, write to us or drop in at our office closest to you.

ISSUES MARKET

roblems and prospects

ssues coming to the market are invariably well conceived with nsic merit, and can be expected to elicit a good response on own strength

no accident that rising secondary kets have always spawned a surge of ssues of capital by new and existing anies. A secondary market boom is ly based on a buoyant economy and tations of good performances by companies. In such a positive envi- ent, new issues, especially in indus- which are doing particularly well, o be successful.

day, there are over 12 million inves- These investors have profited gh subscriptions in primary markets have gained appreciably after listing ie secondary markets. Not sur- gly, primary markets have garnered sums in the past and the quantum of : that could be raised is also huge. It afely be said that even Rs.7,000 crore w issues can be raised over the next onths from capital markets.

e target for the Eighth Five Year is to raise Rs.50,000 crore from the ary markets i.e. Rs.10,000 crore per on an average. What is the medium- scenario?

e interesting aspects of the primary ets are twofold: first, how the pro- of different participants in these mar- have changed, and second the impact changing regulatory environment.

st, the promoters of new issues are rent these days. Better educated, they, e their forebears, are not afraid of ng the capital markets as a source of s to finance their rapid growth. They aware of the benefits of working gh listed companies and realise that ol can be retained through a minor- though significant, stake.

suppliers of funds, we have inves- many of whom belong to the tradi- al middle class and include ewives and retired persons. Their entry into stockmarkets indicates a amental change in investing attitudes ng this class. There is a growing real- on that investment in these instru- ts is a hedge against inflation.

nother manifestation of this social ge is geographical. Areas once con- red unadventurous have realised the ortance of capital markets. An exam- ple is Calcutta which earlier used to contribute 4 to 5 per cent of the total funds raised in an average public issue. Currently, Calcutta contributes an average of 12 per cent. In fact, the change in the regional pattern of funds collection is of very recent origin and now forms a cornerstone of any issue management strategy.

Then there is increasing professionalisation among intermediaries, including merchant bankers and broking firms. Their dealings with financial institutions (who have insisted on a professional approach) have helped them in this change. Also, with institutions being allowed to take up membership in stock exchanges, a qualitative change is being ushered in there also.

Infrastructural changes

One of the major problems facing the capital markets has been the lack of investors' confidence. This originated from a lack of liquidity, inefficient market mechanisms, insufficient number of stock exchanges and brokers, lack of investor education, lack of professionalism and a lack of transparency in trading.

Things have begun to improve with the advent of the Securities and Exchange Board and other new institutions, as well as institutional membership of stock exchanges. Another notable feature is the building up of networks of sub-brokers — in the project township of Bhilai, for example, these sub-brokers offer their services just outside the main gate of the plant.

The question remains whether the more than 300 new issues slated between September and next March will succeed. Normally there is a spate of new issues just before the budget because of the associated risk of entering a dull post-budget market. This creates a phenomenon of 'crowding' before the budget and the corresponding 'non-crowding' in the immediate post budget period of two to three months. In the current context, the crowding effect will be much more due to the tendency of the promoters to take advantage of the unexpected boom in the secondary market.

Some may feel uncomfortable about the success of so many issues likely to hit the market in a short time. However, thanks to recent regulatory measures, the issues coming to the market are largely well conceived with intrinsic merit, and can be expected to elicit a good response on their own strength.

An important factor is the wider choice available to investors in the shape of new instruments like zero coupon bonds and warrants in addition to traditional equity and debentures. In future, the variety will increase with new instruments like zero coupon convertibles, non voting shares and options on the anvil.

Here, a moot point is the withdrawal of permission to mutual funds for getting preferential allotment in the public issues. Investors who would not otherwise get allotment in a public issue, could have derived some benefit if mutual funds formed out of their contribution could be allowed this latitude. The crux of the matter is that mutual funds are pooled resources of individual investors and should be seen as such.

In conclusion, a caveat: while non-project related factors like timing, the state of secondary markets, marketing strategy, regional collection patterns and nature of instruments being offered, etc, play an important role in the success of a new issue, the role and responsibility of merchant bankers has increased. They will need to gear up for their new role. That said, the primary market is set for substantial growth.

oom time

he BSE touches 1,900 our winners shoot up to 15 in IC 349.
gratulations.

iven below is a new list of six scrips, and their closing prices on 23 August . Pick the share that you think will he most in percentage terms by 23 ember 1991 and rank it number one. n choose the one that you expect will he second most and rank it number Then number three, and so on till six. It's as simple as that!

m this Investor Contest, you don't to predict the price of shares; you ely have to rank the performance (in entage terms) on the basis of the prices expect each to reach on 23 September . You don't have to tell us the prices even the percentage changes you ct — only fill in the ranks from to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

Scrips	Prices as on Friday 12 July 1991 (Rs.)	Prices as on Monday 12 August 1991 (Rs.)	Ranks
Astra IDL	88.75	90.00	6

THE NEW WORLD ORDER
Edited by Sundeep Waslekar
Konark, 1991, pp. 255, Rs.200

The New World Order is a collection of articles edited by a young scholar, Sundeep Waslekar, on the changing profile of international relations. The contributors to this book include such luminaries as Javier Perez de Cuellar, the UN Secretary General, David Lange, a former prime minister of New Zealand, and others. The circumstances in which the book came to be produced is a refreshing example of enterprise and initiative by the editor. Apparently, he sold the idea for this book to Asian Paints and Mahindras and managed to get them to finance this enterprise.

Having complimented the editor on his initiative, the book unfortunately disappoints. Even though he had the misfortune of compiling this book in what can best be described as interesting times, the more significant happenings — the collapse of the Soviet bloc, the Iraqi invasion of Kuwait and the US counter-invasion — are not fully covered. This of course, is the difficulty encountered by seeking to prepare a book on international relations; it is bound to be dated by the time it gets off the press. Given this problem, the editor has not advanced his cause by including the kind of contributions he has published. Most of them are by unknown bureaucrats who generally express the commonplace: or, if the contributor is famous the contribution is uniformly banal.

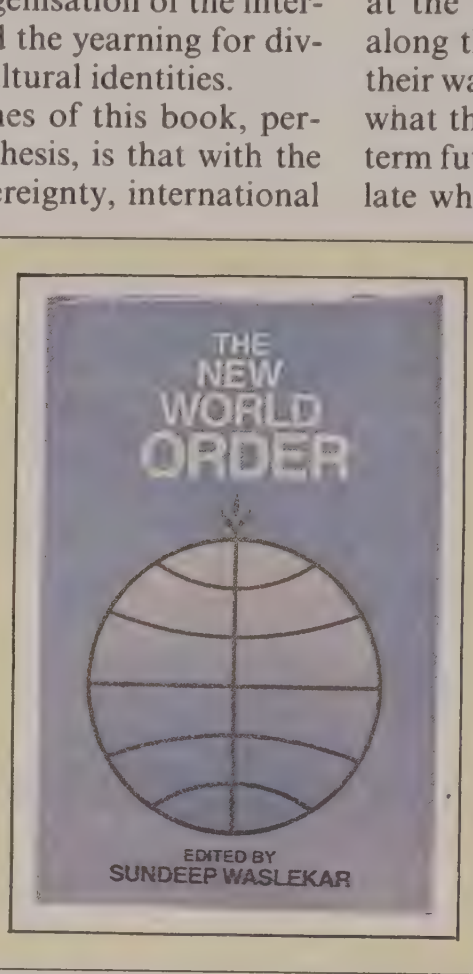
Mother Teresa gives a one page contribution which reads like a prayer. One wonders why such a contribution was included at all. De Cuellar's projections of the UN as a great moving force in world affairs are unfortunately based on a total misreading of history, and his prognostications for the future on unwarranted and untenable assumptions, particularly in the shoddy manner both he and the UN acquitted themselves in the Gulf War and after.

The only oases are contributions from journalists, the redoubtable K. Subrahmanyam and Dilip Padgaonkar, editor of *The Times of India*, which make interesting reading. Subrahmanyam talks of a peace revolution sweeping the world, war no longer being an instrument of politics. Padgaonkar, in discussing the role of the media, dwells on the contradiction between the homogenisation of the international media and the yearning for diverse and distinct cultural identities.

One of the themes of this book, perhaps its principal thesis, is that with the breakdown of sovereignty, international affairs are no longer exclusively conducted between nation states as has been the case for the last five centuries; warfare and dissension have become internalised in the state. India's Kashmir problem, therefore, is an international issue, too. As a thesis, this argument is not entirely original or striking, but it helps to explain much of our present trauma.

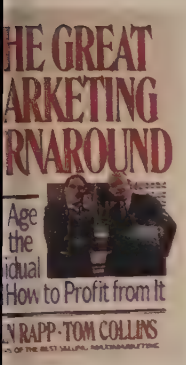
Editor's misfortune. The title of the book unfortunately has been appropriated by US President Bush who has something very different in mind; and this is the editor's misfortune. The whole idea of imposing an ideal on something as complicated and unstable as our international polity is in any case a hugely ambitious task. Bush, cynics claim, made such a momentous reference only to extract $55 billion from the rest of the world to finance the Gulf War. To put an ideological gloss on this requisition, the term New World Order was a deliberate coinage.

The innocence the writers display of the realities of the international po the main drawback of these essays ring one short and old interview (w questions?) with Senator Clairborn of the US, who roundly dismisses an tion of power sharing with develo states, reality rarely breaks thro However well intentioned the edito at the start of his project, somew along the line both book and edito their way. It is possible to write a boo what the future will be, what Amer term futurology; or it is possible to p late what you want the future to b idealistic vision of the fu The book contains es which seem to fall betw these two stools, betwee turology and idealism, derding sometimes on p wishful thinking.



The book then fails to flect the sheer bloody m edness of the hum dilemma, the irrational, the reality of power poli It talks about the inequit world development and g uflects before the vari UN initiatives, the Brun land Report, but nowher there any suggestion of h the developing world c mobilise for a better deal

Similarly, on the environment front is insufficient to say that sovereignty broken down and that we live in o world. The fact is that there has bee general tardiness in respect of address the issue of the environment intern tionally, with politicians considering th constituencies back home and thinking terms of their nation state rather than t world. How does one change this? The are no easy answers.



The editor has chosen a theme and substantiate it, he requires to be som what more demanding of his contrib tors. There are far too many loo statements and general observations make this book useful for the scholar, a hardly any footnotes or references. Sa two or three contributions, the othe lack readibility, perhaps because Engli is not the first language of their autho It is difficult to understand which aud ence this book is addressed to.

sintegration of ass markets

THE GREAT MARKETING TURNAROUND: THE AGE OF THE INDIVIDUAL — AND HOW TO PROFIT FROM IT
By Stan Rapp and Tom Collins
Prentice Hall, 1990
Distributed by IBD
pp 340, Rs.395

Great Marketing Turnaround is a ly anecdotal sequel to *maximarket-* from authors Stan Rapp and Tom lins. It rests on the premise that the ventional marketing wisdom of the ies, seventies and eighties cannot nstand the current demands of the ketplace and must necessarily hide ind ten significant trends which are trary to traditional marketing king.

he authors claim that marketing tools yesteryear have rusted and dulled. nce, effective brand building must essarily include more direct and more countable communication" with a prospect. Talking to consumers on a -to-one basis can result in enduring tionships for mutual profits.

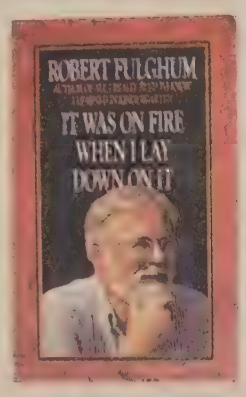
he decade of the nineties, say the au-rs, will be different — in that it will be harbinger of "individualised mar-ing", or the "primacy of the con-ner". As far as this reviewer can ember, this phrase — primacy of the sumer — has always been the very is of the 'marketing concept', stated efully and repeatedly, throughout the enties, by gurus like Kotler, Levitt and ucker.

he new discovery, therefore, is not of pre-eminence of the consumer, but of tools that can be deployed for creat-and sustaining consumers. Close in-vement with individual prospects ough event marketing, public relations l other modes of personal encounter merely ways of talking to the indi-ual sensibly, persuasively and ssuringly.

he book begins with a review of the en basic causes for shifting attention m mass markets to individual pros-ts. Of course these shifts are easy to determine, for they are happening in our very own environment and range from changing demographics and lifestyles, to advertising clutter, overkill and waste.

The most important ingredient in the "great marketing turnaround", according to the authors, will be the ongoing relationship with individual customers. This will squeeze the waste out of advertising. The other tenets of this turnaround are a shift from:

- unknown to known prospects
- creativity to response
- steam-rollering to niche-filling
- advertising impressions to winning new customers
- bombarding the market to building relationships
- turning passive consumers into involved participants
- mass marketing to direct mass marketing
- USP to EVP (extra value perception)
- single to multiple distribution channels



How much of this, one may ask, is relevant to us in India? Conceptually, all of it is relevant. Operationally (as visualised by the authors) very little is. Direct marketing is in its very nascent stage in India, despite the limited successes of organisations like American Express and British Airways. Mass advertising will continue to be a formidable weapon in marketing arsenals. Direct marketing will be used, in addition, to forge and cement relationships with individual consumers.

Overall, the book is rich in examples, but could have been far more incisive.

Words of wisdom

IT WAS ON FIRE WHEN I LAY DOWN ON IT
By Robert Fulghum
Grafton, 1990
Distributed by Rupa
pp 214, Rs.85

It's stating the obvious to say that no one has time for philosophy today. But yet no one but the most grossly insensitive will go through life without having moments when one pauses to ponder on the eternal questions in their various disguises — who am I, where am I going? Or the real mother of a question — what is the meaning of life?

Robert Fulghum's intriguingly titled book, *It was on fire when I lay down on it*, like his earlier and equally intriguingly titled, *All I really need to know I learned in kindergarten*, is about the author's attempt to find meaning in small everyday occurrences, to grasp at the meaning in life rather than the meaning of life.

The book is not a collection, it's just small, apparently unconnected pieces (that never fail to touch you) strung together. To mention but two. The time when his daughter gave him a bag of apparently worthless bits and pieces and he nearly threw them out, retrieving them in time to be able to sit with her and understand the special meaning they had for her. His warning to parents, "Don't worry that they never listen to you, worry that they are always watching you." These and other words of wisdom make the book a wonderful oasis in the midst of our frenetic lives.

■ MINI SHRINIVASAN

A useful primer

MERGERS AND TAKEOVERS IN INDIA
By N. Ashok Kumar and Rajas Parchure
The Times Research Foundation, 1990
Distributed by UBS
pp 136, Rs.150

The authors have put together a concise primer that clarifies the financial, accounting and legal aspects of takeovers, summarises public policy on them and presents a few cases as examples. But the treatment is incomplete in many ways.

For example, the book makes an important contribution by pointing out that most takeovers and mergers in India are different from those elsewhere because they usually involve a healthy enterprise taking over a sick one.

Once such a merger is complete, the healthy enterprise is able to write off the book losses of the sick enterprise against the future profits it makes from the combined operations and thus lowers its income tax liability. But the book doesn't seem to deal with the actual mechanics.

Please turn over for

CHIEF EXECUTIVES

NEW DELHI **TERMS NEGOTIABLE**

We are a large multi-unit, multi-product group of companies with interests in CONSUMER ELECTRONICS, HOME APPLIANCES, ELECTRONIC COMPONENTS, TRADING, EXPORTS, FINANCIAL SERVICES etc., backed by technological support from world leaders in various product lines. Our manufacturing units are equipped with the most modern and advanced facilities supported by nearly 50 sales offices and depots throughout the country, handling more than 1500 dealers. Our team of nearly 3000 personnel comprises large numbers of professionals in various disciplines including engineering, management, finance etc.

We have turned in excellent working results in all our activities over the past 7 years and have consistently commanded a major share of the national market in our product segments. We are now poised for a major expansion and diversification in our activities with fresh investments of around Rs. 100 crores in the coming 12 months. These are proposed to be financed through our considerable internal resources as well as public issues and institutional borrowings. Our current group turn over of around Rs. 400 crores is expected to double at the end of 3 years.

We are now looking for outstanding leaders to head our companies as their Chief Executives. The incumbents shall be expected to manage all aspects of the company's operations barring marketing which is a separate centralised division. They shall also be responsible for implementation of new projects in their respective companies. They shall be supported by a strong team of professionals in all functions and shall in turn report to the Managing Director.

Candidates with engineering background, preferably electronics and around 20 years experience of which atleast 5 years in general management positions in organisations of repute would be suitable. Excellent track record of achievements, strong techno-commercial and human relations skills would be decisive factors in selection.

Preferred age Group – around 40 years

Please apply within 10 days with full biographical details and record of achievements alongwith a recent passport size photograph to :

Box No. AA/352/EM/4, Business India, 59 Regal Building, Connaught Circus, New Delhi-110 001.

CHIEF EXECUTIVE

CALCUTTA **EXCELLENT TERMS**

A large professionally managed fast expanding industrial house is looking for a highly competent and dynamic Chief Executive to head one of its companies engaged in expanding the export business of the group.

The incumbent as a profit centre head will ensure high level of performance and profitability by building effective teams. His prime responsibilities will be to develop and expand the export business, provide necessary thrust to formulate innovative export marketing strategies, consolidate the market share and exercise close financial controls.

Candidates must have thorough knowledge of export markets and formalities with at least ten years senior level experience in general management in a reputed company.

Preferred Age : 40–45 years

An attractive compensation package shall be worked out for the deserving candidate.

Please apply in confidence to Box No. AA/352/LP/2, **Business India**, Krishna Villa, 100, Park Street, Calcutta 700 017.

A LEADING NRI MULTINATIONAL GROUP NEEDS

MANAGING DIRECTOR / CHIEF EXECUTIVE
(BOMBAY)

THE GROUP Operating in over fifty countries spanning four continents. Reputed for a high degree of professionalism. Has been traditionally employing top-class Indian expatriates to manage its diverse businesses. Indian presence so far relatively small but growing substantially with large investments in metallurgical projects (under implementation).

THE COMPANY Bombay-based, Group-promoted, multi-unit, 20-year old. Manufactures sophisticated industrial chemicals. Has been operating in a highly competitive market. Current annual turnover around Rs. 400 million which can potentially grow to Rs. 600 million in the next two years. Future growth must come mainly from exports which currently account for 15% of the annual sales turnover. Given its inherent strengths, a good helmsman can certainly realize its full potential.

THE POSITION Created due to the existing incumbent's imminent retirement. Bombay-based.

THE PERSON The desired profile is of a mature, dynamic and highly innovative engineer/chemical technologist in the 45-52 years age group who can provide the much-needed thrust to its operations. A strong techno-commercial background essential. Equally essential 5-7 years' top management experience – at least three years of this at Chief Executive/ Managing Director level – in a reputed organisation. A chemical industry background will give you a leg up over others.

THE CHALLENGE To rejuvenate an inherently strong but flagging operation and in good time to lead the Company into new phases of growth and diversification.

THE REWARD A challenging job opportunity, an attractive compensation package and a possible future overseas assignment.

If interested, please write with CV within ten days to :

D S Parnerkar
Cosmos Business Consultants
(Executive Search Specialists)
206/8, Cadell Road, Mahim
Bombay 400 016
Phone 46 77 34

A profitable and well established company in the process chemical industry with close international affiliations, based in South Central India and a turnover of Rs. 250 crores, wishes to strengthen its top management with the induction of the following:

VICE PRESIDENT (MANUFACTURING)

(MS/5723)

VICE PRESIDENT (PROJECTS)

(MS/5724)

The VP (Mfg.) will be fully responsible for the present manufacturing operations of the company. The VP (Projects) will look after the extensive modernisation and expansion of the plant which will cost over Rs. 150 crores. Both positions report to the Managing Director. Future prospects are particularly good based on performance.

Candidates should be successful technocrats with an engineering (preferably chemical engineering) background and ideally, experience in the process chemical industry.

Preferred age: around 45.

The remuneration package is generous and includes housing, car with driver and other top management perquisites.

Please write quoting the relevant MS reference numbers in full confidence to:

A. F. Ferguson Associates
Post Box 1786
Bombay 400 001

RAUNAQ AUTOMOTIVE COMPONENTS LTD.

RAUNAQ AUTOMOTIVE COMPONENTS LTD., part of the multi-dimensional Raunaq Enterprises, is a hi-tech transmission gear manufacturing company equipped with the most modern machinery and state-of-the-art technology. We require for our factory at **Gajraula,** Distt. Moradabad, U.P. (approximately 100 kms from Delhi):

VICE-PRESIDENT (Manufacturing)

The incumbent will report directly to the President of the Company. He will be responsible for all the technical aspects of corporate operations, including policy-making, monitoring, upkeep of plant and machinery, plant productivity, quality assurance, raw material procurement and heat-treatment facilities. The incumbent would also develop systems, work closely with peers, and provide motivating leadership to employees to face new challenges.

Candidates should be graduates in mechanical engineering, have 10 to 15 years' experience, and be between 40 and 45 years in age. Preference will be given to candidates with relevant experience in the **gear industry.**

The compensation package would not be a limiting factor and will include house and car, besides other perks.

Interested candidates should send their resume in confidence to:

The President,
Raunaq Automotive Components Ltd.,
15th Floor, Chiranjiv Tower,
43, Nehru Place, New Delhi 110 019.

GENERAL MANAGER-OPERATIONS

(Mass Consumer Products)

Our client, a progressive company with distinguished record as pioneers in their field and engaged in manufacture of a wide range of well-known mass consumer products is looking for a GENERAL MANAGER-OPERATIONS for its plant near Delhi. The products of the company enjoy excellent brand-image and are market leaders. Growth and profitability records have been excellent over the years and the current turnover of Rs. 200 crores will substantially increase in view of ambitious expansion & diversification plans underway.

The incumbent will report to the Managing Director and will be responsible for total OPERATIONS MANAGEMENT including Production, Engineering, Expansion & Diversification, Commercial Functions, Factory Administration etc. It is desirable that the incumbent should have knowledge of Excise and other Legal/Statutory obligations required to run the Plant. The assignment will call upon special strengths in the area of Man-Management and Public Relations.

He should be a leader with vision, an analytical & innovative mind, capable of bringing about a systematic approach to Technical and Administrative areas, and an urge to excel. He will be required to meet the challenges of a fast growing business.

The Candidate should be young & dynamic Chemical/Mechanical Engineer with Post Graduate qualification in Industrial Engineering/Business Management and around 15 years of experience of which last 5 years should have been at a senior level running the entire manufacturing unit/profit centre. Prior experience in a large Pharmaceutical/Process Plant is desirable but not essential. He must be an achiever with proven ability to perform. Age: around 40 years.

THE COMPANY OFFERS VERY ATTRACTIVE SALARY & PERQUISITES WHICH GO WITH SUCH SENIOR POSITIONS AND COMPARE WITH THE BEST IN INDUSTRY.

Apply in strict confidence within 10 days with detailed Bio-Data, marking the envelope & application with job title & code GMOP/8 to:

SRISHTI 91

Our clients are a professionally managed company, engaged in the manufacture and export of High Pressure Decorative, Industrial and Commercial laminates, with an annual turnover of Rs. 14 crores. (Targetted turnover is around Rs. 40 crores by 93-94)

Although established just 4 years ago, our clients are already a force to reckon with in the export market, particularly in Europe and the Far East.

Encouraged by the overwhelming response, they have planned to launch their products in the domestic market, in a big way. To meet this challenge the Company has already initiated an expansion programme to double the present production capacity. To spearhead their envisaged growth, the Company is on the look out for:

GENERAL MANAGER – MARKETING

(LBS/343)

LOCATION: AHMEDABAD (Rs. 1.8 lakhs + furnished house & Car)

The incumbent should be an MBA, 35 – 40 years of age, with a minimum of 10 years' marketing experience, preferably in the field of building material products.

As Head of the Company's all – India operations, he will be responsible for the marketing and sales of their products. This entails developing and implementing strategies, launching new products, recruiting and motivating the sales team and establishing and controlling the sales distribution infrastructure.

Interested candidates may send in a detailed resume, within 10 days, superscribing the envelope with the above Ref. No., to:

INDIAN SEAMLESS

growth through excellence

We are a large diversified Group with interests in seamless tubes, steel making, aviation, leasing and financing business. Our ongoing expansion and diversifications, which are expected to take the Group turnover past Rs. 500 crores by the end of the decade, have given rise to the following position :

FINANCIAL CONTROLLER & COMPANY SECRETARY

The position, reporting to the Managing Director, heads the finance, accounting and secretarial functions of a large manufacturing company. Besides administering the above functions with the help of increasing computerisation, the incumbent will have necessary professional knowledge and skill to advise the Board of Directors on mobilisation and management of funds for meeting the growth-needs of the Group.

We expect the applicant to be a qualified C.A. and C.S. with about 15 years' experience in the above areas in reputed listed companies, of which at least 5 years should have been at a senior level. Experience of having conceptualised and handled large public issues will be an advantage.

We offer a compensation package matching the best industry practice, a thoroughly professional environment and excellent growth prospects. Please apply in confidence, within 10 days, giving details of qualifications, age, experience, remuneration drawn, and enclosing a recent passport-size photograph, to :

To join us as Human Resources Development Manage
there's one thing you have to be.

Human.

Recently, our oldest employee was called upon to do something he'd never done before.

Lay the foundation stone of our second plant at Angamally.

Then again, on our first Founder's Day, every founder employee of Kancor found himself being chaffeured to work in a company car.

This attitude extends to day-to-day work, too.

Not one of our employees hesitates to assume responsibility. To participate in decision-making.

Even to throw the book at us if need be.

We expect all of our people to place a premium on a much-abused word: Creativity.

As well as understand that, through their work, they create values that will foster and nourish our culture.

(We hope we make ourselves clear.)

Frankly, there's nothing very surprising in all this. Our people, after all, have made us what we are today. The global leader in spice oleoresins.

They have made possible, and will give impetus to, our tie-up with McCormick, US food giant and Fortune 300 company.

They are the flesh and blood of the corporate skeleton that is Kancor.

The challenge now is to manage our growth without turning into an impersonal machine.

A task we'll succeed in only if we continue to treat our people in the way we always have.

As human beings.

KANCOR
FLAVOURS AND EXTRACTS LIMITED

If you have 5-7 years' experience in a global operations company, a post-graduate degree in personnel management/ HRD, and can communicate in English and Malayalam as well as our ad agency can, we'd like you to be part of our team. Will we pay you well? Will we give you a house? And a car? Yes. Yes. And yes. Write to: Sanjay Mariwala, Kancor Flavours & Extracts Ltd, Post Bag No 3, Angamally South 683573, Kerala.

BRAND EUPHORIA BECKONS

Creating winning products is half the success story. Marketing it well is the other. Our R & D edge has developed products that will dramatically change the market scenario.

WE WANT MARKETING MASTERMINDS to propel our products right into the pages of brand history, the young, ambitious success hungry people who will create a frenzy in the market place.

The products breathe excitement. Making us specialists in power electronics systems who export technology to Japan. We are introducing more products. Soon. Aiming at a turnover of Rs.10 crores in the first year of commercial production.

We want marketing men with experience in direct selling with any background. But with a drive to succeed.

REGIONAL MANAGERS (Bombay, Calcutta, Delhi, Hyderabad, Madras)
Age: 27 – 30 Salary: Rs.1,00,000 p.a. + sales incentives

Young talented graduates, preferably with an MBA may read on. They should have 4-8 years experience in sales. They should be earning atleast Rs.70,000 per annum. And they should have led a team of marketing executives. Experience in handling dealers is a plus. They will have to set up a regional office, gun for sales targets in that region, motivate their executives, set up 15-20 dealers in the region and help dealers achieve their targets. Clearly, a busy schedule awaits.

SR. MARKETING EXECUTIVES/MARKETING EXECUTIVES (Bombay, Calcutta, Delhi, Hyderabad, Madras)
Age: 22-25 Salary: Rs.50,000 p.a. + sales incentives

Graduates preferably with an MBA are ideal. Experience of 0-3 years in sales is expected. A normal day will entail activities in sales achievement in your territory and strong customer orientation.

Come. Step out of anonymity. And take your place in the centre stage of marketing performance. We'd like to hear from you in 10 days.

A LEADER

IS LOOKING FOR

LEADERS

TO CONQUER THE

INTERNATIONAL

MARKET

We are a public limited company with an established name in the building products industry in India. We have grown rapidly, and are on the verge of taking on many more challenging projects both in India and in international markets.

Today, we're looking for 2 dynamic marketing men to head our operations in the Gulf and S.E. Asia respectively.

REGIONAL MANAGERS

Location : Dubai and Singapore

They would be around 35 years of age and armed with post graduate qualifications from a leading business school.

Experience would include a minimum of 5 years in the Gulf/S.E. Asia, handling similar products. Based in Dubai and Singapore respectively, the candidates will look after the distribution and marketing of our products in their region. The job will also involve establishing franchised showrooms in all major cities in the region.

An attractive remuneration package, sales-linked incentives, accommodation, car and home travel allowance will be offered.

BUSINESS MANAGER

Location : Madras

The job will involve sourcing new products for international markets and eventually establishing an export house.

He will be around 30-35 years of age, preferably an MBA with at least 5 years relevant experience. Previous experience in sourcing building products like granite, marble etc. will be an added advantage.

EXPORT EXECUTIVE

The candidate will be around 30 years of age, preferably with a degree from the Indian Institute of Foreign Trade.

Experience would include a minimum of 5 years in the export department of a reputed company or an export house.

The candidate would be in charge of following-up on enquiries, export pricing, export documentation and the processing of export incentive claims.

Remuneration for all positions will be on par with the best in the industry.

SRISHTI/91

Tenzing and Hilary scaled the Everest. Armstrong went as far as the moon.

Maybe we can help you reach for the stars.

What would you expect of the fastest-growing software company in the country? We invite you to plot your growth curve along with ours. Your growth is more easily achieved at Wipro Systems. That's because we've created an atmosphere that's people-friendly. Here, ideas take root, branch out and flourish. And talent is never allowed to remain latent. In fact, it is the premium that we place on people and ideas that has made us the company that we are.

Today, our clients recognize us as a software company that approaches their business needs honestly, competently and with a sense of partnership. To build on this reputation and to accelerate the 100% growth rate (300% on exports) we've maintained over the past two years, we are now making many moves. Shortly, we'll be adding HP and IBM workstations and an IBM mainframe to our existing environment of IBM AS/400, UNIX, LAN and SUN Sparcstations among others. We even propose to establish satellite links to communicate with our overseas clients. These plans apart, we'll need you as well.

Software Specialists/ Project Managers

Your growth depends on your managing software projects profitably, from cost estimation to project implementation, either in the area of Commercial Applications or in Systems and Communications. You'll also actively seek out new business to make your growth that much faster. A high-calibre team of well-trained professionals will assist you in the process.

Apart from the desire to grow with us, you need to be a BE/CA/MBA/MCA with 3-10 years of software development experience.

If you're one, see what you can be. At Wipro Systems many exciting overseas assignments will come your way, and in time, you can take over as group projects manager, manager-in-charge of a line of business or a business development manager at any one of our overseas offices. To start with, you'll start at Bangalore.

If you're interested, write within 10 days. And what seems light years away might turn out to be well within your reach.

OME, LET'S MOVE THE WHEELS OF INDUSTRY !

THE LIBERALISED INDUSTRIAL POLICY USHERS IN A NEW ERA OF INDEPENDENCE FOR ENTREPRENEURS

SPECIALLY IN MAHARASHTRA, WHERE SICOM AND OTHER DEVELOPMENT AGENCIES MAKE YOUR DREAMS A REALITY.

With the doing away of the licensing system, the new industrial policy has opened up several avenues for growth. Entrepreneurs and industrialists are now free to set up new units or undertake expansion. And what better place than Maharashtra?

Maharashtra — A Sanctuary for Industries

Maharashtra has a distinct edge because it has so much more to offer.

- A favourable environment of stability.
- Well-developed infrastructure which includes roads and highways, railways, airports and sea ports.
- Abundant water and power supply (at reduced rates during night).
- Well-established communication system.
- Productive labour force and reservoir technical expertise.
- Centre for major industrial market.
- Many industrial locations across the State with well-developed social amenities.
- Tremendous scope for the growth of petro-chemicals, chemicals, pharmaceuticals, plastics, electronics, engineering, bio-technology, food processing, agro-based and other industries.

And all this, with SICOM's involvement and assistance from other development agencies.

SICOM — Industrially Yours

SICOM, an entrepreneur-friendly organisation in Maharashtra offers a comprehensive range of services to medium and large scale industries which includes term lending, plant location, technical guidance, industrial escort and direct subscription to share capital on a selective basis.
SICOM also offers attractive tax benefits under the State Government's package scheme of incentives for industries. Even for expansion/diversification.

Contact us today. We have all the elements for integrated growth.

s return to India in 1987, Prakash ne Madras-based plantation com- .V. Thomas, as director, research. akash, "The lab at AVT is as good nes in the UK." In 1989, he took of IAHS' biotechnology division. ed and executed by him, the lab ns to international standards. een April '90 and March '91, IAHS exported tissue culture plants worth Rs.1.43 crore while the total turnover of the biotechnology division amounted to Rs.2 crore. Prakash's success is remarkable since marketing is not his area of operation. He hopes to reach a turnover of Rs.3 crore during 1991-92, of which exports will be Rs.2.4 crore.

While Prakash has received overseas orders for breeding blue lilies, bananas, cutflowers and potflowers, certain Indian companies dealing in tissue culture have primarily concentrated on multiplication of plants or breeding of seeds. The IAHS biotechnology division has unique facilities such as breeding disease-free plants and certain completely new ones (such as banana with mango flavour)!

Undoubtedly, at IAHS, tissue culture is a growth area. Says Prakash, "The impact of biotechnology should be felt in the solving of basic problems of food, fibre, fuel and medicine. As agriculture scientists, our objective is to improve the inherent ability of the plants making them more productive, through a combination of conventional plant breeding and plant biotechnologies."

Prakash has achieved two of his three ambitions — developing three new varieties of plants at Dublin, virus-resistant potatoes, oil seed rape plant and Easter lilies, and, the publication of a book titled, *Pollen Cytology and Development,* from the Academy Press of the US (the top publisher of books on education and research in the world). His efforts are now directed at achieving something phenomenal, like, for instance, the Raman spectrum in science. And for a successful commercial biotechnologist this is certainly not a tall order.

■ DEVAPRASAD PUROKAYASTHA

FRONTRUNNERS

Job-hopping is not his cup of tea. **Akhilesh Bhargava**, 35, general manager of Bayer India's rubber chemical division, has worked with the company for 12 years, and made it to the top. With a B.Tech in chemistry from IIT, Kanpur followed by an M.Tech from IIT, Bombay, Bhargava joined Bayer as a management trainee in 1979. His first promotion came in 1982 when he was made production officer. In 1986 he went on to become deputy manager, in '87 production manager and last year he was promoted to the post of general manager.

With modernisation on the cards, Bhargava has to be on his toes. "You have to train your staff as the dialogue between machine and man must be perfected for any kind of modernisation to work," he says.

■ S.C.

"You have to trust people in this profession to be successful," says **Raman Madhok,** 32, general manager (personnel) of Cynamid India Ltd. An MS in chemistry, Madhok graduated from IIT, Delhi, in 1979. Later at XLRI, Jamshedpur, he bagged the gold medal. He then did a course at the Delhi-based Society for Training and Development while simultaneously working with Voltas. Since then he has worked with Taj Mahal Hotels in Delhi, Pfizer, and Parke Davis in Bombay before joining Cynamid. In every job Madhok had to negotiate a settlement with the union — a challenge he took in his stride as he saw it as an opportunity to learn faster.

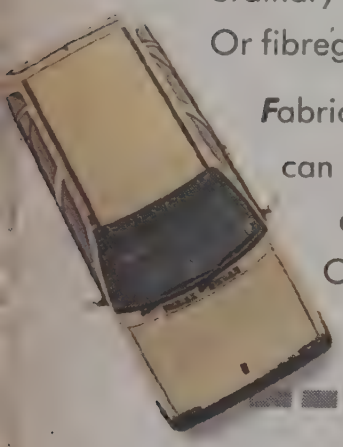
After a hard day's work Madhok turns to his hobbies that among other things includes abstract painting. "In my job I have defined boundaries, abstract painting has none. That's why I paint abstracts," he says.

■ S.C.

WHEN 97% OF THE WORLD RIDES ON STEEL RADIALS, WHY SHOULD YOU SETTLE FOR ANYTHING LESS?

All radials are not the same.

When you want the best radial tyre for your car, find out what's under the tread. Steel. Or ordinary textile fabric. Or fibreglass.



Fabric or fibreglass can never match the efficacy of steel. Only steel belted radials enhance the performance of your car. By way of increased fuel efficiency, more mileage and better road grip on any and every kind of road.

That's why 97% of the world rides on steel belted radials.

So give your car the advantage of steel. Feel the unmatched power and safety of steel radials while braking, cornering and driving, even on wet roads.

Switch to the world-class steel radial. **O**nly from JK. **I**t's the Real Radial.

APALLY

at of clay

ent art gets a new lease of life and brightens up modern homes with e pieces of art

apally, cradled among hillocks ndhra Pradesh's Chitoor dis- ell known for the Rishi Valley ounded by the philosopher- ist, Jiddu Krishnamurthi. Less the fact that much of the terra- pieces — from the five-foot tall urns and decorative pots to small ays — so favoured by the cities' ne from this sleepy hamlet, lo- ee hours away from Bangalore. fifties, there were 13 households in pottery in By the mid- , the number of families had to two. Over- g climatic odds mmer the fire- are cracks and the rains the too damp to be — lack of ransportation, indling market ely unimagina- ducts combined his art over the

point

ing point came mid-eighties, kram Parchure, tudent of the alley School, re- armed with a diploma from the al Institute of Design, abad, to teach at his old alma ma- et by the urge to revive Mad- y's dying art, Parchure started to the potters — injecting new troducing them to new materials, ing them to expand their reper- designs.

ival also meant teaching the pot- tain design basics. Vadalamudi na, who aided Parchure's training me, recalls that: "The traditional had to be taught the concept of ement. They tend to work intu- sing twigs, leaves or bark as crude ing instruments. But once the ts were mastered, there was no stopping them." Today the figures and objects made are more intricate, bolder, bigger, and often spectacular.

The process is fascinating. First, red clay is collected from tanks and lakes during summer. This is mixed with sand and water and pounded till it is soft and malleable like dough, and ready for shaping. Once the main figure, or object, is ready, it is stored in a shed — constructed with aid from the State Bank of India — and later baked in a large oven in batches. The

Child potters at work: but many are turning their backs

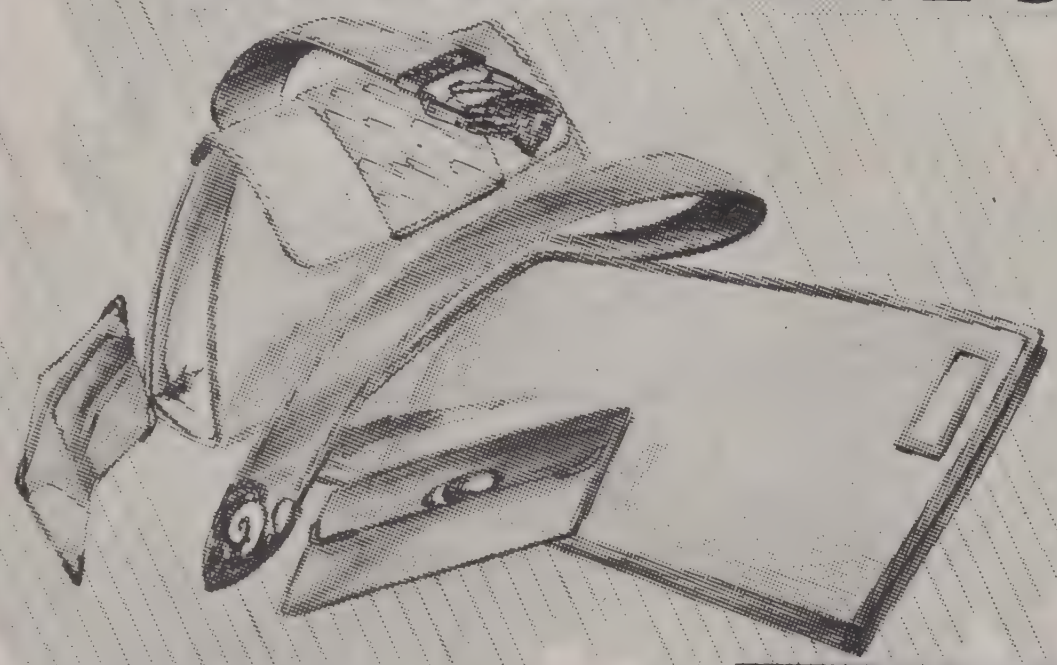
womenfolk add the delicate decorations. On some pieces they use the pointed edge of a damp cloth to draw leaves or geometric shapes. On others they add bells and trinkets.

In yuppy homes

One such is the figure of the mother goddess Ammavaru. Shaped like an upturned pot, these symbols of the cosmic womb were once bought only by village folk, who offered sacrifices to the goddess for protection against disease and natural calamities. They still do, but today, Ammavaru also graces the snazzy living rooms of metropolitan yuppy homes.

The market has taken to Madanapally's clay creations. Exhibitions which were organised at regular intervals in cities all over the country have been runaway successes. "Now we dispatch truckloads to Bangalore, Madras, Coimbatore and Hyderabad. We have even learnt to package properly to minimise damage during transit," explains Krishnappa, an old potter. As a result, a family engaged in this work can now earn upto Rs.3,000 a month.

The prices paid to the makers of these exquisite pieces range from Rs.20 for the smaller vessels and figurines to Rs.50 for the larger ones. But they are well aware of the eventual prices their products fetch. In upmarket city craft shops, these terracota pieces are priced at Rs.200 and upwards.



For the time being, the potters are quite contented with what they get. Their lot, they say, has visibly improved over the last five years, since Parchure extended a helping hand. Sadly though — and this is becoming a common refrain in most traditional Indian arts — their children are turning their backs on this craft. That prompted the government to introduce a scheme to encourage rural artisans. Apprentices now draw a monthly stipend of Rs.300 while they learn this traditional skill.

A jeep stops. It is an order for six mugs in diminishing sizes. Krishnappa, tall, sinewy and white haired, takes an inert lump of clay, places it on his wheel where it begins to acquire shape. A short while later, the mugs are ready in a perfect decreasing size, reminiscent of the Russian Babushka dolls which fit one into another. The tradition-bound potter of Madanapally has acquired the crucial quality which has lifted him out of the mire of a marginal existence: sensitivity to market needs.

Ramakrishnan: "No Verifone office can function without E-mail"

all

ank, for one, had decided at the ts inception in 1982 that it would e them at all. "Being largely in- n off-shore dealings, we wanted level with international organisa- says executive director Tarjani With all modern electronic ameni- ke fax machines, PCs, and tea and machines — close at hand, Exim es say they do not miss peons. corporate headquarters in south y, multinational giant Hindustan td has just one peon - the mail man, who receives and distributes mail. Even for the essential afternoon cuppas, vending machines have replaced the *chaiwalla*. As a company spokesman explains it, "When the economics are worked out, hiring personnel for such trivial jobs is prohibitive." Today, companies end up paying between Rs.1,200 and Rs.2,000 even for new recruits. And that adds up for a large corporation like HLL too.

The do-it-yourself trend is catching on in Bangalore too. Digital Equipment India Ltd, for instance, is managing quite well without the services of peons. The company uses electronic mail for communication, within the country and abroad. Says managing director Mike Shah, "We are promoting the culture of self sufficiency, in keeping with our company culture worldwide." DEIL executives depend on the phone to talk to each other, on the fax for correspondence, and the courier for deliveries.

Verifone Software Systems, a subsidiary of Verifone USA, also in Bangalore, has dispensed with such low-rung employees too. "Today, no Verifone office can function without E-mail," says technical director V. Ramakrishnan. Each of the company's 50 employees are provided with PCs and telephones with ISD/STD facilities — at both office and home - to take care of their communication needs.

As a senior manager at a multinational says, "The initial investment to create a peonless office is very high. But in the long run, it works out cheaper. And machines don't give you labour problems."

"Not realistic"

Not everyone is convinced about such cost-cutting methods, or that they cut costs at all. Says a senior official at Credit Lyonnais Bank "It is not realistic to manage without these sub-staffers". While intra-office deliveries can be easily handled, crises come up when there are outdoor jobs, "like depositing that urgent cheque".

Those who are most unhappy with the trend are, obviously, the peons themselves, and their class IV employees' unions. For them, it is a simple equation: automation equals unemployment and, therefore, something to be opposed. Consequently, companies with strong unions are often stuck with what they term 'deadweight' employees. In any case, Indian labour laws are quite strict about retrenchment.

Most Indian executives though would rather have peons, often for sentimental reasons. As an official from BASF India at Bombay puts it, "Machines may be more efficient, but the personal touch is missing. Exchanging even superficial pleasantries or chatting with the *chaiwalla* makes the workday seem less regimented."

True. But Indian companies can no longer buck the trend. In an increasingly competitive environment — and with foreign companies knocking at our doors — the focus is going to shift to the lean-'n'-mean organisation. As cost-cutting and efficiency gain currency in the Indian corporate world, the one institution that is likely to fall prey first to the new order may well be good old Ramu.

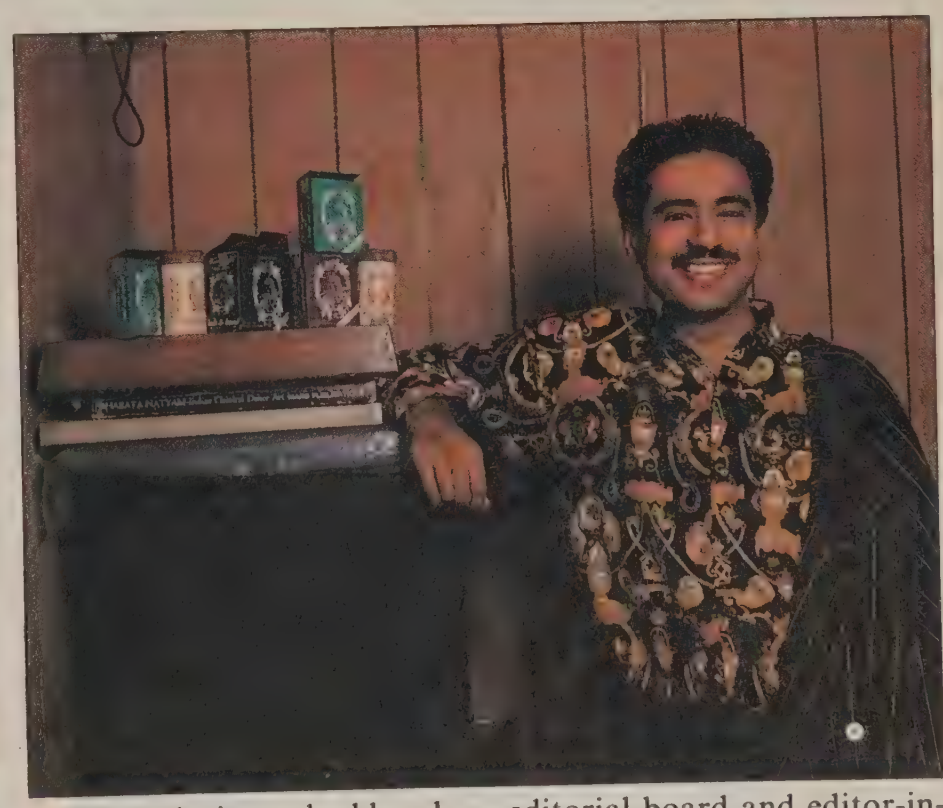
be held this month. A long time motor sports enthusiast, he is the driving force behind the new Rs.3 crore race track at Sriperumbudur.

"Covering 250 acres, it is the only racing track in the subcontinent and its design has been approved by the two auto sports' world bodies," says Muthukrishnan, chairman of the Rs.11 crore UCAL Fuel Systems. "It has all the latest safety and rescue features and I hope it will eventually become a centre for world events." His other dream is to get more youngsters to the track and, therefore, a driving school is next on the agenda.



dent of the Madras
Sports Club, indus-
Muthukrishnan is
lved in preparations
India Grand Prix to

He has designed hotels, bungalows, commercial and residential complexes and is considered an authority on roller flour mills. But what architect **P.S. Nadkarni** is really proud of is a home for the aged in New Bombay. Also a centre for poor women and a paraplegics' home. All of which contributed to his winning this year's Vijayshree award from the International Friendship Society of India.

Old people's homes are not a new interest for Nadkarni — they were the subject of his thesis for an honours diploma from the Royal Institute of British Architecture, London. His Narmada Niketan has everything he could think of to keep its inmates pleasantly occupied — including an amusement park, a temple and a television room. The women's centre has been the subject of a study by an

Englishwoman doing a doctoral thesis and the government-run Lokmanya Tilak hospital in Bombay has asked him to design a paraplegics' home for it too.

It's like playing a double role. Between nine and five, he is the proprietor of the Bangalore-based Hansa Enterprises, manufacturing and exporting herbal cosmetics. But after sunset, 32-year-old **Mahesh Dattani** steps in front of the arc lights and dons the mantle of a playwright-director-actor. He has written four plays and the rights of one of them, *Twinkle Tara*, has recently been bought by Alyque Padamsee. The play is likely to be premiered next month.

Inspired by a story in a medical journal, the play is about a pair of Siamese twins. With theatre groups and playwrights mushrooming all over the place, how long can Dattani expect to be around? But he is confident. "The fact that Alyque is interested in my work indicates that my plays will survive," asserts the young theatre personality.

What was expected to be the biggest bash of the season turned out to be a wash-out. The occasion was the celebration of the tenth anniversary of *The Sunday Observer* last week. What amazed the invitees gathered at the Rooftop in Bombay's Oberoi Towers was the absence of the hosts. Dhirubhai Ambani and his two sons were nowhere around. Nor were R.K. Mishra and B.N. Uniyal, the chairman of the paper's editorial board and editor-in-chief respectively, who have been in the news recently for their attack on Nusli Wadia through their paper.

So it was left to *SO*'s editor **Chandan Mitra** to look after the guests — mostly drawn from the ad and publishing worlds. Not that he had much to do. According to one of the disappointed invitees, "Nothing exciting happened. People gulped down their drinks quickly and quietly went home. Nobody had to be carried out drunk!"

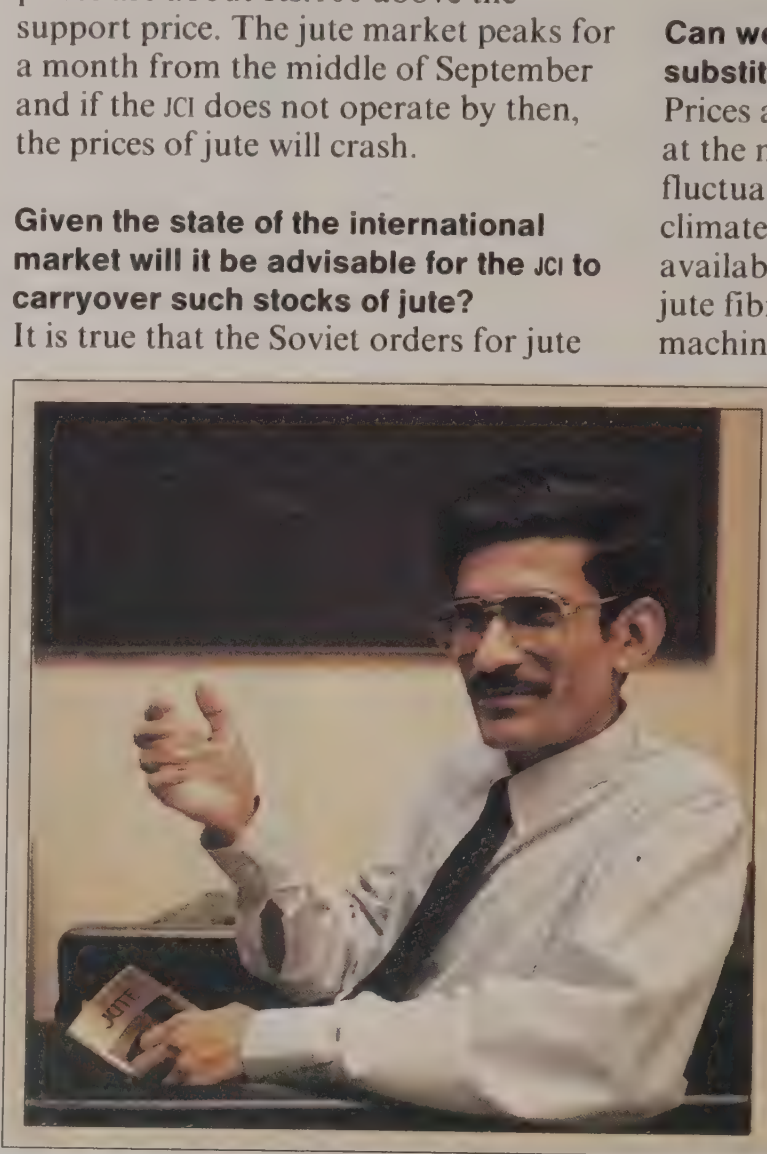
A need to diversify

Will the Jute Corporation of India close down?
No. At present there is no such move. In fact, it is not even realistic to think of such a situation. The JCI no doubt, needs some restructuring but it has rendered signal service and cannot be dispensed with.

What kind of restructuring are you talking about?
The JCI was set up to procure raw jute for the six National Jute Manufacturing Corporation (NJMC) mills. However, procurement is limited to, say, a maximum of Rs.150 above the minimum support price. At prices higher than this, the JCI has only a small role to play.

For instance, in the last couple of years, jute prices have been good. It has not been necessary for the JCI to operate. But, when a bad year comes along it will be the JCI and not the private traders that will keep the poor cultivators alive. It will thus be naive to discard the social benefits.

What needs to be done is that this large organisation be put to other uses in order to strengthen its bottomline during off-season periods. Jute procurement is seasonal, a couple of months in a year. With such a limited season the jute trade cannot be remunerative for the JCI. It has to diversify into other activities that will help pay for the huge overheads incurred in maintaining a presence in every rural village or town market.



Given its current insolvency, can it afford to diversify?
The problem is that of political will. We have Rs.10 crore worth of jute locked up by CITU workers in NJMC's Nuddea Jute Mill. We have been talking to the state government with no positive results, to release this stock so that the JCI can reopen its credit line with the State Bank of India. There is a Rs.14 crore overdraft without covering which the JCI will not be able to operate in the market this year. This will depress the prices for this jute season.

What is the position of jute procurement this year?
According to our estimates, 9 million bales will be in the market this year. Of this, 8.4 million bales will be used by the large industry and another 400,000 by the cottage industry. There are already carryover stocks of 1.8 million bales from the last season. At the moment, prices are about Rs.100 above the support price. The jute market peaks for a month from the middle of September and if the JCI does not operate by then, the prices of jute will crash.

Given the state of the international market will it be advisable for the JCI to carryover such stocks of jute?
It is true that the Soviet orders for jute have run into problems. Of the 30,000 tonnes of hessian, only 10,000 tonnes have been shipped. Part of the stock has been shipped to other countries. But luckily this year Indian prices for sacking and hessian have been competing with those of Bangladesh, and, our sales in western Europe has also risen. The market for jute is growing at the rate of 30 to 40 per cent annually, as the use of certain other fibres are considered environmentally unsafe. So, on the whole, this year's carryover position will be around 2 million bales if the JCI can repay the State Bank of India and buy jute this year. And, also if the budgetary support of Rs.10 crore comes along.

Are exports rising in real terms?
Exports last year were Rs.300 crore, this year we expect it to touch R

From the Publisher

In a country with so many young people (more than 50 per cent of our population is below 25), it is surprising that the decision-making is dominated by the old. There is an enormous deference to age and few young people get any real opportunity to take decisions, not even unimportant ones. A few lucky ones, by virtue of their being the children of their parents, get catapulted into the higher reaches of the corporate world. But no matter how they get there, the fact is that the young have an appeal of their own. And it is indeed nice to see so many young people, many of whom will inherit vast fortunes, throw themselves so completely into their work.

In our cover story, we decided to take a quick look at some of the people who, in the years to come, will also become household names. Obviously, our list is not exhaustive. Some people were not available, with some we missed appointments and, quite frankly, there are so many kids in different parts of the country who deserved to be mentioned but just could not be fitted in for reasons of space. No doubt more names will keep surfacing in *Business India* and other media from time to time.

But what is important is not just the names and faces. It is equally important to look at the social attitudes and values of the future generation of industrialists. What are their attitudes to competition, both domestic and international, to labour and unions and other important issues? Do they have a different attitude from their parents to generating black money and to social obligations? Do they have a life beyond business and making money? While many of them may not have even thought of these issues, sooner or later, because of the positions they will occupy, they will have to think these issues through.

The only sad thing is that unfortunately in India no young person can make it really big without having a fortune to start with. We just cannot produce a Bill Gates (he founded Microsoft which owns the rights to MS-DOS, the standard operating system on all PCs) who was a billionaire before 30. While he is obviously an exception even in the US, we do not have anywhere near the same number of entrepreneurial start-ups which allow young people with new ideas or better ways of doing things to grow rapidly. It is not that our kids are not as smart as kids elsewhere: it is just that our corporate and tax laws are such that it is only those with inheritances who are favoured. So much for our constant preaching of socialist cant for the last 40 years!

It is for these reasons that we do not have any real venture capital business in the country. It is for these reasons that we do not have hi-tech start-ups. And it is for these reasons that many of our young people only dream of jobs or businesses overseas.

Letters to the Editor

An eyewash?

Your article on the RIL-RPL merger (Cover Feature, 19 August) covers all adverse features and weaknesses inherent in the RPL project and the financial games Ambani proposes to play and, yet, leads lay readers to believe nothing much is wrong with RPL and that Ambani has not lost his gloss in its entirety, but only in patches.

RPL promised heavens, declared a maiden dividend but failed miserably in converting "debentures at high premiums and strengthening a weak financial base". It will not be in a position to generate a sufficient cash surplus, even as a division of RIL.

N. NAGARAJAN
Vallabh Vidya Nagar (Anand)

Interesting

The report on Shirke group made interesting reading (Enterprise, 19 August). Shirke's had gone through tough times but eventually achieved a group turnover of Rs.100 crore.

RAKESH SINGH
Bombay

More confidence

It was heartening to note that the Indo-German Chamber of Commerce has gone beyond trade and collaborations and has introduced a dual training programme in India (Business Notes, 5 August).

This programme will inject more confidence in the young. Our education system only stresses the theoretical aspects. Faced with practical problems, our managers invariably depend on 'what was done last time'.

HEMANT SRIVASTAVA
Pune

Waiting for a masterstroke

I am happy to note that 'A near impossible task' (Editorial, 8 July) refers to some of the plus points of the erstwhile DMK government. The 'noon meal scheme' hailed as MGR's masterstroke was, in fact, introduced in the sixties by Kamaraj. But, later, he was forced to scrap all non-productive expenditure in a bid to take the state industrially forward.

If Ms Jayalalitha is serious about putting Tamil Nadu back on the industrial map, she will have to scrap this scheme as the state's financial status is already bad.

P.R. THIRUVENGADAM
Coimbatore

Well begun

This has reference to the article 'Lupin's rural formula' (Development, 8 July). D.B. Gupta has rightly pointed out that other industrial houses should also take up programmes for rural upliftment in India like the ones which Gupta has initiated.

KAPIL MEHROTRA
Kanpur

Misleading

Apropos the article on Parke Davis, 'Life after merger' (Corporate Report, 8 July), the statement, "Compared to Bombay workers, the Uppal workforce puts in longer hours and accepts lower wages and are easier to negotiate" is far from the truth. The workers here are young and their per capita productivity is high compared to that of Bombay workers whose average age is 45.

The union at the Hyderabad plant has proved that the products manufactured here contribute tremendously towards profits of the company, but still the wage bill is stacked against them. Only the obsolete and illogical industrial relations policy pursued by the company can be blamed for that.

V. GURUMOORTHY
Hyderabad

Star-rating undeserved

'A near impossible task' (8 July), is perhaps one of the most reckless editorials I have ever read. I would like to emphasise that I am not a sympathiser of any party in any state or in the Centre. None of them deserve it anyway. Yet I don't think the DMK administration was admirable at any time, as made out in your magazine.

G. SIVASUBRAMANIAM
Coimbatore

Surprising

With reference to the news item which appeared in 'Corporate Monitor — In Brief' (24 June), the statement "the company has set up a joint sector project in collaboration with the Punjab State Industrial Development Corporation to manufacture 4,500 tpa of acetic acid", is wrong because the company has not entered into any such collaboration.

V.K. MATHUR
Company Secretary, IOCL
Bombay

One-sided

Your Cover Feature (24 June) and and the Editorial (8 July) contain the same theme — what is good for big business is good for India. The only notable exception is Sudhir Mulji's 'Gold and convertibility'. The Fund-Bank prescription which Manmohan Singh has administered to save the necks of his political colleagues is almost an act of faith. object to a magazine standing presenting ently one-sided picture

RCD's Project Consultancy. Engineered for excellence, used by competitors

The Research & Consultancy Directorate (RCD), a division of The Associated Cement Companies Limited, provides engineering and technical consultancy services that covers the entire gamut of activities from project conceptualization, siting, construction, commissioning, and management – all under a single roof.

RCD offers expertise in fields which include Geology Environment & Mining, Process Engineering & Productivity, Erection & Construction, Refractory Engineering & Applications, Concrete Consultancy, Research & Development and Technical & Management Training. These are available to clients singly, in combination, or as turnkey services depending on the requirement.

These services have been used in India and Abroad, by cement producers and in other process industries like chemicals, ferrous, fertilizer, and non-ferrous, among others.

If you are planning to modify or extend an old plant. Or get more from what you have. Or starting a new venture. Or even just thinking of one – an idea, a concept that you think we can help make a reality.

RCD has a lot to offer you.

ARB/RCD/91

Continue forward trades

The recommendation of the government-sponsored report by L.C.Gupta to ban forward trading from Indian stock exchanges and replace it with a "mark to the market" system of daily settlement shows a lack of understanding of the real problem of the Indian stock exchanges — the lack of liquidity. It also reflects a confused understanding of forward trading, which is merely trading on borrowed funds or shares. There is no difference between daily settlement and fortnightly settlement when brokers are willing to finance clients' settlement differences in both cases.

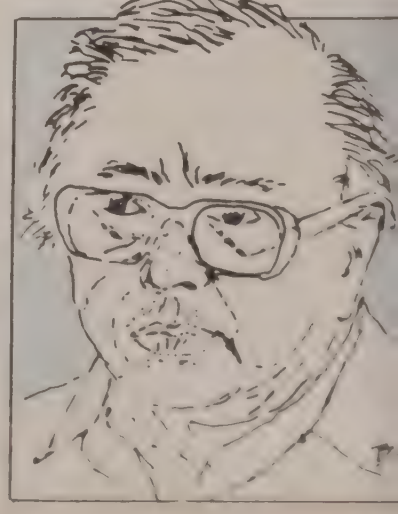
The report objects to forward trading because it believes that it adds to price volatility and assists insider trading. Both these views are wrong. By definition, a speculator is one who takes a forward position, ie, he does not pay for shares purchased nor gives delivery of shares sold, but merely pays the price difference on his position. Since this may encourage him to take risks that he is not in a position to bear, there could also be large defaults.

The fact is that despite a very volatile economy through the second half of 1990-91, which caused the BSE to lose over Rs.40,000 crore (about 40 per cent) in market value in four months, there was only a single case of default. On the other hand, six brokerage houses on the NYSE folded up after the 30 per cent fall in market values after August 1987. This suggests that the BSE's system to avoid defaults — wherein all brokers club together to share losses — is a robust one that has stood the test of time.

The evidence supports the view that speculative shares are not particularly volatile. While the average monthly price variation in the speculator-sensitive BSE Sensitive Index over the past 12 months was 11.6 per cent, that of the broader based National Index was only marginally lower at 10.2 per cent (*see chart*).

As for insider trading, this will continue regardless of whether forward trading is allowed or not. Controlling insider trades can only be done with an adequately empowered Securities and Exchange Board.

The plus side of forward trading is that it has the advantage of providing liquidity and information to the market and, thereby, actually smoothen price movements of shares.



The critical issue, neglected by the proposal, for sto market development is, in fact, liquidity. If any invest no matter how small, can freely buy and sell reasona quantities of most shares at small spreads, a large part the problem is solved. Liquidity can and should be i proved by providing brokers with better communicati facilities and helping the spread of broker networks. course, it should be recognised that this will not by its ensure liquidity if companies perform poorly and floati stock is low.

In sum, while the proposals ought to look at creati solutions, such as putting all shares up for forward tra ing and introducing new forms of derivative securities, suggests moving in the opposite direction of reduci trading opportunities.

There is, finally, the additional objection that just at t time that the government ought to be speeding up legisl tion to empower SEBI to allow it to deal with the vario issues, various *ad hoc* bodies have been empowered f the purpose. For example, there are three separate pane to deal with setting up mutual funds, new stock exchang and new kinds of securities. These issues are linked and makes little sense for these panels to work outside t aegis of SEBI, which is the appropriate body to promote comprehensive framework of self-regulation.

All that this report amounts to is the promotion of a increased level of external regulation — a contradiction the well-established logic of letting markets work wi minimal regulations that ensure a level playing fie for all.

Merely descriptive

One wonders what the Finance Minister will think of the RBI Annual Report 1990-91 when it reaches his desk. Released last fortnight, the report reads as if the country's central bank has merely fulfilled an obligation. It contains no more

n a matter-of-fact account of the current economic sit-ion, interspersed with explanatory bits for the actions as taken to correct the economy's aberrations. Instead providing a sense of direction to the government or n an intelligent analysis of possible strategies, it merely tes the concerns and policies of its master, the govern-nt of India. One does not need Mr. Venkitaramanan to form this service.

One expected much more from the Reserve Bank. For tance, the document provides no clue to the alarming te of the banking system and the direction that the fi-ncial sector is likely to take in the next couple of years. r does it prescribe any long-term solutions for the ills t the country has been facing on the economic and bal-ce of payments fronts for years now. Also, it having n proved beyond doubt that too much control does t work, the report ought to have discussed the role that rket forces can play.

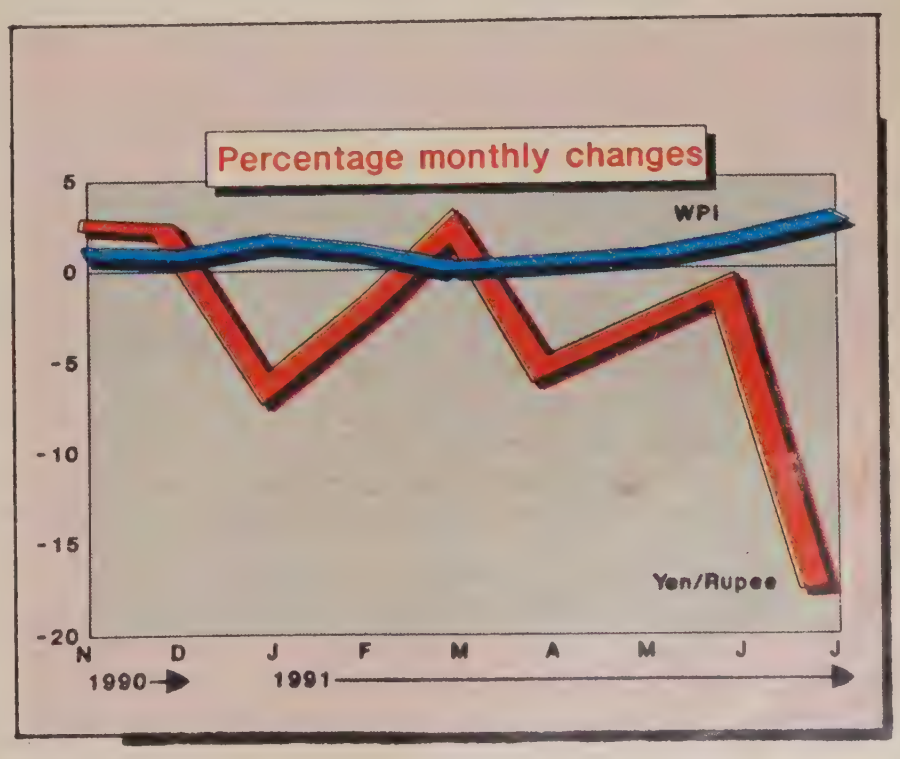
The report's dismal picture of the economy, especially commercial sector, does not suggest that it is the RBI's n restrictive credit policies over the past two seasons t have led to this stagflation. The RBI may plead help-sness over what it has done to the industry and may ntinue to blame everything on the government's ris-budgetary and fiscal deficits and on external factors. t, the central bank has done very little to explore other ans to control inflation.

Again, on a long-term basis, the RBI has suggested no asures to prevent a recurrence of the foreign exchange d credit crises. Is it not the bank's responsibility to tell e government how to manage the economy if the gov-nment cannot do so on its own? If economic growth der a liberalised regime is the only long-term solution, y not tell it like it is?

Given the resource crunch in the banking system, there are indications that the cash credit (short-term borrowings) on which the corporate sector is heavily dependent will soon be axed. Should not the report give a warning signal of this to the corporate sector in advance?

A major area inadequately tackled is the returns to the average depositor. The RBI considers the raising of the interest on 3-year term deposits by one percentage point a few months ago as being at a "historically high level". But almost any other savings avenue, from equity to National Savings Certificates and the National Savings Scheme, not only gives the depositor at least an equally attractive rate of return but also offers special tax concessions.

The decline in the growth of bank deposits over the past two years is a pointer to their uncompetitiveness. It is extremely unfair to both depositors and banks to keep the deposit rates so abysmally low, and yet, the RBI suggests no steps to bring in a fair deal for both. Of the menu of savings opportunities, bank deposits are a poor choice. While the report poses the right question relating to the banks' competitiveness, it says nothing beyond that.



It rightly warns against rising fiscal and budgetary deficits. But there is nothing new here; over the past year, the government has been talking about monetary targeting. The report's warnings are too general, merely a meek series of ifs. The government, the culprit, remains unbooked and unpunished. The RBI's subservience to its masters in New Delhi stems directly from the bureaucrats at its helm.

The RBI has also missed the opportunity to indicate the direction that the financial sector will take in view of the World Bank-sponsored liberalisations. While the desirability of reforms is unquestionable, the pace is debatable. The RBI could have utilised this forum to spark a much desired and healthy debate on the state of the economy. It has preferred to stop at description, where it should have prescribed.

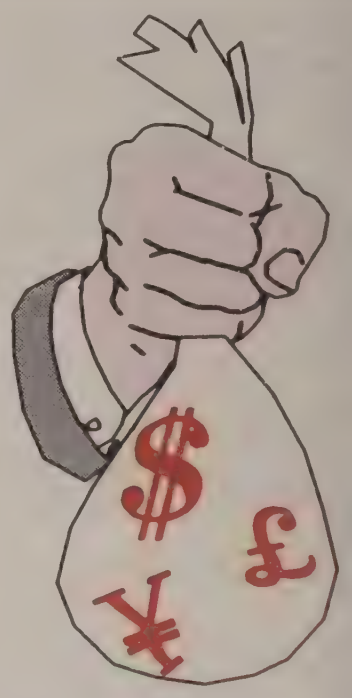
A word of caution

"he statement that further devaluation might be neces-sary, which made its round in the dailies, was subse-ently denied. And even if the minister of state for ance Shantaram Potdukhe did make it, it was a slip. t then, truth often comes unbidden.

After the sharp devaluation in early July, there was a mmitment from the finance minister that there would no further realignment of the exchange rates for some ne. Yet the real apprehension of a further devaluation ems from inflationary expectations reducing compet-veness on the one hand, and the possibility of competi-

tive devaluations in the subcontinent emerging as a trade strategy on the other. Already, Pakistan and Bangladesh have devalued their currencies to match the Indian action.

The essence of the devaluation of the rupee against other major currencies was to help Indian exports regain international price competitiveness. Here, what was important was not the nominal exchange rate but the real exchange rate or the nominal rate adjusted for inflation, both within the country and abroad. Between October 1990 and June 1991, there had been an appreciation in the real exchange rates despite a continued nominal depreciation, a result of the widening differential in inflation rates between India and other countries. The realignment of exchange rates by the Reserve Bank did much to rectify this anomaly. Yet much of this could be undone if inflation continues to grow faster in India than it does abroad.



The main task before the government, therefore, is to check inflation. This inflation has its roots in historic factors, like the budget deficit which has reduced the scope for monetary intervention to control inflation. With devaluation resulting in the higher cost of imports, cost-push pressures have accentuated. It is premature, at this stage, to ascertain which of the two is more to blame for the current surge in prices. Here, the fact that the monsoon was better than normal could help stabilise the prices of food grains if availability increases in the long run in spite of the recent spurt in food prices. The government has also made a commitment to reduce the fiscal deficit from 8.5 per cent to 6.5 per cent, which if it succe would help correct a major macro-economic imbala which has spurred inflation.

The government will be handicapped by its attempt reduce the average rate of custom duties, a major sou of government revenues in the past. But it would be fected even more so, if it is unable to cut its c expenditure.

An even more serious challenge is the inflationary pectations which have been unleashed primarily by government's own actions. The increase in petrol pr and railway freight set a certain psychological tone, t gering inflationary expectations. The message they se out to manufacturers is clear: if the government can crease prices so can we. Given the paucity of alternati the Indian consumer has no option but to buy even higher prices .

With this scenario, prospects for curbing inflation r largely on the government's ability to create a new e nomic climate. It needs to cut its own expenditures, even more, it needs to put in all efforts to boost prod tion, in both private and public sectors. For it is in a m sive increase in supply that the real hope for controlli inflation lies. If inflation continues to spurt, the wh purpose of the exercise could be defeated, destroying t

Treating NRIs differently

The Romans have a saying: *pecunia non odet* — money has no odour. For India, all foreign funds are becoming welcome. However, the really special deals are given to non-resident Indians via non-resident foreign currency accounts (FCNR) that return up to 13.25 per cent in foreign currency.

No element of sacrifice was expected of NRIs and none was required; on the contrary, a relatively high rate has been given to induce deposits in FCNR accounts. The rate of return on FCNR accounts exceeds by about 2 per cent that available in banks abroad. Given this difference, a proportion of FCNR money is even arbitrage money borrowed by NRIs at lower rates and re-invested in FCNR accounts.

The question is why NRIs alone should receive the benefit. Why not allow resident Indians who earn dollars through their exports to have the option of delaying repatriation in order to earn these high rates of return? Why not allow ordinary Indians to buy Exim scrips and do the same thing? And most of all, why only Indians? If foreign exchange is what is required, why not give the same deal to everyone the world over? It can only help to increase the pool of funds available at a time when India needs these funds desperately. Parti ularly, since we are the greatest preachers of equality.

Of course, deposits by other foreigners would add the country's total of debt whereas NRI deposits a treated outside the debt burden. But this is a farce th need be discontinued at the earliest. What matters in de is the servicing of it and even FCNR funds need to be se viced (at a high cost, as it happens). *Pecunia forant non odet.*

Signs of the times

So what if Lenin is in disgrace in his homeland; in Calcutta he is still revered — with cops ensuring that no one gets any ideas to the contrary.

Suite dream

Hotels, the magazine for the hospitality industry, in a recent survey of the world's most luxurious suites, in seven world class cities and two resort locations, has determined that the Galactic Fantasy suite at the Crystal Palace Resort and Casino in the Bahamas is the most expensive — it costs $25,000 a night. Gulp.

But charging a rate and receiving it are two different matters. The suite is often not booked — it is occupied by visiting celebrities or the casino's high rollers on a complimentary basis.

Guests in the ultra modern suite find a female robot servant named Ursula who explains all the suite's high-tech toys. The toys include a changing eight feet high wall of abstract art, a lucite piano that produces images as well as music, a rotating sofa and bed and a thunder and lightning storm created by light and sound effects. A sensoring device the guest carries opens doors, while body heat activates pulsating light columns.

Woman power

A record 77 women out of 200 members of Parliament were elected to the new Finish Parliament in the spring 1991 general election. Women now make up 38.5 per cent of the newly elected members which is the highest percentage in the world. Also, seven of the 17 ministers in the new cabinet are women which in itself is also a world record.

Rigged race

A short while ago, a multinational giant celebrated its annual sports day in Delhi for which a board director had specially flown in from Bombay. At the start of the fun and games, the director urged all participants to be unmindful of the end result and play in the true spirit of the game.

The event of the day was the senior managers' 100 meter dash, for which everyone lined up — the director himself, the local general manager, the marketing manager, a divisional sales manag Leading the race was t GM, who was cheered lustily by his colleague About 20 yards short o finishing line a peculia thing happened. The G suddenly slowed, the marketing manager sto in his tracks and the divisional manager not stopped, but took two s backward. Thus the rac ended in perfect hierarc order, with the director breasting the tape first, followed by the others.

Footwork

Recently, Bata India was approached by the Ramakrishna Mission Math, Belur, for advice on the preservation of footwear more than a century old. These are no ordinary shoes. They were once worn by Swami Vivekananda and Sri Ramakrishna and his disciples. Bata's representatives spent a few days at Belur Math where they restored the shoes and advised the authorities on their prop upkeep.

The President of India, who was in Leh at that point, did not come despite newspaper reports later to the contrary. "The sanctity of the stupa would not have been increased in his presence," said an acerbic official of the Ladakh Buddhist Association, which is fighting, among other things, for freedom from Kashmir. "But," he added, "it would have been a good token gesture towards the people of Ladakh."

Opening up

The Brandenburg Gate, the historical symbol of divided and now united Germany, was 200 years old this August. An open air music symphony held in the outskirts of Berlin marked the bicentenary celebrations of this monument that was established in 1791 as a customs counting house for Prussian officers. Berlin's population then was 150,000 and its wealthier citizens were allowed to drive through the Gate's central arch.

The heavy iron gates were damaged during a storm in 1804 and now no longer exist. Now the Germans are debating over whether the arch should be opened to traffic. Until now it has been used for state ceremonies and parades.

Junk bond

German car makers have recently agreed to take back junked cars from their customers. Thus, instead of landing up on the scrap heap, an old car will be recycled using environment friendly methods by the original manufacturer. Owners turning in their cars will be paid a scrap value that will depend on the car's condition. The German federal environment ministry is likely to issue a regulation that makes recycling binding on manufacturers.

Big arrangers

A list of the largest arrangers of commercial finance since January 1990 for India is dominated by French and Japanese banks. Since last year, Japanese banks have channeled close to $925 million of commercial finance into India. The second largest contributors are the French banks who arranged credits totalling $32 million. Significantly, the aggressive and high-profile Citibank figures nowhere on the list.

Buckling in

Indications are that the Bombay stock exchange is going to buckle to government pressure and accept new members. The exchange now seems willing to accept 100 new members, including institutional ones. The price of each membership is likely to be less than the presently quoted price of Rs.55 lakh. However, there is a premium of approximately Rs.25 lakh which is collected unofficially.

In a related development, all 1,200 application forms for dealerships on the OTC exchange were snapped up and there were demands for even more. Interviews for the dealerships are going to take place at the end of this month. Speculation is rife about the possible price of the dealerships and the expected price is likely to be around Rs.25 lakh.

Devaluationary boost

Grasim Industries has decided to revive its earlier plan of setting up a 100 per cent EOU for viscose staple fibre (VSF). While earlier the proposal held very little

Viscose: back in the running

appeal, the export of VSF has become more attractive after the devaluation of the rupee. The 25,000 tonne plant will be set up at Grasim's existing site in Nagda, thus doing away with infrastructural expenditure. Current estimates are that the size of the investment will be in the region of Rs.40 crore, which is far less than any greenfield project should cost in these "devalued" times.

Protesting helps

The one-day nation-wide strike organised by the drug industry seems to have had some effect. The government has allowed a price increase in some drugs like Ethambutol and Rifampicin, and has done away with the 5 per cent annual ceiling imposed on price increase by the

Testing drugs: better days ahead

former union minister M.S. Gurupadaswamy. But the most important announcement is expected to come later in the month when the government will, in all likelihood, further dilute the Drug Price Control Order. Not only will the list of drugs under price control be pruned, the industry is also expecting the government to do away with the current dual category system of pricing, where some drugs are allowed a 75 per cent mark up and others 100 per cent. In the new order, except for a few essential drugs, the mark-up for all others still under the price control will be a uniform 100 per cent.

A piece of the action

Now that the government has to hock off some public sector equity to the mutual funds the question is how it is going to actually set the prices. As these units have not been exposed to the market, normal asset pricing models or the guidelines of the controller of capital issues might not be the most appropriate. So, the department of public enterprises has contacted ANZ Grindlays, Bombay-based Strategic Consultants, and Coopers & Lybrand, the Indian

affiliate of an international cons firm, to suggest alternative mode decision has been taken on wh these three firms is going to be sel

Second thoughts

ITC which was till recently serious ing with the idea of hiving off i hotel-chain Welcom subsidiary into a sep company, is appa reconsidering the With MRTP gone, should be no goverr restriction on futur pansions, even if comgroup continue remain part of ITC. A company would ma difficult for the mon flow from the cash cigarette giant in the Welcomgroup through difficult ti But on the other hand attraction of floating a new compan in the fact that the Delhi-based comgroup will not have to refer ba ITC's Calcutta headquarters every a major decision needs to be ta Meanwhile, despite the fall in to traffic, the company is going ahead its Rs.160-crore expansion and mod isation plan which includes construc of new hotels in Jaipur and Hydera and expansion of facilities in Bom Madras and Bangalore.

Betting on diesel

While Greaves Cotton's decision to Brooke Bond's auto division rem still at the proposal stage, the Th group company is moving ahead wi plan to get into the manufacture o diesel autorickshaw. The compa light engine division has developed engine at its Chikalthana, Aurang plant. The vehicle is targeted at areas and small urban centres. The for the three-wheeler plant will prob be a 'D' zone backward area in rangabad that will give the compan cal incentives. The vehicle will be expensive than the petrol version bu operation cost will be much lower.

ND UNIVERSITY, GOLD COAST, AUSTRALIA.

SUCCESSFUL CAREERS START HERE FOR INDIAN STUDENTS.

Bond University is proud to be Australia's first iivate university. Based on an American model, it aims equip graduates with the intellectual and practical ills needed for success in their future careers.

The University takes pride, too, in the 34 Indian udents among its current enrolments. They are elcomed into every sphere of campus life, including dian-hosted social functions which all students d staff attend and enjoy.

Their academic success is reflected in the fact that ne Indian student was chosen as a member of the niversity's prize-winning team in the international oot Corp competition.

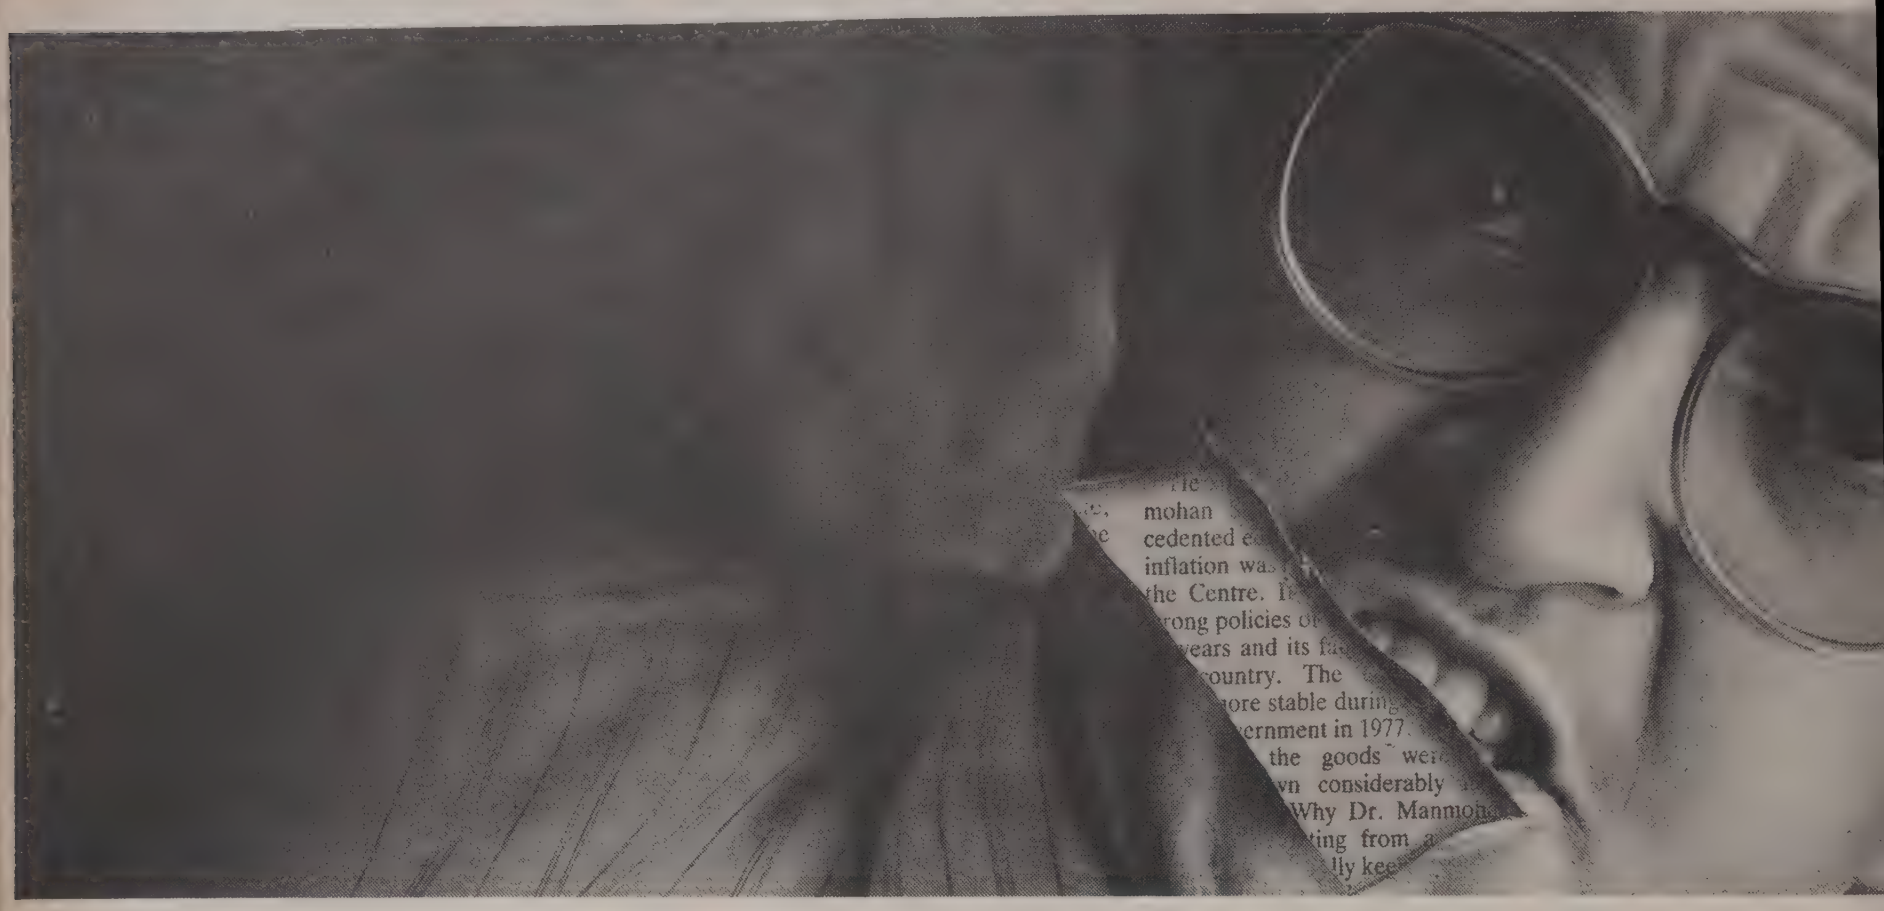
Bond University, in fact, is the only Australian mpetitor invited to take part in this prestigious rent with the world's top business schools – Wharton, CLA, Northwestern, Stanford, Carnegie-Mellon, ondon Business School and Lyon (France).

The University offers undergraduate and ostgraduate programs in four academic Schools: usiness, Information and Computing Sciences, umanities and Social Sciences, Law.

Its unique three semester system also allows udents to speed up completion of degree programs. or example, postgraduate degrees such as an MBA or an MSc in Computing Science can be achieved in just one year of study – since, unlike other universities, it does not close for three or four month vacations.

A member of the Australian Vice-Chancellors' Committee and the Association of Commonwealth Universities, the University is ideally located on Queensland's Gold Coast – Australia's premier tourist destination and fastest-growing city, one hour by car from Brisbane and one hour by plane from Sydney.

During the first two weeks of October, Bond University will host a series of seven seminars in Bombay, New Delhi, Madras and Calcutta. Everyone interested in undergraduate or postgraduate study in Australia should contact our Indian Alumni for more information:



Pustak Bhandar, Govind Mitra Road,
Patna 800 004, India. Phone: 0612-52958.

NDIA

o joy with the Sun

n 17 September, Air India decides upon a Bombay-based advertising cy which will handle its interna- l account, worth Rs.9 crore. At that it will also unleash its first promo- l campaign in many years, called

Maha Lucky Rajah Scheme, where tickets will be on offer in a public petition. But most importantly, this be the day when the airline will con- its decision to drop the Sun symbol, return to the Centaur.

wo years and $35 million later, Air 's flight of fancy will end without pathy, or even a glorious sunset. m Jetley's gimmickry — no thanks e San Francisco-based Landor As- tes, which reportedly tried to pass ne Sun to at least two other foreign nes — of buying the Sun for AI to re- the Centaur, will only prove to be ud many critics had expected.

spokespersons aver that the airline e from 30 Landor designs. Nev- less, the inappropriateness of the symbol and the extravagant ex- es incurred in the change, jarred y industry observers at the very ning.

ndustan Thompson Associates , which handles the airline's Rs.2 domestic advertising account, is of se the frontrunner in the race for the ligious account. Altogether ten cies will have made presentations, the controversial withdrawal of agencies like Trikaya Grey which plained that the two-week notice for ntations was inadequate, consider- he task on hand. It is most unlikely that HTA will be left out of the international account, given its past successful work. But to add creative inputs, the likeliest choice seems to be between Clarion and Advertising Avenues.

AI spokespersons claim that there will only be a marginal financial loss in reverting to the Centaur symbol. According to them, the stylish Landor livery incorporated into 10 out of the airline's 22 aircraft will stay. But though they deny that the Sun image never clicked, the return of the Centaur and even the continued existence of the Maharajah mascot (as in their latest promotional campaign) tells another, more real story.

■ DEVENDRA TAK

EXIM SCRIP

Many questions

More than a month has passed since the launch of the exim scrip (see *Business India*, 19 August 1991), but the modalities have not yet been fully announced. In the first of the changes, heeding exporters' pleas, the commerce ministry has agreed to include the name and address of the exporter on the exim scrip. The scrips issued prior to 23 August 1991, were unnamed, rendering the instrument into a bearer bond.

Echoing another demand of the exporters, Ramu Deora, president, Federation of Indian Export Organisations, has said exim scrips should be made transferable through letters of authority — a procedure prevalent for REP licences.

The addition of the name on the original scrip should make little difference unless the original exporter who applies for the scrip holds it. In most cases, the scrip is sold. Also, if a letter of authority has to be issued every time the scrip is sold, the very purpose of transparency of operations would be defeated and it might complicate attempts to list the scrips on the country's stock exchanges as per the original plan.

Will a letter of authority be necessary? Will the scrips be freely traded on the stock exchanges as per the original plan of commerce ministry? The mystery still remains unexplained. However, according to informed sources, a lot of forward trading in the scrips is taking place. Premium rates, dependent on demand and supply, were between 40-42 per cent in the first week of September.

■ MANALI RESHAMWALA

VANASPATI MANUFACTURERS

Gujarat on top

The battle rages on. The vanaspati manufacturers of Maharashtra and Gujarat are still slugging it out (see *Business India*, 27 May 1991) but the latter seems to be at an advantage. Out of the 11 factories manufacturing vanaspati in Maharashtra, three have already shut down, one has served notice for closure and the remaining seven have been operating at significantly low levels of capacity since August.

The total consumption of vanaspati in Maharashtra is over 100,000 tonnes per annum (with a turnover of Rs.400 crore). While the sales tax levied in Maharashtra is 8 per cent, Gujarat manufacturers pay only 2 per cent. On a 15 kg tin, costing about Rs.630, the price difference becomes a substantial Rs.40.

Representations to the Maharashtra finance minister allege that sales tax and octroi evasion by the Gujarat manufacturers has led to the complete erosion of the market.

The appeal of the beleaguered Maharashtra manufacturers is two-pronged. They are suggesting increased monitoring by sales tax authorities, including the setting up of an outpost on the Gujarat border; and reduction in sales tax to match neighbouring states. According to these manufacturers, a decline in the tax rate will be compensated by increased revenues for the state.

■ DEVENDRA TAK

Pow-wows

Much fanfare surrounded prime minister P.V. Narasimha Rao's first foreign trip: the **goodwill visit** to Germany which has been threatening a drastic cutback on aid to India. Rao's pow-wows with Chancellor Helmut Kohl resulted in the former agreeing to cut down on red tape for German investors. Kohl, in turn, promised to dole out more cash. Full marks to Rao.

Power ministers huddled together in the capital recently to ponder over **highpowered issues**. Their verdict: fix a minimum electricity tariff for the farm sector, amend the archaic Indian Electricity Act to let private parties in and revamp the State Electricity Boards.

The controversial **foreign remittances bill** that allows people to receive dollars from abroad and no questions asked was introduced in parliament last fortnight by finance minister Manmohan Singh. Janata Dal leader George Fernandes opposed it saying it was just a convenient conduit to bring back illegal earnings.

Tie-ups

Indian companies are firming up their global plans. Among them is the public sector **Indian Petrochemicals Corporation Limited** which plans to put up a Rs.1,000-crore petrochemical joint venture project in Saudi Arabia. By 1995, IPCL hopes to rake in those dollars, about $700 million. Chairman Hasmukh Shah isn't ready to reveal their partner's identity as yet.

The Indian computer industry has got a sudden attack of the blues. Specifically, the IBM blues. The likely shape, subject to approvals, of **International Business Machines'** second coming into India is a Rs.100-crore joint project with the Tatas to manufacture mainframes and microcomputers.

Avery India is now all set to manufacture petrol dispensing machines, in technical collaboration with the world's largest manufacturer of petrol pump equipment — Gilbarco of US. That is not all, Avery India also has plans to tie up with Avery Hardoll, UK, to manufacture electronic dispenser meters at the existing plant in Faridabad.

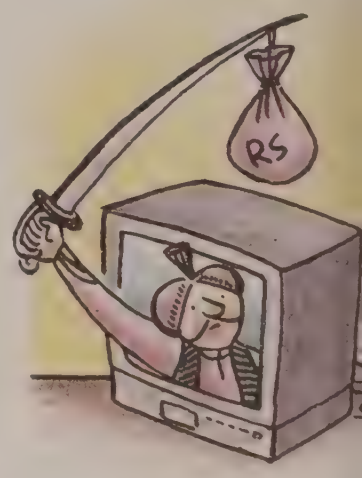
Grapco Granite Ltd, the flagship company of the Calcutta-based R.P. Jhunjhunwala group, wants to expand and diversify. The Rs.43-crore programme includes a diamond tool project which has a technical tie-up and buy-back agreement with Budiam of Germany.

Welcome mat

Andhra Pradesh wants to establish a significant presence on India's industrial map. Privatisation of certain languishing public sector units, cutting the cord between the AP Industrial Development Corporation and the government and opening up to foreign investments are the core proposals of the state's newly announced industrial policy.

The long-delayed Fourth Round inviting companies to bid for **oil and gas exploration** in 72 identified blocks was declared open last fortnight.

Milestones



Tea exports in 1990-91 earned the country Rs.1,074.81 crore. Of the total 201.99 million kg that was exported to over 23 countries, more than half — 115 million kg — was shipped to the Soviet U The UK accounted for 10 per cent share in ter both volume and earni

Since July, the price of **polyester filament yar** been scaled up by Rs.2 per tonne. Manufacture that the hike does not m the Rs.25,000 per tonne in cost of imported yarn

The export target for **engineering goods** has scaled up from Rs.4,200 Rs.5,000 crore by the Engineering Exports Promotion Council. In light of the April to Jun performance of Rs.1,05 crore, the target looks achievable.

Tipu Sultan, the televisi serial that raised a controversial storm befo and after it went on air earned Doordarshan a

whopping Rs.19.54 crore gross revenues from advertisers and sponsors

Power, steel, cement, shipping, fertiliser, telecc in essence the **core secto** remained immune to the political upheavals that rocked the country last y They performed better in fiscal '91 as compared to previous year. The only exception was the petrole sector which saw a fall in production. Bandhs, blockades, strikes and lea were the main causes.

delines

nance ministry has sed an additional 0 crore of foreign nge for importing sers. Imports, however, d be of raw materials alue addition done y.

te sector mutual funds nally on the way. That he recommendations of member study group d by S.A. Dave, man, Unit Trust of , the country's largest sector mutual fund, ccepted. The suggested s: an overall fundraising of Rs.200 crore over cars, a ceiling on ing in affiliate anies upto three per of the fund amount and er cent of any any's share capital. e should prevent them turning into takeover les). Dave & Co also feel rivate funds deserve a reak similar to their rnment-owned erparts.

rters now have more ns. The commerce try recently **ntrolled** 63 items and the ban on 17 others. estrictions (both total artial) that remain are fied in two lists.

ing go

losely held **MRF Ltd**, ountry's largest tyre facturer is letting go what. Uniroyal drich, its American borator which is a diary of French tyre Michelin, is paying 3.5 lakh to pick up a 9.8 nt equity stake in . That will mean a inal increase in MRF's apital base of Rs.3.85 and give a kick-off to ompany's proposed project to manufacture aircraft tyres.

Dollar accounts can be opened only by those trading and export houses which have an earning of over Rs.4 crore in the last three years. The Reserve Bank is finalising detailed guidelines.

Road blocks

Canbank Mutual Fund's new schemes have been **canned** for the time being by the finance ministry following a negative report by the Securities and Exchange Board of India (SEBI).

Environmentalists in Goa are gearing up to launch **an offensive** against the controversial Thapar-Du Pont Nylon 66 project if the state government doesn't scrap it by October 1. The Eco Forum, an organisation of six environmentalist groups, met recently and passed the Ponda Resolution (so named after the project's site) which contains their resolve to prevent not just Ponda but any part of the country from being polluted by Thapar-Du Pont. That should put paid to the combine's hopes to relocate their project from Goa to Andhra Pradesh.

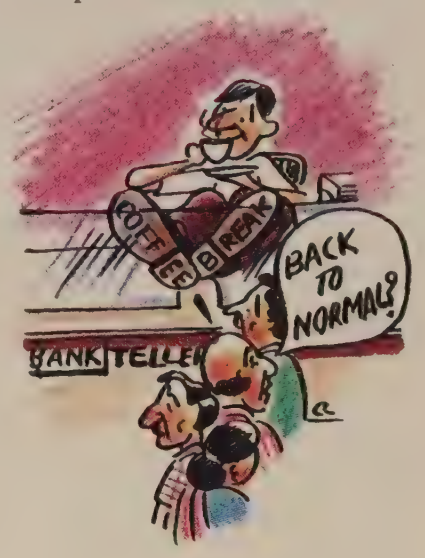
The Cochin-based Toshiba Anand Batteries Ltd is facing **a closure**. With accumulated losses in the region of Rs.16 crore, the Kerala government has the unenviable task of

getting a new promoter, by year end.

Indian exporters of **gold jewellery** complain that they are facing heavy weather in the form of competitive suppliers from neighbouring countries where labour costs are low and export procedures far simpler.

Pipe dreams

Some would call it a pipe dream. The **Gujarat Gas Co Ltd** (GGCL) is looking for a foreign partner for its Rs.1,200-crore project of providing piped gas in its home state. The dream is stuck not for want of collaborators — British Gas and Hongkong Gas are interested — but for a further 17 million cubic metres of gas supply from the government.



Bharatiya Janata Party leader Atal Behari Vajpayee

unveiled his scheme to bail the country out of its economic morass. Issue **gold bonds** and force all gold hoarders to offload. Vajpayee estimates that the hidden stock totals 2,000 tonnes.

Patch ups

A last minute assurance by P.R. Kumaramangalam, minister of state for parliamentary affairs, that bank privatisation is out, convinced bank employees **to call off** the strike planned for September 6. The bank unions' Joint Committee for Movement against Privatisation of Banks met finance minister Manmohan Singh recently and pleaded that privatisation would be

detrimental to their interests as well as the general public. Disgruntled bank customers who feel shortchanged when dealing with grumpy tellers would certainly not agree.

Striking junior college teachers in Maharashtra returned to their **classrooms** after 19 days when the state government conceded to a two-tier pay scale which will cost the exchequer Rs.1.5 crore.

Balram Singh Yadav, the union minister for mines, has assured the workers of the National Aluminium Company (Nalco) in Orissa that they would not be retrenched. The workers have asked for an ex-gratia payment of Rs.2,500 in lieu of annual bonus and a minimum conveyance allowance of Rs.300.

Dust-ups

If their wages are not revised forthwith, employees of the **Food Corporation of India** (FCI) will observe a countrywide strike on September 16.

Over 70,000 employees of regional rural banks all over

Newscast

India **stayed away from work** in response to a strike call by the All India Regional Rural Bank Employees' Association. The strike was called to demand proper implementation of the National Industrial Tribunal Award, promotion for all cadres, including substaff, payment of arrears and restructuring of the gramin bank.

By transferring its transmission business and some assets to the newly-constituted National Power Transmission Corporation, the National Thermal Power Corporation has rubbed its Japanese lenders the wrong way. The **Industrial Bank of Japan**, the leading lender, believes that the transfer will affect the NTPC's capacity to repay. The banks want to terminate the loans since NTPC's action implies, they say, a breach of the loan agreement. The Japs obviously feel gypped.

Before he relinquished office at the annual general meeting, Chirayu Amin, president of the All-India Organisation of Employers, suggested that trade unions should agree to a self-imposed **ban on strikes** and work non-stop for five years. Minister of state for industry, P.J. Kurien, who was present, pointed out that not all strikes are unwarranted. Incidentally, statistics from West Bengal reveal that, in 1990, 98.5 per cent of the total man-days lost were due to lockouts.

Sale deeds

RPG Enterprises is negotiating with Reliance Industries for selling its 24 per cent stake in the joint sector **India Polyfibres**, a loss-making unit. For the moment, though, the Ambanis have put all takeovers on hold until they bag the big one, ie Larsen & Toubro.

The perennially loss-making **Ramon & Demm**, a Bombay-based company may have a new owner. Telco, Eicher Ltd and Ashok Leyland have put in their takeover bids to the Industrial Credit & Investment Corporation. Accumulated losses of Rs.19 crore have wiped out the networth of this company which has a Rs.2.5 crore equity base.

Recordings

Finance minister Manmo Singh admitted on record the **Financial Times**, London, that India has a for $5 to $7 billion from International Monetary Fund.

The quantity of silver smuggled into the countr last year (187 tonnes) was twice that in 1989 (99 tonnes).

LANDMARKS

Kidnapped, Dr.O.N. Wakhloo, former principal of Regional Engineering College, Srinagar, and his wife Khemlata Wakhloo, the former Kashmir tourism minister, by militants in Srinagar. Also on the kidnapped list in the state are S.L. Khosa, Srinagar branch manager of New India Assurance Company, and Vijay Kumar Kaul, director, Regional Institute of Science & Technology, Srinagar.

Killed, T.S. Raju, assistant executive engineer, ONGC, by ULFA extremists in Assam after 69 days in captivity. Seven more ONGC officials continue to be in the hands of the extremists.

Revealed, by Girija Vyas, union deputy minister for information and broadcasting, in Bombay last fortnight that as many as 3,500 serial proposals were pending with Doordarshan. She also said that the Lok Sabha speaker had approved the idea of live telecast of parliament proceedings, though finance was a hurdle, and that the government had received 32 proposals from firms who want to run the second national channel of Doordarshan which is expected to be thrown open to the private sector.

Launched, the country's second credit rating agency, Investment & Credit Rating Agency of India, promoted by the Industrial Finance Corporation of India, UTI, Citibank and many nationalised banks. D.N. Ghosh, former chairman of State Bank of India and Larsen & Toubro will be the chairman.

Chargesheeted, R. Raghupathi, ex-chairman and managing director of Syndicate Bank and Amrit Sagar Puri, ex-managing director of State Bank of India, by the Central Bureau of Investigation. This is part of the 3 cases involving 42 senior officials of various public sector banks who ar being investigated by CBI for variou offences including showing of undu favours, sanctioning and releasin loans to fictitious persons and firm possession of disproportionate a sets, bribery and crimina misconduct.

Announced, officially by the Frenc embassy in New Delhi that India television viewers will be able to re ceive French TV programmes liv from 11.30 am to 6.30 pm with th help of a dish antenna. This follow the beaming of the French publ television channel Canal France In ternational to Asian countries vi satellite. But the programmes are i French, and Indian viewers will hav to wait till next year for Englis programmes.

Do you travel light and entertain heavily?

Win two return tickets to Singapore, Bangkok or Hong Kong. Or a pair of Titan Classique watches. Or one of ten leather executive bags

With today's increasingly hectic business schedules you may be travelling on business as often as twice a week. And with business meetings spilling over into business lunches and dinners, you're probably also entertaining your business associates frequently.

We at Ogilvy & Mather Direct, have been commissioned by an international organization to conduct a survey on travel and entertainment amongst successful corporate executives and businessmen.

Please answer the questionnaire below (it should take you just five minutes) and mail it with your visiting card to Ogilvy & Mather Direct, Mahalaxmi Chambers, 29 M.G. Road, Bangalore 560 001.

To thank you for your time, all complete responses will be entered in a Grand Draw. The first prize is two economy class return tickets to Singapore, Bangkok or Hong Kong. (The winner chooses the destination.) The second prize is a pair of Titan Classique watches. And there are ten third prizes: specially crafted leather executive bags. Do mail your response well before 7th October 1991, to qualify for the Draw.

Mail to Ogilvy & Mather Direct, Mahalaxmi Chambers, 29 M.G. Road, Bangalore 560 001. Please write your name and address in block letters, or clip your visiting card to the entry form. You might like to use a photocopy of this entry form, or give one to a colleague or friend. (Tick the relevant boxes below.)

TRAVEL

1. How frequently do you fly on business or otherwise?

	Within India	Overseas
* 5 or more times a year	[A]	[E]
* 3-4 times a year	[B]	[F]
* 1-2 times a year	[C]	[G]
* Less often	[D]	[H]

2. Where do you generally stay?

* 4/5 Star hotels	[A]
* Company guest house	[B]
* Other accommodation	[C]

ENTERTAINMENT

3. How often do you entertain in a leading club or restaurant?

* 4 or more times a month	[A]
* 2-3 times a month	[B]
* Less often	[C]

CARD OWNERSHIP

4. Which of these cards do you own?

Diners Visa Mastercard

Others (Please specify): _____

INVESTMENTS

5. Who do you bank with? Please list in order of preference:

1. _____
2. _____
3. _____
4. _____

6. Your investment in banks/fixed deposits earns:

Simple rate of interest [S] Compound rate of interest [C]

7. Do you invest in shares and debentures? ☐ Yes ☐ No

Please clip your visiting card, or fill your name and address below in capital letters:

Name (Mr./Mrs.): _____

Designation: _____

Company: _____

Address: (Off./Res.) _____

_____ City _____

State _____ Pin _____

BT

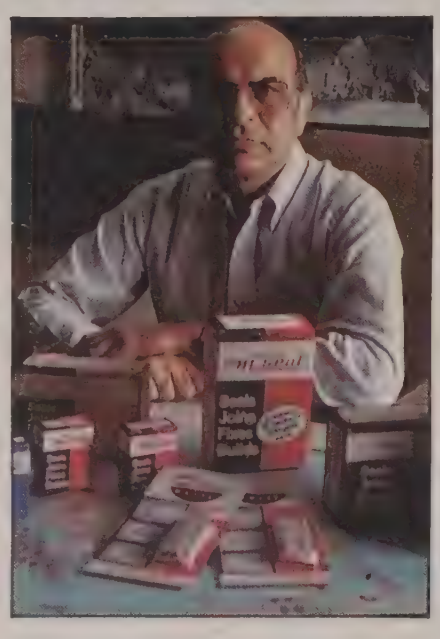
B. BASKARAN

The Karur Vysya Bank Limited has strengthened its owned funds by increasing the paid-up capital and reserves to Rs.9.58 crore from Rs.6.49 crore within a year. Following this increase, the ratio of owned funds to deposits works out to 3.04 as against the Reserve Bank of India's stipulation of 2.5 per cent. While every other bank claims an increase in their advances, KVB has reduced its advances from Rs.17.90 crore to Rs.17.58 crore in 1990-91. "This was a conscious decision made in anticipation of the tightening of the money market. And the decision has helped us increase our profit by 100 per cent," claims B. Baskaran, chairman, KVB. Of

late, KVB has been very active handling new issues. "Following our success in merchant banking, we have decided to enter portfolio management in a big way," says Baskaran. KVB is now floating a new division called Investor's Point, which will handle portfolio management for an annual fee of Rs.500.

SURINDER BAKSHI

His achievements in the food processing industry have won him a lot of praise. Naturally.



It is chief executive, Surinder Bakshi's breadth of experience and specialised knowledge that recently won Sunsip Ltd the national export award jointly given by the ministry of commerce and the Agriculture and Processed Food Production Export Development Authority. By introducing some really advanced technology into this field, Bakshi has helped SunSip, a Wimco subsidiary, become the first company in India and the fourth in the world to use aseptic packaging for processed fruits and vegetables. SunSip is also the first company to manufacture mango, papaya and guava concentrate. SunSip's exports, last year, amounted to 60 per cent. "The new export-related policies have given a further stimulus for growth this year," says Bakshi.

GURBIR SINGH

In 1969, an epoxy was introduced into the market by Mahindra Engineering & Chemical Products, a Mahindra & Mahindra subsidiary. Gurbir Singh, who was then a sales manager, recalls, "We used to go from factory to factory, explaining the concept and demonstrating the uses." By 1974, M-Seal had invaded industries ranging from small auto garages to nuclear plants. "It was a personal achievement for me," says Gurbir, now the executive director of MECP (latest sales: Rs.15 crore). Later, companies like Hindustan Ciba Geigy and TVS introduced competing products but they could not cut into M-Seal's 75 per cent market share.

On the contrary, M-Seal became a generic name and even stormed into the domestic market. Housewives found it convenient to seal and mend a host of items and artists used it as a sculpting medium. MECP has now introduced M-Seal

White, which sculptors prefer to the normal grey M-Seal. Launched successfully in Maharashtra, Delhi and Kerala, it is now being promoted in Andhra Pradesh, West Bengal and Gujarat too. MECP also makes cable jointing kits.

RAJENDRA MEHRA

The happy sense of achievement is written all over Rajendra Mehra's face. A partner in Rupa & Co, book distributors and publishers, Mehra has recently promoted a new company, HarperCollins India, in collaboration with Harper & Collins, UK. H&C, owned by the Australian media magnate Rupert Murdoch, is the third largest book publisher in the world. "This is the first ever

publishing joint ventu
Harper & Collins. They
persuaded by the great p
tial of the Indian market
forms Mehra. H&C has a 4
cent stake and Mehra 6
cent in the venture.

The books published
under the brandname I
will be authored by In
writers or be reprints of H
tles. Mehra will also ex
these books. This will pa
ularly benefit Indian wr
says Mehra, as their b
will get international expo
through all H&C outlets
world over. With devalua
making books prohibit
expensive, Mehra also ass
that HI reprints will be ov
per cent cheaper than the
ported originals.

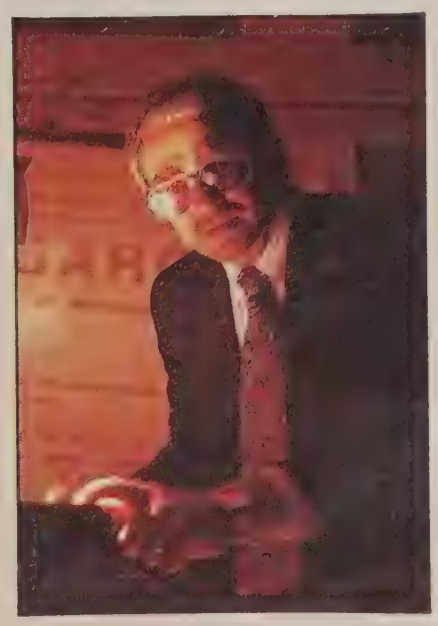
" The second unit (not
amed), also in collabora-
with a Korean company,
manufacture acrylic fibres
used for making toys,

baby clothes, lining for shoes, etc. The new unit will export the fibre to Russia and Thailand. This, however, is not the first time that Podar is tapping overseas markets. One of the group companies, Maharashtra Fur Fibres Ltd, has a turnover of Rs.14 crore and about 75 per cent of the production is exported.

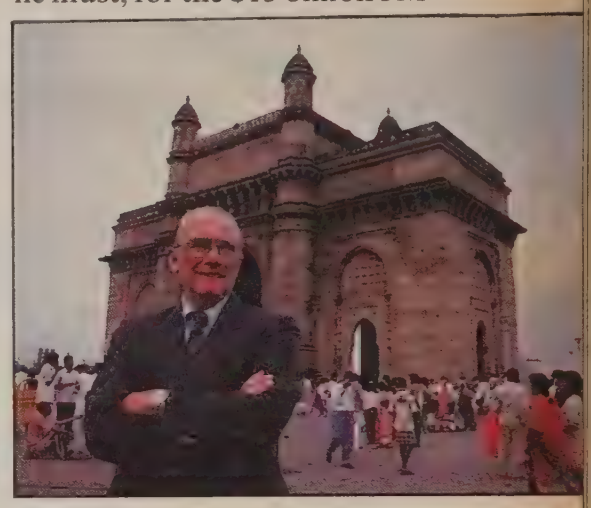
H.N. SETHNA

Normally a calm and collected person, H.N. Sethna, chairman of the Tata Electric Companies was at his strident best while addressing his shareholders in Bombay last week.



The object of his ire was the environment ministry which is sitting for the last one year over the clearance for the group's new gas-based 180 MW combined cycle unit at Trombay in Bombay. "All the formalities and stipulations have been fulfilled for this project," he said. "An organisation must know the precise environmental standards to be followed. These cannot be left to the whims of individuals. And these standards should be uniformly applied." What irks the Tata Electric top brass is the fact that international finance for this project — as well as for a 150 MW pumped storage project at Bhira — has already been tied up. "But since both are part of the same loan package, any delay in clearing the Trombay unit will also affect the Bhira project," Sethna added.

JIM WRIGHT

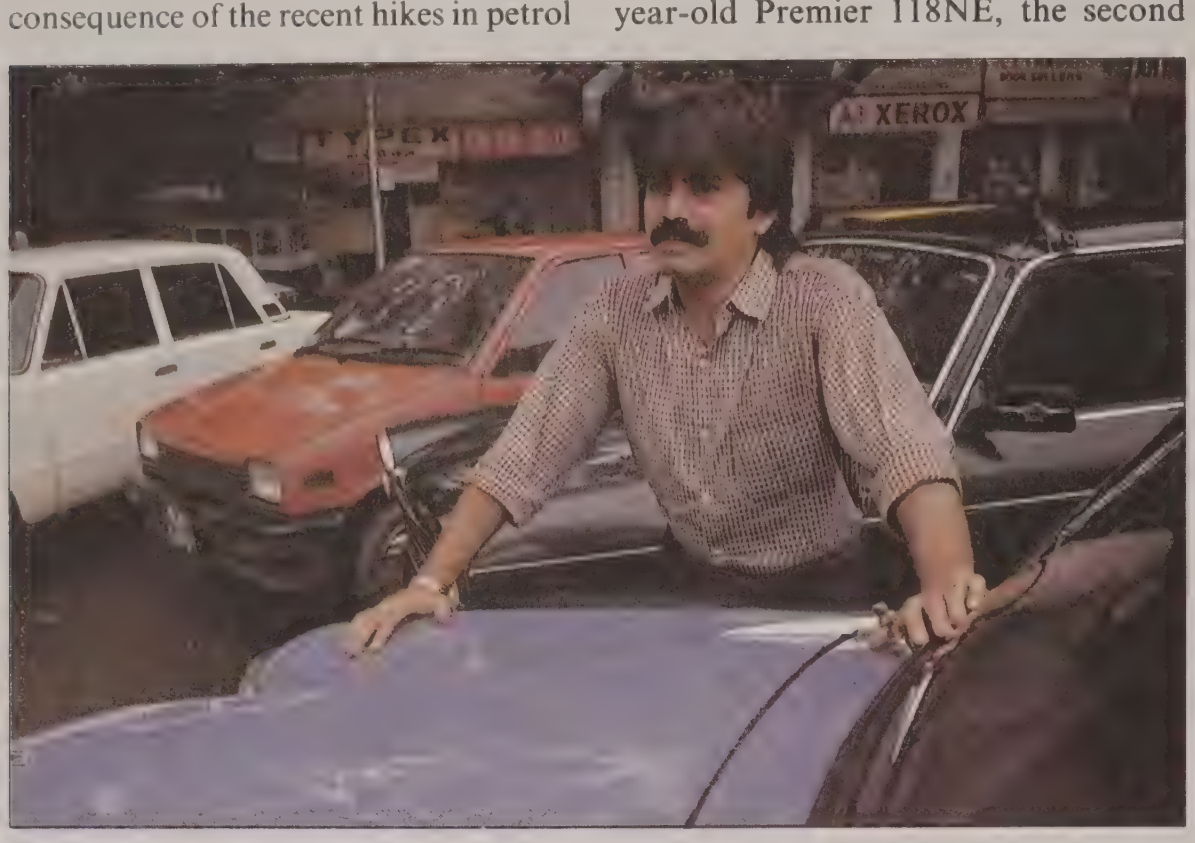


It was barnstorming with a vengeance. A group of Motorola (the communications giant) salesmen went around five cities in India, holding seminars that made the mouths of their communication-hungry audience water. The gizmos they demonstrated weren't expensive options like cellular telephones, or the proposed Iridium system, a satellite-based communication package for the very affluent which Motorola also sells. What Jim Wright (director, strategic planning and marketing in Motorola's paging division at Boynton Beach, Florida) and his colleagues were stressing were the relevance of technologies like radio pagers and the CT-2, or second generation cordless telephony in India.

World wide there are over 23 million pagers. These have, in fact, become so common that even teenagers have them. India has only a few hundred pieces, mainly in hotels and public sector units. But if the powers that be allow paging services to be set up, India could be one of the five largest markets in the world by the end of the century. That explains the great interest shown in our country by Motorola.

ALAN JACOBSON

"I only smile when I hear the word profit," is what Alan Jacobson, the chief operating officer of 3M Corporation says about himself. And smile he must, for the $13 billion 3M



is not only among the most profitable US corporations, it is also among the most admired for innovativeness. Jacobson was in Bombay and Bangalore last fortnight, to "see for myself how our Indian subsidiary (Birla 3M) is doing." But, according to business circles, the main purpose of the trip was to check out the feasibility of increasing the American giant's equity in Birla 3M (sales: Rs.10.64 crore) from 40 to 50 per cent. Says Jacobson ruefully, "Nowhere in the world is there a limit on foreign ownership, especially in technology-related business." Adds the executive, who is also on the board of several other companies like Mobile Oil and Sarah Lee, "It is important to stay on the leading edge of technology in this business. If you slip, you are dead." 3M annually spends 6.5 per cent of every sales dollar on research and development to maintain its high level of innovation.

SECOND-HAND CARS

Sweeping along

Even while an aura of gloom surrounds the automobile industry, second-hand car dealers are doing very good business indeed. "There has been a 30 per cent jump in sales in the past few months," says Nikhil Kantawala, who runs Kantawala's in Matunga, Bombay, and sells around 140 second-hand cars a month.

Along with the jump in volumes, prices of used cars have also shot up by almost 10 to 15 per cent. The frenetic bustle in the used car trade is a natural consequence of the recent hikes in petrol prices and the series of steep increases in taxes on new cars. "A new Maruti800 now costs over Rs.2 lakh, which very few people can afford. But the demand has not gone down — it has only shifted to second-hand cars," says Kantawala. He estimates that showroom sales of cars have dropped by almost 50 per cent in the last month from pre-budget levels.

Kantawala: more than content with the uptrend

Best seller on wheels. It is the Maruti owners who have a best seller on wheels. Thanks to the Rs.40,000 hike in the price of a new Maruti800 and its higher petrol efficiency, prices of second-hand Marutis have boomed. "A Maruti is like a blue chip share in the trade these days," says a spokesman for Computer Auto, a Bombay firm dealing in second-hand cars. A 1985 model Maruti in good condition fetches almost Rs.80,000, and a 1990 model around Rs.1,75,000. In Bombay, which incidentally is the biggest market for Marutis, almost 60 per cent of Kantawala's sales are in Marutis.

While the Maruti phenomenon defies the laws of depreciation, other cars , too, are fetching good prices. Premier 118NEs, Fiats, and Contessas are also fetching higher prices, though not higher than the original cost price. A three-year-old Premier 118NE, the second best selling car, for example, commands around Rs.1.5 lakh when a new car of the same make costs Rs.1.8 lakh.

Marutis and Premier Padminis are pouring into metros from other states. In Bombay, especially, a new car attracts a 15 per cent sales tax and 4 per cent octroi — an old car is liable to octroi only. In Delhi, though, sales to out of state areas are more than local sales.

The spurt of auto finance schemes, like the Citifinance scheme, have also been a boon for the trade. "Even people earning salaries of Rs.2,000 to Rs.3,000 can now think of buying cars because they can get almost 100 per cent finance for it," says Mahesh Tanna, of Royal Star Auto Consultants. Most d agree that middle-income custome on the rise. From June to August, Citibank stopped its refinance sc the business at Kantawala's dropp by 25 per cent.

Regularised schemes. As finan cars is moving from bundles of no regularised schemes, dealers are als ting sophisticated. Computer Aut come up with a software package f valuation of old cars. The com comes up with the approximate m value based on various paramete lated to the condition of the car. In bay, dealers have also become parti about documentation, unlike where the used car trade still functi a haphazard way.

Streamlining the procedures has an increasing dependence on dea "Earlier, buyers preferred dealing owners. Now people don't want to the risk of direct purchase," says K wala. As the percentage of 'suspect available is on the rise (an estimate stolen cars were sold in Bombay year) customers prefer to go thr dealers who take the responsibilit ascertaining the car's legal status. two per cent given to the dealer is co ered reasonable.

Naturally, second-hand car de are all smiles. Kantawala expects volume of sales to rise by another 2 cent around Diwali. The auto indus loss, obviously, is the second-h trade's gain.

■ SUDESHN

COFFEE PRICES

Stabilisation bi

The Bangalore-based Coffee B and the pool sale dealers (those buy raw coffee beans at the C Board auctions and sell it to consu after roasting and grinding) are lo in a new controversy. Reason: the fee Board has reduced the quota fo auction sales in spite of sufficient st And as a result, the price of retail c

e berries and (below) **seeds being dried: are s being manipulated?**

er in the market has zoomed. e victim, of course, is the consumer. began when the coffee auction uled for 12 March was cancelled by offee Board, because the pool sale rs boycotted it on the ground that ethod of working out the new mini- release price for coffee was isfactory.

s crash. Later, the board released le the quantity (5,000 tonnes) at an on in Coimbatore. But, a leading national, which on an average buys o 1,000 tonnes a month from do- c auctions, was absent and coffee s crashed. (According to sources, emand for coffee during summer is nd the multinational did not take n the March auction probably be- it already had the stocks or did not visualise any increase in retail sales in April.) As a result, few buyers managed to buy coffee at a lower price.

Thereafter, the Coffee Board decided to reduce quantities of coffee released at auctions even though the pool sale dealers have been crying for more. An amount of 1,750 tonnes each of raw coffee was released (against 2,500 tonnes auctioned early this year) at Bangalore and Coimbatore. The auction prices, hence, went up by 40 per cent.

Says Anil Bhandary, vice-chairman, Coffee Board, "We feel that the pool sale dealers somehow manipulated the prices at the Coimbatore auction held later in March this year. In order to recover the prices, we reduced the release quantity to 1,750 tonnes, expecting that the prices would go up." But the pool sale dealers swear that the coffee growers (planters) want more money for their coffee and the Coffee Board is deliberately reducing the supplies and allowing the prices to soar. In other words, the Coffee Board is speculating.

Desperate bid. Even though this year's coffee crop (167,000 tonnes) has exceeded last year's production of 117,000 tonnes, the price the consumer pays for coffee has remained the same — Rs.60 to Rs.70 per kg. Says G. Murthy, secretary, All India Pool Sale Dealers Association, "If the Coffee Board releases a higher quantity of raw coffee, the prices of ground and roaster (roasted) coffee will stabilise." But will the Coffee Board do that? There is a feeling among buyers at the Coffee Board auctions that the board, in a desperate attempt to get higher prices, may release more coffee at export auctions.

Next year's crop is expected to be a bumper (225,000 tonnes) and if the Coffee Board cannot sell its accumulated stocks in time, it may be loaded with a huge carryover stock of more than 15,000 tonnes of raw coffee. Since the Coffee Board does not release coffee in time and tends to stock it for a long period, the quality suffers, warehousing costs go up and planters have to rake in more interest for the bank loans. The situation calls for some quick decision-making on the part of the Coffee Board, otherwise, it will have only itself to blame.

■ DEVAPRASAD PUROKAYASTHA

MINERAL WATER

Donning an austere garb?

While the size and spectacle of the Maha Kumbh Mela in Nashik last month held sway over the masses, two Delhi-based companies took the opportunity to market their new products. Both companies, it seems, have decided to cash in on the Hindu religious fervour sweeping across the country and market *gangajal* in the form of mineral water. While Gangotri Minerals Pvt Ltd (GM) has launched Gangotri Pure Gangajal from Bombay, Himalayan Mineral Waters (HMW) has countered with Himalayan Bliss Gangajal from Delhi. According to R.K. Malhotra, marketing controller of GM, his company hopes to sell about 2,000 cartons during the mela.

Alone so far. Till recently Parle's Bisleri was the only mineral water available — aimed mainly at foreign tourists and a small section of the Indian upper class. Now the newcomers are focusing on a different market segment altogether. And their packaging too is different. While Bisleri Mineral is sold in one-litre bottles, the new entrants have opted to sell *gangajal* in 250 ml pouches and PVC re-usable bottles for domestic consumers.

The best of efforts evoked no comment from officials at Parle Exports. They were uncommunicative when queried about Bisleri, marketed by Aqua Minerals Pvt Ltd, a wholly-owned subisdiary of Parle. And chairman Ramesh Chauhan claimed that the

Malhotra: selling sanctity

turnover of Bisleri as a part of the company's total sales was very insignificant.

Although the two new companies stress that their product is not aimed at exploiting religious sentiments, the packaging and advertisements relate a different story. Says Sanjay Srivastava, general manager, technical, HMW, "We are not stressing the religious sentiment that *gangajal* evokes. The brand name only suggests that the water coming from the source of the river Ganga has a high degree of purity." Malhotra, on the other hand, is aware that the brand name Gangotri could evoke communal sentiments. Says he, "We were careful and decided to emphasise that Gangotri Gangajal implies purity of water."

Both companies have plants in the Himalayas where the water is filtered and packed. Malhotra emphasises that GM's plant has been set up at a height of 8,500 feet at the source of the Ganga because "downstream the water gets contaminated, this reduces its sanctity and herbal qualities." Built at a cost of Rs.1 crore in Harsil, Uttarkashi, the picturesque town in the Garhwal Himalayas, the plant has a capacity of 100,000 pouches a day.

The HMW plant is located at Sainj-Maneri on the way to Gangotri where the Himalayan Bliss Gangajal is naturally filtered through shifting glacial sands. "The refreshing combination of natural mineral water and salts in it makes Himlayan Bliss Gangajal the most natural and pure mineral water," claims Srivastava.

Marketing strategies of the two companies are, however, poles apart. Gangotri is promoted as a charitable venture. According to Malhotra, the promoters intend to use the profits for building hospitals and ashrams. The company therefore charges Rs.5 as a service fee for every pouch. As a stockist says, "It is likely that consumers may not like the idea of buying *gangajal* at a profit." Again, the religious sentiment factor could be playing its part. Says Malhotra, "And in this way money would be generated on a recurring basis." Srivastava of HMW hopes to sell about 400,000 to 500,000 pouches in about two or three months and capture 10 per cent of the mineral water market in the first year. "We hope to establish ourselves as brand leaders as far as natural mineral water is concerned."

Aggressive marketing. With both companies targeting their products at the same audience, the fight is going to be tougher than one expects. To add to their concern, the bogey of competition is already raising its head. Bombay-based Sparkel Foods, which has been marketing Aquaspa, a mineral water, for the Belgian company Spardel, is now involving itself in larger measure with marketing the product in India. The company has recently franchised its Delhi operations to Ajay Kilachand, special executive of Synthetics and Chemicals Ltd.

The market is divided and the consumer awareness growing. Both the companies have their job cut out for them — aggressive advertisement and rigid quality control. Their product, they have to convince the consumer, is bacteria-free and not just plain water.

■ MAHIRA SHEIKH

CORDLESS TELEPHONES

Floodgates open

The domestic market is going to be flooded with cordless telephones, now that two Indian companies have started manufacturing them. An buyers' dependence on hawkers d in smuggled electronic goods is c to an end.

Last month, Bharti Telecom p cordless telephone in the market i around Delhi on a trial run. It too years, an investment of Rs.1 crore collaboration with Lucky Golds South Korea, for the product to h market. The company is lookin ward to a 20 to 25 per cent share total market.

Close on Bharti Telecom's heels a model from Weston Electronics which sought technical assistance Winflair of Hong Kong for prod cordless telephones in partnership Himachal Pradesh Electronics Dev ment Corporation (HPEDC). The fee to Winflair for a one time knowhov $45,000.

Good market share. Weston hol per cent investment in its venture (1 cent is with HPEDC), and already clai have 40 per cent of the market shar cordless telephones are priced Rs.3,900 per unit. With an annua stalled capacity of 100,000 units, joint venture has so far produced 30 units in the last three months.

Now, a Tata project has also gon stream. And there are many more jects in the pipeline. Zimag, a subsi of the Punjab State Electronics Dev ment Corporation has signed an a ment with a Hong Kong b electronic firm, Ponic Enterpr Zimag will invest around Rs.10 cro this project and plans to invite some vate sector company as its partner in venture.

All this has been possible becaus the change in government policies cater to the domestic market, 33 lice were issued by the department of tronics. However, only three compa — Bharti Telecom, Weston and Zi — went in for foreign collaborat while one — Tata Industries — ado indigenous technology. And it's t four who would be fighting for the panding Indian market, untouched till now.

"The potential of the domestic ma as such is quite big, but then, we sh also look towards the global mark opines M.L. Rawal, advisor, telec munication, in Tata Industries Ltd.

alisation is bound to change the market scene

s' product, made with technology oped by the Indian Telephone In- ies, Bangalore, will be marketed by Keltron. With an installed capacity ,000 units per year, the plant in kad, Kerala, has already gone into uction.

e two recent devaluations of the e have resulted in the price of cord- elephones going up even before it touch the market. "We had priced ordless telephone at Rs.3,200 but it has touched Rs.4,000," says Ra- Mittal of Bharti Telecom. But he is istic. "Once Bharti Telecom is able lise its Rs.30 lakh worth of moulds e telephones, the price will further down as it will cut the outflow of oreign exchange. For, then we will e importing the telephone cases."

he foreign market. "We are sure to ell with our Rs.25 lakh advertising et this year for the domestic mar- We are looking forward to a foray in oreign market but only when we sold extensively in the domestic et," says Kamal P. Vachani, direc- f Weston group.

owever, Rawal feels that the domes- arket will reach a saturation point some time and then the only choice e manufacturer will be to either ex- or perish. "To compete in the global et we will have to be very careful of uality of the product, have a rea- ble price tag and deliver timely." level of production is also very im- nt as it will have a direct bearing on the price per unit, not only in the domestic market but in the foreign market as well.

With liberalisation, the market scene is bound to change. All manufacturers claim that their 'sleek' instruments contain the best features and has the maximum sophistication. So, there is going to be a lot of competition among the manufacturers for a niche in the market. But, it will be the consumer who will finally decide who wins and who loses.

■ RAJESH PROTHI

TYRE TRADE

Unacceptable price hike

When the tyre manufacturers' cartel decided to hike prices by 11-20 per cent last month, it didn't reckon with the consequences of a boycott by dealers and transporters. This was because previous hikes, including two during March and November last year, had been absorbed by the industry without much ado. Since November though, the trade has experienced an overall drop in profits, and with business continuing to decline the consumers are in no position to accept a steep hike such as the current one. The All India Tyre Dealers' Federation had opposed the move to hike prices and had made a representation — though unsuccessful — to the prime minister.

Truck and bus tyres now cost 11 per cent more, car and scooter tyres are up by 15-20 per cent and tyre tubes by 20 per cent. The tyre alone constitutes about 20 per cent of the operational cost of a truck. The effect of the tyre price hike has been felt in Bombay first. About 20 transporters' associations have made representations since 22 August to all the major tyre companies as well as the dealers agitating against the price hike. N.L. Gupta, president of the Bombay Goods Transporters'Association says, "We have asked dealers not to buy tyres at the new price. In case they do, we will stop patronising them. We are not going to give in, no matter what happens." The association, which has a thousand members with trucks numbering 30,000, will undertake a *dharna* and pull trucks off the road if the tyre manufacturers do not relent.

No giving in. "There would not have been any problem if the price rise had been a reasonable 4-5 per cent," says Kulvinder Singh, secretary of the Bombay Tyre Dealers Association and partner, Central Tyres, which sells 400 truck tyres every month. He adds, "The tyre manufacturers should have hiked prices in two or three small doses, instead of such a steep hike at one go."

Tyre dealers operate on very low margins — about 5 per cent for truck tyres and 7.5 per cent for car tyres. With tyre manufacturing companies now resorting to direct sales and setting up company showrooms, the dealers feel threatened by the companies' involvement in the replacement market. Many of these dealers feel that the manufacturers are not taking them into confidence, and the sharp hike in prices seems to have only bolstered this view.

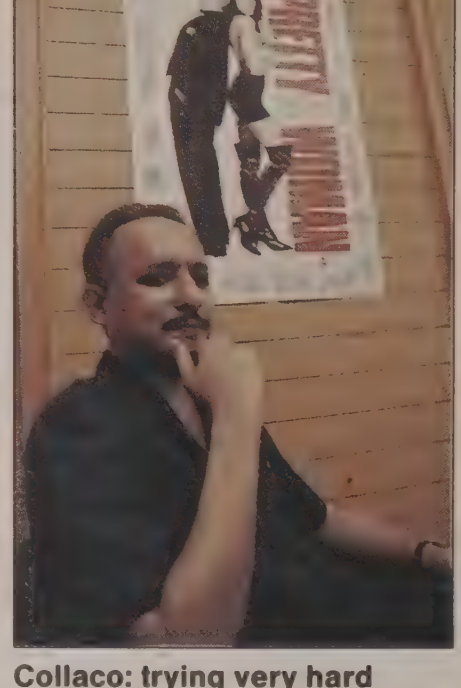
Tyre manufacturers are unperturbed

While the Automotive Tyre Manufacturers' Association claims that the increase in raw materials has made the price hike inevitable, the argument doesn't cut much ice with dealers and consumers who point out to the huge profits raked in by the tyre manufacturers. Last year, major tyre companies who account for 80 per cent of the trade had a combined turnover of Rs.3,300 crore with impressive profits totalling Rs.320 crore. In fact, the Bureau of Industrial Costs and Prices had indicted major manufacturers for arbitrary price increases. However, tyre manufacturers seem to be unperturbed by the recent developments. "The price hike was inevitable," reiterates Sahin Warsi, regional manager (west), Apollo Tyres. "In all parts of the country, dealers are already accepting tyres at the new price, except Bombay."

Tyre dealers, however, have never been a united lot and even in this agitation, they have to decide whether to toe the line of the manufacturers or support the case of the transporters upon whose goodwill they thrive. Either way, their decision could have national ramifications.

■ DEVENDRA TAK

EROS CINEMA



Unique selling proposition

Can the inimitable style in which movies are promoted — good marketing, merchandising and maintaining a sustained campaign — change the fortunes of a cinema hall? If the experience of Eros cinema in south Bombay is anything to go by, the answer is yes. In fact, *Pretty Woman* has had such an extraordinary long run that it has held back at least six new releases scheduled this year. It helped the next film *Tango and Cash* on to its sixth week, and also got *Hard to Kill* shifted to New Empire, another south Bombay cinema hall.

Lance Collaco, chief of Warner Bros, the American movie company, which normally releases its movies at Eros, is now faced with a unique problem — too many unreleased films on hand. Say he, "I won't be able to release many films at Eros this year."

Striking impact. The euphoria and excitement created by *Pretty Woman*, released in December last year at Eros has just about settled. Says Collaco, "We planned our strategy six months in advance and we went for it hammer and tongs." Eros today is riding tall. This record comes at a time when cinema halls, themselves in a run-down condition, are struggling to attract video-obsessed audiences. The campaigning was so effective that *Pretty Woman* ran the penultimate 5 weeks at Eros on its own steam.

In 1990, ten films were released at Eros. This year the number will surely be halved as this theatre is slowly replacing Sterling as the cinema house for long-playing films. Not since *Star Wars* hit off a jubilee run in the early eighties has a foreign film crossed 25 weeks. Oldtimers of course, will talk about *Mackenna's Gold* (45 weeks), *Towering Inferno* (40), *Sound of Music* (38) and *My Fair Lady* (32) but those were the golden years of foreign cinema in Bombay.

Collaco: trying very hard

As against an average box office collection of Rs.20 lakh for a foreign film released on the all-India circuit, the takings of *Pretty Woman* was Rs.39.8 lakh. This is clearly a runaway success of the Bombay release.

Full houses. "With all our concentration focussed on Bombay, we could not give much attention to other centres. We do not have the staff to manage that," says Collaco reeling out figures for the other centres — Calcutta (9 weeks), Bangalore (8), Hyderabad (8), Delhi (6) and Madras (6). At many of these places, the film continues to draw full houses.

The Warner Bros supremo's stints at Singapore and Bangkok earlier enabled him to see the efforts made by the American companies to roll back audiences to the big screen. At the time, says Collaco, "Coca Cola had just bought Columbia and there were all kinds of gimmick promote the film *Ghosts*." He descr how they hired a group of eight ho clothed them in white robes to look ghosts and made them appear toge in the most unlikely places in an effo promote the film.

"There is hope for English cinem India but one has to try very hard," Collaco who cites instances to show hard they worked on tie-ups. "How we link our product, cosmetics, wi hooker?" asked one of Bombay's le ing cosmetics firm — Warner had to proach others. Nine rejects later, t finally got a yes. Says Collaco prou "Who had ever hear Estelle before we leased our film? Now a household name."

For the first 20 we after the release of *Pr Woman*, Eros c ducted the Estelle F of '91 competition. T attracted college g who flocked there b to watch the movie well as be noticed ho fully and, may be, wi prize in the process. T girls chosen every we won prizes and qualif for the final competiti which was held w much fanfare.

At the final gala, like Sunil Gavaskar, Moon Moon S and Shiamak Davar played their p while Warner introduced a Pink Pant Macho Man and Pretty Woman conte This was on for six weeks.

Where Warner Bros and Eros have tually broken new ground is in the c cept of marketing and merchandisi Estelle sold jewellery worth Rs.1,800 day including trinkets and necklac The Pink Panther boutique sold clot worth Rs.600-800 per day.

Of course, its location near Chur gate railway station, the western railw suburban terminus (convenient for su urban dwellers) is Eros theatre's great asset. Its stature as Bombay's premi cinema hall is just a matter of time, b more importantly, it has fired the fi salvo for the resurgence of the Engl cinema.

We have people who check the people who check the people who check your aircraft.

You might well call it excessive German thoroughness that we don't let our technicians work unsupervised on an aircraft until they have completed four years' basic training and have at least eight years' practical experience.
It goes without saying, however, that their work is still inspected by an even more experienced technician who, in turn, is checked by a highly qualified engineer. And, after all that, there is the independent inspector from the technical control department who reports directly to the Board of Management.
We call this Lufthansa's contribution to inflight relaxation – it's something we simply owe you and ourselves.

Lufthansa

Savings-growth nexus

Countries that have, according to the World Development Report, shown a high growth rate of 6 per cent per annum or more during the period 1965 to 1989, have one thing in common — all have registered increases in the rate of savings. In view of the fact that income in India is skewed in favour of the top 10 per cent of the population, the propensity to save is therefore high. As a result, India has one of the highest savings rates in the developing world.

The gross domestic savings rate (as a percentage of GDP) increased from 10.1 per cent in 1951-52 to 15.3 per cent in 1966-67 and has now stabilised around 21 per cent. Actually in the decade to 1990-91, there has been no increase in the savings rate. In the last decade, the savings rate dipped below 20 in five out of 10 years. The bulk of the increase in savings has been generated by the household sector. In 1950-51, the household sector accounted for 7.7 per cent, the private corporate sector 1 per cent and the public sector 1.8 per cent. This went up to 11.3 per cent, 1.5 per cent and 2.9 per cent respectively in 1970-71. In 1989-90 the household sector contributed 17.8 per cent, while the private corporate sector and the public sector contributed a meagre 2.1 per cent and 1.7 per cent respectively. While the gross domestic savings has remained more or less stable at 21.6 per cent (current prices) during the eighties, the net domestic savings has actually declined from 13.5 per cent to 12.7 per cent.

Role of productivity

While savings do fuel growth, conventional theories like the famous 'life-cycle theory of savings' are not quite applicable in India because of the general poverty, high dependence on agriculture and cultural differences. Still, higher productivity, be it in agriculture or industry, does increase the propensity to save.

Another very important element in increasing the savings rate is real interest rate. There is considerable evidence to show a positive relationship between real interest rates and growth in financial savings. However, very high real interest rates could stifle investment and also lead to financial bankruptcies. Fiscal incentives, in the form of Public Provident Fund, National Saving Certificates, and life insurance, etc, have helped garner thousands of crores.

But the real challenge before the government is to boost public-sector savings, which reached a peak of 4.9 per cent in 1976-77 and since then have gradually declined. This is because the large public-sector enterprises are performing much below par, and are not generating enough resources for reinvestment in new plant and machinery. The net profit after tax of the central public enterprises was -1.1 per cent in 1980-81, but has shown a rising trend since then. In 1989-90, on a total capital of Rs.106,078 crore employed by 227 public enterprises, the return was a mere 4.5 per cent.

While savings have stagnated, government expenditure has risen. The current expenditure of the government as a ratio of GDP was up from 11.5 per cent in 1970-71 to 23.1 per cent in 1989-90. This has given rise to large revenue deficits in recent years (2.81 per cent of GDP in 1989-90). The rising revenue deficits and declining public savings have increased public debt to a frightening level, leading to higher inflation and a deteriorating balance of payments.

Clearly, there is little scope in substantially increasing household savings because they are already quite high. But there is ample scope to increase public-sector savings by increasing the efficiency of public-sector enterprises. This can be done by exposing them more to the market forces of demand and supply and greater competition. On the other hand, a stable fiscal policy would help in generating more revenue, reduce inflation and boost savings.

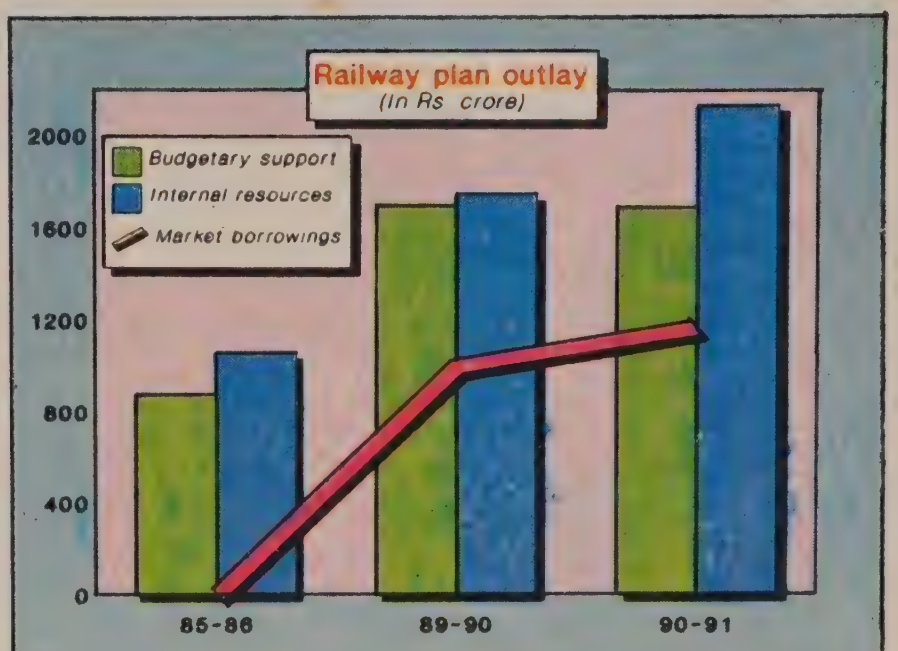
ACC

RCD's Geological Prospecting. Technology so advanced, even the World Bank is impressed.

For any mineral based industry selection of a suitable consultant for exploration and mining of raw material is a very important task. But not a difficult one if you value the advice of the World Bank. The Geology, Environment and Mining (GEM) division of the Research and Consultancy Directorate (RCD) is one of the few organizations in India which the World Bank recognizes as a raw material investigator. There's reason for it.

We at GEM have been involved in intensive exploration of minerals for over five decades, in India and abroad. Ninety percent of all cement manufacturers have used our expertise. We also operate and manage mines abroad. And now with the installation of a Sun 3/60 workstation and other modern analytical equipments we are about to chart a new course in the history of optimal recovery of raw materials.

So the next time you need a geological and mining consultant call GEM. You'll find us invaluable.



RCD

Vanaspati Industry

There are about 100 units in India manufacturing Vanaspati. However, due to certain extraneous factors, 21 are sick. Vanaspati industry has an installed capacity of around 220,000 tonnes, and its production has increased from 174,000 tonnes in 1951 to around 830,000 tonnes in 1989-90. But production has been declining over the last three years since 1987-88, the year it reached a peak of 986,000 tonnes.

The decline in production is mainly due to the fact that the supply of edible oil to the vanaspati industry has been suspended since December 1988. The industry has to therefore take recourse to the open market which is also restricted.

Lessons from Japan

AMIT MITRA

In the wake of the first serious attempt by the government to cut back the pervasive role of the state in India, some economists and journalists of the *left* have suddenly begun to 'discover' the central role of the state in the economic development of Japan, Taiwan and South Korea. Not so long ago, these nations were portrayed as the back yard of western neo-colonialism. Today, we hear that it is 'state planning' and aggressive state intervention that has transformed these East Asian nations into world class players. This questionable line of argument could unwittingly find common cause with vested interests which are eager to stop the process of liberalisation of India. For this reason, it is important to carefully examine the *real* role of the state in each of the cases in East Asia and reflect on the policy needs of our economy.

Let us analyse the case of Japan, reaching into its past and rethinking the role played by such legendary organisations like the ministry of international trade and industry (MITI). Modernisation of the Japanese economy began around 1868. The state took the responsibility of building the infrastructure and agricultural experiment stations, a role that is fully acceptable to market economics.

PSUs disposed of

However, it also began to establish iron foundries and coal mines etc in the public sector. But soon, the government realised the mistake of encroaching on the private domain and in 1882 it conducted *the first ever case of privatising public sector undertakings.* The PSUs were disposed of '... at prices low enough to attract ready buyers'. "Through the early decades," concludes an eminent scholar of Japan, "....business interests, both large and small, were left comparatively free to develop most fields of industrial and commercial enterprise with little direct competition and regulations by the state".

However, the government concentrated on human capital formation instead, promoting education and training. By the turn of the century, 5 million Japanese children were receiving primary education and by 1903 over 240 technical schools had been initiated. Contrary to Japan's image of resisting western ideas, it unhesitatingly drew on the French model of primary education to set up its own system.

Now let us turn to the recent period ar popular perceptions on the role of the One would be surprised to learn that MI *not* want Honda and Mitsubishi to build and did *not* want Sony to purchase Ame transistor technology. Defying the wish MITI, the private companies went ahead these ventures on their own steam. The re of this defiance need no elaboration.

Enough to rethink

Furthermore, other successful industri Japan such as cement, paper, glass, bic and motorcycle did not receive much a tance from MITI either. Curiously enough two industries which did receive MITI's fu tention — ship building and aerospac have remained major disappointments Japan. While these examples do not cap the entire picture, they are enough for u rethink the supposed role of the MI Japan's current industrial successes.

Returning now to the context of redu the role of the government, one must rem ber that market economics assigns many r to a modern state. The state is expected t duce the transactions cost of the private a through the establishing of unambigu rules on contract and private property. expected to tackle private monopolies, b infrastructure, invest in human capital, br information gaps in the market place, keep alive an economic safety net.

When judging the role of the state in Ja or in India, one must use these mainstre criteria. In doing so, one will find that state in Japan remained fairly close to above criteria from 1882 onwards (with so exceptions during the period of the Sec World War). Unfortunately, the state in In strayed far beyond the boundaries laid do by modern market economics, and the curr reforms are merely attempting to bring In back to the normal course.

One key lesson for us from Japan's exp ence is to shed our historical and social pre dices against private economic activity, a direct government policy towards a heal partnership between the state and private terprises. The other is to take advantage global opportunities in the realm of ide technology capital and trade. Japan's histo successes epitomise both these lessons.

The author is director, policy unit, of Business India *and former director, Centre for Asian Studies, Franklin & Marshal College, US*

Reach out for high-growth!

UGS 5000

Last year, we introduced UGS 2000 a growth scheme whose Net Asset Value has already reached Rs.15.78 (Jan-Aug '91). This means an appreciation of 58% in 8 months.

On Mastershare, another growth scheme, investors' gains have gone up over four times in less than five years. In addition, they've received good dividends — 18% in 1990-'91.

This year once again we offer an equity based growth scheme — UGS 5000 to Unit '64 account holders. So you may look forward to capital appreciation.

Highlights of the Scheme

- The Scheme is exclusively for Unit '64 account holders as on 30th June '91 and also those who applied in the month of July '91 (excluding transferees).
- The amount you can invest depends on the size of your Unit '64 account holdings in one account.

Unit Holding in one account	Eligible limit under UGS 5000
Upto 150 Units	Rs.2000/-
151-300 Units	Rs.3000/-
Over 300 Units	Rs.5000/-

A growth-oriented equity scheme

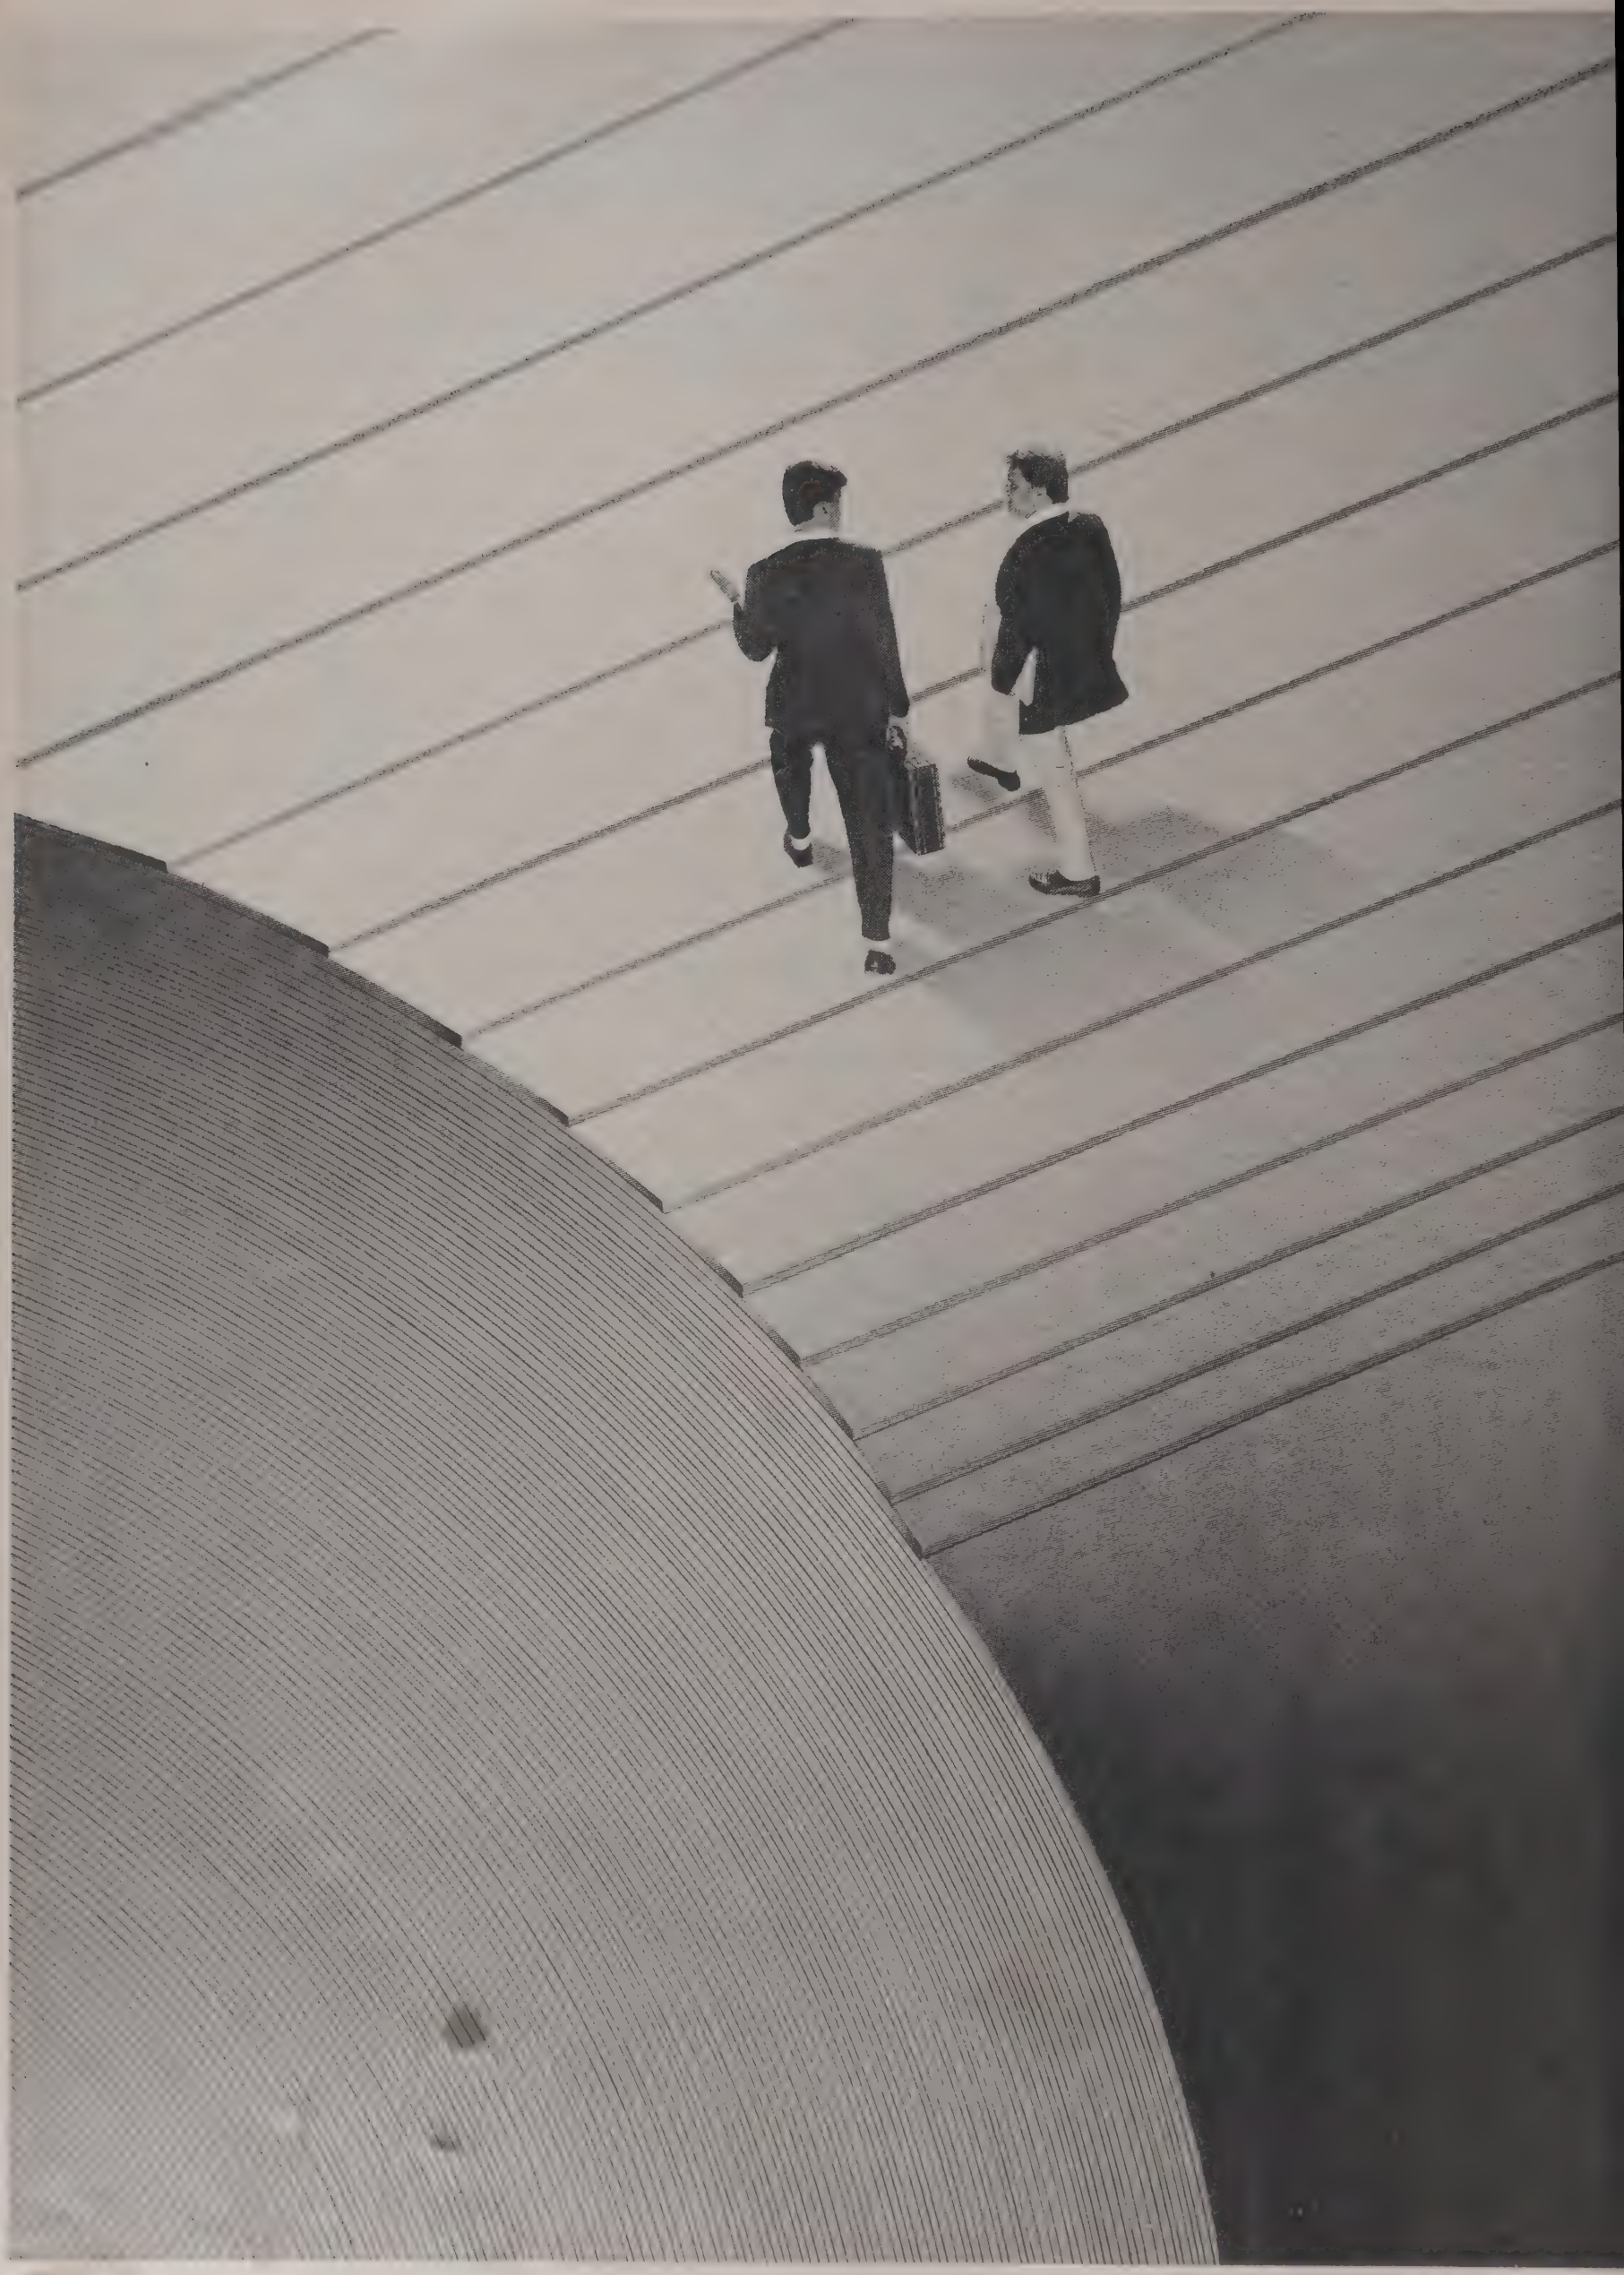
58% appreciation in 8 months under UGS 2000.

- This scheme will be open from 1st September to 30th September '91.
- This will be a 10-year growth scheme.
- Repurchase facility after 2 years.
- Capital gains on repurchase after 3 years will be treated as long-term capital gains. This is presently exempt up to Rs.15,000/-.

All Securities Investments carry market risk. Do consult your investment adviser or agent before investing.

UNIT TRUST OF INDIA

At the service of One Crore Unit holders.



Bombay • Calcutta • Madras
New Delhi • Ahmedabad • Bangalore
Bhubaneshwar • Chandigarh • Cochin
Durgapur • Guwahati • Hyderabad
Indore • Jaipur • Kanpur • Lucknow
Ludhiana • Nagpur • Panaji • Patna
Pune • Rajkot • Shimla • Surat
Tiruchirapalli • Trichur • Vijayawada

Applications accepted at all branches of: Central Bank of India, Union Bank of India, Canara Bank (South Zone) and Bank of Rajasthan (Rajasthan) **And designated branches of:** State Bank of India and Bank of Baroda (West Zone)

Exclusively for Unit '64 Account holders.

Please collect your application form from any Unit Trust Office or Chief Representative or Agent. Separate Offer Letters are not being posted.

ON TO AN EVEN MORE EMANDING FUTURE WITH A NEW NAME

ITC BHADRACHALAM PAPERBOARDS LIMITED

Bhadrachalam - The Company promoted by ITC 15 years ago. The Company that set an illustrious example for India's paper industry with its trailblazing performance... is now set to meet the challenges of an even more demanding future.

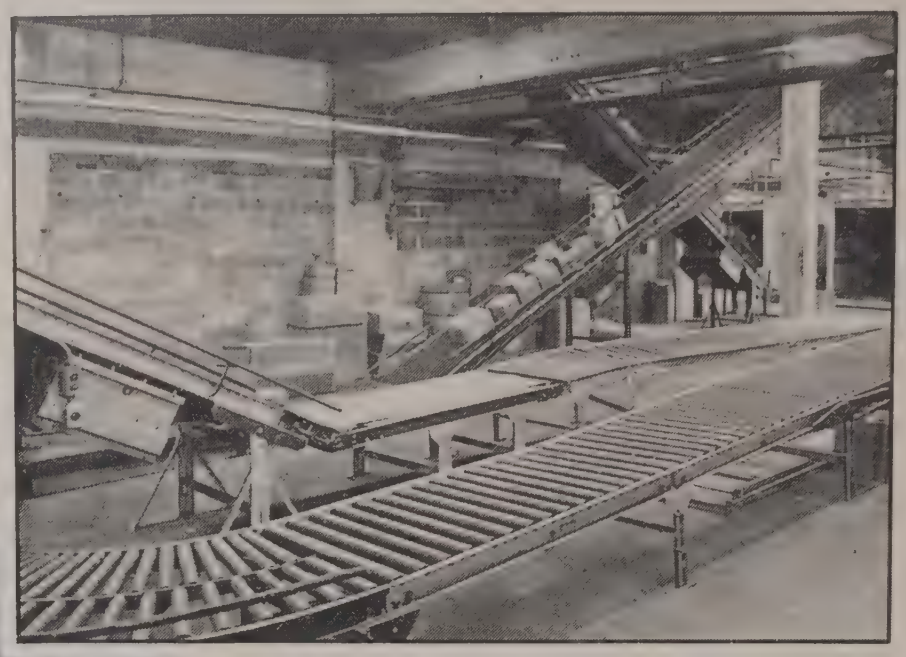
To symbolize the new thrust for the 90's and to reflect its close, natural bond with ITC, the Company will henceforth be called "ITC BHADRACHALAM PAPERBOARDS LIMITED". A fruitful, mature togetherness! A name that signifies deep commitment to meet the growing needs of domestic and international markets.

Tomorrow will throw up newer challenges. Newer packaging requirements. Writing and printing papers for versatile communication needs. Production oriented to customers' changing demands and an ever responsive distribution network will be the need of the day. And marketing that spans across nations and continents.

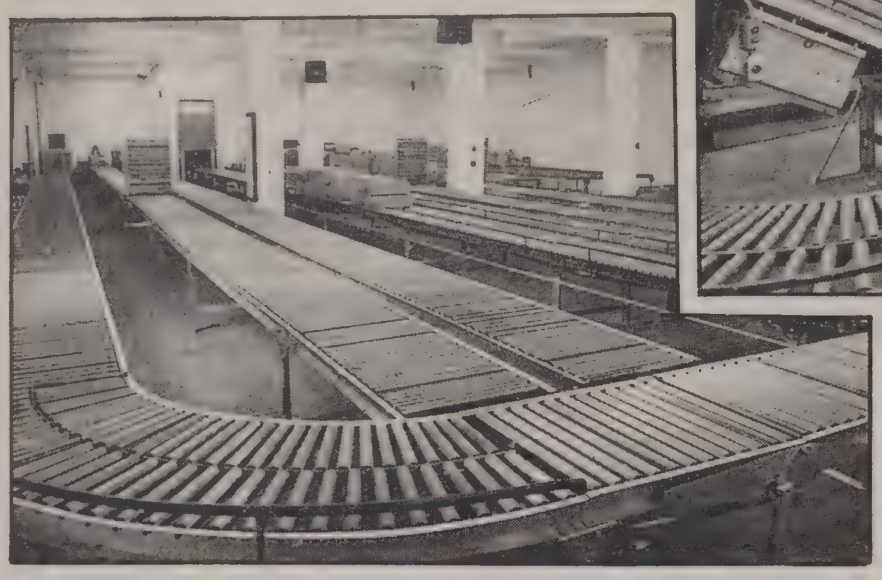
ITC Bhadrachalam is creating new niches for its products in world markets to boost the nation's exports. Together with ITC - India's largest foreign exchange earner in the private sector - ITC Bhadrachalam will have the much needed competitive edge to propel it forward!

Some meaningful strategic alliances are on the anvil.

More daring dreams are taking shape. For, the future belongs to those who dare. And ITC Bhadrachalam has the vision to match it !



ITC BHADRACHALAM PAPERBOARDS LIMITED



106, Sardar Patel Road, Secunderabad-500 003.

C BHADRACHALAM: A NEW NAME TO LIVE UP TO!

ULKA-H-BCM-16004

Our name carries a lot of weight . .

in many more ways than one

We at Pluton Machinokraft Pvt. Ltd. have been engaged in the design, manufacture and commissioning of various types of Material Handling Equipment on a turnkey basis.

Our technical tie-up with M/s. Material Handling Equipment, Singapore has helped us incorporate the latest technology into our products for optimum efficiency and peak performance.

Total dedication and time honoured commitment to delivery schedules has earned Pluton the trust and confidence of reputed clientele like

- Kinetic Engineering Ltd., Ahmednagar
- Kinetic Honda Motor Ltd., Pithampur
- Videocon International Ltd., Aurangabad
- Apollo Tyres Ltd., Delhi
- Bharat Forge Ltd., Pune
- Onida, Delhi

Another unique feature of our operations is our total involvement with Material Handling operations in which we undertake projects right from the planning to the commissioning stage. A service offered by very few in India.

The range of turnkey projects undertaken for various Material Handling Equipment are :

- Slatt Conveyors
- Roller Conveyors (Gravity & Powered)
- Belt Conveyors
- Troughing Belt Conveyors
- Free Flow Conveyors
- PCB Assembly Conveyors
- Assembly Line & Process Conveyors
- Overhead Conveyors
- Automatic Turn-Tables
- Winches
- Jib Cranes
- Trolleys
- Other Material Handling Equipment as per customer design/requirement.

Is it any wonder then that our name carries a lot of weight ? In many more ways than one ?

Pluton Machinokrafts Pvt. Ltd.

Carrying ideas to their fruition.

ardly a ripple

obably is the first time that an n prime minister on a trip abroad o coldly received. Prime minister simha Rao, on a recent visit of

many, was not greeted at the airport hancellor Helmut Kohl or any of inisters. The German government itched the Deputy Chief of Proto- – who must be an officer equivalent nk to that of joint secretary to the rnment of India.

so, Kohl did not call on Rao at all. of his ministers kept the Indian e minister company at dinner and fast respectively. It was not until ext day that Rao could meet Kohl. same evening, a press conference held, the venue of which was ded with Indian journalists. There not more than a handful from the nan media — some among them walked out after sometime.

o's visit hardly attracted the atten- of German television. He was n for 10 seconds on the second day visit, that too on the last news spot .30 pm.

bjections stained

the recent liberalisation brought t a dramatic change in the attitude e bureaucracy? The reader may as judge on the basis of this incident ring after the Indian dairy associa- held a conference in the capital last ight. Dairymen from all over the try expressed concern at negative de towards the dairy industry. The was the finance minister's delicens- f this industry which meant that the peratives sponsored by the National Dairy Development Board and those in the private sector will compete with one another.

Minister for agriculture, Balram Jakhar, however, assured the delegates that all the recommendations of the conference will be considered seriously. The only hitch, as it turned out, was that as a cabinet minister, Jakhar could not address a letter to P.J. Kurien who holds the industry portfolio, but is a minister of state! And letters across the government fabric can apparently travel only laterally or upwards, downwards.

The problem was finally circumvented by requesting agriculture secretary R.C. Kapila to write to Suresh Mathur, his equivalent in the industry ministry. It was now Mathur's turn to reverse the entire process — the industry portfolio being held by the PM himself, seeking a change in the industrial policy would require a review of the entire cabinet.

Clean-up man?

In Delhi's *darbar*, where empire building is a favourite pastime of the upwardly mobile, fortunes can be made or broken in a moment. A good example of this is Jairam Ramesh, an engineer turned economist who, a few months ago quit a government job at the Planning Commission to work for the Congress party, (along with mentor Sam Pitroda).

When the Congress party was elevated to power, sure enough the plum post of an officer on special duty in the prime minister's office landed on him. Just two months later when Sam Pitroda suddenly fell from grace, this signalled the end of Jairam too. He has been shunted back to the Planning Commission.

Postscript: the official version however, is that Jairam has been sent to clean up Yojana Bhavan which is in a mess.

Balancing act

Like anyone else, the commerce ministry has little indication of the happenings in the Soviet Union or the possible consequences this will have on the rupee denominated Indo-USSR trade. Says an official in the ministry, "It will take us at least a month to evaluate the possible implications and, of course, much will depend on the nature of the new treaty that all the states in the USSR sign."

Future policy will involve the balancing of certain core items like fertilisers, crude oil and essential chemicals that we import with commodities like tea, coffee and consumer goods that they export. The rest, according to the commerce ministry will be left for the private sector to deal with.

Besides, exporters to the Soviet Union eligible for import replenishment at the old rates until 31 December this year will be awarded rupee replenishment at the rates prescribed by the new export-import policy.

Of good stock

Are our bureaucrats educated in Harvard, Cambridge and Sorbonne? One would not think so, considering that the basic requirement for recruitment to the IAS is a plain degree. But prime minister Narasimha Rao appears to think otherwise. When questioned by a group of German industrialists on how he could prevent bureaucrats from scuttling the reforms he has introduced, Rao offered many reasons to explain why this would not happen. One was that the bureaucrats being educated at Harvard, Cambridge, etc were modern in their outlook and will have no incentive to do so.

Interestingly, Oxford-educated commerce secretary, Montek Singh Ahluwalia, was with Rao on the dais. Perhaps our PM has begun to think that all bureaucrats are of the same stock as Montek.

Tailpiece: The latest rumour, doing the rounds in New Delhi and apparently reliable, is that Gopi Arora, currently director of IMF operations in India will return next year, after India has secured the IMF loan, to assume charge as cabinet secretary — the top civil service job.

Faces of the

A new generation of tycoons are being groomed to take over the rei of their fathers' businesses. Most of them, unlike their fathers, are highly educated and are now being put through the paces in preparation for their upcoming roles as the royalty of Indian busine

It's Saturday night at 1900s, Bombay's elite discotheque. Amidst the glitterati, some obviously rich and seemingly carefree young people are rocking to The Doors. The conversation — little that there is of it over the high decibel levels — skirts around fast cars and last summer's European holiday.

Photos: Palashranjan Bhaumick

Chhabrias: it was given on a platter

Later, when they are winding down though, the conversation switches to production problems, stockmarkets, petrochemicals, electronics.

For these are no ordinary sybarites — come Monday morning and they are back on factory floors and plush offices, running companies worth crores of rupees and taking decisions affecting hundreds of people; t are the future royalty of Indian business.

And while everyone is talking about changing equations in the Indian econo another metamorphosis is taking place v out much fanfare. The Birlas, Thap Singhanias, Khataus, Bajajs, Dalmias Kilachands, to name just a few busi houses, are paving the way for the next ge ation to take over — a generation which longs to the era of the microchip and MI generation that spouts, in heavily accen tones, the jargon picked up from Ameri business schools.

Thanks to the circumstances of their b and the legacy of earlier generations, th young inheritors — most are in their twen and thirties — are being groomed to head dustrial empires at an age when most peo are just dreaming about the corner office a company car. Many of them are not yet c fident about talking to the press; and others could not be contacted. So a repres tative sample of inheritors served as spok persons for their peers.

In a country where family run busines are a predominant feature of the indust structure, family management, professio ism notwithstanding, will continue to prev "The Tatas are considered the epitome of p fessionalism, but it is Ratan who takes o from JRD," points out Priya Paul, who at heads the Rs.10-crore Park Hotels chain. elder of two daughters, she was the obvi choice for the top slot after the tragic mur of her father, Calcutta-based industria Surrendra Paul, younger brother of tycoon Swraj Paul.

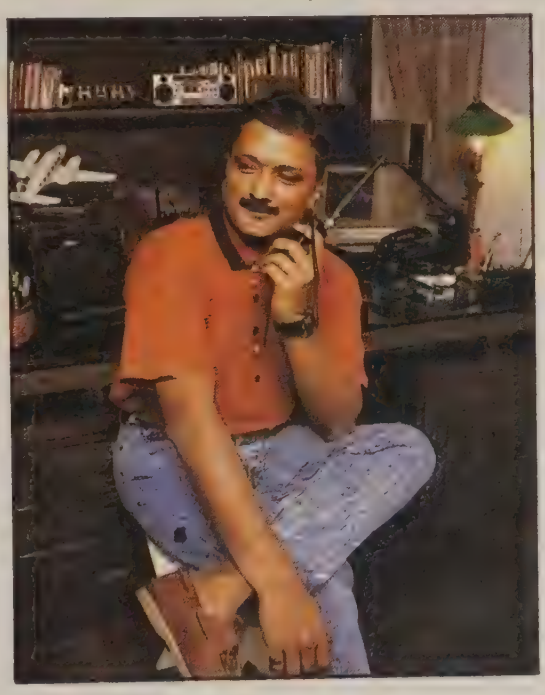
The succession issue is not called to qu tion even by senior professional manag working in family-owned concerns. doesn't upset anyone. I've been around sinc was a kid and everyone knows that I'm go to take over some day," says the cheru

uture

ɾav Ghai, the 23-year-old son of lity's Ravi Ghai. He learnt how to make ɾeam at an age when he should have been figuring out how to wangle out his next Gaurav, who once grew a beard to look , was instrumental in setting up RG's, bay's latest exclusive nightspot.

deed, the 'conditioning' starts from child- , what with the conversation almost ex- ɾely centered on business, often starting ɯe breakfast table. Priya spent hours hing her father run the business since she en.

ɯutam Singhania, younger son of ɾpat Singhania, horticulturist, aviator kingpin of the Rs.400-crore Raymond p, spent his school vacations training at actories. And over the years, the *chhota* becomes a familiar sight and gains ɔtability among other employees.



ɔne can deny that they were born lucky. have been given everything on a golden ɐr — our parents had to work their way without any support," admits Deepak abria, son of K.P. Chhabria, general ager, production, of the Pune-based ly company Finolex Cables Ltd.

ɯt the charmed life has a host of respon- ties and expectations attached. Science ɔn nut Gautam Khandelwal wishes he d have finished his Master's at the Lon- School of Economics — but the early de- of his father Premnath brought him back in his uncle Mahendranath and cousin v in running the closely held Khandelwal up (flagship company: Khandelwal ɔ-Alloys).

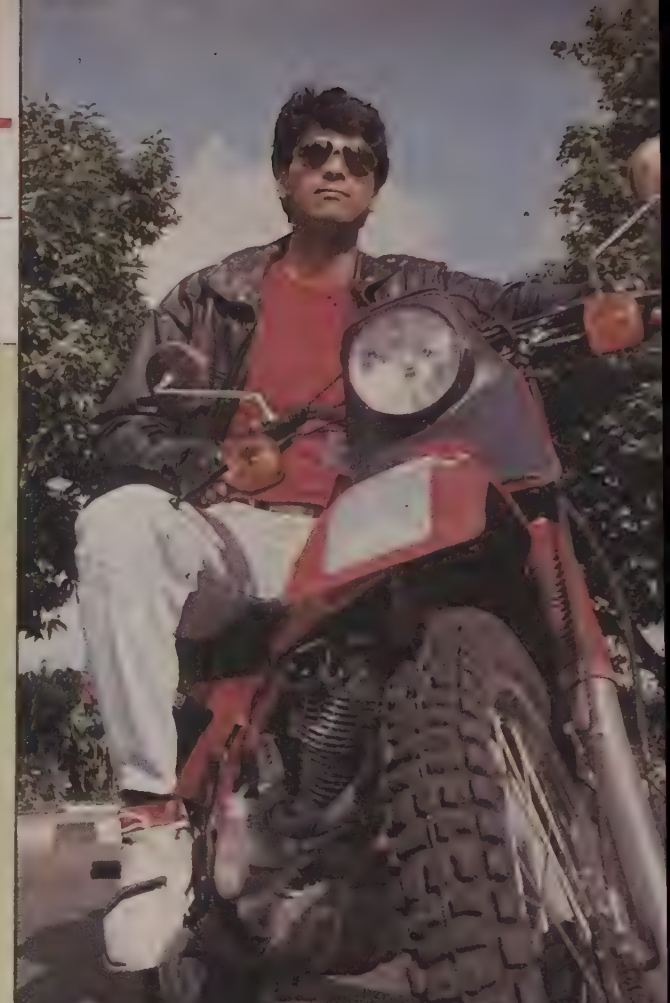
contrast, Prakash Chhabria of the Fin- group, could hardly wait to get back while doing his bachelors in international business at the Indiana University, US. And when he did, Prakash spent over a year in the grease and dust of the shop floor. Now he is general manager, administration, while cousin Vijay, is general manager, commercial of Finolex Pipes. There are no fancy designations as yet for the Chhabria boys.

Sajjan Jindal, fresh out of engineering college in 1983, was handed Jindal Strips, then small and ailing stainless steel unit in Bombay. "I had no experience, no management team — I'd work 18 hours a day and yet the unit made losses," he recalls. It took four years of struggle before he phased out stainless steel, started a cold rolling plant, and despite his father's sceptism went ahead and designed what is now known as one of the lowest cost galvanising plants. The second son of O.P. Jindal and admitted "squash addict", Sajjan is joint managing director of the Rs.280-crore Jindal group and heads the western region operations; brother Ratan handles the northern region.

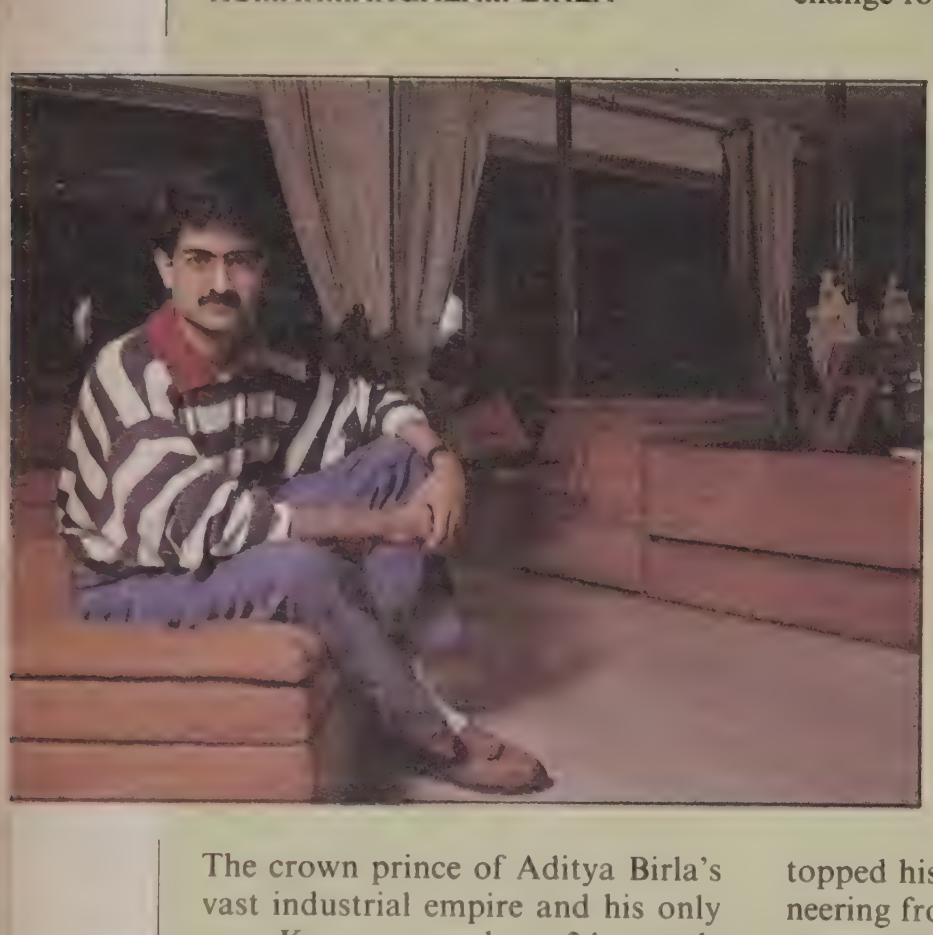
Such a baptism by fire is rare, but that may be related to the fact that the older Chhabrias and O.P. Jindal themselves came up the hard way, and as first-generation entrepreneurs do not take their success for granted. Nor would they like their children to.

Madhupati Singhania: well in control

Shyam Kothari: keeping in step with change



eep Garware: hoping to shape up



New kids on the block

Until yesterday they were ordinary kids of the M.C. Hammer generation. Then the family business beckoned. Loaded with American degrees, denims and dad's backing, the young tycoons of tomorrow are bubbling with self-confidence.

Some are feeling their way around. Others are trying out their own ideas. But all of them are taking their first tentative steps on a path that inevitably leads to the boardroom. How are they coping and shaping up? Business India *talked to a few new kids on the block.*

KUMARMANGALAM BIRLA

The crown prince of Aditya Birla's vast industrial empire and his only son, Kumarmangalam, 24, stands out from his contemporaries. There is no brashness; instead there is the Birla stolidity and level-headedness. "I'm really a very boring kind of person," he says. But he knows he has to prove his mettle and come out of the shadow of his father's towering personality.

Kumar is keenly aware of, though not overawed by, the expectations surrounding him. At present, he is halfway through an MBA at London University; his involvement in business is still marginal. A commerce graduate and qualified chartered accountant, Kumar spent a year after graduation looking after operations at Vikram Cement and the caustic soda division of Grasim, as well as setting up two small specialised chemical units for Grasim. In major policy matters, he says, he was just a spectator.

After his MBA, Kumar will be back at Industry House, the Birla group's headquarters in Bombay. There are no grandiose dreams, no schemes to bring about change for its own sake for he displays a healthy respect for the traditional Marwari systems. He is quite clear on his future course: "My role would be to dovetail with the growth route of the organisation which is poised to go global." He believes his MBA, which gives him a "helicopter view of business", should be invaluable.

RAJIV BAJAJ

As educational credentials go, Rajiv Bajaj's are as impeccable as his pedigree. The older son of two-wheeler tycoon Rahul Bajaj, has been a topper all his life. He topped his year in mechanical engineering from Pune University, spent a year training at Telco, and went on to top his masters course in manufacturing systems engineering at Warwick University in the UK. A PhD he's working on, in Japanese automobile manufacturing techniques, currently has Rajiv shuttling regularly between Pune and Warwick.

In the meanwhile, in a corner at Bajaj Auto's Pune plant, a small but significant experiment is taking shape. Rajiv, along with a team of engineers, is trying to transplant Japanese concepts like just-in-time and supplier integration onto Bajaj Auto's decades-old manufacturi systems — no mean task that. Rajiv interacting with supervisors on t shop-floor, for change "needs bottom-up effort", he says.

Rajiv is all praise for his father "dedication to a focused cause". A for himself and his brother Sanjiv, h says, "We're still on the learnin curve."

TANYA GODREJ

She could as well be modelling for th soaps she markets. But Tanya Goc rej, the eldest daughter of tycoon Ac Godrej and high-profile interior de signer Parmeshwar Godrej, wa faced with a choice between he mother's profession or her father' business. "Since I'm not keen on de signing other people's homes, I de cided to give my Dad a try," she says

An economics graduate from Brown University, US, the 22-year old Tanya is now brand manager fo Godrej Soaps' premium soaps. In th last six months, though a little fazed by the "enormous scale", she's beer "trying to get the hang of things by dabbling in various departments".

For Tanya, her present job is essen tially a stop gap. "I'm getting the re quired job experience for admission to a US business school," she admits That MBA degree is crucial to help her establish credibility with the nu merous MBAs that the Godrej group recruits every year. Tanya's future plans, however, are nebulous. Godrej

caps, though, is definitely out ecause, "I'm too much in awe of my ther". She would rather do her own ning "even if it is a small project"

ARTHIV KILACHAND

e's just spent a year computerising ie operations of Polychem Ltd, the s.114-crore company run by his fa- er. Parthiv Kilachand, the only son Tanil Kilachand, opted for a ourse in electronic engineering from rown University, US, even though

olychem is into chemicals, because rganic chemistry wasn't my cup of a". Back home, he skipped the shop oor and opted for the keyboard. "I d to find out how every depart- ent worked, to computerise the op- ations," he says.

Now, he is in the midst of setting up a new project, a joint venture with the Gujarat Industrial Investment Corporation and AVX of the US. It marks the group's first foray into electronics and engineering plastics; that suits Parthiv perfectly.

YUDISHTIR KHATAU

When American-educated Yudhishtir Khatau, Dilip Khatau's son, returned home in January this year, he brought back not only a bachelor's degree in economics and finance from Wharton but also "a certain frame of mind". First on the agenda was getting a PC on his desk and then, gradually, making sure that they proliferated throughout the office at Cable Corporation, the company in which his family holds a controlling interest.

Yudhishtir has spent the past few months going through his paces at Cable Corporation. By year end he should have completed the rounds of the factory, the sales and finance departments.

He's had a mentor at every level and a lot of "guidance, but not interference" from other family members. Does the entry of new blood upset older employees? "Not if you respect age and don't go around waving your Wharton degree," drawls the Khatau lad.

The hand-it-over-on-a-platter attitude, is however, more prevalent. A phalanx of stalwart managers usually take the younger lot through their initial paces. Designations are generously doled out and sometimes even the cash for a grandiose venture.

While he may have the right name, Jaideep Garware admits that he lacked business acumen. "I went all wrong," he says of his much-publicised supermarket venture which has been struggling to stay afloat. Jaideep's biggest regret is that he didn't work his way up the ranks at Garware Paints, the family company run by father Chandrakant. Jaideep, who is heavily into body-building, is now learning the paint business, and trying to recoup the supermarket's losses. "At 23, I was calling the shots," he says. Now a much wiser Jaideep is learning to listen.

Family pressures to join the business coerced rallyist Sanjay Kilachand, Suresh Kilachand's second son, to drop out of college. "Today I feel I shouldn't have," he says ruefully. After helping orchestrate the expansion of the family flagship, Rs.140-crore Synthetics and Chemicals, the outgoing Sanjay is now enthused about diversification — plans are to take over an edible oil project in Sikkim. Not surprisingly, younger brother Ajay, who has a diploma in business management, looks after the company's factory at Bareilly and the group's trading activities.

Twenty-six-year-old Gautam Singhania, another racing enthusiast, has learnt a lot from the experience of the ill-fated *The Indian Post*, which was his baby. "I had so many plans," he recalls wistfully. Now in charge of Raymond's expansion at Chindwara, he's also preparing to launch a new product, a condom called Kamasutra. This time round, he has made a very careful study of the market.

Being the younger one, Gautam perhaps was given more leeway. Older brother Madhupati, who takes after his father in his interest in flying and is an accomplished ham operator, came in for a more rigorous upbringing. When he returned from the UK in 1982 after dropping out of his A levels, he was sent off to look after the group's nascent cement division "in a remote area near Bilaspur, miles from civilisation". After

five years in the wilderness, he'd helped set up what is now recognised as one of the most efficient and productive cement plants, and returned to Bombay to take over Raymond Synthetics, the group's PFY project.

As times change, the premium now is on education, preferably foreign, with professional qualifications being considered an imperative. While it may seem quite natural for the sons of an Aditya Birla, himself an engineer from MIT, or a Harvard-educated Rahul Bajaj to be highly qualified, even graduates of the learnt-through-experience school are beginning to get degree conscious when it comes to their own children.

Narayan Mulchandani, son of J.R. Mulchandani of Bush India Ltd, has a curriculum vitae that would turn any self respecting yuppie green with envy. An electrical engineer with an MBA from Cornell, and two years' work experience with Intel Corporation and California Microsystems, he is now overseeing the company's export effort.

Similarly, Sohrab Sonawalla is an IIT graduate, with an MS from the US — besides being a sitarist. Sister Paula is a painter by inclination but no less qualified — she holds a Master's in application chemistry from Stanford. The children of technocrat Hemant Sonawalla of Hinditron Ltd can't envisage trying to run things without specialised technical training. While Paula has just submitted a project report for fibre optics products, Sohrab is now program manager, western and eastern regions,

Gaurav Dalmia: learning by degrees

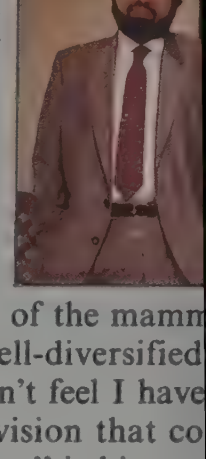
of associated company Digital Equipments (India).

Delhi-based Gaurav Dalmia, son of M.H. Dalmia and vice-president of Orissa Cements, is an electrical engineer — with a degree from the Salford University, Manchester, UK — and an MBA from Columbia. He was a director with the English company Doltan International, and has worked with Alan Bradley in India as a project manage a year. "Although business quali tions may not be essential to head a ily business, it helps to broa individual perspectives," he says.

Competitive considerations apart creasingly, professional manager teams are being put into place. Wit skills that measure up to professi standards, it can be tough going. "A

Preaching to papa now

Six years ago, when we wrote about them (Cover Feature, 10 February 1986), they were trying on daddy's shoes. Today, the likes of Harsh Goenka, Ajay Piramal and Mukesh and Anil Ambani need no introduction. Though only in their thirties, they have emerged as businessmen to be reckoned with. Going down memory lane, some of these not-so-young inheritors take stock of their deeds in the past half decade.

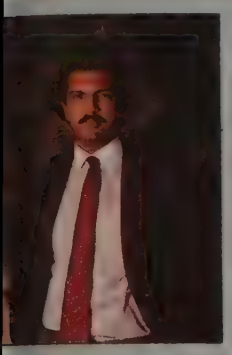


NIRAJ BAJAJ

For someone who claims to be low on ambition, Niraj Bajaj hasn't done too badly. The youngest of Ramakrishna Bajaj's three sons, Niraj quit table tennis at his career peak to sweat it out on the shop floor. By 1986, he'd finished his stint as underdog at Bajaj Auto and Bajaj Electricals and was general manager at Mukand Ltd, the Rs.550-crore company owned jointly by Viren Shah and the Bajaj clan.

Five years down the line, he is executive director, sharing the responsibility of running Mukand with Rajesh Shah, Viren Shah's son. His main interest right now is in exports of specialised and leaded steels to hard currency areas. "It was very difficult to break into these markets, but we're managing. In three years, we're aiming for Rs.100 crore in exports." Niraj, who has a "head for figures", is also the family's portfolio manager and in charge of the group's investment and leasing companies. He keeps track of the 45 family-owned charitable trusts, tax payments everyone's personal investment says, "There are many smart p around who are as good as me. the advantage of being born wit right name."

HARSH GOENKA



From being the young, untried managing director of Ceat Ltd, Harsh Goenka now has the serene confidence of one completely in command. At 32, he's the chairman of the mamm Rs.2,200-crore, well-diversified Enterprises. "I don't feel I have kind of business vision that co with experience yet," is his mo self assessment.

However, Harsh has developed own style of running things. He courages decentralisation and pro sional managers run indivi companies. He works on new p jects, organisational restructur and long-term strategy. "Until n our growth has been more opp tunistic than strategic," acknowledges.

Harsh has inherited his father R Goenka's legendary appetite takeovers but not his aggressive a tude. He is a lot more conservative the future he foresees himself en ing new businesses not via the ta over route but with greenfi projects.

ANAND MAHINDRA

Five years ago, this publicity-s Harvard-educated Mahindra sc had said to *Business India*, "I am here to carry on family control an

my future in this company depends entirely on my ability to perform." And perform he has, ridding himself in the process, of his shyness. "I've anaged to realise some of the pro-cts I was dreaming about then," says.

When he joined Mahindra Ugine eel Co Ltd in 1981, the company as in the red and struggling to stay loat. Working his way up from ecutive assistant to commercial rector, Anand was instrumental steering MUSCO out of troubled aters and initiating new projects e Mahindra Days Hotels & Re-rts and a real estate development oject, Anand's other pet dream. th are now on stream.

Earlier this year, the uncertainty er who would inherit uncle Kes-b Mahindra's empire was settled hen Anand moved in as deputy anaging director at Mahindra & ahindra, the flagship company. ese days Anand is trying "to get a ip on his new responsibility", nctioning, typically, out of the ctory at Kandivli. He continues as sco's vice-chairman, but the sys-m he set up there "can function ef-iently even without me", he says. fter all, professionalism is a Ma-ndra trait.

ANKAJ MEHRA

e heir apparent to the Orkay em-re had confidently proclaimed e years ago: "I know I'll be head-g this company one day." The avado is gone today. Orkay, once favourite among investors, has never had it so bad, what with sliding profitability, a takeover threat and scuttled diversified plans.

Pankaj's designation remains the same but he says it's not quite status quo. "My responsibilities have increased, not quantitatively but qualitatively," he explains. Production and new projects constitute his portfolio — daily decision-making, of course, is left to professional managers.

With the recent policy changes, Orkay's plans have been re-kindled and the project department is buzzing once more. "The new industrial policy will unleash 500 tigers," Pankaj enthuses, revealing a glimmer of his old exuberant self.

AJAY PIRAMAL

Some people never change. When Ajay Piramal, all of 24, was inducted into the board of Morarjee Mills, his first love was polo. The sudden death of elder brother Ashok catapulted him into the chairman's cabin but Ajay continued with polo.

He still plays the game. Today, however, at 35, his stature in the corporate world has changed dramatically. Morarji Mills turned around last year while Nicholas Labs, bought over a few years ago, has emerged as one of the fastest growing pharmaceutical companies in India. "A lot of changes have taken place, and things are still changing," he says. And as one of his own managers says, "He is an aggressive businessman, no doubt, but he is also a thorough gentleman."

Pradeep Dhoot: small-town man with big-league dreams

Cousin Hiten Khatau, managing director of Carona Ltd, faced the same problem. After learning how saris are woven, he had to pick up the threads of manufacturing shoes. Under him, the image of Carona has changed dramatically. After the tie-up with Puma last year, Hiten is buzzing with ideas — exports, sportswear. Since father Abhay Khatau has retired, Hiten and sister Brinda, who runs Khatau Industries, are fully in charge.

A stray few hold the old view and put a premium on work experience. Kamal Vachani, director of Weston Electronics and son of Sunder Vachani is one such, "The will to work and dedication is of prime importance," he swears fervently. Kamal finished college as a private candidate and spent over a year behind the counter of a music shop in Delhi before he took charge of the company's printed circuit board plant.

Undoubtedly, the young ones are still too young to have developed their own distinctive management styles but they prefer a more relaxed and informal approach in dealing with their colleagues and employees. The catch words for the younger breed are decentralisation and HRD. Bhadrashyam Kothari, managing director of Kothari Sugars and Chemicals and H.C. Kothari's son, feels that his generation has less qualms about recruiting professionals and allowing them the latitude to take decisions.

When, for instance, the soft spoken and reserved Uday Kilachand, 30, was given Synthetics and Chemicals after his

n knowledge of the business is a — otherwise no one respects you," Anil Khatau, director in charge of ations at the Rs.31-crore Varun ping Ltd. And he should know.

nile the Khatau family was split-Anil was in the US getting a degree xtile management. When he re-d, there was no textile company to thanks to the split. His father Kishore Khatau had aligned himself in uncle Dilip's fold, with the textile mills on the other side of the divide. "It took me almost three years to understand what shipping was about," he recalls. Now his company is on the verge of expanding its fleet. And his wife Naomi's concoctions, which are served at Just Desserts, do better every day, what with Anil serving as unofficial taster.

father Suresh Kilachand and his uncles split, one of his first priorities was to develop human resources and set up a professional management team to reduce family control. Uday is now executive director of the company.

Their attitudes towards business tend to be perceptibly different as well. Change is one factor that they are all too aware of. With foreign investment and privatisation looming over the economy, hitherto complacent business giants will have to gear up to face invasions into their territories. Most of the younger lot are aware of, though not prepared for, the new paradigm. "The business environment is changing so rapidly, we have to be on our toes all the time," says the 28-year-old Shyam Kothari.

Many seem quite taken in by the concept of the lean, mean organisation, and emphasise the competitive, market-oriented business approach. "My father was strictly a production and finance man. In those days, it was a seller's market. Now my focus is on marketing," says Gautam Khandelwal.

Almost all of them have hi-tech visions, a result no doubt of their stints abroad. A few years at home will teach them to be pragmatic about implementing technology indiscriminately; but they are more than keen about it.

But perhaps the most significant change amongst the younger industrialists is their attitude to borrowings. They would rather take the equity route to growth than sacrifice expansion for retaining control. "My brothers and I had to convince our father to take Jindal Strips public — but it was essential for growth," says Sajjan Jindal. As a consequence, today, decisions are no longer taken at the dinner table.

Pradeep Dhoot, youngest brother of the Venugopal Dhoot of the Rs.700-crore Videocon group, is perhaps the best example of the transition that family businesses in India are going through. The ambitious, determined Pradeep belongs to an entrepreneurial family, new to the big league. Having come from a small town background workaholic Pradeep regrets that he didn't get the opportunity to go to engineering college. "I've realised that our style of functioning was too dependent on the family — my stress in the past few years has been on man-management," he says.

While they are all looking to new ways of doing things, the question is: are their values as different from the older lot's as their methods? Gopal Srinivasan, 32, joint managing director of the TVS group's Sundaram Clayton Ltd, and Venu Srinivasan's younger brother says he would never give up the family's core values. True, the paternalistic approach has made way for a welfare-driven one, but total integrity continues to be the golden rule. Gopal says, "We believe in following the law scrupulously, not breaking any rule".

Hrishikesh Mafatlal, managing director of Mafatlal Industries, shares the same view as his father Arvind Mafatlal: "We are the trustees of our company and we have a responsibility to shareholders." That goes pretty well with his strong spiritual bent of mind.

The lessons no doubt have been imbibed well. But whether the current crop of young corporate czars have the same pioneering vision as their father, is a query for the future. Some, by virtue of the positions they hold, like Kumar Birla and cousin Yashovardhan (the late Ashok Birla's son) will no doubt be in the front ranks. But many of the others will have to prove themselves. Those who don't quite cut it will fall behind. The coming shakeout will separate the men and women from the boys and girls.

Gopal Srinivasan: new milestones

PARKINSON'S LAW *of* CORPORATE GIFTS

1. A committee invariably deliberates for 216 working hours to decide on the festive gift. No matter the length of deliberations, the gift is always thermoware.

2. If a company has been giving flasks for the past 28 years, it will continue to do so for the next 28 years.

3. The probability of the marketing manager dining out with his family increases with the number of servettes he gets.

Why follow Parkinson's law when you can follow Morphy Richards'. Simply put, it states that a Morphy Richards iron makes an ideal corporate gift this festive season. Morphy Richards is the largest selling iron in the U.K. It not only looks stylish, it performs efficiently too. Not surprising as it's made with the latest technology. Morphy Richards has a range of dry, spray, steam and cordless irons to suit every budget. If you'd like to give your employees a surprise, forget thermoware. Think Morphy Richards. There's a special price for bulk orders. For more details, please send us the coupon on the opposite page. Surya Morphy Richards Ltd. 1118, Maker Chambers V, Nariman Point, Bombay 400 021. C STRIKE

ire implications

ndefinite strike at ONGC, following the killing of an engineer by A militants, has the makings of a disaster for the country's already guered economy

e sad and brutal killing of ONGC's nior executive engineer, T.S. aju, on 8 September by ULFA nts in Assam cannot be condoned. nlights the Centre's almost distant de to the plight of the abducted employees, and also constitutes a nation of a long litany of woes pla- the country's largest petroleum producing company. Raju's death red a nationwide strike by the As- iion of Scientific and Technical Of- (ASTO), ONGC, resulting in all oil and illing and producing operations g to a halt from 9 September.

Trouble at the Oil and Natural Gas Commission is not too unfamiliar a story. Oil output dropped dramatically by 4,098 million tonnes in 1990-91. Then followed the controversy over the Bombay High review committee's report which blamed the fall in output on faulty reservoir management. And now comes the indefinite strike.

"Most of these troubles are traceable to a faulty management," says an ONGC official. In the present instance, comparisons are being drawn (to the ONGC management's disadvantage) between the abduction of eight ONGC engineers and the kidnapping of Indian Oil's executive director K. Doraiswamy by JKLF militants in Kashmir, IOC promptly set up a monitoring committee at its New Delhi headquarters, and its personal director camped himself in Srinagar. The executive director's wife was flown in from Bombay to meet the President and the national media always kept Doraiswamy on the front page.

Nothing of this kind happened after the eight ONGC engineers were kidnapped on 1 July, though ONGC chairman S.I. Khosla flew down to Assam on 6 July, followed by a member, personnel, on 8 July and a member, technical, on 10 July. That was Khosla's second trip to Assam (the first was on 26 April 1991) since taking over from S.P. Wahi, ONGC's former chairman. His third visit came 72 days after the tragedy when he accompanied petroleum minister B. Shankaranand to Guwahati on 11 September.

The strike at ONGC has dire implications for the national economy. Industrial production is already wilting under the strain of import curbs, devaluation of the rupee and declining credit. Now, to this recital of woes, will be added the casualties of units that rely on gas as feedstock. Apart, of course from the loss of crude and natural gas valued at Rs.24 crore each day.

Within three days of the strike, several fertiliser units had shut down: two plants each at Rashtriya Chemicals and Fertilisers and Kribhco; National Fertiliser's Bijaipur plant; IFFCO's at Aonla; and Indo Gulf's at Jagdishpur. The power generating units shut down so far include the National Thermal Power Corporation's two gas-fired plants at Anta and Auriya, ONGC's LPG producing plants at Uran and Hazira, and GAIL's twin plants at Bijaipur. Essar Gujarat's sponge iron plant at Hazira has also stopped production. Clearly, the situation can only worsen.

"We are not holding the national economy to ransom," says Shree Dhar Vyas, president of the central working committee of ASTO. "This is a temporary hold-up, but if the four engineers still in

captivity are not released immediately, then the damage could be permanent."

ASTO representatives from all over the country met in New Delhi on 12 September to decide on their future course of action. The feeling at the meeting was that ASTO had been pushed into the strike. But, says the chief executive of an oil company, "People have been killed in the past and perhaps they will be killed in the future too. This does not mean that the entire economy has to be throttled."

Nonetheless, employee opinion at ONGC is unanimous that the government did not take the ULFA threat seriously. "None of your employees have been killed. So, what is the use of all the panic," the petroleum minister is believed to have told a delegation which met him on 17 July, sixteen days after the eight engineers had been kidnapped. Shankaranand had evaded the issue, saying the abduction was really the home ministry's problem. The home ministry in turn passed the buck to Saikia's state government.

However, it is also true that ULFA was not interested in negotiating with the state government because chief minister Hiteshwar Saikia enjoys little credibility, according to a close observer of Assam politics. ULFA had demanded the release of 14 militants held by the Assam government in exchange for four ONGC engineers. The Assam government claimed that it held only 10, the rest being held by the governments of Manipur and Meghalaya, and therefore outside its jurisdiction. The handling of this situation, therefore, clearly demanded coordination by the Central government.

ASTO officials say they will not relent till all their demands are met. "We do not want all our staff to be pulled out of Assam nor to give up production operations in Assam, but there are several things the management can do." To begin with, says ASTO, all surplus staff in Assam (the state is overstaffed by 40 per cent) should be relocated. Next, the housing capacity in the state (which meets only 20 per cent of requirements) should be increased considerably. A majority of the employees are compelled to live outside ONGC colonies, in private rented accommodation.

For the management of ONGC, the most urgent task before it at moment is to ensure the release of its four employees still in captivity. One measure which might help, though taken rather belatedly, is the decision to deploy the army, under civilian control, in all oil installations, to prevent any further escalation of the situation.

Full-scale intervention will wait until other measures do not produce results and if the state government cannot nab ULFA's top leadership, numbering about 50. Negotiations so far have made no progress, with ULFA's central committee not responding to the overtures of either the delegation of the Central government or the state government owing, it is believed, to a power struggle within the militant organisation.

ULFA chairman Arabinda Rajkhawa and second-in-command Paresh Barua have been challenged by armed wing commander Naresh Deka, also called Hirakjyoti Mahanta. Deka is believed to be holding the four ONGC men, and is the ULFA leader taking the hard line. The moderate Rajkhawa is willing to talk but has nothing to offer. If these leaders do not agree to meet the g ment at the negotiating the lives of the captives be in real danger.

The strategy increasing ing favoured, nevertheles bring the moderates to t gotiating table and lat after the hardliners in col with the moderates. B one, not even ULFA me themselves, can predict how and whether, the fou tive engineers will be rele

However, if the urgen the issue has registered now, not everyone is sur at ULFA having made ON target. Militant intervent the lives of oil industry a garden employees is by old hat: blockades, exto and cars being taken awa still fresh in memory. never in the past decade have things so bad. The oil companies traditio have got around the militant proble negotiating with the local popul and offering financial aid to seve the development plans that the mi organisations have launched. V Wahi did make the motions of ap ing the militants, the present chai has not ever undertaken any public tions exercise.

If the commission's relations wit local population have deteriorat has not done well in production e Over the last year and a half Assa increasingly turned into a problem As on 1 December 1990, idle wells stituted 28 per cent of the total we the region, while another 13.7 per ce the wells yet remained to be tested. with a proven potential, the regio now suddenly become inconsistent.

Things are no brighter in other a The commission has yet to sign its with the government for 1991-9 turn, the government has yet to p enough courage to approve the re mendations of the Das Gupta com tee much after the commissi deadline of 1 July. The postponing o Eighth Plan too has had its own im Which all adds up to some very healthy portents for the economy.

TATA CONSULTANCY SERVICES

The mode is upbeat

The country's largest software developer continues to lead the pack in more ways than one — growth, turnover, technology, training *et al.* Its success owes no less to the personality of its formidable CEO, who now readies the company for some of its most ambitious projects

At an age when most CEOs would have visions of a serene retirement dancing before their eyes, 69-year-old Fakirchand Kohli's daily schedule, which begins with a punishing six-kilometre walk in the morning, is only getting more hectic.

Kohli is the director in-charge of India's largest software developer — Tata Consultancy Services, a division of the Tata holding company Tata Sons. And if things go as he's planned them, TCS will this year easily better the 58 per cent growth it achieved in 1990-91. And, much of this growth will come from four major projects, among the largest and the most ambitious the company has executed so far.

- On 18 September, TCS will launch E-X, its much-touted business accounting software, in Bombay. To be priced at around Rs.7,000, this software package was 27 man years in the making and the company says that market surveys indicate it will sell as many as 10,000 copies in the first year itself.
- The company is close to clinching two major international deals, each expected to bring in business worth around Rs.40 crore in the next three years. The first one involves developing software for the new computerisation plan of one of Britain's three largest banks, and the other involves a large American financial institution (TCS won't reveal names).
- TCS is in the second year of executing a Rs.40-crore contract signed last year to develop a software system for the Swiss Securities Clearing Corporation and the Swiss Corporation for International Securities Settlement. The four-year contract is the single largest bagged by an Indian software house. Says Nirmal Jain, executive vice-president of the company, "We clinched this contract in the face of stiff competition from companies of th ure of Arthur Anderson."

Photos: Palashranjan Bhaumick

Kohli: a giant in the Indian software world

So, these are indeed exciting tin Kohli who has presided over TCS tiny for over 22 years now. Thou electrical engineer by training (he 19 years with Tata Electric Comp Kohli strides the Indian software ment like a giant, the man who, anyone else, discerned the Indian nuity for developing software a ploited it successfully to nurture TC the country's most successful sof developer. "He is no ordinary CE personifies everything that TCS is to says a contemp Adds Walter Vi management co tant, "Kohli ha vided the com with the nece foresight, dyna and continuit leadership ove years."

But apart fro awe he inspires, also a much-f figure at the TCS quarters in Bombay. His bearing perso and keenness to volved in every a of TCS's busines looked upon as backs by many contemporaries and present. Bu success of TCS ov years more than fies Kohli's sty operation.

The comp turnover since has more than tr to Rs.106 crore its gross p margin has clir from 10 to 15 cent. Of this, soft exports contrib Rs.80 crore and

ning came from the
stic market. Says exec-
vice-president Vinay
awal, "This perfor-
e not only positions
s the largest consul-
outfit but also bigger
the next ten software
anies in the country
gether."
orts this year grew by
cent from last year's
of Rs.46.96 crore,
domestic perfor-
e grew by a slower 30
nt. Even though a ma-
ortion of the com-
s revenue is generated
eas, two-thirds of its
rces is located within
ountry. To execute
cts and support cus-
s anywhere in the
, TCS functions out of
erseas offices and 18 offices in
all of them networked together.
s Yash P. Sahni, executive vice-
lent and general manager, "We
established the credibility of doing
re projects in India." At present,
mpany is executing some 500 pro-
which are at various stages of de-
ment, in 40 countries.

key to TCS's growth over the years
s been its ability to ride the wave of
ological innovations. Says Viera,
li has this ability to keep changing
in response to trends worldwide."
Kohli himself says, "TCS tracks
ology as it is developed worldwide
arts work on adapting it at least 24
months before it is actually com-
alised in the international market.
d this it is useless, as the rate of
e and obsolescence is very high."
ce a technology is identified, it is
ned for its adaptability and the
any's ability to absorb it. External
s such as the future of the market,
chnology's applicability to the
n environment and its lifespan are
udied at great length. Says execu-
ce-president S. Ramadorai, "Our
s clearly lies in our ability to relate
ology to the customer."
ough this detailed evaluation pro-
TCS is able to spot a niche in the
t early enough and bid for con-

Jain, Aggrawal and Ramadorai: relating technology to the customer

tracts. Two years ago, the company spotted a new programming metaphor called C++. Personnel were sent overseas and trained. Later, these people trained a hundred more staff. Today, when the market demands the language, the company is right on top, with people trained and ready.

Along with technology, manpower is another key input. Of the 2,500 professionals employed, only about 1,600 are actually productive, the remaining 900 are trainees who undergo the initial training programme of a year-and-a-half and are, therefore, unproductive until a year later. Since 1,600 professionals contribute the entire turnover of Rs.106 crore, this works out to a contribution of Rs.6.6 lakh per employee.

Annually, 800 new recruits join the company. To identify the right person, a detailed profile is drawn up. "In November every year, the management and project leaders get together and project skill needs based on the company's business strategies and future project requirements," says Jose Abraham, corporate personnel manager. Once the profile is complete, they put into motion a recruitment plan to tap the premier institutes in India and abroad for the best Indian talent.

But, as about 300 recruits leave every year, there is an attrition rate of 12 per cent (industry average: 25 per cent). The effective number that finally joins TCS is about 500. Says Viera, "TCS has developed the ability to withstand the departures and renew itself without affecting business." Though some customers don't entirely agree. Says one, "Ever since TCS began work for us a year-and-a-half ago, four new TCS people have worked on this project. By the time a person has understood the job and we have developed an equation he leaves and someone else takes over."

But there is very little that TCS itself has been able to do to lower the attrition rate. Its training programme is so good and popular that other software manufacturers keep luring away people. Of late though, TCS has moved aggressively against companies who get its trainees to break their signed bonds with TCS. As many as five software companies, big and small, have already been taken to court in this matter.

For instance, an unusual incident occurred last year: a software exporter got his employees recruited at TCS to undergo its training programme. After completing it, they promptly quit. TCS moved fast and served a legal notice, upon which the exporter agreed to settle the matter out of court, and pay a compensation amounting to the cost of training the employees.

TCS's massive manpower training programme has an annual budget of 8 per

cent of its turnover (Rs.8.48 crore last year). Even those who have been with the company for a long time undergo periodic retraining to adapt their skills to rapidly changing technology. On an average, every TCS employee undergoes training of 20 days every year.

Today the company boasts of skills unparalleled in the country. Says Sahni, "When we started, our expertise was in one area, the Unisys platform, for whom we were a beta site. Over the years we have built our expertise on several other platforms block by block." Says another

cost of Rs.13 crore.

Currently, there are 850 professionals working on software projects at the Madras centre alone and this figure is expected to rise to 1,000 by end 1992. S. Mahalingam, the deputy general manager who heads the centre, says, "We work on application and system software projects as well as develop and maintain software projects. Most of the work done here is for overseas clients." A similar centre is planned for Calcutta for the Digital platform.

The TCS is now working hard to de-

Mahalingam: "most work is for overseas clients"

senior official of the company, "Specialisation is a major thrust. On one axis we have specialist skills in several industry groups and on the other on hardware platforms, and both these complement each other." Financial services, computer-aided design and manufacturing, and real-time systems are some existing areas of strength.

TCS also follows the strategy of developing alliances with hardware vendors. For instance, it has developed systems on the IBM platform over the years; two years ago it was designated as an IBM business partner, which makes it easier for TCS to bid to develop software for IBM requirements worldwide. To further strengthen their position on this platform, an IBM centre was set up in Madras. The company acquired an IBM 3090/2501 mainframe computer at a

velop package products. A plan to tap the global software package markets, estimated at $38 billion, is also on the anvil. Packaged software has a multiple effect on revenue, as repeat sales of a product generates continuous revenue. The company hopes E-X, the business accounting software, which is the first in the series, will be a hit among Indian businessmen. The export market is also being looked at. TCS has already tied up with the UK-based Twelve Star Technologies to sell E-X in that country.

The company is also taking a relook at management consultancy, an area of activity which for long has remained neglected. Last year it contributed only Rs.1 crore to TCS's turnover, but Kohli is quick to point out that it is still the largest in the country. Walter Viera was recently hired to revamp this division. He

says, "Their strengths outweig
weaknesses. But enough mana
time was not given to this divisio
cannot run this division with y
hand."

But there is no doubt that as
Kohli, the MIT-educated ele
engineer is in command, compute
ware will continue to be TCS's bre
butter. And as 1992 draws clos
groundwork is already underway
new thrust into the European C
nity market. Says executive
president Jain, "The Swiss contra
we are now executing will go a lo
in establishing our name in the EE

The fulcrum for this will be
Tata, a subsidiary based in Ooster
Holland. To overcome the langua
rier employees are undergoing cou
French and German, the two ma
guages spoken on the continent aft
glish. The company is working o
modalities with the Jawaharlal
University to work out a long
training programme.

On the other side of the Atlan
the US — TCS's largest market
government's decision to restrict t
mber of business visas availab
Indians to 6,000 will not affect the
pany. "We are concentrated on th
end of the software market and th
visas we use annually will be easily
able," Kohli says.

To keep up with emerging tre
the west, TCS has already started res
work in areas like Artificial Intelli
man-machine interfaces and a new
gramming technique called o
oriented programming, which
pected to become the mainline co
ing tool of the nineties.

Though they concede that TCS h
deed achieved a great deal, industr
servers think there is also a downs
the fact that the organisation is too
tricably linked with the strong pe
ality of one man. What happens
Kohli steps down? There seems to
answer to that question as yet. Fo
moment, though, there seems to
doubt that, with the reputation tha
hli has been able to build for the o
isation over the last two decades, TC
continue to spearhead India's soft
export efforts in the coming years.

WALCHAND GROUP

Kalyug arrives

This hundred-year-old industrial empire is breaking up with some younger members, impatient with the group's ultra-cautious approach, seeking greater independence in running their companies

Ten years ago, theatre enthusiast and Premier Automobiles chairman Vinod Doshi starred in Shyam Benegal's *Kalyug*, the story of greed and intrigue in an industrial family. He wasn't to know that it would be replayed, if only in parts, in his own real life Walchand group.

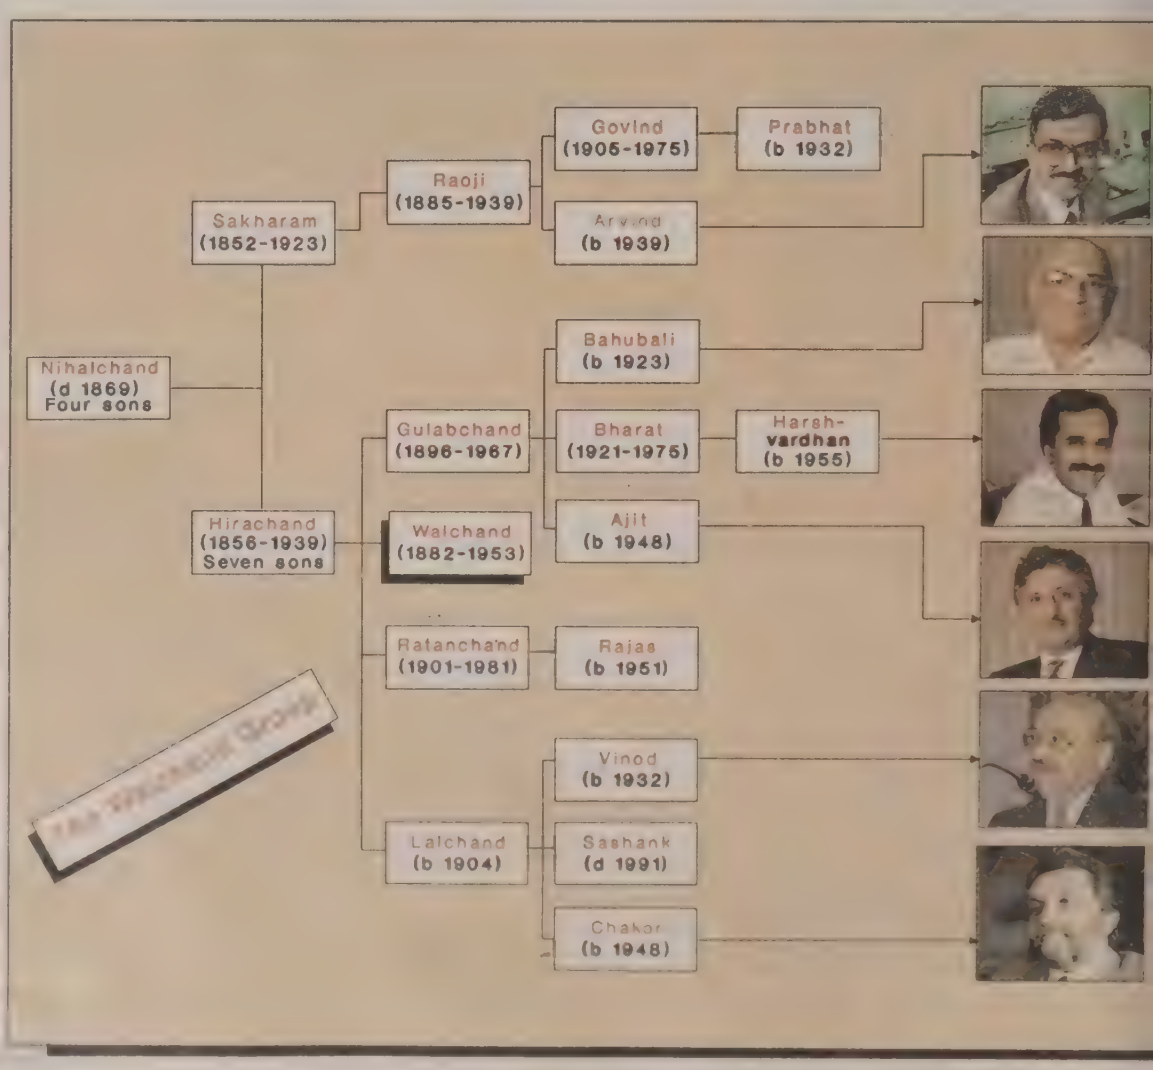
The story is not over yet, but the climax, observers say, will lie in the group splitting. That event should bring the curtain down on an over 100-year-old empire, painstakingly built by the late Walchand Hirachand.

Holding centrestage with Vinod Doshi is his cousin and managing director of Hindustan Construction Company, Ajit Gulabchand. The younger man wants out, with his share of the group companies. The close-knit Walchand family does not like it, but cannot do much now, having failed to either placate him or thwart his attempts. So, a package is being worked out to "settle the matter amicably". But group chairman Bahubali Gulabchand says, "It does not serve anybody's interests to reveal anything now."

Ajit Gulabchand, the most colourful and ambitious member of his low-profile family, is not alone in seeking to break out. His nephew and managing director of another group company, Ravalgaon Sugar Farm Ltd, Harshavardhan B. Doshi, is accompanying him. Neither of them like to call it a split. While they refused to go on record with *Business India*, they are known to have told others, "We are only seeking more independence from the family in running our companies."

All other family members have aligned themselves with Bahubali Gulabchand and Vinod Doshi. They will continue to be the Walchand group, retainers of the great industry builder's legacy. Requesting anonymity, a family member explained, "At a personal level, we are still a family, but we cannot work together. Let the two (Ajit and Harshavardhan) race ahead if they can. We will continue to live by the group's policy of cautious growth."

At the time of going to press, sources close to the group revealed that details of the division have been finalised. Working without an intermediary, the family has decided that Ajit and Harshavardhan will get HCC, Ravalgaon and Acrow India and some cash or office premises as compensation. Right now, they are in the process of appointing merchant bankers and chartered accountants to work out the modalities of the transfer.



Each person's share in the family's holding concern, Walchand & Company Pvt Ltd, was taken as the basis in determining who got how much. And that is where Ajit beat the others. Against each

Bahubali and Ajit: breaking up

controlling member's share of 9-10 cent, the breakaway group controls per cent of this company. This was cause Ajit's parents, both of whom w involved in the group's activities, bought out part of another membe share when the latter was in need of ca

The story probably began in 1983, fore Ajit Gulabchand moved into H Industrialist R.P. Goenka, on a ta

spree at that time, raided Premier omobiles (PAL), the group's flag-. It was a vulnerable moment for the pany, which was already under at- from institutions and others for not ducing results. Confident that there no rescuer in sight, Goenka contin- acquiring Premier shares. The fam- hands-off-politicians policy didn't much either. Reportedly it was ul Bajaj, a close friend of both fami- who played the key role in staving the takeover attempt. Ajit abchand, through his friendship Sharad Pawar, also played a role. A sed family rewarded its sibling with managing directorship of HCC.

ut Ajit's ambition was to have a say ne running of Premier Automobiles. slump in HCC's fortunes immediately r he took over only added to his dis- fiture. However, he immersed him- in the task of reviving the company. 986-87, when Vinod Doshi's son treya was promoted as vice- ident, corporate planning, in PAL, resigned from its board.

latters came to a head a year ago n the board of directors of HCC ck down, reportedly at Vinod hi's behest, Ajit's proposal to appoint a chief executive for the company. Doshi argued that the person to be appointed was too expensive. After a six-month wait, this youngest son of Gulabchand Hirachand dropped the bomb. His demand: a share in the management of PAL or a free hand in running a few group companies.

Though the family denies it, it is obvious even from the brief conversations with some members, that differences between Vinod Doshi and Ajit are responsible for the split. Lest their acrimony affect the working of the companies and the reputation of the group, Bahubali Gulabchand and other members decided to do something about it. Back in the 1940s, Walchand Hirachand had separated every member's share in the group; the third generation emulated his example and quietly evolved the basic structure for the partition.

They were successful in maintaining a facade of normalcy. Unlike what happened at Modinagar, it is life as usual at Construction House, the Walchandnagar headquarters in South Bombay. The five-floor stone structure seems to be quietly absorbing the shock of change. But inside, the difference in the styles of working of the two groups is visible in the decor itself. The two floors occupied by HCC are modern and plushly furnished, while the others look like government offices of a bygone era.

The flamboyant Ajit Gulabchand has turned HCC around, after three years of losses, and is making it a point to trumpet the story. He has big plans for this 65-year-old construction company, one of the largest in the Indian private sector. He has promised a Rs.500-crore turnover in the current year, though he couldn't take it beyond Rs.128 crore in 1990-91 (*see table*). "I hope to be heading a Rs.1,000-crore company soon," he was quoted as saying last year.

His claims of a happy scenario are contested by analysts who dismiss it as only better balance sheet management. HCC has even been late on some loan repayments last year, says a banker. Therefore, it is felt that Ajit has chosen the wrong moment to move out because the Walchand umbrella would have helped, at least until HCC had stabilised.

"That is where the analysts are wrong," says a family member. According to him, the breakaway group is getting the most secure companies in the group, in terms of both profitability and shareholding pattern. However, the fact remains that in terms of sales, the size of the new group will be only Rs.180 crore, against the present group turnover of Rs.1,000 crore, from ten companies.

This does not seem to worry the two youngsters too much. Even Harshavardhan, among the youngest in the group, is busy drawing up plans for the future. The family credits him with having revived the sagging fortunes of the group's sugar and confectionery company. New brand names like "Mango Mood" and "Pan Pasand" did bring the ailing Ravalgaon back into the reckoning in the confectionery segment.

These success stories do make the two "rebels" sound like a formidable team of managers, though the family tends to dismiss them as brash and immature. To observers, the happenings appear like a struggle between liberals and conservatives. Only their future performance will tell whose stand is vindicated. But, for now, the story of the Walchand split will soon see "The End".

ESCORTS-MMW

A dream bike for India

The motorcycle joint venture between the Indian two-wheeler giant and BMW can become a trendsetter for further German investment in India

The big dad of the Indian motorcycles industry — H.P. Nanda, chairman of the Escorts group — is quite kicked with life these days. The reason: an unexpected early clearance for the German automobile giant BMW's proposed investment in India in a joint venture with Escorts. The clearance came on the eve of prime minister Narasimha Rao's visit to Germany last fortnight.

A joint venture company is likely to be formed with an equity capital of around Rs.35 crore. Both BMW and Escorts will have 40 per cent stake each and the rest would be taken up either by IFC or a German development bank.

Despite having undergone major heart ailment in the recent past, 73-year-old Nanda is taking keen interest in the project. He succeeded in convincing the BMW chairman to make the joint venture for manufacturing four stroke 180cc motorcycles in India. Says he, "This is the first time in the world that any major automobile maker has joined hands with a company in the Third World to work jointly on development of a vehicle."

Currently, the things are at the drawing board stage as the engineers from BMW and Escorts are working at the former's R&D centre in Germany. The specification given by Nanda are certainly very demanding. He wants a motorcycle that can go 80 km on a litre of petrol, carry three people or six large cans of milk with ease, and run on village roads. Also, its price should not be more than 10 per cent higher than those of the other 100cc motorcycles. Hero Honda, the country's most popular 100cc bike now sells at around Rs.31,000.

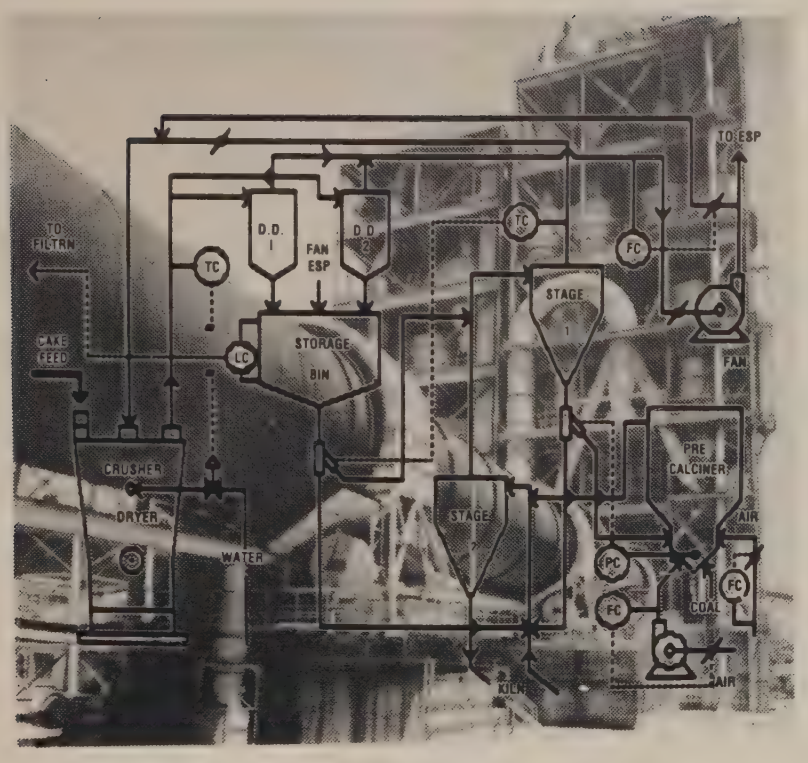
Nanda obviously has the rural market in mind. But with Escorts' 175cc bike Rajdoot, the mainstay of the company's profitability, catering to this segment of the market, won't there be a clash of interests? Nanda doesn't think so. According to him, the new bike, though fuel-efficient, will naturally cost much more (at least 15 per cent more) than the Rajdoot 175cc which now sells for around Rs.26,000. And so, even within the rural market, the two bikes will be directed at different segments. Nanda says that he will also be using BMW technology to make even the Rajdoot 175cc much more fuel-efficient.

Nanda with sons: keen interest

According to Nanda, the new bike will have zero import component from the first day of production. This means parts for the motorcycle (other than the engine) also need to be developed in-house or through vendors. Escorts already has a large number of ancillaries producing high quality components. Even on account of capital equipment, Nanda is confident that most of the things can be procured within the country itself and only tooling will be provided by BMW.

Nanda hates the way the Japanese have taken advantage of their collaborators by providing CKD supplies for starting production early and then keeping them dependent by resisting indigenisation. His relations with collaborator Yamaha have soured on this issue and he is thinking of terminating the technical tie-up for the 100cc mobike before its scheduled expiry date.

Another reason for Nanda opting for BMW this time is his complaint that Japanese do not let their collabora undertake any significant exports. " cannot export Rajd and the Japanese will let me export RX1 But with BMW name I certainly export," says. Nanda's agreem with BMW provides the joint venture's acc to markets in Asia, rica and the Europe countries outside EE Of the total product of 100,000 motorcyc annually, about 32,0 will have to be export he says.



The strategy of to indigenous producti can delay things. Nan expects the product to take another t years to come out, causing an escalati of Rs.25 crore in cost. Accordingly, has revised the project cost to Rs.1 crore from the earlier estimate of Rs. crore.

Nanda is happy with the way thin have worked out on the foreign e change expenditure front, which, a cording to him, is going to be not mo than 10-15 per cent of the total proje cost. Most of the plant and equipme will be bought from sources within t country, though in consultation wi BMW. And most of it will come from t foreign exchange that BMW will bri with it as part of their investment.

Nanda is also trying to sell the Ge man company the idea that they can g components for their 500cc-1000cc m torcycles cheaper from Escorts anci aries. His logic is that the manufacturi cost in India is several times lower tha that in Germany or elsewhere in the d veloped world. Nanda is optimistic th the idea will jell with the BMW bosses. A a macro level, Nanda hopes that the m torcycle joint venture between Escor and BMW will become a trendsetter fo further German investment in India.

ACC

RCD's Process Optimization. Engineered so well, it even attracts finance.

At the Process Engineering and Productivity division of the Research and Consultancy Directorate (RCD), we specialize in advising industry on how to maximise output through optimal use of scarce resources. And in certain instances, clients who use our recommendations qualify for equipment finance (and energy subsidies) from the Industrial Development Bank of India. That's value for money.

What's more, our services extend to all stages of project consultancy • Plant and Unit Design • Operations • Start up • Commissioning • Technology absorption • Diagnostic studies • Modernization • Upgradation • Execution of recommendations • And trouble shooting. This expertise can be availed of singly or in combination, for old and new plants, for unit operations or plant level operation.

Our expertise is nutured from data available from eleven plants in India, two overseas projects and over fifty years manufacturing experience continuously sustained by the latest technologies.

Our philosophy is to extend this expertise and experience to all who seek our advice. Even our competitors.

C ALLOYS

nto the Tisco fold

steel giant extends its interest into charge chrome manufacture

ussi Mody and Tisco have added another company to their already large stable. Last fortnight they anced the take over of one of the ntry's largest charge chrome prors, OMC Alloys Ltd, a loss-making idiary of the Orissa Mining Corpon. The acquisition is important for o to retain control over its huge mite mining interests in Orissa. The pany has leasing rights over two ls of the country's chromite sits.

nough the Mittals of Ispat group the charge chrome producer Indian als and Ferro Alloys Ltd were also ested, there was never any doubt Tisco would walk away with the pany. And after two rounds of talks een Orissa chief minister Biju aik and Tisco chairman Russi y recently, the deal was clinched the steel giant agreeing to take over ntire Rs.135 crore liability of the company. According to a Tisco esman, the company board has ed to pay off Rs.82 crore foreign and n bank loans taken by OMC Alloys ediately and the balance of Rs.53 , which constitutes state governdues, will be repaid over 15 years.

e Tatas justify their acquisition sayhat they wanted to get into charge me production any way and it is bet- take over an existing plant rather set up a new one. But industry obrs say that the steel maker was apensive about the Orissa government cing its leasing rights over its chron mines when it came for renewal in in the absence of a manufacturing ty.

sco's mining rights are now spread 1,261 hectares of land in Sukinda y of Orissa's Cuttack district. ge chrome manufacturers have demanding that they be given some ese mines since Tisco itself did not any manufacturing facilities so far. ct, the B.K. Rao Committee, aped by the Supreme Court to look into the matter sometime back, had opined that "The position is distorted to the extent that three-fifths of the total chrome ore reserves is in the captive mines of Tisco which has no charge chrome plant."

OMC Alloys was set up as a 100 per cent EOU with a 50,000 tpa capacity at Brahmanipal in Orissa in June 1985 in technical collaboration with a consortium of Voest Alpine AC, Austria and Ottokompu Oy, Helsinki of Finland at a total cost of Rs.59 crore. Production started in September 1987 but never went beyond 20,000 tpa, largely on account of technical problems.

Mody: adding another feather to the cap

According to J.L. Tripathy, managing director of the company, the chromite ore used by the plant so far was not of the required quality. Besides, there were problems with the pelletisation plant which, in turn, affected the entire production. Power also has been in perennial short supply. On top of all this, the charge chrome prices crashed worldwide last year and almost all the charge chrome plants set up in Orissa in the last few years were severely hit.

One of the first tasks on hand for the Tatas will be to deal with the problem of overmanning at the plant. At present, OMC Alloys has on its rolls 540 regular staff and 793 contract labourers. Though the state government maintains that there will be no retrenchment, the Tisco's spokesman told *Business India*, "We will take the workers' interests into consideration but there is no commitment as such to retain the entire staff."

According to Tisco sources, fresh investment will be needed in the form of balancing equipment and maintenance if the current production is to reach the 50,000 tpa level. A team of high level experts from Tisco will shortly visit the plant site and submit a report. According to Tripathy, the balancing equipment will cost around Rs.3 crore and a captive power plant around Rs.45-50 crore. Industry sources say that the Tatas will have no problem in marketing their products worldwide, considering their experience and stature.

There are mixed reactions to Tatas entering into the production sector of charge chrome, especially if they add capacities and compete in the Indian market at a later stage. Says one producer who prefers anonymity, "It will shake up the Indian charge chrome industry in the long run. As for the global market, the competition should not make much difference. After all, Indian exports are much too small."

Adds R.N. Mishra, executive vice-president of IMFA group, "I feel that it is a very positive sign that the Tatas are going to be a producer of charge chrome. Once they establish themselves as a steady supplier of charge chrome even in the lean years, India's image can only go up. With their wide ranging global contacts, once the Tatas develop certain markets, we can also follow."

NDOVI PELLETS

The kiss of life

nks to Essar Gujarat, this long dormant producer of iron pellets is he road to revival and preparing to reap the benefits of the new ort policy as also the rising demand for its product

ince May this year, a little known Goa-based company, Mandovi Pellets Ltd, which is controlled by the wgule family, has been making es on the Bombay Stock Exchange. nare price has shot up by more than t times to Rs.85, despite the fact that company has accumulated losses to une of over Rs.50 crore — over five s its net worth — and, most impory, despite the fact that its plant has unused for almost a decade.

ne sudden interest in the company sparked off by a strong rumour that as being taken over by the sponge manufacturer, Essar Gujarat. Algh the rumour did not quite hit realpot on, Essar Gujarat, did in May, a memorandum of understanding the Goa company. Mandovi Pelas the name suggests, is in the busiof manufacturing iron ore pellets. tisation is the process by which iron ines are agglomerated into larger which are used by sponge iron and manufacturers.

sar buys lumpy ore from the Baillamines in Madhya Pradesh. The ess of washing the lumps generates amounting to upto 30 per cent of riginal ore, which cannot be used to ufacture sponge iron in the com-'s plant at Hazira. According to the J between the two companies, Essar end upto 200,000 tonnes per annum of fines to MPL for pelletisation over iod of five years. MPL will also supssar Gujarat with 400,00 tonnes of ts, made from its own source of iron ines, every year for five years.

hile the MoU is expected to safed Essar from raw material shortages nsulate it from the effects of the risprice of pellets in the international et, for MPL this arrangement is like a f life. Essar has already advanced it crore as an interest free deposit h has gone a long way in helping restart its plant (on 15 September 1991) after nearly 10 years.

MPL plant in Shiroda and Chowgule: sigh of relief

MPL was promoted in the seventies in the joint sector with equal equity participation by Chowgule & Company, the government of India (through the Steel Authority of India which later handed over its stake to the National Mineral Development Corporation) and the public. The company's plant at Shiroda, Goa, based on the Lurgi process with an installed capacity to manufacture 1.8 million tpa of pellets, went on stream in May 1979. A major portion of the plant and machinery was supplied by Voest Alpine AG, Austria, on a deferred payment basis.

In fact, the company did not incur any expense on capital goods as the total sum of about Rs.70 crore was provided by Japan in the form of foreign exchange. Mandovi was to repay this in kind (pellets) to the Japanese in a sort of barter trade. Since MPL does not own any mines, Chowgule & Co were to supply the iron ore concentrates from its two beneficiation plants in Goa: for this, Chowgule received an advance payment of Rs.2.50 crore. At the time the plant was commissioned there were no gas-based sponge iron units in the country and so Japanese Steel Mills (JSM) was MPL's sole customer.

MPL's plant, situated off the river Zuari, is provided with a 180-metre jetty to accommodate 1000 DWT barges for carrying incoming iron ore and outgoing pellets. While in operation (June 1979 to April 1981), MPL's plant failed to attain even 50 per cent capacity utilisation. The reason: paucity of power supplied by the state government, the steep price of fuel oil (which had to be imported), and the

STATEMENT MADE BY MANTOSH SONDHI, CHAIRMAN, AT THE 20TH ANNUAL GENERAL MEETING HELD IN MODINAGAR ON SATURDAY TH 31ST AUGUST,1991

Ladies and Gentlemen,

On behalf of the the Board of Directors and on my own behalf, I extend to you all a very warm and cordial welcome to the 20th Annual General Meeting of your Company. The Notice convening the meeting, the Directors' Report and the Audited Accounts for the period ended 31st March, 1991 have been with you for some time now and, with your permission, I shall take them as read.

The year that has rolled by has been full of turmoil and tribulation for the country. Finally it culminated in the henious assassination of Shri Rajiv Gandhi; before I proceed further I would request you to stand in silence to pay homage to his memory for two minutes.

REVITALISING THE ECONOMY

It is to state the obvious that our economy is in the doldrums. The present Government after assuming the reins of office has taken a number of bold measures to extricate the crises ridden economy out of the quagmire it has got itself embroiled into. The long term objective is to free the economy from the shackles of controls and regulations so that it can gradually transform itself into an open market-driven free economy. In fact, the reforms seek to "uncage the tiger". It remains to be seen whether after 40 years of domestication, the "tiger" can survive in a highly competitive environment without protection. This will call for a strong political will, courage and a sense of purpose to carry the reforms through without buckling under the pressure of vested interests.

Last year, in my statement at the AGM I had said that in a developing economy, the sustenance of growth can be derived only through better management and greater efficiency at the micro and the macro levels. At the micro level, industry be it in the public or the private sectors because both these together really constitute the national sector, cannot escape the responsibility for maintaining a continuously rising level of productivity to fuel further growth. At the macro level, the government must provide the necessary policy and administrative framework to achieve this. The government has now tried to provide this; it is for the industry to respond and accept the challenges in the transitional period and convert these into opportunities.

The performance of the public sector must also improve dram objective is not to remain illusory. A significant development in th is the government pronouncement about reducing the budgeta the public sector undertakings. If this is carried through then the undertakings will be forced to stand on their feet. This financ will by itself help significantly to reduce the fiscal deficit. Conc this positive measures will have to be taken to distance the publi the government and bureaucratic control and from undue poli ence.

Last year in the context of the development of the road trans I had suggested that a positive strategy must be adopted t consumption of diesel and petrol. From this point of view,use o Natural Gas (CNG) as transport fuel offered one attractive po was cheaper and environmental friendly. I am glad to find fi government pronouncement that effective steps at last are being direction and a beginning is likely to be made shortly with an entailing an investment of Rs. 680 crores. It is a very welcome d A poor developing country like India cannot afford to frit invaluable bounty bestowed upon it by nature.

It is also reported that the government has decided to com flaring of gas in another four to five years with the implementa 7500 crores World Bank aided project. If this can be achieved, i a sea-change to our economic development.

REVIEW OF OPERATIONS

During the year under review, your Company has achieve of Rs. 526 crores as against Rs. 482 crores in the previous year – of 9%. The profitability was also better although during the yea conditions remained highly competitive. The performance of yo can be considered as satisfactory keeping in view the overall perf tyre industry in the country.

During the first four months of the current financial year the t gone upto Rs. 198.43 crores as against Rs. 173.35 crores in the co period of last year – an increase of 14.5%. The profitability thoug higher has not kept pace with the increase in turnover as the pr have been under extreme pressure.

COST ESCALATIONS

There has been a phenomenal increase of 38% in the price of 12-month period. In the case of other major inputs also, there substantial increases in the prices, e.g. 30% increase in the pric Tyre Cord. This has necessitated revision of tyre prices more during the course of the last year although your Company is fully a impact of price revisions on the cost effectiveness of the roa industry. In order to absorb cost escalations to the maximum exte your Company has taken measures to accelerate its R & D act embarked on a major modernisation and technological upgradation p

portance to the concept of total quality management rking on other cost saving programmes such as energy

& DEVELOPMENT

ogramme of your Company with a provision of Rs. 5 crores on iture is progressing well. The new products developed by your been well received in the market. Improvement in process and technology to cut costs has been commendable. The concept management being implemented diligently at all levels in your helped to improve its overall competitiveness besides helping its important objectives of ultimate customer satisfaction.

ustry as a whole has also been working on a proposal for setting rative basis – "Testing Facilities Centre" – which otherwise nd the reach of individual tyre companies. This would help to ed impetus to the tyre industry to forge ahead to meet the future to gradually move towards greater self-reliance.

npany's export earnings during the year under review were Rs. ainst Rs. 40 crores in the preceding year. The Gulf Crisis was putory factor towards this decline. Efforts are being made to into the new markets in Africa and Latin America besides ctivities in the existing markets of USA, Afghanistan and xports continue to remain an important plank of our marketing ping with the latest policy framework of the government.

/MODERNISATION

ME

ed in the Directors' Report, first stage of plant balancing/ programme at Modipuram and Modinagar plants is under n and is expected to be completed by March 1992. This would rn utilisation of the production facilities besides rationalisation -mix of the two plants. Production of the smaller tyres will be Modinagar Plant whereas the larger tyres including the radial oduced at the Modipuram Plant. The total estimated cost of the 25 crores which is being implemented in technical collaboration ntinental Aktiengesellschaft, Germany.

ration so far has worked very well. Steps necessary to cement nder serious consideration.

3. Modi Mirrlees Blackstone Limited (MMBL)

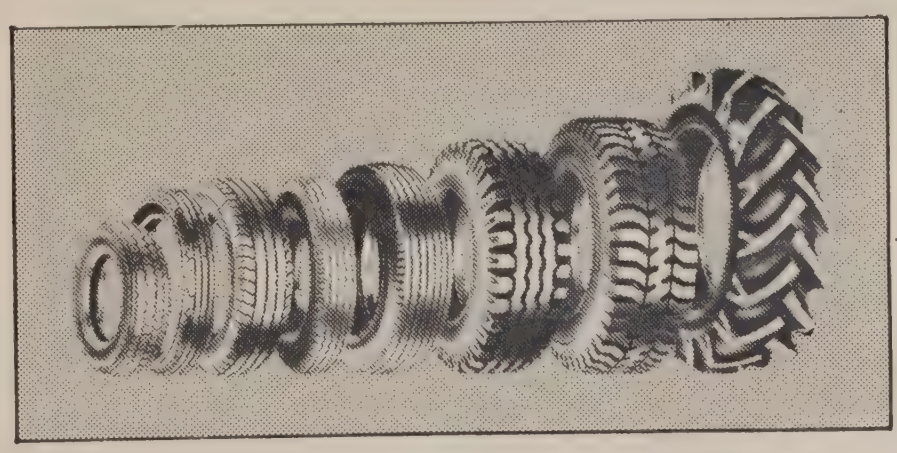
MMBL is implementing the project for manufacture of large capacity Diesel Generating Sets based on heavy fuel in technical collaboration with the world renowned Mirrlees Blackstone, UK. This project is making satisfactory progress.

CONVERTIBLE DEBENTURES

Conditional approval from the CCI to our proposal has been received. Further course of action is under consideration.

SOCIAL OBLIGATIONS

We are gradually enlarging the scope and scale of our social welfare activities in and around the areas of our operation. We shall continue to pursue these objectives as enthusiastically as before.



LABOUR RELATIONS

Throughout the year, the labour relations continued to be harmonious and cordial. All those who work in Modi Rubber Ltd. are fully committed to the common goal of "Discipline, Quality and Productivity" set by your Company.

THE FUTURE

The fortunes of the tyre industry are inextricably linked up with the fortunes of the automotive industry. From all indications the automotive industry is doing well and should continue to do well with some of the manufacturers having large capital investment plans in hand. Therefore the prospects of your Company are bright.

Taking a little longer perspective, the competition in the tyre industry is going to become even worse as the capacity in the industry will be in excess of demand. Therefore, a scenario is likely to develop in India also, as it has already developed in the western world where out of the 9 large tyre manufacturing companies, only 4 or 5 remain through mergers and acquisitions, in which it will be a question of the survival of the fittest. As far as your Company is concerned, I am happy to state that it has the technological base, the tenacity, the work culture and the resources at its command to wade through the difficult times that may lie ahead. The crux will be the speed and the effectiveness with which the modernisation and the redialisation programme can be put through.

Note : This does not purport to be a record of the proceedings of theAnnual General Meeting.

The control room: major advantages

slump in the global steel market. All these factors made the price of pellets unremunerative. "Since then the plant, considered economically unviable, has been kept shut. However, the equipment has been maintained," explains B.P. Awati, executive director (finance).

But what about the foreign exchange liabilities on account of the advance received from JSM and the equipment supplied? "From 1982 onwards no pellets could be supplied, but JSM were agreeable to receiving iron ore fines in lieu of pellets. Under this arrangement, JSM paid us a premium of $5 per tonne," says Awati. For four years, through this route, MPL earned foreign exchange to the tune of Rs.68 crore. Thus, the advance received from JSM was adjusted.

In the late-eighties, with the scenario changing for the better, MPL looked a likely candidate for revival. "Pellet prices in the international market started looking up with the increase in demand from European steel mills and upcoming direct reduction plants in the Third World," explains Awati.

With plans to revive MPL gathering momentum, in February 1989 the company received a letter of intent from the Central government, allowing it to reopen as a 100 per cent export-oriented unit. "As of today the EOU status has been surrendered, as we realised that we would not be able to sell to Essar," says Awati. "Also, the only advantage of becoming an EOU is for import of capital goods free of duty, but we already have our plant here. Now MPL will operate as a registered exporter and export to the extent it gets export benefits."

Meanwhile, MPL has also signed a collaboration agreement wi n Hoogovens, Holland, to optimise the operations of the plant after it commences commercial production. "This is more like assistance to re-start the plant and bring it to running condition. We've paid a one-time lumpsum fee of Rs.47 lakh for this service," says Ramesh Chowgule, managing director of the company.

MPL has the capability to manufacture both the direct reduction (DR) and blast furnace (BF) grades of pellets. Essentially, these grades are determined by the metallic content of the pellets. The DR grade is of an iron content of 67 per cent as against the BF grade's 64 per cent. The former is purer and, therefore, used to make sponge iron in the electric arc furnace. However, the electric arc furnace does not have the facility to remove slag, as compared to the blast furnace in which there is a separate arrangement for tapping out the slag. The electric arc furnace is also highly energy-oriented; an electric arc user would not like to use inferior raw material and thereby waste energy in removing the slag.

As it happens, MPL has identified the Bellary-Hospet sector to source its ore. But this will involve stiff transportation costs. The distance from Bellary to Goa on the South-Central Railway is some 370 km over a metre guage, single-line rail track passing over the ghats between Hospet and Londa (via Hubli). Another constraint is that as ore comes fourth in the list of the railways' priorities, the moment there is pressure for moving defence items or food, the wagons could be diverted.

However, looking at the price at which sponge iron is selling, sponge iron producers will easily absorb these transportation costs. Moreover, transportation by road is also not ruled out. Essar currently purchases pellets from Kudremukh at Rs.1,100 per tonne and sells sponge iron at Rs.6,000 per tonne, while the imported price of pellets is 40 dollars per tonne, excluding a 35 per cent duty.

MPL, therefore, plans to produce both grades of pellets. The capacity utilisation intended for the first year (19 months ending March 1993) is 80 per cent. Of this, how much will constitute DR grade will depend on every tonne of ore procured from the Bellary-Hospet sector. If MPL gets 600,000 tonnes from Bellary in a 12-month period, the total acquisition for the 19-month period would work out to 1 million tonnes. In the first year, the company has targeted a turnover in excess of Rs.80 crore.

At present, the only other indige manufacturer of pellets is the public tor Kudremukh Iron & S Kudremukh produces the DR grade let which is the main raw materia gas-based sponge iron units. Accor to an industry insider, even the BF g can be used to make sponge iron (th tendant disadvantages involved in process will be passed on to the user plants). So far, of the six gas-ba sponge iron plants in the country, Essar Gujarat's 880,000-tonne plan Hazira has gone on stream.

Clearly, going by the potential mand for pellets in India, especially o the other sponge iron projects take MPL could cash in on the domestic m ket alone. However, the company pl to also earn foreign exchange by exp ing the BF grade. Not that there is market for it in India, but the proble that the nearest blast furnace in relat to Goa is Bhilai. The arithmetic is, the fore, unfavourable, when transportat costs are added on. Moreover, exp earnings will see the company out of red sooner.

While the recent budget allows company a tax deduction on exp profits under section 80HHC of the come tax act, MPL will also avail of Ex scrips. Gains from Exim scrips will be flected in the 'other income' of the co pany as soon as shipments take pla while the former benefit will only co after the company wipes out its stagg ing losses.

Going by the revival scheme drawn by the company, the promoters will ha to infuse funds to the tune of over Rs. crore to get the plant fully operation But it would still be worth the inve ment considering that, with so ma sponge iron plants expected to come in the country, the demand for pellets only going to rise in the coming years

While MPL spent Rs.120 crore to p up its plant, any new venture of simil capacity is now expected to cost ov Rs.300 crore. This automatically pr vides MPL the kind of advantage it d not enjoy in more than a decade. seems highly probable, therefore, tha in the coming months, MPL's Rs.10 sha will scale ever higher peaks in Bombay Dalal Street.

■ LANCELOT JOSE

After a small beginning in 1967, equipped with our urge to excel, we designed and built more number and varieties of coil processing lines than any other company in India. We specialize in Slitting Lines, Cut-to-Length Lines, Levelling Lines and Equipment, and Roll Forming Lines. Options and combinations for coil handling entry units and processing sections are also offered. Hence selection of the right equipment becomes easier for your particular needs of operation and maintenance. Tailor made equipment saves you money in purchase and operations. It also offers you total operation safety and an uninterrupted output of your product.

Our passion to excel is leading us to new heights.

e threat of delicensing

v industrial policy will upset the fragile balance achieved by the dustry in the country and lead to more shortages

ation Flood, crafted carefully r 20 years, has been one of the lian co-operative movement's ccesses. This summer, this fragution showed its first signs of g, unable to absorb acceleratand and a 32-per-cent drop in "But the present shortage will lived," says an NDDB official, k supply will return to normal." greater threat has been the new al policy which seeks to free , among several other indusl threatens to dislocate the sysall likelihood, this provision of strial policy will go through a review. Yet the fundamental remains whether the dairy inan be treated like any other; for , scooters, where demand can fairly rapid increase in supply erection of new plants. en, chief of the NDDB, in a typerbic comment has said that, in the policy, the government reeople "who don't know which e cow is more important". entry and exit can be sustained a milk surplus situation," says a Dairy official. The country is rom that situation — supply at n tonnes a year barely matches This is complicated by the fact pply increases cyclically in the and drops during the summer But the demand cycle follows rse pattern: it falls during winter s in the summer months. Winplus milk is reduced to powder r oil. This enables the dairies to tute skimmed milk powder as ilk to add to supplies. o July is always a trying period dairy industry with the summer ing up milk output; a 25 per cent n milk supplies is not unusual. r's higher than normal summer tures, together with the delayed ok a heavier toll. Procurement co-operatives dropped by more usual 25 per cent — from 9 million litres in July last year to 8 million this July — an extra 11.1 per cent fall.

The cyclical decline in natural milk output, that occurs once every four years, has accentuated the decline this year. The last one occurred in 1987 and was followed by two splendid years. "Milk powder then sold at Rs.28 a kg versus Rs.35 now," says an official of the Delhi Milk Scheme. The market growth this year, estimated at 10 per cent, has added to the problem. Recombining milk with skimmed milk powder and white butter, usually resorted to in the summer months, has continued longer than normal.

There have been other problems. India's milk grid also relies to some extent on imported skimmed milk powder and butter oil from the European Economic Committee. Imports of 15,000 tonnes of milk powder were awaited this year, but in vain. The EEC claimed that many of the less developed countries — India, Bangladesh, Malaysia and Pakistan — had achieved self-sufficiency, and were exporting themselves, thereby threatening the community's markets. "That perception is not accurate," says an official of the agriculture ministry. "We did export in 1988, but that was because it was a better than normal year and not because we are self-sufficient."

Nevertheless, the shortages have had their predictable effect on prices. Delhi's two primary milk processors, Mother Dairy and Delhi Milk Scheme have held on until now, refusing to comply with a demand by a clutch of 28 other supplying co-operatives to add Rs.2.40 to the existing price of Rs.7. Now there seems little choice left but to relent. "Even if we pay Re.1 higher to the co-operatives we will not add much to our supplies," says a Mother Dairy official. The co-operatives suspended supplies in support of their demand.

Even if their demand were agreed to and supplies are restored, then, over the longer run, the system is likely to be threatened by the free entry that will be allowed into the industry by the new industrial policy permits. Operation Flood's success rested primarily on its ability to move large consignments of milk over long distances. Delhi, which needs 2.6 million litres more each month, over and above its own supply of almost 1.1 million litres, is fed by milk producing districts in Rajasthan,

Prakash Jadhav

Chocolates or milk? Which comes first?

Gujarat, Madhya Pradesh, UP and Punjab. Calcutta, another milk deficient city, is fed by supplies from as far away as Tamil Nadu.

Only the co-operative system, together with necessary government investment, has the capacity to absorb the high transport overheads needed for the successful operation of the national milk grid. Private trade has only been efficient in setting up localised distribution systems, perhaps tying in dairies in Bulandshahar in UP or Bikaner in Rajasthan for supply to Delhi. Besides, an identified surplus milk producing district does not allow any dairy industry to be set up within its boundaries.

This ensures that milk is not turned into more lucrative products like powder, *ghee* and *khoya*. The co-operatives by the finance ministry's reported desire "to break the monopoly of the co-operatives". Currently, 7 million farmers organised into 67,000 milk producer co-operative societies (also known as the Anand type co-operatives, with the NDDB as its apex body) handle 70 per cent of the marketed milk in the country. The rest of the milk is handled by the unorganised sector and the private co-operatives. And the NDDB sponsored co-operatives are primarily responsible for the country's supply of liquid milk.

"All state co-operatives sponsored by the NDDB are legally bound to supply liquid milk to the designated areas," says an NDDB official. The same is not true for the private co-operatives and the unorganised sector. That allows both these sectors to have the most profitable product mix, between milk, butter, cheese,

Will private entry mean less milk?

then transport liquid milk to the designated milk deficient areas. The co-operatives have until now accepted the 10 per cent return on investments that liquid milk supply and a varied product mix provides them. Now, with free entry, all the liquid milk is likely to get diverted by private industry to the more lucrative value-added dairy products (milk sells for Rs.10 in the free market versus Rs.7 that the co-operatives get now). Liquid milk supplies provide a return of only 4 paise to Mother Dairy on a price of Rs.5.50, clearly unsustainable in a free market.

Much of that policy change is inspired *ghee* and *khoya*. "So all we desire is for the government to lift the obligation of the co-operatives to supply liquid milk."

In the past, there was sufficient legislation to prevent private dairies to proliferate. That legislation was, however, never successfully implemented and which has resulted in illegal installations that have eroded the supply of the co-operatives. The agriculture secretary did write to his counterpart in the industry ministry informing him of the adverse implications that such a policy would have on the country's milk grid.

"But what is to be done about the private co-operatives that have already

come up?" industry secretary Mathur is believed to have aske hardly possible to uproot then Nevertheless, since the industry lio is held by the prime minister any repealing of the industrial po need the approval of the entire Finance minister Manmohan Si out a discouraging message la with his announcement in Par that "no reversal in the industria is possible now".

Speaking at the XXIV Dairy try's Conference in New Delh presence of agriculture minister Jakhar, NDDB's Kurien welcon licensing of industry in general. same time, he said, "But t operative dairy sector should also caged from its social obligations ing liquid milk to the deficit stat the surplus states." Since that ca done, Kurien is against delicens dairy industry. He said, "The pri dustry has no commitment to sup uid milk to consumers. Instead, th supply milk for the manufact value-added products like cho which are consumed by a small of the population."

Besides decrying delicensing, t cial session for milk producers conference passed a resolution de ing two things. First, the milk pro demanded privatisation of gover dairies, beginning with Mother and the Delhi Milk Scheme, pref with shareholding by co-operative ond, they demanded an amendm the Co-operative Societies Act in dance with the recommendations Chaudhary Brahm Prakash com to reduce interference from bureaucracy.

Private traders, however, believ the Mother Dairy and the DMS's po procuring milk only from th operatives is what is causing the de supplies in the first place. "If the cured from private trade too, the obtain more milk than they know to do with." For the moment, how the co-operatives insist that the re clauses in the industrial policy wil to be repealed to disallow private industry into milk surplus districts erwise, the shortage of liquid milk more acute than it has been this su

e-entering India

ming back of the US giant will ginger up local manufacturers

Blue is inching its way back into country. "Yes, the Department tronics has received a proposal atas to set up a joint venture with tional Business Machines in confirmed a senior official in the ment, thereby ending the specula- ether IBM would re-enter India at

proposal, which is presently valution with the DoE and was ed a fortnight ago, has exports as or thrust. According to informed , it will have four separate lines of s: manufacturing an estimated IBM personal system/2 range of ers, of which 75 per cent will be d; software exports; developing e for the education segment and g components for IBM products ithin India. "It is very similiar to si approach," opines another of- the DoE. One of the objectives of ture clearly is to utilise India's t technical and software skills.

tanding ties

software exports business, IBM's anding association with Tata tancy Services (see Corporate on TCS) will hold them in good Developing software for the edu- egment also makes a lot of sense veen themselves, IBM and Apple, a large segment of the education in the US. Similarly, software ex- also a high potential area since urrently has 6,000 professionals oing software for the export

risingly, IBM's entry into India unduly concerned the industry. most large companies with for- -ups welcome the move since they compete with IBM in the world . Wipro Infotech's CEO, Ashok ays, "For an industry that is ma- nd growing you must expect the ny's entry."

n will depend on IBM's focus. In sonal computer range, the inter- l market is fragmented with IBM with its micro channel architecture and the OS/2 operating system on one side and everybody else on the other. Their performance in India will depend on whether they propose to push the OS/2 or MS-DOS operating system on their PS/2s and their pricing strategy.

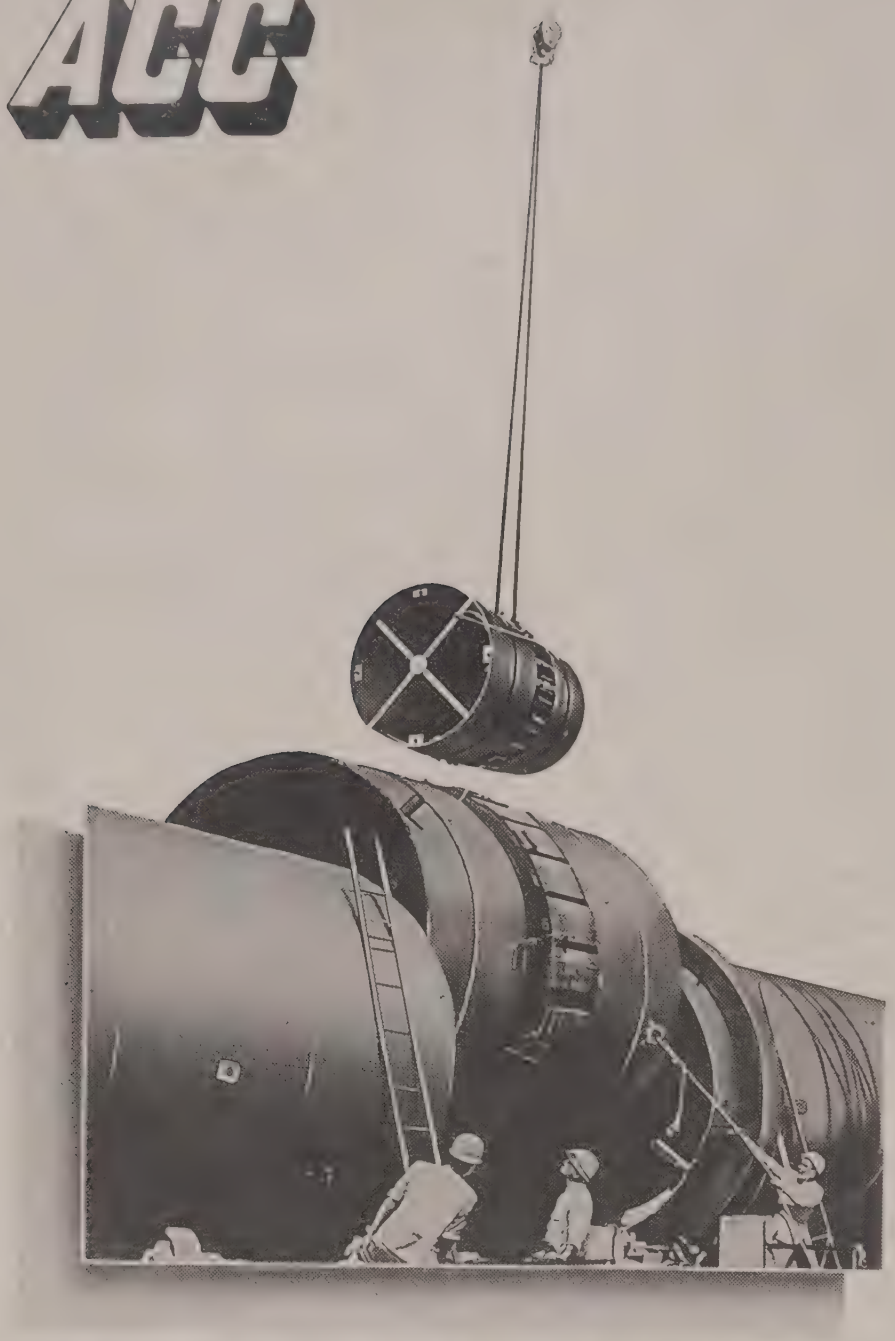
The product which will give the Indian industry sleepless nights will be the AS/400 range of minicomputers. The AS/400 is the world's most popular minicomputer. Last year it contributed 15 billion dollars to IBM's total sales of 60 billion dollars. According to industry analysts, the Tata-IBM combine will initially most probably import this machine through foreign exchange earnings and later commence its manufacture.

"The AS/400 sells very well and has found very good market niches for itself," says Shiv Nadar, chairman, HCL Ltd. "Within India, IBM has a very good

following among multinationals, who will opt for the higher range of machines. They can easily sell over 200 machines a year," says Shashi Ullal, a former IBM employee and presently operations director of Modi-Olivetti Ltd. The minicomputer market within India is estimated at Rs.200 crore and growing at 20-25 per cent annually.

Changing scenario

On the whole, with IBM's entry, local manufacturers will have to shape up and pay more attention to issues such as quality, which have been overlooked. But in the long run, this will prove to be beneficial as it will make Indian products competitive in the global market. Worldwide, the economics of computer manufacturing has changed, IBM has realised rather belatedly. It is not feasible to manufacture everything under one roof. As a result, the US giant has resorted to sourcing from third parties, components that meet their exacting quality standards.



Personnel from IBM's Singapore international purchase office have visited companies in India over a year and evaluated their products. One of them, the SEEPZ, Bombay-based Tandon Magnetics, which had earlier sold Winchester headstacks through Western Digitals to IBM, is on the verge of finalising a deal to supply switch mode power supplies directly to IBM.

"IBM's decision to source products in India is a good thing," says Soota. "It is a recognition of the fact that we have a good design capability." This decision will not only strengthen our vendor structure to international standards, it will also help Indian companies launch into the international market.

What, however, is unclear is the project size. Sources indicate that the proposal mentions a figure of Rs. 100 crore. Small by general standards, but for an industry with non-fixed capital such as manpower, a reasonable size. The project, however, is a win-win situation for everybody concerned — Tatas, IBM and the country. If everything goes well, this project will go one step further in taking the Indian computer industry closer to being truly global.

ORT PRICES

A balancing act"

fanfare accompanied the governnt of India's annual exercise of reg (read increasing) support prices ricultural commodities last fort-The agricultural minister, Balram 's proposal to hike procurement was debated in Parliament for 18 Although some 70 members of use spoke on the subject, little was the end of it all, apart from the political cliches like 'helping the armer'.

newspapers too, placed the event Soviet Russia and the VHP agitamd on par with the bickerings in ata Dal. Jakhar's proposals were passed and quickly forgotten.

le annual increases of between 5 per cent have become a regular now, this year's budgetary pro-o hike fertiliser prices by 30 per as had a direct bearing on the l revision of procurement prices. erage increase over 1990-91 has 8.5 per cent and according to M.S. , special secretary (food) in the ry of agriculture, the increase have been 4 to 4.5 per cent less but fertiliser price hike.

for cotton

binet by and large stuck to the recndation of the Agricultural Costs ices Commission (CACP), except in e of cotton where it hiked prices 20 per quintal over the increase ed by CACP. Explains R.P. Sinha, r secretary, CACP, "We have some crops every year where the supprice hike is substantial. This is with a view to encourage more s to grow those crops."

will be the second consecutive nen cotton gets a boost — last year P. Singh government had raised port price by Rs.90 per quintal. the motive for taking this step is ater foreign exchange revenue otton exports, industry represen-fear that this step will only push rket price up thereby reducing bility from exports.

there is a danger in pushing up t prices indiscriminately — it may encourage inefficient farming, which is not our intention," says Sinha. Adds Bhatia, "There is always a possibility that in computing costs, farmers in some states are getting compensated for inefficiency. Fixing procurement prices is therefore a balancing act." The normal practice has been to give more weightage to costs in the surplus states of Punjab, Haryana, Andhra Pradesh and western UP where the applicability of support prices is more probable.

Support prices for kharif crops are recommended by the CACP every year in March after evaluating cost escalations in variable input factors like fertilisers, seeds, diesel, labour and power. The government normally decides on the hike by the month of May, but the process was delayed this year because the minority Chandra Sekhar administration could not take major decisions. Even then, the presentation of the budget meant that the CACP had to revise its earlier recommendations to take into account the fertiliser cost.

Pricing poorly defined

Agriculture ministry officials confess that computing the fertiliser variable proved difficult because of the government's announcement that 'small and marginal farmers' would get fertilisers at the old price. It still remains to be ascertained as to how fertiliser dealers will identify this section that is entitled to the old rate. "This is very puzzling, to say the least," says one bureaucrat. So, what the CACP did was to merely add 30 per cent to the fertiliser component in its computations.

Because market prices of most cereals and pulses are already higher than the government's support price, CACP officials scotch the theory that this hike will contribute in a big way to inflation. "On the contrary, it is the inflation in other items that has led us to revise the support price," says Bhatia. Though the rate of increase in procurement price over the last five years has been less than that of the wholesale price, the CACP was told to keep the galloping rate of inflation in mind while computing the prices.

Since procurement prices are meant to support the farmer in periods of glut, most of the prices fixed by the government are notional because during normal demand situations, market prices fetch a higher return for the farmer. The only loser will be the government-owned Food Corporation of India, which is the largest single buyer of paddy. Says one official, "Despite a fourth good monsoon, the possibility of a glut appears remote. The growing population is expected to sustain current demand."

Most prices fixed by the government are notional

PM's AID QUEST

A cool response

The opening of the year long Festival of India in Germany was the official reason why prime minister Narasimha Rao was in that country last fortnight. It was quite clear, however, that he was going to use the opportunity to plead for larger German economic aid for, and investment in, this country. But Chancellor Helmut Kohl, not very unexpectedly, politely told him that Germany's priorities lay elsewhere for the time being. Erstwhile East Germany required rehabilitation, the European Community had to be consolidated and the Soviet Union was breaking up. So nothing much for India for the time being. However, when India's case for a loan came up at the IMF, the German government would put in a word in its favour.

The official Indian line is, of course, that Indo-German economic relations could be expected to take an upswing as a result of the visit, but when pressed at a conference at Bonn, Rao himself had to say, "I did not come to gather commitments and take them home". An agreement for aid was signed at Bonn, and the Germans agreed to give India DM 390 million (about Rs.450 crore) for 1991. But such agreements are signed every year, and this year's was no exception. So no great achievement. Foreign secretary Muchkund Dubey said that 56 per cent of it was "in quickly disbursible form", but was unable to specify how much was tied to purchases from German sources. About 150 DM million is for fertilisers, which is believed to be tied to purchases from Germany.

Reforms irreversible

Although Rao got nothing in concrete terms, he was able to explain to the German government and industrialists that India was rapidly moving towards a free market economy with liberalised government policies, and foreign investment was welcome more than ever before. Also, that the changes effected in economic policy were not a "contrived event", but the culmination of a process started many years ago. The changes, by and large, had the support of different shades of political opinion in the country and therefore the reforms were "irreversible", whoever might be in power. By itself this was a wise thing to do, because the German press had hardly reported anything about the new goverment's effort at economic liberalisation. As Rao himself said, "The speed of communication of changes has to match the speed of changes".

Nevertheless, the prime minister's question-answer session with the German industrialists was a well attended one. This was partially made possible by the spade-work done by a team of Indian industrialists attached to the Indo-German Chamber of Commerce and the CEI who were despatched to Germany well in advance. But at the meeting itself, Rao had to face sharp queries from the German industrialists which revealed their concerns. Said Matthias Seefelder, chairman of BASF, "There is no improvement in the situation regarding protection of intellectual capital in India, especially in the chemical and drugs industry. India's attitude in the Uruguay round is negative, there are no product patents and royalties for drugs are too little." And Jorg Henle, chai Klockner and Co, went on to "Trade is not a one way proces cannot export from India first, w to be allowed to import into India

Tough export rules

Herbert Kroll, director, MICO pointed out that the rules of expor India were too tough and there wa of paperwork which had to be don this was counterproductive. He als that the rates of corp taxes in India were too and the limit of divi set for export earning likely to be a problem the sharpest comment from Peter Clausen, c of F.A. Wilhelm Cla He said, "It is all fi have liberalisation, bu will realise that an idl reaucrat has a lot of sance value. The bu cracy is not going to their powers so easily.

A visibly embarra Rao however sought t plain this by saying tha bureaucrat in India w "well trained animal" ways taking orders from politi ready to implement the policies s them. But not many were convince the question of patents, the prime m ter however came out very strongly ing that the stand India took was li to the interests of the underdevel countries and its own national inte and could not be changed immedia

Outside the meeting, Juergen L. Schlabrendorff, first vice-presi Deutsche Bank AG, told *Business I* "We are all appreciative of the cha made by your government. The id the exim scrip is especially good. I you want investment and techno from German companies, you open your vast market for them to especially for consumer goods." Th a way sums up the German respon the reforms in India.

THE ART OF POSITIVE PANICKING

Much has been achieved by foresight than by hindsight.

When you have a complex intertwining of activities, time, resources and money, keeping Murphy's Law at bay could be near-impossible.

Unless you've got an intuitive, pre-emptive planning and tracking tool like InstaPlan III that lets you stay atop potentially dangerous situations like missed milestones, decision changes and resource conflicts.

Top-down is the way you'll go

InstaPlan III's plan-the-way-you-think approach lets you glide from ideas to specifics. You can organize, prioritize and categorize your tasks with plenty of flexibility to adjust to changed situations.

Opt while you plan

You have three planning options - Normal, Open-ended or Deadline.

And more ways to view your plan with the Activity, Gantt, PERT, Resource, Resource Calendar and Resource Loading Views.

Outlining acts as a zoom lens so you can get a wide-angle picture or a real close-up.

A tracker helps you ensure that every task and resource stays on course. And a Forecast Option gives you a quick what-if feedback on the effects of actual/potential planning decisions.

** AT-286 nodes with additional memory (EMM card) or XMS NET/EMS NET recommended*

Don't just plan... LAN!

Because planning a project involves so many departments, InstaPlan III couldn't be better suited to networking. With the LAN version* you get power and connectivity for as many users as you wish. So you can consolidate two or more department plans to arrive at the organization's master plan.

InstaPlan III. Coming to think of it, Murphy might not have been such a pessimist if he'd set his eyes on it.

For one year should we be called

"Dugar Celebrations Limited"?

1981 1991

10

10 YEARS OF SERVICE
BACKED BY 80 YEARS OF TRUST

1991. Dugar completes 10 years of service.

To commemorate this occasion, we will celebrate one whole year as 'DEPOSIT DRIVE YEAR'.

This year, there will be a lot of exciting happenings. Like periodic Depositor Meets. And a gala function with concerts by leading musicians. In short, our 10th anniversary heralds a year long festival. Only for our investors.

Some milestones we have crossed in 10 years:

- **Over 18,000 investors**
- **Net owned funds over Rs. 3 crores**
- **25% dividend for 6 consecutive years**
- **Phase I of 'Park Dugar' housing project almost completed**
- **Successfully launched the 'Dugar Mobile Office'**
- **Moved to own Corporate Headquarters, 'Dugar Towers'.**

All this wouldn't have been possible without you.

Thank you very much.

PARTICIPATION

Familiar questions

ASWAMY

I recently completed a hectic ten days of travel in Germany, trying to understand how their system of co-determination works in practice. When it comes to participatory management, our employers and trade unionists alike take a rather gloomy view. They don't think it can ever work, and the grounds for their pessimism have been so often repeated that they are now common knowledge.

Meeting trade unionists, chairmen of works councils and personnel chiefs in varied industries was a good occasion to raise all the familiar questions that dominate Indian thinking. The answers to some of them were convincing.

First, the role of law. Is it reasonable to expect that a participatory style would some day evolve on its own without statutory compulsion? Out of the question, was everyone's answer. Although Germany has had a co-determination law since the twenties, the genesis of the present system traces back to the cataclysm of the second world war. Ironically, it was British experts who helped Germany evolve a system based on consensus, so different from their own adversarial and destructive style of industrial relations.

The law appears to be necessary not only to create a participatory system but also to sustain it. After fifty years of experience, the opinion of both managers and trade unionists is that the system would not survive if its legal underpinning were removed. A vice-chairman of the supervisory board pointed to the tomes on his shelf with the comment that they were the foundation of the system; it was from them that he drew his strength. Significantly, the very people who say that the system would collapse without the legal base also say that co-determination is an effective method of finding a consensus over issues fraught with the potential for conflict.

Information sharing is fundamental to any system of participation, and so it is to co-determination. The law compels employers to provide their employees with information over any issue that might affect their interests. This is a sweeping provision whose significance will be discussed on another occasion. The immediate question is whether labour can understand the complexity of running a business. Can employees understand complex investment decisions, for example? In our country, we have argued that workers lack the education to get into all this, but neither the managers nor trade unionists in Germany saw this as a problem.

The personnel director of Krupp Steel did not think that the lack of specialised qualifications posed such a hurdle. His company was involved in building some cement plants in India, and he felt that we often got workers with better educational qualifications than they did. Cement was a low prestige industry in Germany, whereas his impression was that we got workers with draughtsmen's qualifications and draughtsmen with engineering qualifications. A similar question was put to the vice-chairman of the supervisory board representing employees. He himself had studied business economics, but he was quite perplexed by the argument that lack of technical knowledge was a great barrier to participatory management.

We think of participation as an excruciatingly slow method of decision-making. If employees and their representatives have to be consulted at every step, how is business to be managed? Those who ask the question prefer to forget that the most aggressive businessmen in the world — the Japanese — are also the greatest believers in consultation. When questioned on this, the personnel director of Thyssen Steel admitted that it did take time. But, he said, knowing the process you simply started early, so that you have a decision in time. He did not think that the exercise of management authority necessarily led to faster decisions. The opposition they ran into after the decision became known made it slower in fact. He did not subscribe to the view that participatory forums were talking shops which debated issues endlessly. Decisions had to be made and they were, was how he put it.

What happens to business secrets in this system? Would not employees, being less responsible than managers, damage the interests of the company if provided access to confidential information? To this, a trade unionist replied that the system did not merely confer rights on employee representatives; it also cast responsibilities on them. The law required them to protect the confidentiality of the information they got. A young British lawyer who was present remarked that the

need to protect the confidentiality of business information was a major argument against participation in Britain. But that is simple humbug since trade unionists in any case know all that there is to. The reason why employers held back on information was not to protect confidentiality but to keep off from joint decision-making. A formal system of information sharing was the beginning of joint decision-making, which was what the British — and we in India — did not want.

Is it enough for employee representatives to have access to information and the power of joint decision-making? This was, after all, indirect democracy. What about the ranks of workers? The system requires works councils to hold quarterly meetings to disseminate information. The employers work at information dissemination in tandem with the unions to reach across directly to employees. Even so, much depends upon how earnest employers and trade unions are. The system seems to work in large enterprises with a well organised trade union, but not in smaller ones.

Then there is the question of parity. Can participation work without parity representation between labour and management? Germany has both systems — employees have parity with the employer in the powerful supervisory board in coal and steel, but only one-third representation in all other industries. What were the differences between the two systems? There was no difference, was the unexpected response, because participation was not a system of decision-making through ballot. Labour and management had to work with each other to find mutually agreeable decisions, and this had to be done whether or not there was parity. The cost of an unacceptable decision was the same whatever the system, and labour could not be ignored or pushed around just because it lacked parity.

Being a comparative sociologist; I was trying to go beyond the apparent to identify the fundamentals which made the German system tick. Practically everyone said that what worked in Germany may not work elsewhere, whether out of modesty or some other consideration one doesn't know. While systems can of course not be transplanted wholesale from one society to another, it is unnecessary for all to reinvent the wheel.

Trade unionists and managers were more comfortable with matters of fact than with such seemingly metaphysical questions, but nevertheless they did provide some useful leads. It was the absence of sharp class distinc-

tions, said the personnel director of B
and Voss, the shipbuilders of Hamburg
built the legendary *Bismarck* that terr
the British during the second world wa
two world wars had done much to brea
cial barriers, providing a congenial a
sphere for participation.

High-grade power from low-grade fuel

Wartsila Diesel – the pioneers in burning low grade fuel for continuous base load operation – are the world's leading manufacturers of medium speed diesel engines. Their commitment to R&D and continuous search for future fuels ensure their predominant position in delivering reliable, fuel-efficient, high-performance,diesel-powered generator systems.

In collaboration with the world renowned leaders, Wartsila Diesel India Ltd. manufactures medium speed engines from 4 to 6 MW in Khopoli, Maharashtra.

Turnkey system design capabilities offer cost effective integrated captive power plant packages to suit Indian operating conditions on domestic fuels such as LSHS, HPS and Furnace Oil.

WRIGH

At Godrej CAD-CAM, we indulge in flights of fancy.

Our quest for CAD-CAM solutions is inspired by great minds who never pressed the pause button.

And this quest has led to the discovery of a range of indigenous solutions which are absolutely state-of-the-science, user-friendly, available at a reasonable cost and of course geared to meet the changing needs of the industrial world.

Starting with the Draftsman's Delight, a 2D drafting package offering an exhaustive range of facilities for a complete drawing environment.

The Godrej Solid Modeller. A sophisticated and extremely intelligent software for modelling and visualising complex objects.

The G-CAM. A powerful tool for generating programs for NC/CNC machines, and eliminating wastage of costly CNC machine time.

And the G:SAFE. Linear static/dynamic stress analysis software with superior graphic pre-and-post processors.

These software packages are complemented by our own hardware systems. The Symphony Series Workstations.

Topped by the Symphony RISC Workstation that offers a 'Super Computer Performance' for CAD-CAM applications.

The future range includes the G-CAD (a 3D drafting solution); a new series of Symphony Workstations; and a well-conceived drafting solution, through networking a series of drafting stations.

Yes, at Godrej CAD-CAM, the quest is on.

The quest for products that are made in India. But made to compete in the world.

imonos to don Levi jeans.
ore noodle joints are catering
ky fried chicken. In China, party
are switching from black tea to
Coca-Cola. Even in England, the
noured fish'n'chips have been
l aside by McDonalds fast foods.
nance then have Indian goods be-
ernational marauders?
rary to standard expectation the
s may find India a somewhat dif-
attleground. Mrs. Desai or Mrs.
aniam is a highly ethno-centric
er. She stubbornly resists at-
at changing her time-revered pat-
of rearing, eating, drinking,
g, entertaining — in fact her *San-*
xcept for a westernised fringe in
y, and perhaps, Delhi, the Indian
er is going to be a hard nut for
-oriented products to crack. Wit-
depressing performance of pizza
ange-flavoured powder, instant
ni-tech soups, diet drinks, etc.

ng innovation

other hand, if Indian house-
can see clear advantages to new
doing things, they are not averse
oting innovation. Have they not
o such new-fangled doodahs as
te noodles, music cassettes, wash-
chines, etc? How then should an
s marketer gauge his chances of
? Ironically it was an American
cientist, Everett Rogers, who in
oposed the Theory of Diffusion
the acceptance of a new product
across a market. He put forward
ributes that a new entrant should
if it can hope for a measure of
: compatibility, relative advan-
tage, complexibility, trialability and perceivability.

Compatibility is the degree to which a new product fits into a person's established practice or behaviour. Clearly, if a housewife is accustomed to washing clothes in a bucket, she will be reluctant to adopt a dry cleaning agent. Or if she hand-rolls *chappatis* for her family, a pre-cooked alternative would not be compatible with her self-image as a caring provider. Similarly most cold cereals, porridge or muesli would not be compatible with most *desi* breakfasts.

Conveying quality

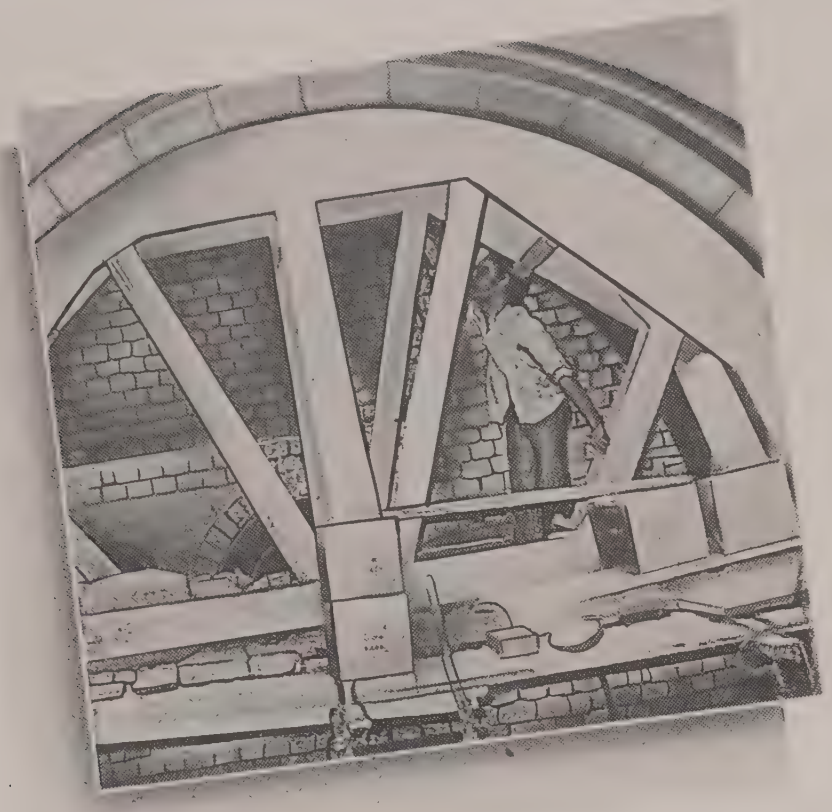
Another attribute that influences change is relative advantage. "Will the new article give me something extra over my present product?" If it has a relative advantage it's in with a chance — if not, forget it. Too many new aspirants, both foreign and Indian, fail to provide a relative advantage and consequently go to an early grave.

Hertz, the rent-a-car Goliath, would be more successful, if it could convincingly put across its relative advantage over local competition — which as yet it has failed to do. Adidas footwear is a name that has world markets at its feet. The absence of a demonstrable advantage has made Indians slow to lace them on. On the other hand, Benneton has been successful in winning a share of fashion street because it has conveyed cotton quality and international styling (priests kissing nuns nothwithstanding).

Perceived complexity deals with the difficulties a consumer may encounter using the new product. Home computers, after the initial popularity of their electronic games, required deeper technical expertise to handle. After initial euphoria, the fad soon faded and the items are now ironically described as "attic computers". Complexity of handling has perhaps slowed down the acceptance of electronic typewriters, VCRs (as opposed to VCPs), microwave, ovens, et al.

Trialability refers to the degree to which a product can be tried out on a limited scale. Inexpensive, frequently purchased household items can be made available at 'lower risk', either through a price-off or a small trial pack or even a free sample. Some years ago, this writer was associated with the unsuccessful launch of a mosquito repellent cream. It was miles superior to the brand leader in every product dimension. But it flopped. Simply because the market leader's fast-moving tube size was 500 gm and the new entrant launched with only a 1,000 gm candidate. Western marketers possess a heap of proven techniques to secure trial including the "lower get-acquainted price" We should be seeing a lot of action on that score from the visiting hucksters.

If it is to succeed, the benefits of a new product should be communicable i.e. easy to show, easy to describe like the relief from a headache pill. Garlic pearls on the other hand suffer the disadvantage that the user cannot easily determine whether his cholesterol levels have gone down. A Vicks iron-fortified product, not heard of much recently, once promised to generate richer, redder blood. The poor punter could scarcely be expected to shuttle back and forth from the pathologist to see what good the pills were doing him.



Rogers' diffusion model shows that the most compelling new product attribute is relative advantage (97 points) followed by communicability (71), compatibility (39), trialability (17) and complexity (11). Western markets entering the sub-continent would do well to ponder Everett Rogers precepts before they can confidently hope to overrun Indian bazaars.

RCD's Refractory Services. Engineered so well, even the Germans use it.

When a leading German pharmaceutical company calls you in to re-design and commission an incinerator which others failed to commission, you have every reason to feel elated. That's how it is at the Refractory Engineering and Applications division of the Research and Consultancy Directorate (RCD)

Every job we undertake reflects our mastery of the subject. What makes this possible is that we provide evaluation, application, and research back-up all under a single roof.

We design, install and commission cement kilns of over one million TPA capacity. We do pioneering work for the design and installation of refractory material for primary and secondary reformers for the fertilizer industry. We also have manufacturing capability for low volume, high technology refractory material.

Our expertise is used by competitors and in non-cement industries like steel, petrochemical, chemical and glass.

ED FOOD DRINKS

uyers prefer brown

nore new brands of brown beverages coming in market leader
vita prepares a new pitch to stave off competition

being off the air for over a de-
e, the once-popular radio pro-
, the Bournvita Quiz Contest got
d lease of life recently. The 27-
ng contest, kicked off in early
part of a new advertising cam-
r a product whose leading posi-
he brown powder segment of the
food drinks (MFD) market is now
ed by other big brands, such as
ul and Boost.

the biggest player in the MFD
, launched Chocolate Horlicks
uary and is selling it on a nutri-
s flavour catchline. Jagatjit In-
s' Viva will now also be available
colate version. And the growth
ver of Glaxo's Complan in 1990
per cent — almost double that of
te powder segment. Two-thirds
plan's turnover is reported to
me from sales of the chocolate-
ed variety.

competition is reason enough for
y India Ltd to worry about
ita's future. Bournvita currently
6 per cent of the highly competi-
own powder segment. Vinod
n, vice-president in charge of
y's food and drinks division, ad-
at one of the reasons for Bour-
new campaign is increasing
ition, but points out that the
annual growth rate of the white
t is important too.

rse race

red to the brown powder seg-
which Boost, Maltova and Nut-
also have strong presences, the
egment is virtually a one-horse
ith Horlicks having cornered 71
t of the market. Horlicks and
an together account for nearly 90
t of the whites market. HMM offi-
lieve that a chocolate flavour will
m more sales.

is has resulted in the concentra-
activity now witnessed in the
segment of the market. Though
ning has not changed. Dhawan says that Bournvita has always been pitched as a drink that keeps one physically fit and, consequently, mentally alert. Publicity for Bournvita is planned to highlight these two aspects. Hence the quiz contest and the athletic meets (which the company plans to re-start from this year, too).

definitely tilted towards either white or brown. As such these regions have decided brand loyalties and are difficult to break into. It is only in the south that the gap between the two segments is narrow. Whites have a 58 per cent market share and browns 42 per cent. This makes the south a good region to prospect for more consumers. The south is also the largest regionwise MFD market. It accounts for 57 per cent of total sales followed by the

The target segment is school children in the sixth to the tenth standards and young adults, particularly young parents. Dhawan says that establishing an emotional bond with children helps win sales later when the children grow up and have children of their own.

The choice of All India Radio stations from which the Bournvita Quiz Contest is being broadcast also tells a tale. Of the 16 stations, eight are in south India, five in the west, two in central India and 1 in the east. The reasons for this, Dhawan says, is that radio listenership in the south is high, in some states even higher than viewership for TV.

This pattern also coincides interestingly with an MFD market trend. In the north, west and east, the markets are east whose share is 25 per cent; north and west equally account for the rest.

But now, with the emphasis having shifted to include flavour, all the whites in the market — including Complan — have started turning to chocolate. And this has put pressure on Bournvita, which suddenly finds itself surrounded by competing brands that not only have a chocolate flavour but also still stick to their original promise of being highly nutritional.

Bournvita's new campaign has already commenced. The other companies have not launched new campaigns, but these could be on their way, and should lead to an interesting tussle for bigger shares.

REGIONAL BRANDS

Kings on their turf

Small-time operators are giving the larger, national companies with country-wide marketing networks a run for their money

A good number of southern housewives prefer to scrub their dirty linen with Ponvandu detergent soap and wash their hair with Chik shampoo. Fun Munch potato wafers are all the rage with kids in Calcutta while their mothers would much rather bathe with Margo soap than Lux or Cinthol. Similarly Mysore Sandalwood soap has a loyal consumer constituency in Bangalore; Delhites reach out for Campa Cola to quench their thirst (Pepsi notwithstanding); while for many Bombaywallahs only Duke's lemonade will do.

Such differing tastes and preferences have led to the rise of regional brands in practically every product category — from teas to TVs, soaps to soft drinks. Though their brands may be relatively unknown outside their limited base, regional players command significant market shares and strong brand loyalty from consumers on their own turf. They have also been able to hold their own against mightier names that have a national profile.

In December 1977, soon after Coca Cola had just been shown the door, a Bangalore-based bottling agent for Coke was confronted with the prospect of going out of business. So Bangalore Soft Drinks Pvt Ltd did the next best thing: it conjured up its own concoction. Torino is now the market leader in the orange drink segment in Karnataka and Tamil Nadu. "Torino's light orange flavour is perceived as the best available," says technical director Pankaj Lakhani. No idle boast this. For the company has 13 small-scale franchisees (including one in Gujarat) and 5,000 dealers in Bangalore city alone.

Like Torino, other manufacturers and marketers have begun to appreciate the virtues of operating in niche markets, geographically speaking. Indeed, when questioned, regional players themselves admit that in a smaller sized market, they have more control and can cope with diverse market forces.

"There are several advantages that accrue to regional brands," explains Brinston Miranda, a Bombay-based marketing consultant. "There is a synergy and there is control. It is easier to understand the characteristics of a particular region rather than to get a grip on the overall market. Sometimes the question could be that of quality control or

newcomer Jumani Icecream
adway in Hyderabad. Jumani's
y is fancy flavours. Black Jewel
e layers of cake spiked with a
te sauce; even its ordinary stick
n is different — the banana fla-
shaped like the fruit. These are
ed" ideas, a result of managing
director, Shyam Jumani's frequent trips to Italy.

Jumani started out as a marketing trainee with Joy Icecream, his present competitor. Twenty years later, when he was appointed franchise director, Jumani's entrepreneurial instinct awakened. He decided to set up his own icecream unit which would be a franchisee of Joy's. When Joy jacked up royalty fees, Jumani opted out. He went about converting the Joy's vendors into outlets for Jumani. Today he boasts a sophisticated plant with an hourly capacity of 1,000 litres.

Jumani admits candidly that discounts of upto 45 per cent (affordable due to lower overheads) to 5-star hotels and other bulk buyers has been integral to the sales pitch. He says, "Plans for going national are held up since we do not have the budget for television advertising."

The recent dramatic rise in rural demand saw many large marketers ill-prepared and unable to extend their reach to interior areas. This is where the smaller, nimble-footed manufacturer was quick to catch on. In Andhra Pradesh, a state known for its scorching summers, Padmini Fans has picked up a 2.3 per cent market share. Small change yet, but what is significant is Padmini's strategy in grabbing it.

A marketing strategy that concentrated on the rural middle class buyer was the thrust of Padmini's launch in 1986. "We focussed our attention on the rural dealers, who despite all their efforts had remained relatively ignored by the larger fan companies. By boosting their morale and offering them the authorised dealer status, we were able to secure their support," says marketing manager S.P. Prasad.

Sophisticated products which require a heavy dose of investment in technology are unlikely to have cheaper clones. There are opportunities aplenty for backyard manufacturers in certain categories like detergents, for instance. Marketing legend Nirma started out as a regional brand confined to Gujarat. Today there are a host of small-time brands. For instance, Budget, launched by the makers of Pan Parag has a faithful following in the north. Similarly cassette king Gulshan Kumar of T-Series fame makes a detergent of the same name and he's managed to scoop up sales in Delhi. In Gujarat, Vimal refers not only to textiles but a popular washing powder.

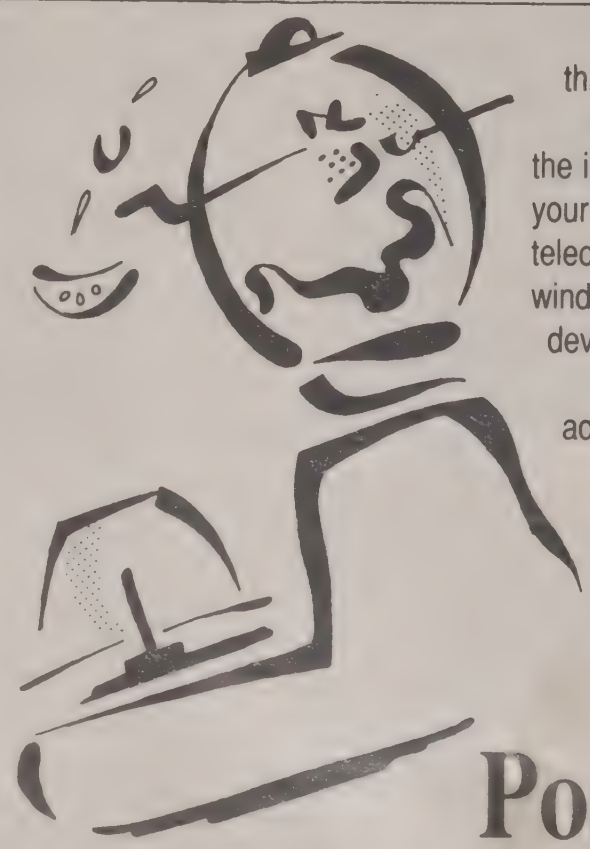
However, success is not guaranteed. Witness Hindustan Lever's recent takeovers of various sick soap and detergent manufacturing plants across the country. The Rajpura-based Stepan Chemicals is now a HLL subsidiary; the others include Union Home Products in Mangalore, Sunrise Soaps in Rajkot and Shivalik Cellulose in Gajraula.

Soon or later, it seems, regional brands begin to nibble into established market shares. Brand leaders perforce have to devise ways to stave off their threat. Sumeet mixers had to take quite a drubbing when almost a hundred odd brands surfaced in the wake of the boom in the mid-eighties. Sumeet, itself a regional brand till seven years ago, found that imitations of its conventional mixer — like Gopi, Jyoti, Maharaja, Shalimar, Pearl, Vishal, Johnson and Minu — were making a killing on its own territory.

"The market for appliances has indeed become a *bartanwala* business. Unscrupulous competition which copied our models and confronted us with lower pricing through excise evasion tactics, has affected our sales in the past few years," admits Ajay Mathur, chairman and managing director of the Bombay-based Sumeet Machines Pvt Ltd. "We have been forced to shift our efforts to other products like food processors and

electronic washing machines. Again, purely as a survival strategy, we have decided to increase our dealer network by a 100 per cent."

A similar predicament confronts Bajaj Electricals Ltd. "We are market leaders only in irons," reveals G.K. Aithal, senior marketing manager for consumer durables. "As for our 50 other appliances, we are competing mainly with regional brands." Bajaj is doing so through product innovation and by providing add-ons. The new Bajaj mixer, therefore, has unique cutting blades and a bigger jar capacity, according to Aithal. "Four years ago we de-



cided to back our lightweight irons with maximum inputs and our sales have jumped from 3,000 then to over 15,000 per month now," he adds.

Not surprisingly, several larger companies have gone a step further by tailoring products for regional markets. VST Industries Ltd, for instance, has discovered that some of its cigarettes sell only in specific segments. Its plain cigarette Shahi-Deccan priced at Rs.3.10 a pack, compared to Rs.2.50 for its own popular Charminar, is being marketed exclusively around Visakhapatnam. Similarly, Royal Gold Medal, special Virginia micro-cigarettes, sells only in Madurai. "We noticed a gap in that region and decided to exploit it. brands if introduced in othe might not have done so well," keting manager D.P. Dhar.

The high failure rate of new have forced the larger compar more prudent. Testing out a n uct in a limited market is now t Marketers have good reason t slowly. Statistics from the Op Research Group show that 1984 and 1989, there have been births than bonny babies in a product categories: Thirteen o new detergent soaps got a lath the market. The sweet smell o eluded half the premium launched. Twenty out of 28 new of refined oils slipped up.

Such statistics do not deter the crop of regional rulers. Thou have lower stakes, they have hopes. Shrewd, small-time m turers know the golden rule of vival game: stick to your own tu

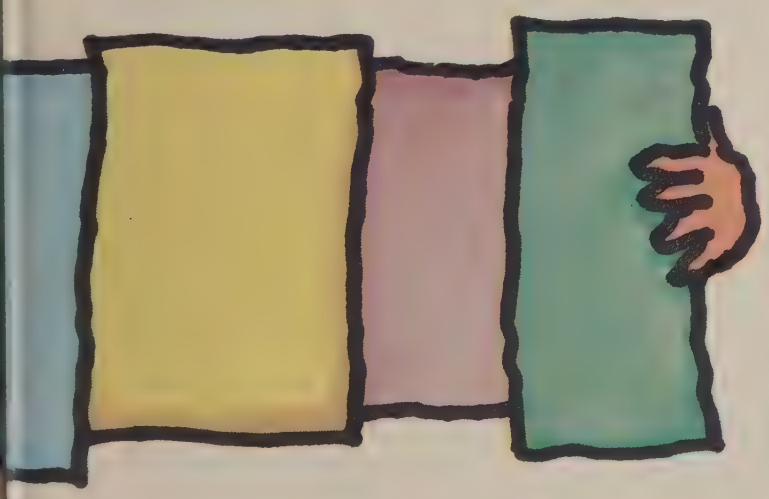
Monel, Hastelloy, various grades of Stainless Steel, Ni-Resist, non-ferrous metals like Bronze, Aluminium-Bronze, Silicon-Bronze amongst a host of other speciality metals and alloys. Maximum single piece casting capacity - 5 tonnes. In accordance with ASTM, BS and Indian Standards.

A sophisticated machine shop with over 500 machines, including 10 CNCs, over 50 metal forming and over 25 Special Purpose Machines. Capable of machining jobs up to 4.3 metres in diameter and also achieving tolerances as fine as 10 microns.



An up-to-date testing laboratory with an impressive array of destructive and non-destructive tests like Radiography, Ultrasonic Testing and Dye Penetration.

Our Hydraulic Research Lab, one of the largest in Asia with an installed testing capacity of up to 7000 litres per/sec flow, 100 metres head and 1850 KW /3.3/6.6/11 KV power. Capable of testing large pumps under actual duty conditions.

Over the years, we have successfully diversified into sophisticated machine tools, valves, hermetic compressors and turnkey project engineering.

Today it is these 'too many things under one roof' that help us zealously maintain our impeccable quality.

Our critics, now totally agree with us.

TAKEOFFS & TOUCHDOWNS

The battle for the blue skies

By Paul Turk
in Arlington, USA

IN THE FILM *The Dream is Alive*, the space shuttle sails across Europe, crosses the Mediterranean, then the Nile delta of Egypt as the camera pans the Earth passing below. There are no manmade lines, only sharp geographic features like the familiar "boot" of Italy. The shuttle proceeds, governed only by orbital mechanics.

The view from an airliner window is not so vast, but the principle is the same. There are physical obstacles—weather, mountains, deserts, oceans—but none erected by man. The only remaining obstacles are political, and in the century to come those invisible political barriers are expected to become even less a factor than they are now.

Globalization means airlines will buy some or all of one another or will get into joint marketing and other pooling agreements in search of better market shares, and this will be done across borders and oceans.

The logic behind establishing global airline networks through cooperative marketing agreements or cross-border ownership interest is simple. It is far easier to approach a foreign market through friends and associates in that region than to set up a duplicate operation to compete with companies already firmly entrenched there.

Continued on next page

Battle for the blue skies

Continued from previous page

Going into a new territory unaided means an uphill battle to win airport access or, possibly, changes in bilateral treaties, not to mention the tremendous costs of establishing new offices, support staff and facilities. The partner carrier gains rights from the agreement as well, but cooperation tends to lend market mass to the combination.

In recent negotiations between the US and the UK, British negotiators appear to have won long-term benefits for their nation, such as the right to make substantial investments in troubled US carriers, in return for granting American Airlines and United Airlines access to Heathrow.

There are other nonbinding ways to gain access to traffic. For example, there are joint marketing agreements where carriers without investments in one another agree to promote each other's services and to book passengers on one another's routes where they do not compete.

In one notable case of combination and cooperation, Swissair, Singapore Airlines and Delta Airlines of the US have purchased small stakes in one another. The idea is to provide seamless borderless service around the world.

In another combination, the Netherlands' KLM took almost a half-interest, which includes voting stock and equity, in Northwest Airlines of the US. Northwest, in turn, has a substantial minority interest in Hawaiian Airlines, which provides inter-island service as well as long-haul services reaching out to the West Coast of the US and to Japan. Japan Air Lines, through a hotel subsidiary, also owns a 20 percent interest in Hawaiian Airlines. The airline companies involved have not made full use of the synergies available, but the framework is there. It is a complex web of relationships which the companies involved will probably not want to make more visible or controversial to avoid the interest of federal agencies trying to determine ownership.

SAS, the flag carrier of Denmark, Norway and Sweden, took a 10 percent stake in struggling Continental Airlines of the US in 1989. The Spanish carrier Iberia has taken control of Aerolineas Argentinas (although the deal was structured for a minority holding when it was negotiated) and now holds a substantial interest in LADECO of Chile. What the conquistadors and the Catholic missionaries could not accomplish by force and persuasion in the New World in 16th century is coming to pass thro airline economics.

Lufthansa has not made outward vestments, but has entered joint m keting and planning arrangements Air France and others. It also has moted itself heavily as a "big broth consultant and maintenance and tr ing source for the airlines of Cen Europe as they emerge from So influence.

There is a desire in the rest of world to gain access to the North Am ican domestic traffic base. Indivi European airlines, which have relat ly small domestic population bas strong competition from rail and ot surface transportation and limi foreign traffic rights, view access North America as essential to grow and prosperity.

There is also a surge of activity Europe in which carriers seek to pl themselves in a position to take adv tage of the unitary market due to ta effect at the end of 1992. Airline s will be a major factor in competit in Europe, as it has been in the US a Canada in the era of deregulation.

What the investor can expect from this is continued general weakness the market and for the time being, in t aircraft market as well. What t passenger can expect in North Amer is the disappearance of one or two mo major carriers through liquidation merger, higher fares and diminishi levels of service, although the system a whole should remain efficient.

In Europe, the same trends shou appear over time as the unitary mark settles into place and as the air transpo system rationalizes itself. Perceived n tional interest and chauvinism w perpetuate "flag" airlines for sm countries (Austria, Switzerland, Po tugal, Belgium) but these airlines will b overshadowed by the relative giant never mind whether they are in priva hands or held by the government. Th concept of global connections betwee airlines will remain strong, and intern tional travel should actually get easi over time.

As we go into the new centur another 4,000 airliners will be added the 10,000 in service now. They will b larger, and the completion of th 1,000-passenger aircraft is a matter "when" rather than a question "whether."♦

Paul Turk is director of publications for AVMARK, Inc., an aviation and airline economics consulting firm.

Pilot says humans can't be replaced

To get a view of modern aviation from inside the cockpit, WorldPaper *staffer Tricia Curry spoke with Lufthansa pilot Artur Schreiber on a stopover in Boston.*

much of the flying today is puterized?
o the takeoff ourselves and then we e on autopilot until landing. Landing ually done by hand, to keep in prac- But in very bad weather conditions, pilot provides a smoother landing. ight, you never fly by hand, we ys use autopilot because it is more fortable for the passengers.

ou still feel in control when the e is on autopilot?
you are in full control. You can over- r the autopilot or disconnect it at any . Even while making an automatic ing, a pilot can always take over.

there innovations that you look ard to?
ewer aircraft normal flight is suppos- o be easier, but if something goes ng and there is a technical problem, much more difficult than it was in the r aircraft. In a DC-8, for example, if lost the hydraulic system, there was change. But it can even be difficult e DC-10, for example in the accident had in Sioux City where they lost the hydraulic and the aircraft was no longer flyable. Newer planes, more high-tech, are even worse; the difference between normal and abnormal conditions is getting larger.

Would you prefer to return to more simplistic technology?
Well, you can't go back. Development goes on. Like cars, every generation has a better system, new gadgets. The same is true with avionics. Even if I don't think I need it, it is there and I have to be able to handle it. As far as other new developments, there are always new manual innovations, a side stick or a computer that oversees the flight process, but for things like decision making, humans can't be replaced.

Do you think as airlines become more globalized and alliances are cemented, cultural differences or language will affect safety?
Western pilots must speak English. But airlines in the East don't have the same standard. On Chinese airlines, for example, language can be problematic on international flights. They either carry an interpreter or rely on an English-speaking crew member. I imagine that this is improving.

I used to fly over Russia, and they have improved quite a bit over the past five to 10 years. At first, we had a Russian interpreter and the air traffic controller used an interpreter and only the interpreters could communicate in English, and when they didn't understand one another they would revert to their native language, which could be disastrous. But now if you fly to Moscow, it's much better.

On a global scale, how do you rate cooperation between air traffic control systems.
In Canada and the US, it's ideal, you can fly direct routes and change controllers very infrequently, but that is not true in Europe where each country insists on keeping control of its airspace. In flight, every couple of minutes there is a changeover to a new controller. It is even bad for approaches, airports are very close together, and the air is very crowded. Hopefully in 1992 it will get better, flying and air traffic control will be regulated by Eurocontrol—unifying 22 independent systems.

Passengers are quick to complain about food. Do you ever bring your own lunch or dinner?
No, they change the food every month or so. So far, the food has been very good and I haven't had to bring my own. For a few years I flew with a cargo company owned by Lufthansa—I was interested in flying around the world. On these flights we wouldn't have cabin crews, but we did have a kitchen onboard where we cooked our own steaks or whatever else we wanted. When I began working on passenger flights again, in 1987, my weight rose about two kilos, which I guess is testimony that the food is quite good.♦

Latin America's air war

Competition heats up among new and old carriers

By Carlos Castilho
in Rio de Janeiro, Brazil

WHILE MOST Latin American airlines are facing an uphill struggle in order to survive the recession and indebtedness, a former Brazilian truck driver is convinced that he has an answer.

Wagner Canhedo, 54 years old, was an unknown businessman until September last year, when he bought Viaçao Aerea São Paolo (VASP), the second largest Brazilian airline, once controlled by the government of the São Paulo state. Since then, Canhedo has become known as a sort of maverick in the local airline industry.

The new owner of VASP has decided to ignore old rules, all gentlemen agreements and regulations for the sake of competitiveness.

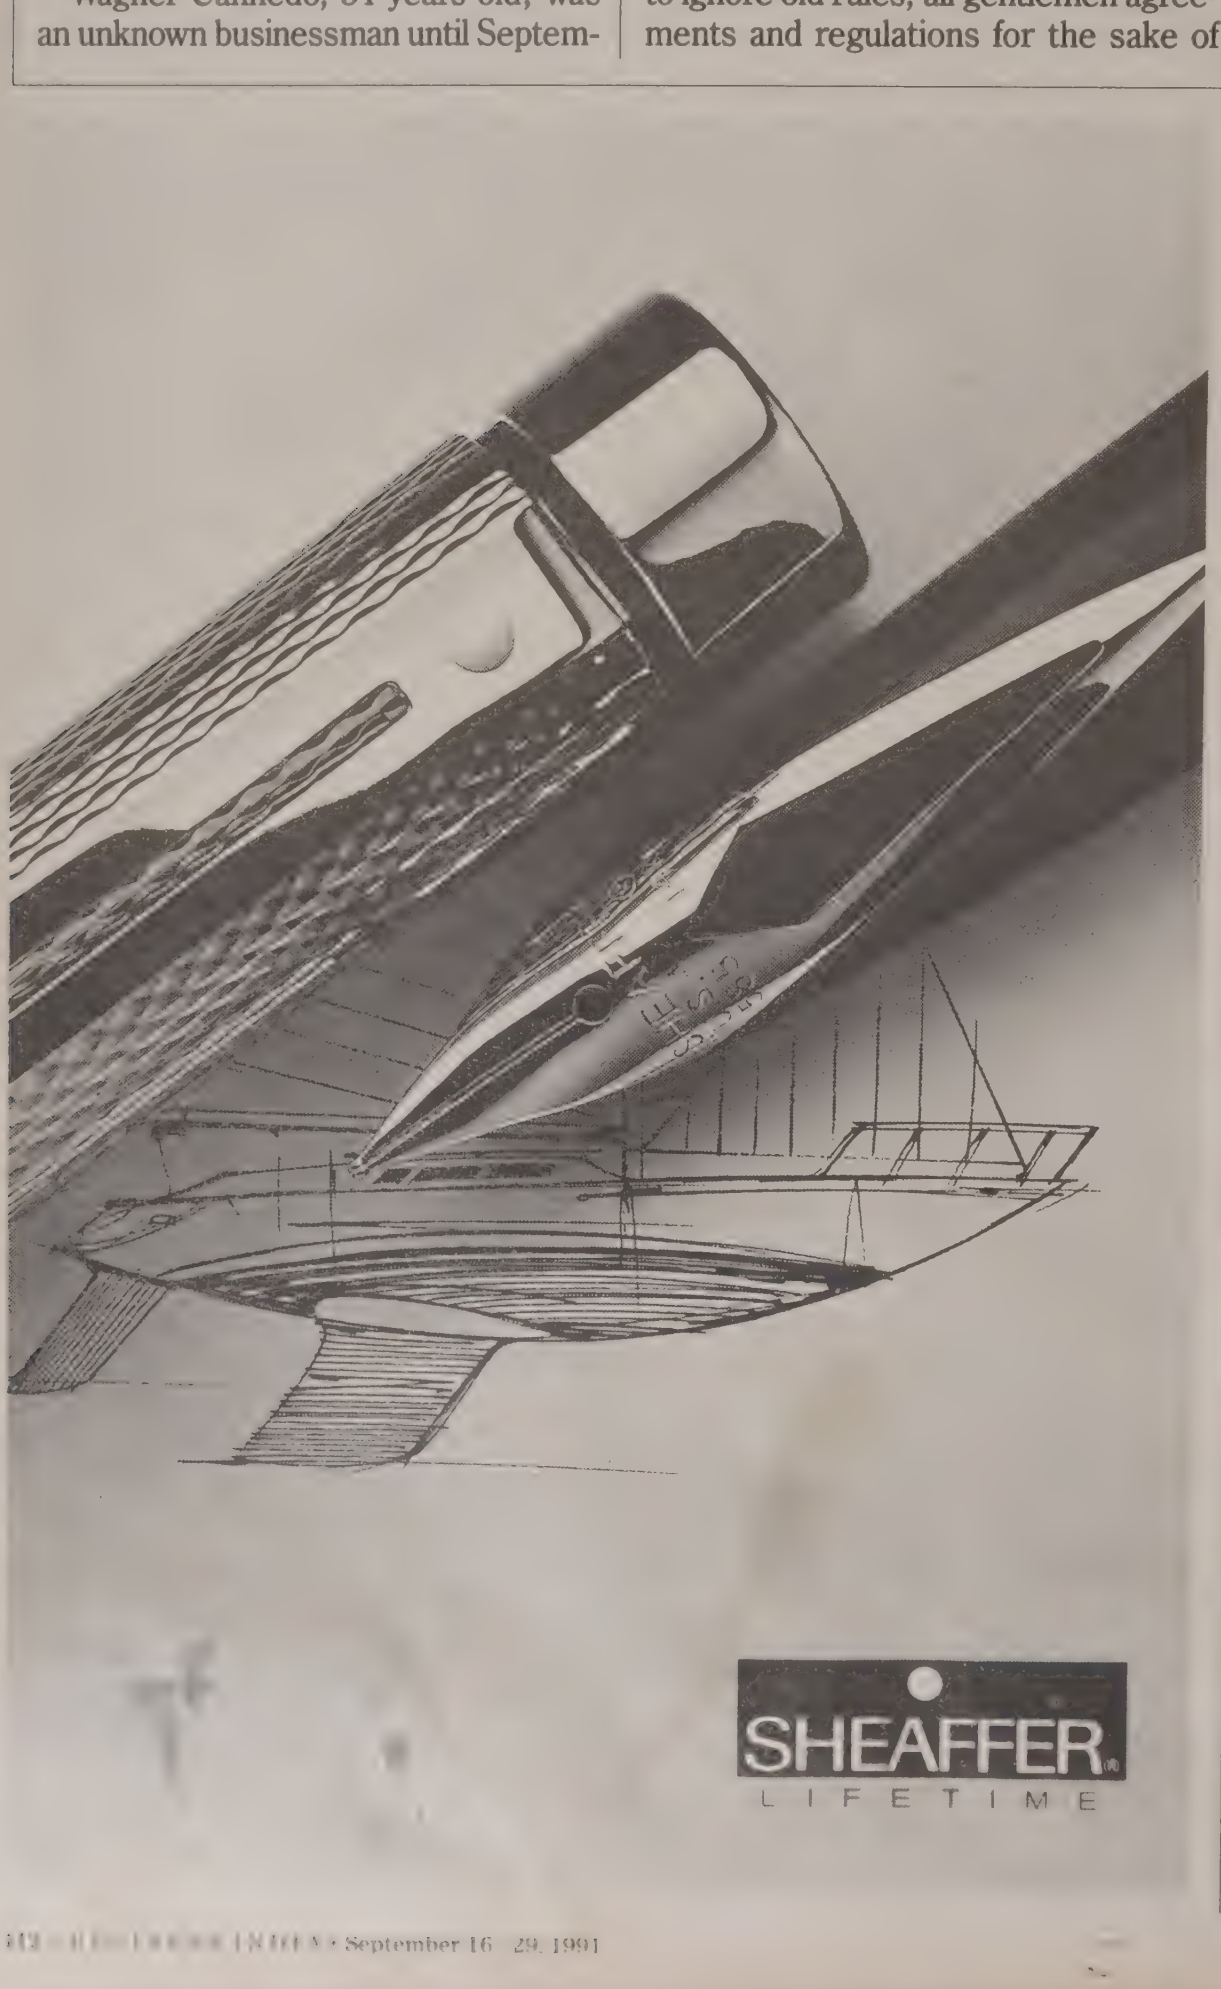
"The market will have the final w
is Canhedo's favorite slogan. He beli
that competition is the only choic
recently privatized airlines in L
America. If he fails, he will simply c
VASP and return to his profitable t
company.

The market has become a magic w
for most of the carriers on the co
nent, but companies like Chile's L
Chile and Argentina's Aerolineas Ar
tinas have experienced bumpy take
since they decided to look for "o
skies" through privatization.

Both have yet to reach a safe cruis
altitude and speed to avoid danger
turbulence. Others, like Urugua
Pluna and Venezuela's VIASA, are
taxiing on the runways of privatizati
VASP chose a risky route when the co
pany decided to lease 48 new aircra
a US$2.8 billion deal to try to win a pl
among the biggest Latin Ameri
carriers.

Domestic flights have been deeply
fected by the recession in most La
American countries. So, almost all a
lines are dramatically seeking to w
passengers to highly profitable desti
tions like Miami, now the mecca of So
American tourists and businessmen

Approximately 5,000 South Americ
tourists arrive weekly at internatio
airports in southern Florida.



For Brazilian tourists, Florida is a ba
gain. One week in Orlando and Miam
cheaper than a seven-day tour of t
Amazon area where hotel rates and a
fares are very expensive.

The stream of South America
headed to Miami includes the so-call
"ant-smugglers." They buy Americ
goods in Miami and sell them back hom
for a huge profit.

VARIG, American Airlines and P
Am dominate the lucrative route
Miami, but there is savage competiti
among small airlines for new segmen
of the market.

Executives from VARIG, the bigge
Latin American airline, recognize th
only the fittest will survive in the war f
passengers being fought on the cont
nent. Industry experts forecast that th
fittest could be American Airlines an
VARIG, but also bet on those Latin com
panies on the verge of privatization.

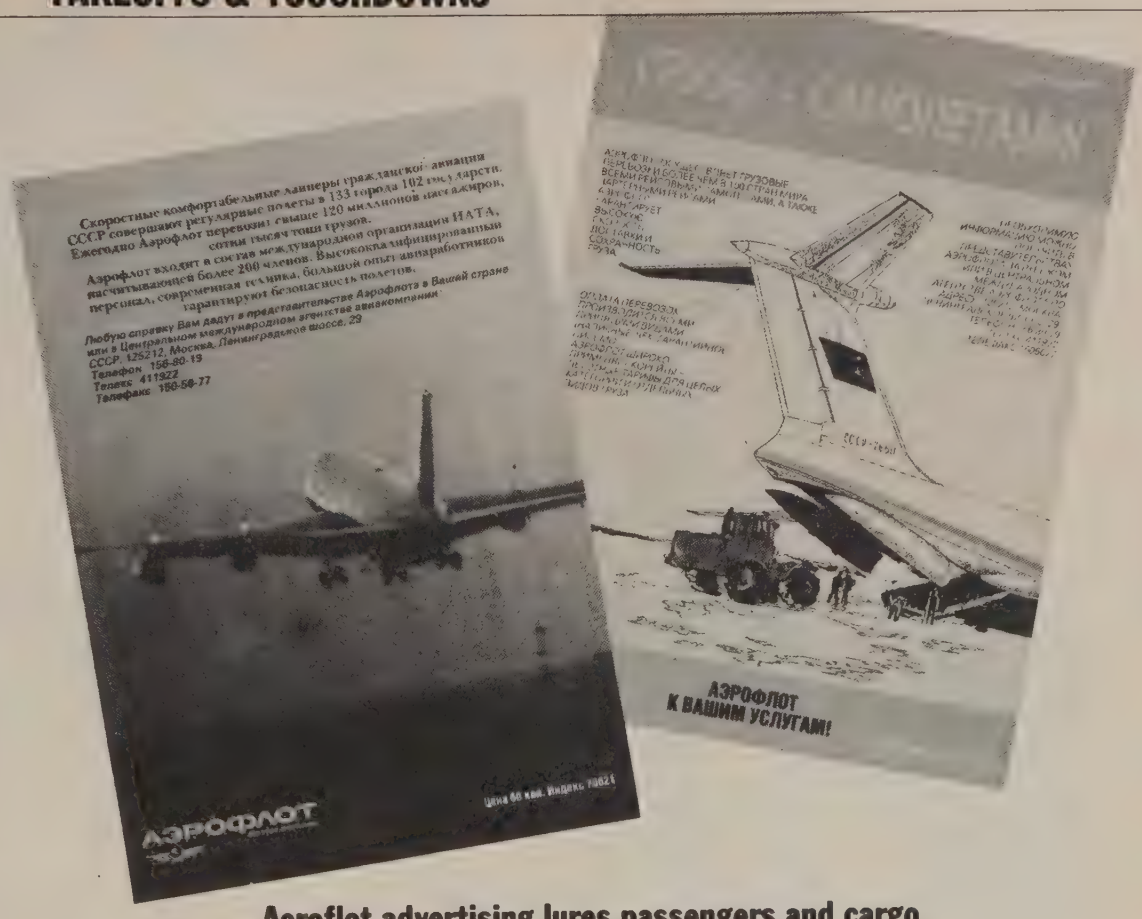
Carlos Castilho is a freelance journalist based
Rio de Janeiro and the South American correspo
dent for the Portugese newspaper *Publico*.

The Soviet system that doesn't fly

No plane, no gain

By Leonid Mlechin
in Moscow, USSR

A MAJOR WORLD airline is short of modern aircraft, fuel and the money to adequately pay its employees.



Nevertheless, Aeroflot has been relied upon as the main, and relatively safe, means of transportation over the vast expanse of the Soviet Union. Aeroflot's ineffectiveness is not solely the result of the airline's own blunders. Soviet civil aviation has always been short of aircraft and fuel. Aeroflot, not the local authorities, is supposed to build and maintain airports, but there is an acute shortage of construction material and civil airports have never been considered top priority.

There is also a growing shortage of able pilots. Averaging 531 rubles a month, (the official rate of exchange is about 28 rubles to the US dollar) life is not comfortable, especially after April's dramatic price hikes.

Pilots admit that frequently they have to break safety regulations and fly in bad weather in aircraft that have not been properly inspected by ground personnel. Air traffic controllers complain that the lack of attention to their needs undermines safety. As a result, the lives of passengers, and pilots, are endangered daily.

People in countries with free market economies may find it hard to understand why Aeroflot is in its present predicament. An increase in passengers has occurred though airfares for domestic flights have risen by as much as 150 percent; prices for international flights have almost tripled.

But instead of rejoicing at greater demand for airline tickets, the leaders of the Soviet monopolist airline cannot conceal their grief. Absence of a free market makes it impossible to mobilize resources, to modernize and expand the

Aeroflot advertising lures passengers and cargo (at least the cargo can't complain).

fleet and to upgrade aircraft ground maintenance and in-flight service. The number of people who want to fly greatly exceeds the number of available seats. Yet Aeroflot is unable to operate at a profit.

Increased air traffic has not led to fleet expansion or modernization, as would be the case in any other country, but instead has led to rapid aging of existing aircraft. Until very recently, Aeroflot was ahead of most other airlines in flight safety, but the situation deteriorated last year. Poor training, mistakes and violations of regulations have caused more than half of Aeroflot crashes, but there also have been cases when, due to shortages, worn engines have been used past the point where they should have been overhauled. Sometimes working engines are shifted from plane to plane.

Another deterrent to Aeroflot's commercial success is that it is state-run and cannot be concerned solely with commercial problems. One can get to the Soviet Far North and Far East only by air; people living on the Island of Sakhalin, for example, depend on Aeroflot.

During the past five years, Aeroflot has added 121 new routes, primarily to the Far North, the Far East and the Tyumen Region in Siberia, where much of Soviet oil is extracted. Considerable fuel, in short supply, is used to serve these routes, and as a result Aeroflot was forced to cut back more profitable freight traffic.

Another problem daunting Aeroflot is fuel shortages. The number of landings for refueling has tripled, scheduled flights are canceled or postponed and passengers have to wait to take off for hours or even days. Since there are no airport hotels, there is nowhere to spend the night.

At present, the Soviets cannot expect radical improvements on domestic routes because Aeroflot is their only choice. Passengers are just happy to get a ticket and are willing to put up with rude employees. Failure to provide top-class, in-flight service on international flights, however, could mean serious losses.

This year will mark the start of the privatization process of civil aviation property and transferal to the republics. New airlines, concerns, corporations and associations—potential rivals—are springing up.

Reforms in civil aviation cannot outstrip reforms in the Soviet economy, which are implemented at a very slow pace. As some republics declare sovereignty, the integrity of the Soviet Union is in danger. But despite new national leaders' desires to have their own airlines, Aeroflot will not face competition from national airlines, at least for the time being. A lack of hard currency prevents, for example, the Baltics from obtaining aircraft and fuel abroad and setting up a flight-control system of their own.

Competition will come from outside. If the airline wants to expand successfully, it must compete by global standards.♦

Leonid Mlechin is deputy editor-in-chief of the Moscow weekly *New Times*.

No Other Airline Gives You The World Like We Do.

With Delta Air Lines you can reach destinations across three continents.

Together, Delta and The Delta Connection® fly to more than 275 cities across the U.S. and around the world. Including cities in Mexico, Canada, the Caribbean, Denmark, England, France, Ireland, Germany, the Netherlands, Japan, Korea, Taiwan, Thailand and Hong Kong.

And now that we're partners with Swissair and Singapore Airlines, our reach extends even farther across Europe and Asia.

What's more, you'll enjoy the high level of personal service that has made Delta number one in passenger satisfaction among major U.S. airlines for 17 straight years.* For reservations or information, see your Travel Agent or call Delta Air Lines.

We'll give you the world.

DELTA AIR LINES

We Love To Fly And It Shows.

Singapore rebounds

Small nation, big competitor

By Ruth Youngblood
in Singapore

'ER-ENTERPRISING Singapore lines (SIA) is emerging from the Gulf r doldrums, marked by low passen- loads and high fuel costs, determin- to return to rapid growth and to stay ead of the pack.

The "Singapore Girl," whose exotic age has long graced advertisements uating the national carrier with the itome of taste and excellence, is now ly one of several logos depicting SIA's rust into diversification.

In a dizzying array of spin-offs, SIA forming links with other carriers to ef up commercial cooperation, open- new routes and planning increas- moves into catering, engineering, ight services and hotels.

"The Gulf War and the slowdown in e world economy have shown the vel industry's vulnerability to external rces," says managing director Cheong oong Kong. Tourism in the island public took a beating during the nflict.

The number of visitors from major arkets such as Europe and the US opped off by half, but the biggest dis- pointment has been the lack of a re- und from Japan, Singapore's number e source of travelers, who are the big- st spenders.

SIA is forging ahead with new alli- ces, including a linkup with Swissair d Delta Airlines to increase com- mercial cooperation.

Cheong says the trio is considering joint fuel purchases to save money and hedge against the possibility of a further rise in fuel prices. The airlines already share airport lounges, offer combined special fares, undertake joint promotions and encourage passengers to take advantage of the separate networks each carrier has for international travel.

SIA and Swissair are also cooperating on cargo computer systems, which provide agents with instant access to information on shipments. The benefits, they claim, are improved productivity, cost savings and enhanced customer service. Earlier, SIA concluded a similar pact with British Airways (BA). Denis Connolly, BA's senior cargo manager, said the arrangement does not rule out competition.

"There is no reason why the airlines cannot continue to compete with each other for a share of the cargo market, while working together to ensure that the cost of providing high standards of service is controlled and the benefits shared," Connolly said.

SIA also plans to construct a second hangar by the end of 1992 as part of an aggressive plan to sell aircraft repair and maintenance to more foreign carriers.

Earlier this year, one of SIA's subsidiaries won the right to supply in-flight meals in Japan, a lucrative business that up to now has been the domain of Japanese firms.

In a recent breakthrough, US and Singapore aviation officials reached an agreement allowing SIA to fly across the Atlantic to four destinations in the US, including New York. The pact enables SIA to offer around-the-world service for the first time. In return, American cargo carriers have been given the right to use Singapore as a base.

At left: Singapore Airlines' pride in the nest between flights.

With no experience yet in the hotel business, SIA deputy chairman Lim Chin Beng said SIA plans to enter into a joint venture in which it will take no more than a 20 percent equity. Even that will involve tens of millions of dollars as SIA intends to stake a claim in more than one hotel.

Diversification "is profitable and supports the core business," says Lim. "It also protects your flanks."

While the war walloped US airlines, which had been struggling to remain airborne even before the conflict, debt-free SIA still remains one of the most financially sound in the world.

SIA traces its beginnings back to 1947 with the formation of Malayan Airways. It was renamed Malaysian Airways in 1963, and became Malaysia-Singapore Airlines in 1966 following the separation of Singapore from Malaysia. Five years later, the Malaysian and Singapore governments decided to split the airline into two carriers, reflecting the differences between the countries in deciding the policies and direction of the company.

Year after year, SIA's profits set new records until the full impact of the Gulf crisis hit. Following the grim saga, SIA announced an after-tax profit of $518 million for the year ending March 31, 1991, a 24 percent drop from the previous year's high.

While wary of a weak world economy, managing director Cheong anticipates capacity will grow at 8 to 10 percent a year over the next five years with more services mounted to 14 cities in 11 countries.

The International Civil Aviation Organization predicts passenger traffic in the Asia-Pacific region will grow by an average of 11 percent and air freight traffic by 13 percent until 1995.

When viewed against these projections, Cheong sees the Gulf War reduced to a minor glitch to overcome. "We have the good fortune of being located in a part of the world that will witness the highest growth rates in air travel," Cheong says. "The potential is here. Whether we reach it lies not in our stars but in ourselves."♦

th Youngblood is the Singapore bureau chief United Press International.

The Smart People's Computers

When you expect to use your computer for many years, day in and day out, what you look for is Performance, Quality and Service. Over the years you realise these are so much more important than the price you paid for your computers. High Performance translates as shorter response times, which means you have more of your valuable time for other important activities. This represents a lot of money over the years. Good Quality translates as fewer problems or breakdowns, and Good Service ensures that when problems or breakdowns do occur, their effects are kept to a minimum. This also represents a lot of money saved over the years.

Smart People know and appreciate the value of Performance, Quality and Service, and know that it represents much more money than a few percents "saved" on the purchase price of a computer.

Aurelec is in its 11th year of selling Smart Computers to Smart People.

NEVER"

It seems just like yesterday, but it's over a year ago. I still remember the emphatic way in which I said "Never" when my boss mentioned Speed Post in the Routine Matters Meeting.

Being a long-term planner (Why else do you think he is my Vice President?), he bided his time and, when he was on tour, sent me a Speed Post parcel.

I was impressed by their efficiency, and by my Vice President's operating style. He made his point! Today, my courier is Speed Post. And he's my President!

ALDAS EXPORTS

titches in time

prime exporter is concentrating on innovation and diversification y ahead, even as people hooked on readymades find it difficult ake off the habit, assuring garment exporters of zooming balances

ndy, casual and easy on the purse, adymade garments are sure win- with teeny-boppers and yuppies obody knows this better than ex- rs. Figuring prominently among ash-happy lot is Bangalore-based ldas Exports.

er the years, the company uccessfully established a g domestic presence. It so captured a large chunk e export market. Last it exported garments n Rs.43.39 crore — s, trousers, shorts, shirts, casual wear, and sports- — to Europe, Australia, Middle East, Singapore, da and the US.

s annual sale include 1 on shirts to Levi Strauss 250,000 shirts to Wran- Among its other regular s are leading departmen- ores like Sears and J.C. y in the US, Kauf-Hof in any and Galeries ette in France. The Ap- Export Promotion Coun- s recognised GE's efforts ffering it the Council's ds since 1981, the latest the second place award global exports category.

is one of the three com- s promoted by Jha- las, Jagdish and ishendas Hinduja, three ers who earlier dabbled in copper and foodgrains e becoming silk traders. split in 1979, cordially, ding to family sources, as joint business family, there are d to be tensions, especially when are lots of youngsters waiting to to business. We thought it was bet- separate while the relations between us were still warm." It was then that Jhamandas and his three sons (Madanlal, Rajen and Dinesh) started Gokaldas Exports.

The combined Gokaldas group (before the split) was selling silk worth around Rs.40 lakh every month. But profitability was under pressure. Says Madanlal Hinduja, "We realised others were making money out of yarn supplied by us. So we decided to write to buyers abroad," and exports of silk scarves started. But in 1970, international demand for silk scarves suddenly dwindled and the combined group started looking around for some other market.

Jhamandas and sons: excellent rapport

Madanlal went to Europe armed with a few samples of cotton shirts and came back with an order of 10,000 cotton shirts. The successful delivery of this order fetched another order for 100,000 cotton shirts. So was made the combined group's debut in exports of garments! Since then, there has been no looking back and over the years, the group has set up its own manufacturing units and expanded the capacity.

By 1979, when the group split, it had 13 factories of which six went to Jhamandas Hinduja and his GE. Later, GE added 19 more units. Says Dinesh Hinduja, "When we split, we were making nearly 60,000 shirts a month. Now we produce 500,000 a month. Also, we started with 2,500 workers and now we have a strength of nearly 9,000."

The Hindujas have a varied marketing strategy. Madanlal goes abroad once a month to tap overseas deals. Sometimes, customers directly contact the Hindujas. GE also has seven agents who stock the company's samples and show them to prospective clients. Those who are interested are taken to the Bangalore office.

The agents get a 7 per cent commission from GE on all deals. Says Madanlal, "Since the beginning, our agents have been loyal to us." One of them, Anil Paul, managing director, Banaras House, says, "The Hindujas are easy people to deal with. They have a very good international profile. The most strategic decision they made was to move their base from Bombay to Bangalore where not only is labour cheaper and less unionised, but there is still ample space available at cheap rates too."

The Hindujas not only had excellent foresight, they have also clearly divided the responsibilities among themselves. Jhamandas looks after finance and guides his three sons. Madanlal handles exports, design development and raw materials. Rajen is in charge of finance, knitwear, customs, export quota, public relations and advertising. And youngest son Dinesh looks after production and marketing. Says D.K. Gupta, director, AEPC, "The main reason for the success of Gokaldas Exports is teamwork and excellent rapport among the father and three sons."

in Bangalore also helps as it is close to fabrics sourcing centres (such as Salem, Coimbatore, Cannanore, Madras, Tirupur). The company's past performances have also helped the company to get a better quota for exports."

According to Ravi Kishore, additional director, AEPC, Bangalore, "It (GE) does not stick to any particular customer or country. Its customers are spread over various countries. It has been concentrating on daily wear and the middle market (not the upper end of the market) which offer maximum returns." Even

now gone up to Rs.1.5 lakh a day. mandas feels that domestic market always be there even if GE cannot, by chance, cater to the international ket. It doesn't want to neglect the market and hence the company sp nearly Rs.80 lakh a year on publici Wearhouse.

According to Jhamandas, "W house has a good future. It may e some time, beat our export activities cause in the future, it may not be nomic to make garments in India sell them abroad." Yet, despite its po larity in the south, Wearhouse garm have not yet attained tional status mainly beca it does not have any sh rooms in Delhi, Bom and Calcutta.

The Hindujas are look at the future with optimi especially after the deval tion of rupee. Says Raj "Our turnover dur 1991-92 should be up by per cent." GE is all set to into industrial and medi wear. Says Jhamand "There is not much o headache here because s uniforms have standardi designs." The company also been toying with idea of diversifying i spinning mills, with an on exports.

A Gokaldas unit: new idea on fabrics

There are a number of other reasons for GE's success, an important one being the total involvement of the brothers in the business. Madanlal, for instance, is a regular at many international fabric fairs where he picks up new ideas on fabrics, which help the company develop new ranges for the international market. GE has its own designers, some of whom have studied at design institutes abroad. The company also has a few foreign technicians who help GE workers control quality. "Keeping in mind international trends, GE believes in bringing out garments with new look and texture," says Madanlal.

Says a spokesman of a rival company, "Gokaldas Exports dominate in men's wear which are high-value items. They have good machinery and being located

competitors acknowledge GE's attributes. "They are very strong in quality control and adhering to delivery schedules," says M.K. Panthaki, general manager (administration) at Miltons Ltd. He adds, "They also had some early openings in some general currency areas."

According to Rajen Hinduja, "The key to our success in overseas market is reliability." Not that the domestic market is being neglected. GE now has 28 "Wearhouse" showrooms including seven in Bangalore; three more are to be opened soon at Coimbatore, Mysore and Belgaum. There are also plans to open outlets in Calcutta, Delhi and Lucknow.

In 1983, the Wearhouse chain of six showrooms was doing a business of less than Rs.10,000 a day. The turnover has

According to garment dustry sources, GE's fa has spread far beyond Indian shores a the company has, in the past, turn down collaboration offers from ma international players including M subishi, Levi Strauss and Takashiya large departmental store in Japa However, according to the Hindu brothers they are taking a re-look at t Levi Strauss offer. If the deal ma rialises, GE will set up a new unit to ma ufacture products exclusively for L Strauss.

Since people hooked to readyma find it difficult to shake off the hab garment exporters can rest assured th their bank balances will only fit into t extra large category. Gokaldas Expo just has to concentrate on innovati and diversification to stay one up.

"Why do I prefer the Daily Thanth
for reaching Tamil Nadu?"

"Because 60% of the upper-income audience in Tamil Nadu don't read English dailies."

தினத் தந்தி
DAILY THANTHI

Some advertisers think that the leading English daily in Tamil Nadu will give them an effective coverage of people earning Rs. 2,000 and above.

Here are some facts that point to a hole in that theory:

First, 60% of them don't read any English daily.

Second, as many as 5,40,000 of the upper-income audience read the Daily Thanthi.

And third, the cost of reaching each of this upper-income audience through the Daily Thanthi is 14% lower in Tamil Nadu and as much as 62% lower in Madras city than through the leading English daily.

The Daily Thanthi is as effective in other vital segments too – officers, businessmen, executives, professionals, graduates and those who are socio-economically forward.

So, when you think of corporate, financial, or business advertising in Tamil Nadu, it pays to prefer the Daily Thanthi.

Because, no other daily, Tamil or English, gives you such quality readership, with such high cost-efficiency.

nore bad news for the scandal- lomon Brothers Inc, which re- dmitted to manipulating US ent securities. The British gov- no longer wants Salomon to be ager in the US for British Tele- billion public issue which opens ember.
Salomon will play no part in the tion of Britain's most profitable public-sector company, the government has yet to decide who will.

Stock scam

Scandals and bankruptcies are sweeping through Japan's financial system. The latest charge against Nomura Securities is that it manipulated the price of Tokyu Corp, a railroad company. A four-day trading halt was announced when the scam — which besides Nomura, involved other big brokerage houses like Nikko Securities — was revealed. Moreover, Nomura and 20 other firms have agreed to pay nearly $1.3 billion in compensation to over 600 clients.

Selling spree

As part of its privatisation programme, the Mexican government has sold 70.7 per cent of the equity of Banco Nacional de Mexico, the country's biggest bank, for $3.2 billion. A group of 800 investors acquired 50.7 per cent of the bank, while the rest will be offered to the regional board members of BANAMEX.

Terminal plans

By next summer, a fifth terminal will come up at London's Heathrow airport. To be built by the BAA (formerly called the British Airports Authority) it will cost over a billion pounds and will eventually have a capacity of 30 million passengers a year. However, the terminal's construction hinges on the Civil Aviation Authority withdrawing its proposal to limit charge increases at London's three airports.

Second thoughts

The merger mania amongst American banks notwithstanding, Commerze Bank AG, Germany's third largest bank, and Credit Lyonnaise SA of France, have given up the idea of "close co-operation". The banks are of the view that taking cross holdings in each other will bring no benefits. Besides, they feel that they are each big enough to handle business on their own.

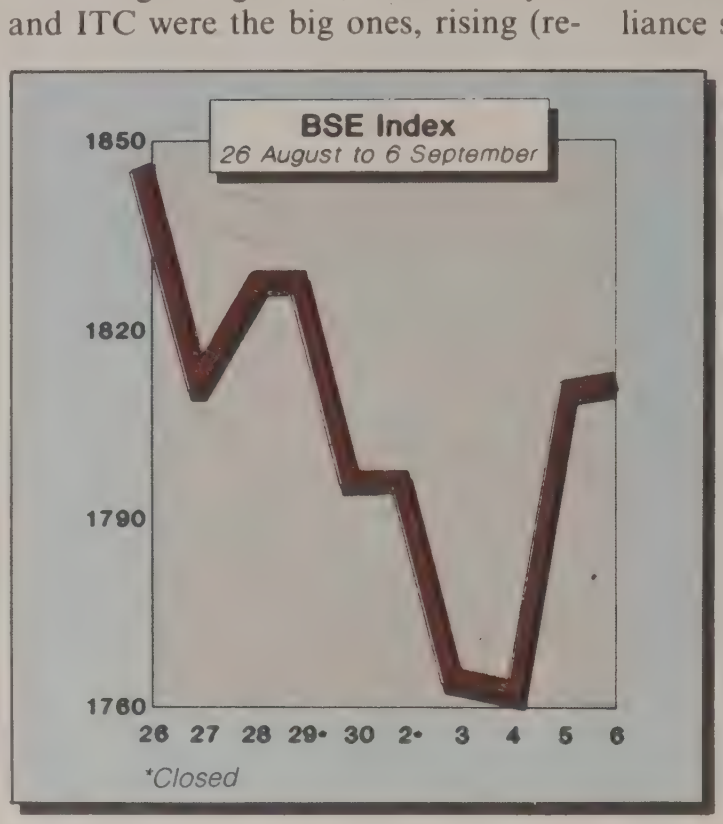
STOCKMARKET REVIEW

Volumes zoom

(For the fortnight ended 7 September 1991)

	7 Sept.	24 Aug.	percent change over fortnight	year
BSE Sensitive Index	1811.54	1802.81	+0.5	+44.3
BSE National Index	858.56	859.90	–0.2	+32.5
Vol (Rs.cr) fortnt. ended	277.35	208.50	+33.0	+185.6

The sharp jump in year to year volume figures indicated in the table above tell a tale. The market continued its 1990 boom into September of that year with a healthy 14 per cent rise in the index. Almost every broker at that time felt that despite bad economic news (Gulf war and domestic disruptions, mostly), the bull market of 1990 was far from over. In retrospect, they were wrong.



A look at the volume figures for September when the market was still in boom could have told the real story: that the bigger and well-informed speculators who sustain bull markets, and are behind high volumes in a rising market were pulling out through September — while the market kept rising on small investor and large institutional purchases. Once institutions stopped buying in October and the market started to fall, volume again rose as intelligent speculators turned from buyers into short-sellers. The current trend of rising volumes in a booming market, therefore, tells a natural story of how a bullish trend continues even among the smart money operators.

Buy and sell irony

In one sense, the irony is complete with the bigger speculators buying while financial institutions are busy selling these days. UTI is a particularly active seller, partly to finance redemptions of US 64 units which have, according to the Trust, crossed Rs.1,200 crore since the budget.

However, the market dipped during mid-fortnight (*see graph*) on fears that the budget might not pass thanks to political flak on the military pension issue. It recovered thereafter when the uncertainty was lifted. More uncertainty was provided by the publication of the L.C. Gupta report on stock exchange reform. This report recommended that forward trading be banned — a peculiar suggestion given in the absence of clear evidence of the ills of forward trading.

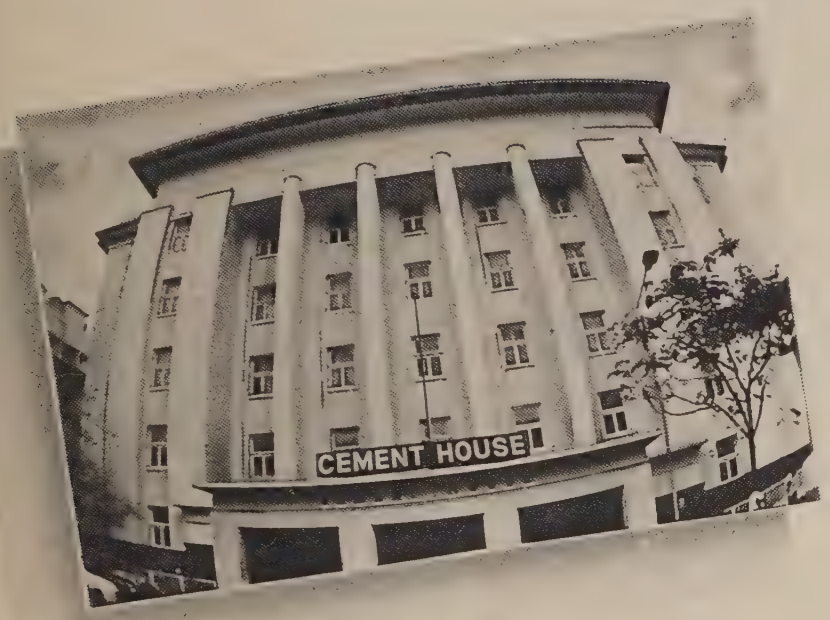
Among the gainers, Indian Rayon and ITC were the big ones, rising (respectively) to Rs.231 (+9.7 per cent) and Rs.299 (+18.2 per cent). Reliance Industries was a loser, down to Rs.175 from Rs.194. Although the CCI cleared Reliance's Rs.987-crore rights issue on 27 August, the BSE stymied plans for an early book closure because the procedural deadlines of minimum notice were not kept.

The book closure will involve an *undha badla* as the scrip will then be ex-rights and ex-dividend. At a price of Rs.175 and a 1 for 5 rights issue at Rs.55 per share (the balance is the non-convertible portion), the cost of 6 shares (including a rights share) is Rs.930 or Rs.155 per share. This implies a price difference of Rs.20 per share. Adding the Rs.3 dividend that forward buyers will receive brings the theoretical *undha badla* to Rs.23 per share and the ex-book closure price to Rs.152.

Speculators are instead be ex-book closure price of Rs. *undha badla* of only Rs.7. Thi liar phenomenon of bullis when market prices do not adj rights and bonuses.

While speculators are una that the price change is matc *undha badla*, there is a potent investors who take delivery. T tions above mean that one wh liance shares, takes delivery them to the company fer before book clos to gain Rs.16 per s buys at the curren Rs.175. Not surpris scrip has been boug for delivery and its tr ume averaged Rs.40 day over the fortni that of the next large

New cards



Meanwhile, the BSE signed to increasing bership under go pressure. M.R.Mayy tive director of the firmed that the BS shortly issue new me cards, probably befo of 1991. Institutional ships will finally be included.

Although at the close of the there was an undertone of fi the market on reports of a g soon and good corporate perf what was worrying was the a state of the government's whim were, on the one hand, pressur membership and directives to i rational margins. On the othe of committees issued reports, which appeared equally irrati lacked any coordination with t ties and Exchange Board.

The government, earlier co to rule by fiat, now seems to force the pace of liberalisatio considering the implications o tates. As the old saying goes everything seems to be goi watch out for the government"

ACC

RCD's Concrete Consultancy Service.
Engineering for quality construction.

It's not enough producing quality cement. Developing and dispensing the technology to ensure quality construction is equally important. This is the primary mission of our Concrete Consultancy division.

We have been involved in development of new and improved building materials, their application, testing and characterization of concrete, site and in house training in concrete production, for several decades. Now the accumulated knowledge and experience we have gained over the years is available to anyone who wants to ensure that the cement he uses gives concrete results!

Our activities cover all aspects of construction. Production of quality concrete. Repair and rehabilitation of concrete structures and architectural monuments. Destructive and non-destructive testing of concrete. Engineering for strong foundations. Also available with us is the technology for producing building bricks from waste material.

And we don't only provide advise. Our consultancy is turnkey – diagnostics, testing, and implementation of recommendations. That's value for money. That's RCD.

ARB/RCD/91

US 92?

The Unit Trust of India's premier scheme, Unit Scheme 64, has been under pressure since early 1990; high call money rates have led to large-scale sales of these units back to the trust. The latest budget proposals have led to further repurchases. This is because the budget proposes that short-term capital losses - such as from selling US 64 units at a loss while pocketing an equivalent amount of tax-free dividend (thanks to Section 80M) — can no longer be offset against ordinary income.

Deepak Tolani

Dave: expects more of the same to come

According to UTI sources, net sales of units (after accounting for new sales) under US 64 in the three months since June 1991 will be a negative Rs.1,000 crore. This is a far cry from the situation in the late eighties; in July 1989, for example, there was sales of Rs.1,700 crore.

Dormant secondary market. Worse still, according to UTI chairman S.A. Dave, there is more of the same to come. With interest rates being liberalised and crossing 20 per cent a year, UTI expects repurchases to touch Rs.2,000 crore by the end of the fiscal year 1991-92. An indication of the state of affairs is that the otherwise active secondary markets for US 64 units, which used to average volumes of Rs.1,000 crore a month in 1989, is now dormant. In early September, a certain broker planning to sell a relatively modest 100,000 units was unable to find a buyer.

Not surprisingly, the secondary market price of Rs.13.60 (on 10 September) was close to UTI's own repurchase price of Rs.13.50. In normal times, the secondary market price lay squarely between the sale price (currently Rs.14.40) and the repurchase price.

Almost all these sales back to UTI will come from corporate holders, who currently hold about Rs.5,000 crore of the total outstanding US 64 units of Rs.7,000 crore. Even though money market rates have fallen over the past month and call money rates are now less than US 64's yield of 14 per cent, Dave expects repurchases to continue, thanks to the aforementioned budget proposals. He notes that the Trust has the cash to pay for these repurchases. Brokers in the stockmarket confirm that UTI has been an especially large seller of shares despite a buoyant market.

If US 64 loses its corporate accounts, will this mark the end of a unique instrument that, in effect, allows any investor to be a participant in money markets? Why not retain this valuable instrument either by paying higher dividends next July and, meanwhile, by raising the repurchase (and selling price) in order to give a higher return to holders? After all, this would be in line with events in money markets and is affordable given UTI's huge profits from booming stockmarkets.

Higher dividend. Dave concurs that US 64 plans to pay substantially higher dividends to its unitholders by year's end, raising the yield above last year's 14 per cent. Other UTI sources, in fact, suggest that the corporation is thinking of raising the yields on all its schemes to a minimum of 15 per cent and for US 64 to 16 per cent. However, the Trust is not prepared to offer these higher yields to US 64 holders immediately, via high purchase prices. Their argument give corporate sellers, who are selli for reasons unconnected with in rates, the benefit of higher prices?

This sounds a bit like putting th before the horse. While corporate holders are disaffected with US 64 because of the proposed change i law, it is equally true that this has because they earlier accepted a relat low yield of 14 per cent in return fo tax offset. If the trust could offer a factory yield of about 16 per cent, co rate buyers would return.

But it appears that UTI is not reall terested in corporate unithol thanks to their short-term nature. therefore, willing to accept a redu in the assets under the scheme if thi curs as a result of corporate redempt rather than individual ones.

If the UTI scenario works to plan new look US 64 should, at this time year, have individuals constitu about a third of the total value of standing units and offer a yield of 1 cent on its asset base of Rs.5,000 c This will also be reflected in a higher in repurchase and sale prices every night. Will the Trust then move tow pricing units at net asset value (curre about 50 per cent above UTI's pr Dave refuses to confirm but notes th it works out, nothing would please better. If that happens, it would b entirely new scheme. Enough to ren it US 92, but with a caveat: corpo buyers could return.

■ RAFIQ DO

PRIVATE SECTOR MUTUAL FUNDS

Getting the framework set

The S.A. Dave panel's guidelines the functioning of private sector tual and offshore funds have evo mixed reactions. M.R. Mayya, execu director, Bombay Stock Exchange, that the guidelines balance conc about private sector mutual funds b used for takeovers with the need to a the private sector in to usher in a new of competitive progress.

However, the asset restrictions *box*) have induced criticisms that

mmendations protect existing pub-
ector mutual funds. Says K. Dhar-
al, managing director, Fairgrowth
ncial Services Ltd, "The proposed
stment limit of 3 per cent compares
vourably with the public sector mu-
fund limit of five per cent." Given
ted floating stock, he adds, "the
s should be the same."
ave disagrees. The guidelines, he
, aim to protect the investor while
enting a mushrooming of mutual
s. But, notes Dharmapal, this could
been done by linking the size of in-
ments with the size of the fund.
cording to Dave, the minimal capi-
equirements of Rs.2 crore of 'unim-
ed' capital, i.e., invested in money-
ket or government securities or in
fund's own assets, makes sense.
th it, the number of players in the
will be limited to the healthy firms,"
he.
und managers generally agree. In
merchant banker R. Shankaran
that the minimum requirement is
low, arguing that a minimum re-
ement of Rs.10 crore would thwart
ly-by-night operators.

dom from strictures. The mutual
industry currently has eight
ers, all public sector companies. UTI
inates (with 65 per cent of total
s) followed by Canbank Mutual
d (15 per cent). The entry of private
r mutual funds along with the on-
g collection by the existing funds is
cted to triple this Rs.30,000 crore
stry by 1993.
ue panel was, according to Dave,
erned with developing a structure
freed it from licensing strictures and
ided for automaticity with the self
atory structure as mooted by SEBI.

The guidelines

- The private sector can sponsor mutual funds through fund management companies, which should have at all times a minimum unimpaired capital of Rs.2 crore.
- At least 50 per cent of the SEBI approved board must consist of independent directors not connected with the sponsoring organisation.
- The fund management company and the trustee will be two separate entities.
- No mutual fund will own more than three per cent of the paid-up capital of any company. In addition, no individual scheme can invest more than three per cent of its fund in any one company's shares.
- Mutual funds will be allowed to operate both closed-ended (subscription for a limited period) and open-ended (ongoing) schemes, and required to raise at least Rs.20 crore and Rs.50 crore, respectively (though without upper limits) with a fund asset limit of Rs.200 crore. However, subscriptions below 60 per cent imply a full refund.
- All closed-ended schemes must be listed, while open-ended schemes must buy and sell shares at net asset value. The fund's income will be tax-exempt provided that it disburses at least 80 per cent of its realised gains under each scheme.

ble." SEBI's prior approval and on-going monitoring, notes Dave, is consistent with its role as overall market regulator. The information it requires, such as regular publication of net asset values and investment lists will not only protect the investor's interests, but will also ensure that adequate information is provided to the investor.

To reinforce the SEBI influence, the panel has also suggested that at least 50 per cent of the SEBI-approved board must consist of independent directors not connected with the sponsoring organisation. According to Dave, with this provision, the management of the fund and its trustees will be two separate legal entities on the lines of British unit trusts. Dharmapal although suggests that it should be clarified that the equity could be widely or closely held and that the 50 per cent directorship should be selected from a wider list provided by the mutual funds and not be nominated by the SEBI unilaterally.

The report encourages the concept of both closed-ended and open-ended schemes (*see box*) within a total asset limit of Rs.200 crore. This limit along with the three per cent rule, says Dave, is to prevent takeovers by private groups financed by public money. Dharmapal disagrees. "Why should there be a physical control when there are adequate regulatory controls?" he asks.

Widely dispersed. Besides, the public's holding is anyway widely dispersed and the public-sector financial institutions often have more than 50 per cent control among them. Again, as merchant-banking pioneer Sidney Pinto notes, the sooner one gets over the fear of takeovers, the better. Takeovers, says he, should not be viewed as immoral.

The Dave panel report has come at a time when the second largest mutual fund, Canbank Mutual, is under a cloud for its allegedly incorrect practices such as non-transfer of shares. This adds an ironic twist to Canbank's latest advertising line: Play by your own rules.

Dave accepts that the report, if true, strengthens his panel's suggestions that all mutual funds be monitored by SEBI to ensure a level playing-field. For example, open-ended mutual fund schemes such as UTI's Unit Scheme 64 does not buy and sell units at net asset value (whereas this has been recommended for the private sector by the Dave panel).

The norms also require the funds to distribute a minimum of 80 per cent earnings in any given year. However, Dharmapal feels this should apply over the life of a scheme so that a scheme can build its reserves in the early years.

Unlike other panels such as the L.C. Gupta and Pherwani panels, the Dave panel had a representative from SEBI. It has also, unlike the others, thrown open its report for debate before seeking government sanction. SEBI's representative on the panel, Pratip Kar, who was involved in the deliberations, however, reserved opinion on the recommendation.

■ MAHIRA SHEIKH

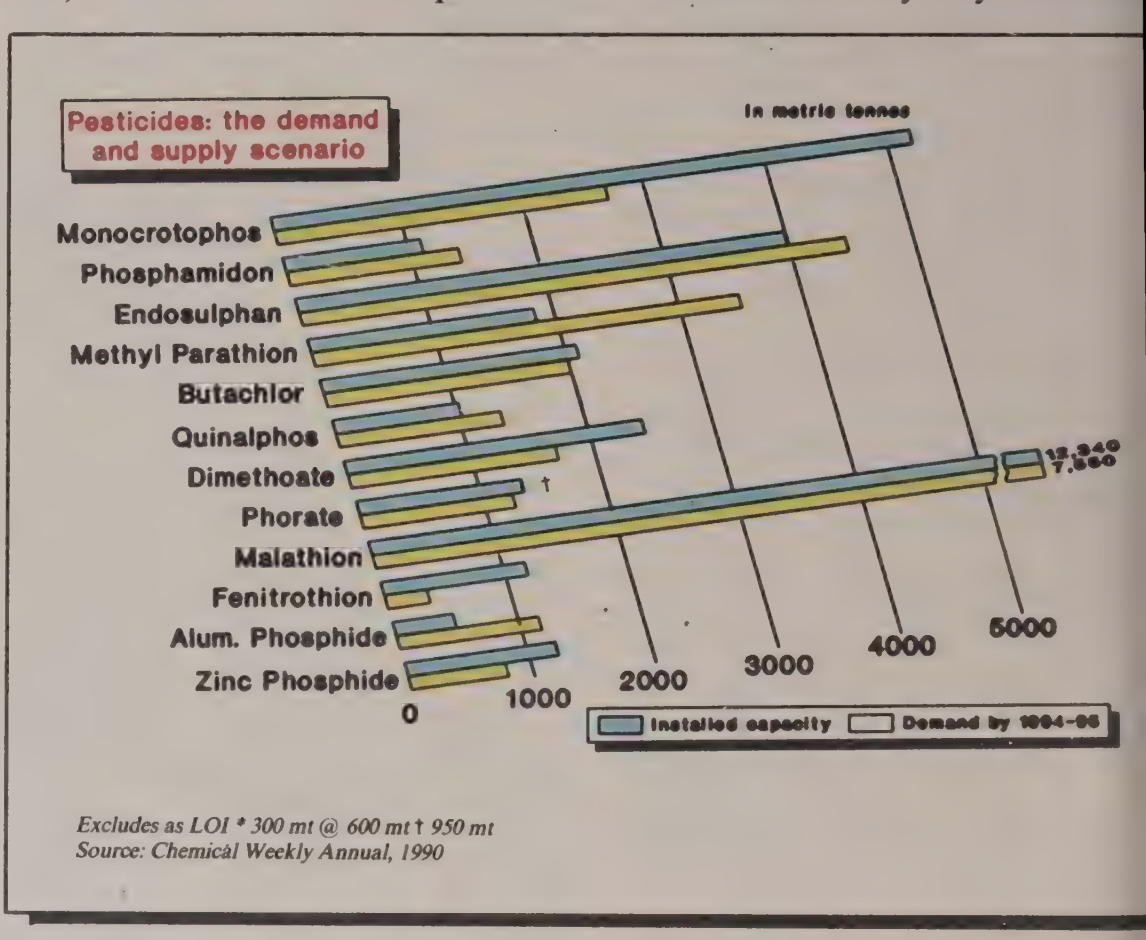
PESTICIDES

Good year, better ahead

The total market size for technical grade pesticides and formulations is put at about Rs.850 crore for 1990-91 and is growing at 5 to 7 per cent a year. Against the forecasted demand of around 85,000 tonnes for 1991-92, the total installed capacity is 110,000 tonnes, implying a capacity utilisation of 77 per cent. This hides the fact that some pesticides such as endosulfan are in short supply, while others such as malathion are in surplus.

The agricultural sector consumes 62 per cent of the pesticides produced, two-thirds of which is absorbed by just two crops, cotton and paddy. Andhra, Karnataka and Tamil Nadu account for most of the consumption, followed by paddy producers in Punjab, Haryana, Gujarat and Maharashtra.

"A good performance from the industry this year," is how Pradeep Dave, president of the Pesticides Formulators Association of India, sums up the situation. With timely monsoons in the south, the cotton crop is estimated by the Cotton Advisory Board to cross 123,000 bales in 1991-92 (117,000 bales in 1990-91). The kharif crop is anticipated at 100 million tonnes of foodgrains, now that the rains have improved. The paddy crop might suffer some setback due to a reduction in acreage by about 5 per cent. The good news is that purchasing power is up after three good monsoons and given that the pests are not far behind, this clinches the demand side of the situation.

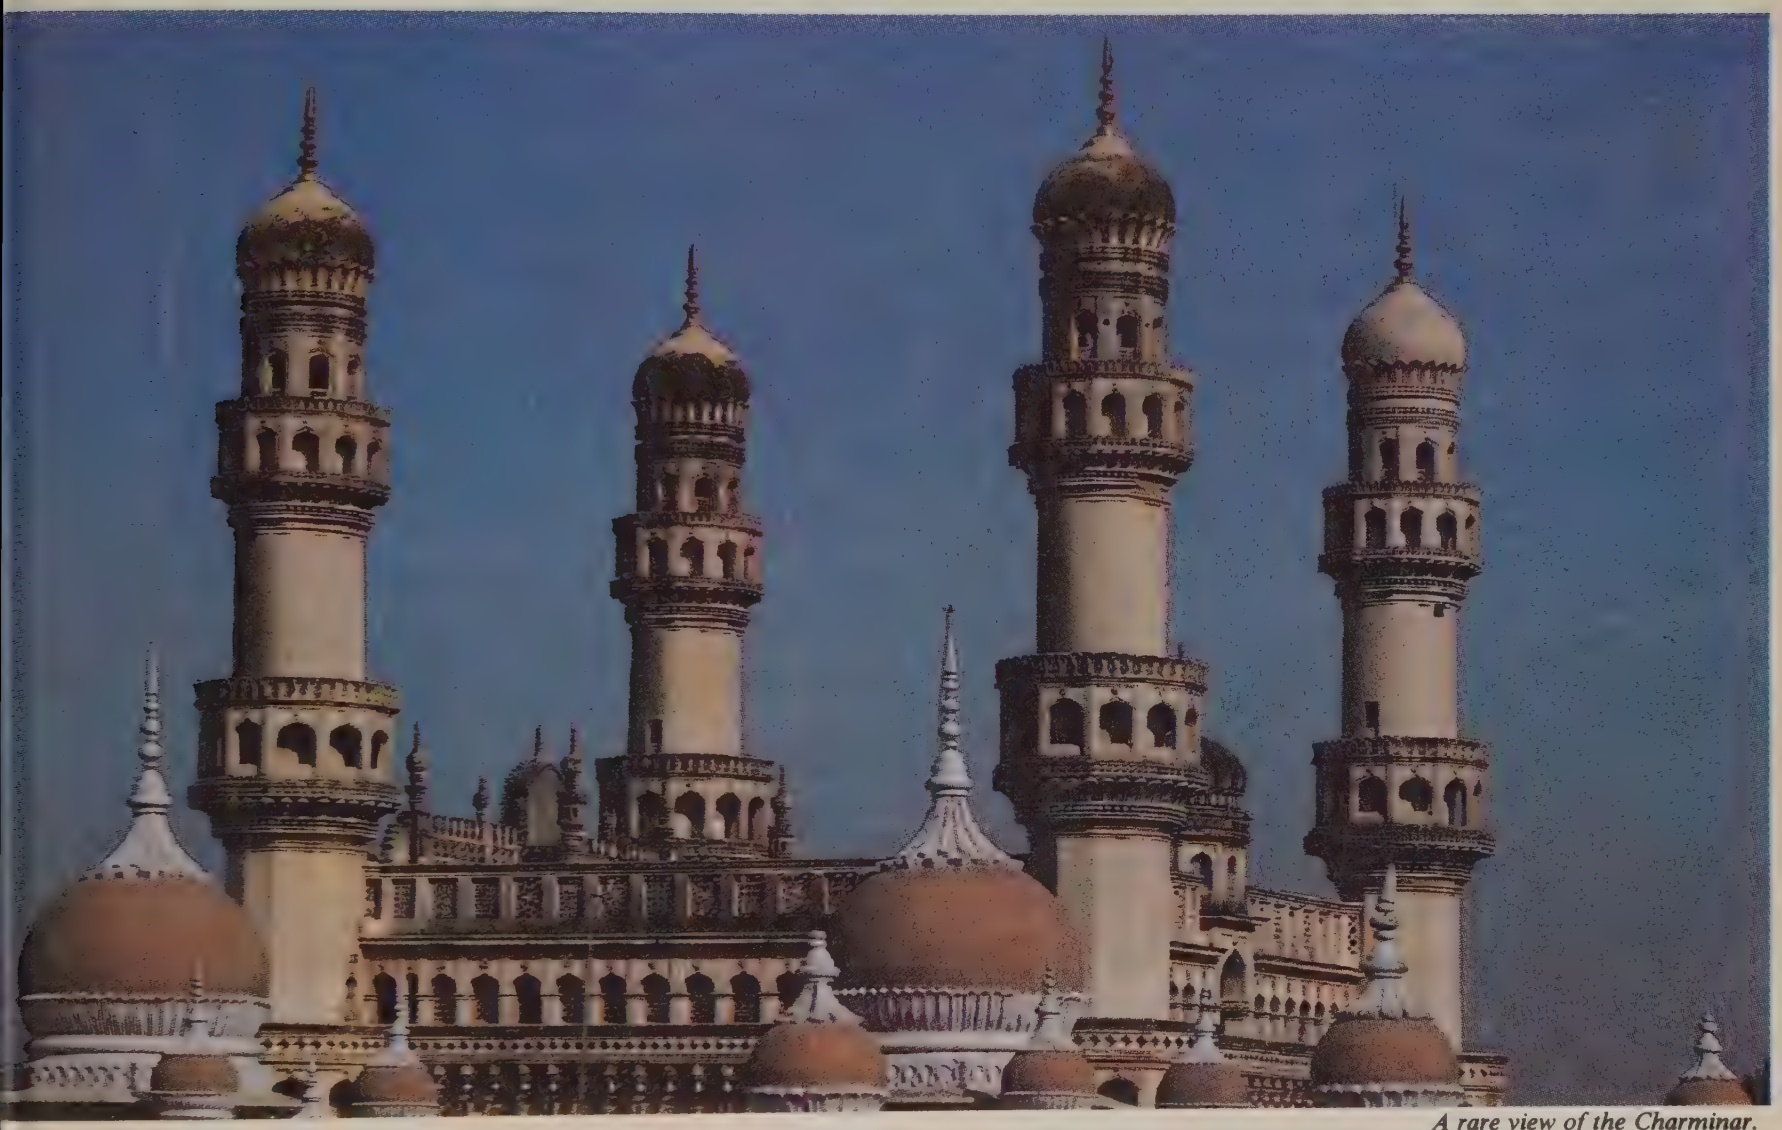


Star performers. Within the industry, Bayer and United Phosphorus were star performers in profitability and the latter has stolen the limelight on the trading floor as well. Excel and Searle have maintained performance, but the overall numbers for other majors such as Hindustan Ciba and Sandoz are watered down by the poor performance in their pharmaceutical divisions (*see table*).

Bayer's insecticides — methyl parathion, methyl demeton and fenthion - should do well. The company has introduced two new fungicides, Bayleton and Baycor (the latter is for the tea industry, the former for grapes, coffee and vegetables). A new formulation plant for methyl parathion commenced commercial production in January 1991.

United Phosphorus is expanding the capacity for its near monopolistic phosphatic pesticides — aluminium phosphide (from 800 to 1,200 tpa), white phosphorus (2,000 to 3,500 tpa) and phosphorus pentachloride. It has plans for a fully convertible debenture issue later this year to raise Rs.9.32 crore. debentures will be converted at R per share compared with the cur market price of Rs.355. The comp later plans to integrate upwards by u its current output of tri-methyl p phate to manufacture monocrotop The demand for its major produc good.

Excel's name is synonymous with dosulfan, a popular broad spectrum secticide used in cereals, cotton, ju oilseeds, pulses, etc. Strong demand a good management combined with b nus prospects (book value per share Rs.63.8) have made this scrip a stro stockmarket performer.



Modest bottomlines. Searle, an RP company like Bayer, makes butachl

OK MORE THAN 400 YEARS TO MAKE
CONFERENCE FACILITY AS MONUMENTAL AS THIS

A rare view of the Charminar.

At the Krishna Oberoi, you get much more than an impeccable conference.
You get the proud heritage of a city more than 400 years old. Hyderabad, with its unchanging traditions is bound to leave you in awe.

When not conferencing, you can lose yourself in the romance of Hyderabad's famous Forts and Palaces. The Qutub Shahi Tombs, Golconda Fort and the Salarjung Museum are an experience in themselves. And of course no visit to Hyderabad is complete without a visit to the majestic Charminar.

Back at the Krishna Oberoi, the facilities are in keeping with the stately traditions of Hyderabad. Luxurious rooms, Presidential suites with private swimming pools and speciality restaurants with a charm of their own.

The conference facilities themselves are rated amongst the best in India. Multiple conference rooms that can accommodate from a few to several hundred delegates. A conference co-ordinator who is always at hand and a Business Centre with specialised equipment.

It certainly takes several hundred proud years and unfailing expertise to build a perfect back-drop to a great conference.

The Krishna Oberoi

Of what use are 77 satellites in space to people who don't even own a television set ?

Imagine launching 77 satellites in low-earth orbit. Imagine a global communication system linked to these satellites and designed to connect every place on our planet to a telephone - even areas as remote as this desertland. There'll be no problems like laying cables (because this will not be a land-based system). So costs will be reduced.

And a dream will come true: that of a phone for every village in India. At Motorola we are exploring many such advanced solutions that can better the human experience.

So that high-technology isn't just relevant to industry.

But also to every Indian.

the first half year of the current nded December 1991, Sandoz has d a setback. Net profit has turned ve to Rs.34 lakh from a profit of 3 crore in the corresponding half previous year. However, this is ikely due to a poor pharmaceuti- formance.

ording to Dave, companies like Bayer and United Phosphorus erform well this year while Hin- Ciba and Sandoz, whose de products are in less short sup- ill not do as well.

rent credit and import margin re- ns have hurt performance. Dave that since the industry is a net for- eign exchange earner (1990-91 exports were Rs.200 crore versus imports of Rs.30 crore), it makes little sense to impose restrictions on this industry.

Developing a new pesticide is time consuming and it usually costs over Rs.20 crore to bring it to the market for release. At the same time, innovation is absolutely a must for the industry; there is a high rate of product obsolescence caused by progressive immunity developed by pests. Besides fears of environmental pollution (as in dyestuffs) often forces manufacturers to turn to newer, less harmful pesticides. In some respects, innovation has proved to be the industry's Achilles' heel and it has to get around that problem somehow.

TRENDS

Sudarshan Chemical

Sudarshan Chemical Industries, a well known manufacturer of a wide range of organic and inorganic pigments as well as intermediates and pesticides, has reported a 14 per cent rise in sales for the half year ended June 1991. However, profit at net level has dropped by Rs.10 crore.

Meanwhile, the company is planning a Rs.10 crore expansion at its Roha plant, where it hopes to upgrade the quality of pigments and intermediaries. This will be done with the help of its collaborators, Dianippon Ink & Chemicals, Tokyo, and will be completed by the end of 1992.

For the six months ended June 1991, the company's sales are up by 15 per cent compared to the corresponding period last year. While gross profit is up 50 per cent, net profit is up by only 30 per cent, partly due to a higher tax burden. For the first time, the company has declared an interim dividend of Re.1 per share.

Kajaria Ceramics

The Delhi-based Kajaria Ceramics reported a 108 per cent higher operating profits for the six months ended March 1991. Gross profit has risen by 132 per cent, while net profit is up by 278 per cent. No provision has been made for

taxation. Operating profits and raw material costs as a percentage of sales have stayed almost the same, not only compared to the same period last year, but also in relation to the figures for the year ended March 1991.

RESULTS ANNOUNCED

Procter & Gamble

Lack-lustre performance; dividend pruned by 10 per cent to Rs.2 per share; plans to consolidate position in the detergents and sanitary products business

Engaged in the manufacturing of drugs and pharmaceuticals, cosmetics and toilet preparations, P&G — of the Richardson-Vicks group of the US - has reported a turnover of Rs.99.40 crore for the year ended June 1991, 29 per cent higher than that in the previous year. However, at net level the profit has dropped by 43 per cent to Rs.3.16 crore (Rs.5.60 crore), causing the EPS to fall from Rs.8.38 last year to Rs.4.73.

According to the company, the net profit has declined on account of investments made towards establishing new products. Manufacturing and selling expenses have increased by 33 per cent to Rs.43.81 crore. Also, the financial charge on the company has more than doubled from Rs.1.19 crore to Rs.2.56 crore with the total debt up by 82 per cent to Rs.24.22 crore.

During the period under review, the company set up a plant to manufacture detergents at Mandideep in Madhya Pradesh. The first phase of the plant commenced production of Ariel detergent in April 1991. The product was test marketed in Vishakapatnam and is currently being sold all over South India.

In the next few years, chairman G.C. Das says, "P&G will consolidate its position in the detergent and sanitary product business through investments in marketing, sales, product development and the supply systems."

Bannari Amman Sugars

Turnover up 13 per cent; EPS hovers around par value; dividend up to 20 per cent; expansion in sugar planned

With its turnover touching Rs.34.04 crore, the company's profit after tax has moved up by 10 per cent to Rs.3.50 crore, yielding an EPS of Rs.9.33. During the year, the company's sugar factory worked for 286 days, during which a total of about 380,000 tonnes of sugarcane was crushed at an average recovery of 9.69 per cent.

As per the Tamil Nadu government's advice, the company paid Rs.308.80 per tonne of cane procured from its reserved area during the first half ended September 1990. This was subsequently raised by Rs.30.50 per tonne for the second half. This was, however, against the statutory minimum prices of Rs.271.80 and Rs.278.70 per tonne notified by the central government during the two periods.

Meanwhile the company is setting up a new sugar factory in Mysore with a cane crushing capacity of 2,500 tonne per day. It is expected to go on stream in the third quarter of 1992.

IN BRIEF

Guest Keen Williams has reported a fall of 5 per cent in its turnover at Rs.224 crore for the year ended March 1991. However, the net profit after tax has improved by 143 per cent to Rs.5.68 crore. This can be attributed to the substantial gains from asset stripping.

Vinati Organics is putting up a l tpa plant for the manufacture of iso benzene, a drug intermediate. The ject will be located at Mahad in M rashtra and the cost outlay is pegg Rs.14.55 crore.

Ganesh Benzoplast is embarking expansion-cum-diversification pr for the manufacture of 3,600 tpa of zonic acid and sodium benzoate.

With its turnover crossing the Rs. crore mark **Punjab Con-Cast** has m tained its dividend at 35 per cent an clared a liberal bonus in the ratio o

Jai Hill Resort is putting up a Rs.8-c 3-star hotel between Panvel Khopoli in Maharashtra. The first p consisting of 72 rooms has already commissioned.

Vee Kay Fibres, a company which tered the capital market in March has attained 95 per cent capacity uti tion and has achieved a turnover of crore upto August 1991.

Pentokey Organy is putting up a p to manufacture 5,000 tpa of acetic via the alcohol route besides 3,300 tp two grades of esters. The project co estimated at Rs.12.30 crore and wil coming up in Maharashtra.

Even though **Andhra Cements**' tu over has doubled to Rs.81 crore, it c tinues to be in the red with net losse Rs.29.39 crore.

After a lapse of seven years, **Associa Precision Spindles** has entered the d dend list with a handsome 50 per cent the year ended March 1991.

Vardhaman Wires and Polymers is ting up a plant to manufacture spe high-heat class enamelled wires and sulating varnishes at Savali in Barod

Shree Rajasthan Syntex has und taken a diversification programme volving Rs.22 crore for the manufact of polypropylene multifilament yarn technical collaboration with Neumag Germany.

Ravi Hi-tech proposes to set up Rs.4.10-crore plant for the manufact of alloy steel and malleable iron castin with a capacity of 3,000 tpa at Pa chmahal in Gujarat.

Balaji Tubes, part of the Indian Sea less group, has amalgamated w United Fluid Power Equipment.

Alexcon Extrusions has put up a 100 cent EOU to manufacture aluminium trusion products.

e-Line Circuits

Line Circuits Ltd's (FLCL) project nufacture professional grade sin- d double side single boards has et up in a short span of one and a ears. It has an installed capacity of housand sq.metres, and has tied up Chicago Circuits International, (equity participation of Rs.75 and Circuit Systems Inc., USA ical knowhow). Chicago Circuits so agreed to purchase the entire ction of FLCL, thus rendering the t 100 per cent EOU. According to y Doshi, the managing director, lave a firm export tie-up with Chi- Circuits who have branches all over S and also in Germany, Singapore Malaysia".

single and double-sided printed boards to be manufactured by a sophisticated product requiring quality control. The computerised and machinery for the same has al- been imported at a cost of Rs.2.7 The company hopes to instal it by er and commence commercial ction by December 1991. It may aved costs on the plant as it was ased prior to devaluation but ma- v materials like copper clad lami- backup entry board, carbide etc. will be imported from the US ngapore. Raw materials will con- 40 per cent of the production cost, Doshi. FLCL will manufacture its cts in the standard 3' x 4' size from it can be cut as per the user's re- nent, be it computers, cars, wash- achines, telecommunications, etc. rt from single and double-sided multi-layer PCBs are in demand in reign markets. Both BCC Fuba and Professional Circuit Boards propose to manufacture multi-layer PCBs also. But according to Doshi, FLCL will concentrate on the former variety. "The Americans don't find this product cost-effective and hence don't concentrate as much on the same," he elaborates.

Jindal Ferro Alloys

A company of the O.P. Jindal group, Jindal Ferro Alloys Ltd was earlier known as Riddhi Siddhi Ferro Alloys Ltd. In existence since the last 10 years, it is only since 1987 that JFAL has been engaged in the production of high carbon ferro chrome, producing 7,200 tpa at 120 per cent capacity utilisation, claims Ratan Jindal, a director of the company. For the 15 months ended July 1990, sales at Rs.18.45 crore showed an increase of 83 per cent (annualised), over the 1988-89 figure. However, for the eight months ended March 1991, sales (at Rs.9.83 crore) shows a decline of around 20 per cent (annualised). Jindal attributed the dismal performance to a fall in demand as well as the political problems that have been plaguing India in the recently ended financial year.

The company is increasing its production capacity to 15,000 tpa, which is also the recommended minimum economic size. For this purpose, JFAL is installing an additional furnace of 12 MVA capacity. The technology for the same has been developed by Jindal Strips Ltd which JFAL is acquiring at a cost of Rs.50 lakh. A rotary kiln for pre-treatment of

Jindal Ferro Alloys	
Issue opens	: 18 September 1991

To Indian public	: Rs.10.33 crore
Instrument	: Equity shares of Rs.10 each at a premium of Rs.20 per share, partly convertible debentures of Rs.200 each
Promoters	: O.P. Jindal
Project	: Increasing capacity of Ferro chrome from 6,000 m.t. per annum to 15,000 m.t. per annum
Cost of the project	: Rs.30.85 crore
Plant location	: Vizianagaram, Andhra Pradesh
Listing	: Bombay, Calcutta, Hyderabad

the raw materials, chrome iron, ore lumps and fines is also being installed.

The new technology is expected to save raw material costs as it will enable the company the partial use of ore fines instead of the more expensive chrome ore lumps. Scheduled to be implemented by December 1991, Jindal hopes to achieve full capacity utilisation only around March 1993.

Ferro chrome is a major raw material for producing stainless steel. Over the last few decades, the ferro chrome market has proved to be cyclical in nature. But JFAL has a five-year tie-up with its sister concern Jindal strips, for an assured sale of 80 per cent of JFAL's production. According to Ratan Jindal, JFAL will also try to export around 40 per cent of its production. For March 1992, he projects a turnover of Rs.22 crore which is expected to rise to Rs.35 crore by March 1993. Jindal expects 14 to 15 per cent net profit margins on turnover.

Hotel Leela Venture

As the name indicates, Hotel Leela Venture Ltd has two five-star de luxe hotels located in Bombay and Goa. It has been operating the Bombay hotel, The Leela Kempinski, since November 1986 and has commissioned the Goa hotel, The Leela Beach, in September 1990.

HLVL first made a public issue in February 1985. Till date, it has repeated the exercise of approaching the capital market almost once every 18 months through rights issues. So far, the company has yet to enter the dividend list. In fact, it has to wipe out its carried forward losses of Rs.1.84 crore (as on March 1991) before it can make headway in rewarding its shareholders. According to the company's managing director, Vivek Nair, HLVL will wipe these losses in the current year ended March 1992.

For the year ended March 1991, HLVL's turnover is up 27 per cent to Rs.20.09 crore while its profit at net level has scaled up by 17 per cent to Rs.21.33 lakh. After the current issue, the company's equity will increase from Rs.18.57 crore to over Rs.30 crore.

The reason for the current issue is to finance the cost overrun in setting up the Goa hotel and the expansion at the

Bombay hotel (that has added 172 rooms including suites, six meeting rooms, a board room and an Italian restaurant), the total cost of which increased from Rs.42.80 crore to Rs.49.92 crore.

Altos India

Incorporated in September 1982, Altos India Ltd started its operations with the manufacture and sale of electronic typewriters. In 1988, it set up facilities for the manufacture of micro/mini computers. Today, AIL is the largest supplier of computers, on an OEM basis, to Pertech Computers Ltd.

Promoted by chairman Bharat Goenka, AIL's board of four consists of qualified IIT/IIM graduates who have relevant work experience in the field. AIL's computer systems, from personal com-

Altos India	
Issue opens	: 25 September 1991
Size of the issue	: Rs.8.62 crore
To Indian public	: Rs.8.19 crore
Instrument	: Fully convertible debentures of Rs.1 each.
Promoter	: Bharat Goenka
Object of the issue	: To finance the upgradation of R&D facilities, for softwa development and to augment working capital
Cost of the project	: Rs.12.78 crore
Plant location	: Okhla Industrial Ar New Delhi
Listing	: Bombay, Delhi, Calcutta, Madras, Ahmedabad

puters to engineering work stations mini computers, cater to both the mestic and export markets. "Effici and quality are the key words an have made many capital intensive vestments, like computerised autom test equipment, to achieve them," s Goenka.

AIL's production in terms of value risen from Rs.14.6 crore in 1988-8 Rs.75.4 crore in 1990-91. With or worth Rs.29 crore in hand, AIL exp production to grow by a minimum c per cent in 1991-92.

Its present R&D objectives include stituting imported hardware and s ware items, so that the compa products are available at reasona rates. However, AIL's plans to con trate more on the export of compu seems to work at cross purposes to R&D efforts. With export orders wo Rs.9.1 crore on hand, projected exp turnover for June 1992 is Rs.29 cr Presently, AIL exports to Sweden, Middle and Far East, Poland, Finla the USSR, etc. "Exports for 1990 were Rs.10.7 crore," adds Goenka.

On the sales front, AIL has done wel notching up a higher sales figure Rs.93.29 crore (Rs.43.99 crore last y for June 1991. But profit after tax Rs.5.38 crore (Rs.4.06 crore) has ri by a mere 32 per cent. This is mai because of higher raw material and ot costs.

4 Critical reasons to go in for UI's machinery breakdown insurance policy

1 THE PRODUCTION REASON
"One important machine down and the whole assembly line comes to a standstill. Production schedules go awry."

2 THE MARKETING REASON
"Availability and flow of products into the market can make or break a company. Failure to keep up to delivery schedules will result in losing faith of distributors and customers. And will allow competitors to get their foot in."

3 THE FINANCE REASON
"Cash flow disruption. Working Capital is unproductively locked up in this investment. All this can make a big difference to profits."

4 THE MAINTENANCE REASON
"Turbines, compressors, pumps, generators, transformers — all costly equipment. I can control routine repairs, but not unforeseen breakdowns or losses."

Any kind of mechanical and electrical machinery—at work; at rest; or being cleaned, inspected, overhauled, removed or re-erected within the insured premises... UI covers them against any unforeseen loss or damage. This policy can also be extended to cover loss of profits following breakdown.

So whether you are the manager of a big factory or a small scale industrialist, make sure sudden loss of machinery and lack of re-financing doesn't bring your operations to a standstill.

THE RIGHTS ISSUE

Issue of 96,16,226 — 14% Secured Redeemable Partly Convertible Debentures (Series VIII) of Rs 200 each for cash aggregating Rs 192,32,45,200 on rights basis to resident shareholders and 4,80,812 — 14% Secured Redeemable Partly Convertible Debentures (Series VIII) of Rs 200 each for cash aggregating Rs 9,61,62,400 to the existing employees (including Indian Working Directors) of the Company on an equitable basis.

SALIENT FEATURES OF PARTLY CONVERTIBLE DEBENTURES

Face Value: Rs 200 per Debenture.

Rate of Interest: 14% p.a. payable half-yearly.

Conversion: Rs 100 per Debenture will be converted into 2 Equity Shares of Rs 10/- each at a premium of Rs 40/- per share. (Market price Rs 150/- ex-Rights at Bombay on 28.8.1991). The conversion will be done in 2 stages.

First conversion to take place on 1st April, 1992 or at the end of 6 months from the date of allotment whichever is later and the second conversion on 1st October, 1992.

Redemption: The non-convertible portion of Rs 100/- per Debenture will be redeemed at par in 3 annual instalments of Rs 35/-, Rs 35/- and Rs 30/- per Debenture at the end of 7th, 8th, and 9th years respectively from the date of allotment.

Listing at Madras, Bombay, Delhi, Cal Ahmedabad.

Payment Terms per Debenture :

On Application	- Rs 50
On Allotment	- Rs 50

The balance of Rs 100 per Debenture wi payable in 2 calls of Rs 50 each.

Payment Facility: The Company has m arrangement with State Bank of India fo Demand Drafts (DDs) free of charge to a investor applying for these Debentures. may be obtained from any branch of Sta of India anywhere in the country.

RISKS PERCEIVED BY THE MANAGEME

The Company perceives the following risks in vi prevailing political and economic conditions.

i) Any new levies and taxes, any further import and/or further devaluation of the rupee may r cost overrun of the projects and may affect th economics of the investment programme. Thi warrant appropriate changes/modifications to programme.

ii) If the Government of India's monetary policie import curbs become more stringent, it may h adverse impact on the growth of the industry.

iii) If the growth of the industry is affected due to as above, intensive competition from existing manufacturers may result in inadequate utilisa capacity.

Your Company will however, strive to take appr measures to counter the adverse impact, if any.

ACC

RCD's Research and Development. The catalyst for achieving technological excellence

The most successful companies worldwide give R & D the same importance as a revenue generating activity. In India ACC was one of the first to realise this and it has never looked back. Although we started as a Research and Development centre for the cement industry in particular, our activities today are more broad based. That comes with experience – and success. Take a look at some of our major achievements. Use of mineralisers for the cement industry. Oil well cement. Silent non-explosive demolition agent. Range of refractory castables and shapes. Molecular sieves. World class adsorbents and catalysts.

These are examples of some very practical R&D assignments undertaken by us at RCD through material evaluation, in plant investigations and sponsored research.

We cater to the cement industry and other process industries including chemical, petrochemical and fertilizer.

Our R & D efforts are aimed at helping clients achieve technological excellence – even our competitors.

PTA REPORT

n expert study?

ert Study of Trading in Shares Stock Exchanges," by L.C. recommends sweeping changes et operations. Surprisingly, the ent has asked for implementa- hese changes without adequate Yet a rethink is necessary.

.C. Gupta committee had a wide examine the trading system t on Indian stock exchanges, to ne effectiveness of the system of on and market surveillance, to the *badla* system and to recom- nprovements in the system of

rst suggestion is to merge 'A' groups with a uniform settle- riod of seven days. This would peculation and help an investor is money fast, thus reducing nts.

ommittee argued that specula- es from the 14-day settlement 'trading velocity" measured by e change over a fortnight as a ge of starting price is used to ar- markets are volatile because 27 of stocks had a trading velocity 0 per cent.

allacies with this argument are l. First, the numbers are unre- the size of scrip. Small 'B' group which record high price swings o thin trades should be treated ly from active scrips. Second, o evidence that active 'A' group which speculation is permitted) e volatile than active 'B' group

ractical level, the report ignores culties in implementation of a ttlement period. It should be at last October the BSE had a vol- 120,000 deals which rose to deals in August. This is the high- ity of deals (per minute) in the The logistics of total 'A' and 'B' ttlement together every 7 days e stultifying. The report simply the realities of paper handling the crux of the problem.

port states that transfers are re- low floating stock. If so, how eport state that excess of trading volume over transfer represents speculation? In fact, the archaic share transfer system is the reason why investors do not transfer their shares at once but prefer to wait until they must.

The report's conclusion that investor complaints are not attended is unaccompanied by back-up data. BSE data suggests that 98 per cent of investor complaints pertain to company lapses and 2 per cent to broker lapses.

The second recommendation is that, to minimise defaults, 50 per cent of the exchange's governing board should be government nominees. In this context, the report refers to the market's default in January 1991 on the BSE. This was, however, a mere Rs.1 crore against a fall in market capitalisation by Rs.40,000 crore. Further, the default arose in 'B' group shares due to client defaults. Hence, the contention that default arises from speculation in 'A' group shares is unfounded.

A contradiction

The recommendation contradicts experience. In the past, be it for revising the transfer system, improving telecommunication facilities, providing more space by vacating premises occupied by public sector banks or approval for the brokers' depository corporation, interaction with the government has invariably involved delay.

The third change suggested is minimum 25 per cent margins should be levied on all shares. There are two issues involved here. First, the BSE regularly levies margins ranging between 5 per cent and 100 per cent and has fined members for disregarding margin directives. A system of imposing daily margins also exists. But it makes sense to vary the margin depending on a scrip's "technical position" rather than to levy a uniform margin.

The second issue is that margins protect investors from default that could arise from excessive speculation. The carry forward system should be abolished and replaced with a "mark to the market" system of daily settlement, says the fourth recommendation. The report strangely states that the *badla* system is perpetuated because it helps both brokers and speculators earn handsome profits. The fact is that *badla* is a cost to a forward buyer while a short-seller takes the risk of losing when scrips appreciate in price. To criticise the carry forward system merely because it is indigenous is to carry the *ergo hoc, propter hoc* (after this, therefore because of this) fallacy to ridiculous lengths. Note that in the government securities market, where RBI has officially allowed banks to do Ready Forward is nothing but *badla* in money market.

The report also suggests a system of obligatory market makers to provide liquidity by offering bid-ask spreads of 1 per cent to 2 per cent. For active scrips, the jobbers' spread on the BSE is within half per cent. The spread rises for inactive scrips, but the problem there is not that jobbers quote too high a spread. It is that low equity bases and floating stock lead to thin trades. This forces jobbers to charge a high spread for carrying large untradeable stocks.

Besides, the most actively traded security in Indian capital markets is US 64 units sold by UTI, where the spread is 7 per cent. If the government has no qualms about UTI charging 7 per cent, what is all the fuss about?

Nobody fears change, least of all brokers who benefit from smoother markets. But change *per se* cannot be justified without demonstrably visible gains to investors and the rest of the capital market's participants. Change involves pain and nobody should be asked to bear pain fruitlessly.

Excellent journalese, but....

WAITING FOR ALLAH: Pakistan's struggle for democracy
By Christina Lamb
Viking, 1991, pp 300, Rs.250

Christina Lamb has been in the news lately, with the focus on the BCCI scam, and her exclusive scoop interview with Agahasan Abedi for the *Financial Times*. A highly competent young journalist who spent a lot of time trying to understand the Pakistani political establishment, her book on the rise and fall of Benazir Bhutto titled, "Waiting for Allah, Pakistan's struggle for Democracy," is very informative.

The book is yet another example of excellent journalese, a book with sufficient background about a country, covering its history, but at the same time telling you a good story. In a sense, Lamb's plot could not be bettered. It's the story of the accession to power of a young attractive lady — educated abroad, glamorous and recently married after the bloody death of her father's executioner; of a country steeped in poverty and fundamentalism, which, for most part of its existence, have been ruled by the army. This is the setting to what Lamb at one stage describes as "Alice in Blunderland".

No illusions. Although Lamb had become a friend and confidant of Bhutto, it is quite apparent that she has no illusions about her friend's competence as a political leader. There are some delightful vignettes which bring home the extraordinary level of imcompetence with which Bhutto handled her political cards — on one occasion she asked a guest what he did, to be told that "I'm your minister for minorities"; on another, a gentleman by the name of Navid Malik was appointed as an advisor for tourism, but another Navid Malik got sworn in. When discovered later and removed, the said Malik began to hold press conferences at which he claimed that he had been removed because he "had uncovered scandals about Asif Zardari".

Lamb also makes it clear that Bhutto threw away a fabulous opportunity to transform Pakistan. At the time of her accession to power, the army, having lost 16 generals in the air crash, was in no position to oppose Bhutto. There was a consensus on several reforms such as educational reform and removing some of the appalling legislation on women including the dreaded *Hudood* which imprisons women for having been raped. Also, the tension along both Afghanistan and Indian borders had been reduced, which would have had the salutory effect of reducing the power of the army and the dreaded ISI, the intelligence service headed by General Gul.

In respect of Afghanistan, it is evident that there was a powerful clique within ISI, which was not keen on the war coming to an end, despite the fact that the US and the USSR were moving closer. And it was only Pakistan under a civilian administration that stood in the way.

Again, because of her lack of leadership qualities and authority, she was unable to say, "enough is enough". But her vacillation did not save her from being accused of betrayal of the Afghan cause by the army. This conflict served to strengthen the anti-Bhutto ISI, and more importantly led to the pile up of sophisticated arms in Pakistan on a massive scale adding to the strength of the drug barons. It also resulted in a major refugee problem for Pakistan with over 3.8 million refugees, causing a considerable drain on Pak resources.

Snappy titles. The book has, a journalist, very snappy titles a ings such as Dial a Kala Prophets and Losses, Resistan Ltd, etc. The refreshing featu writing is the degree of travellin servation made by the author sense, the identification with th tion, something her friend Ben gularly failed to do.

One short passage brings ou thor's main concerns and it is producing: "12,000 will be dead year. More of them will use a gun than speak tional language. Mediev of cock-fighting and baiting will provide mor entertainment than te and they will have no th concert halls to visit. O third will have access drinking water and onl cent will have sewerage. ter will go to school. M become heroin addicts."

But the book lacks any in-depth reading of hist author is heavily reliant Akbar's discussion of Indian history in "India, Within" — very bad news indeed over, there are a lot of passage book which read like travelogue appear strange and oriental to thor and she yearns for things ex they are invariably what we all granted. Still, as an analysis of and where she went wrong, the b great asset. Yet one hesitates comes to her comments on the — it is all right dwelling on the i ities, the backwardness and the ities, but perhaps what does no across well enough is the extent t Pakistan has been dependent on aid and support. To a degree, governments, particularly the U bear responsibility for sustain Pakistani political and military el perhaps, she did right to leav issues untouched. This would raised too many awkward questi

■ JA

The book lacks any serious in-depth reading of history... there are a lot of passages which read like travelogue. Still, as an analysis of Bhutto and where she went wrong, the book is a great asset

sted potential

THE THIRD PARENT: Growth and development of Indian electronics media
By P.S. Deodhar
Vikas, 1991
Distributed by UBS
pp.120, Rs.150

ok is an effort to trace the growth velopment of the electronics me- ndia, particularly TV, and its po- as a powerful tool for change and on. The author's original inten- s to project TV's hold over young — youth and kids only. The hy- s is that a child's character, reper- knowledge and intelligence are d not only by parents and s, but also by televideo — hence , *The Third Parent.*

author, who was chairman of and adviser to the PM on elec- and informatics, expresses the that large sums have been bank- or TV expansion without any for the software.

darshan, according to him, em- financial and administrative de- ore than programme relevance, and quality. The handling of overage" is probably among the imaginative in the world. When s and dish antennas enable ac- ome real slick news presentation truly high voltage entertain- comparisons become inevitable. ance, when CNN covered the late andhi's funeral, a professor of eligions was simultaneously ex- the significance of every step of eligious rites.

ook is a painstaking study of op- r the electronic media, not only s DD, but satellite communica- ble and video too, as well as ayment, subscribed TV pro- s. Deodhar talks with mission- l of how some 600,000 schools overed through more channels, ucational programmes in the llar.

electronics has enhanced and en- "democratised entertainment". ore profound is TV's reach over young, growing minds. American studies have proved that between 1960 and 1980, TV has moved from 8th to 3rd place out of 10 in influencing teenagers.

The chapter on code of conduct and ethical standards emphasises the need for regulating not "who says what, to whom" but in "how they say it". Once the ground rules and value systems are internalised by all concerned, programmes can be left to creative people who can immensely improve them.

Loose collection

INDIAN ETHOS IN MANAGEMENT
Edited by
P.K.Ghosh
Somaiya Institute of Management Studies & Research,
Bombay, 1990
pp.173, Rs.150

This book is a collection of articles seeking to spell out the concept and practice of integral management drawing inspiration from Indian values. An attempt is made to evolve a system of management based on Indian culture and ethos. The foreword cautions readers that the book is exploratory and experimental and does not offer a sharply defined viewpoint. It is divided into two parts — the first is a compilation of articles meant for a course on Indian ethos for post graduate management students at Somaiya Institute of Management Studies and Research, Bombay; the second part serves as reference material.

In their attempt to evolve such a management philosophy, the authors have discussed various Indian thoughts in the context of the teachings and preachings of epics, *puranas, Smritis, upanishads* and other scriptures. However, all these remain as just philosophical thoughts and fails to distinguish the uniqueness of Indian ethos. This could be because the authors, mainly acadamicians and saints, have no managerial experience.

Although the publishers have indicated that the purpose is to stimulate lively discussions, even raise controversies and ultimately search for the means to resolve them, the book is not intellectually stimulating or thought-provoking.

Seen in this light, it is disappointing and appears as a loose collection. Thus the objectives and principles of integral management at the end remain mere lofty ideals sans a direction to translate these ideals into management practices and systems.

Sound in theory

APPROPRIATE REMUNERATION IN DEVELOPING COUNTRIES: Three-dimensional models for executives and workers
By Ramamurthy Kuppachi
Sage, New Delhi, 1990
pp.262, Rs.195

In any country, cultural patterns, values, traditions, region-cum-industry practices, capacity to pay and the might of collective bargaining have always influenced the remuneration structure.

A structure of remuneration based on objectives and goals of an organisation must be flexible and simple enough to absorb improvements and future needs. The best way will be through developed commitments translated into an effective remuneration system for progress, motivation and reward.

In the Indian context, specifically, the three-dimensional approach combining the purpose of the enterprise and the efforts of the manager and the worker resulting in compiling comprehensive job descriptions and thus designing a broad spectrum remuneration structure, has become traditional and inoperative. While executive remuneration by and large, seeks to be influenced by current market rates and one's need for a job, the workers' pay packets depend upon union-management relationship or their war of nerves and/or spirit and power of collective bargaining. However, Kuppachi succeeds in providing sound theoretical basis for compiling job evaluations and job descriptions.

THE AGA KHAN RURAL SUPPORT PROGRAMME

(INDIA)

IS LOOKING FOR A CHIEF EXECUTIVE

The Aga Khan Support Programme (India) is a non-communal and non-profit organisation established in 1983 to promote participative approaches to rural development. Based in Ahmedabad, the programme is active in three diverse districts of Gujarat, working to improve rural livelihoods through the organisation of people and better management of land and water resources. AKRSP (I) has a staff of 80 people, including 50 young professionals, an annual budget of about Rs.3.5 crores and significant potential for further growth. Reporting to the Board of Directors, the Chief Executive will give overall direction to the programme and will be responsible for its management, including programmes, staffing and budgets. He/she will succeed Shri Anil Shah, the retiring Chief Executive who has successfully led the programme since its inception. The Chief Executive must have a professional qualification, preferably in the agricultural or social sciences or management and extensive experience at senior levels in managing rural development. He/she must be able to deal effectively with senior officials in government, donor agencies and other NGOs in India and abroad. As head of an innovative programme with scope for experimentation, the Chief Executive must be committed to rural development, able to lead and inspire programme staff creatively in policy development, planning and implementation and prepared to monitor and evaluate programme performance professionally. Salary and a range of benefits will be attractive and fully commensurate with qualifications and experience. Knowledge of Gujarati and an ability to speak and willingness to learn Gujarati would be a distinct advantage.

Applications or nominations shouid be addressed to Mr. Nasser Munjee, Chairman of the Personnel Committee of AKRSP (I) at: Housing Development Finance Corporation, Ramon House, 169, Backbay Reclamation, Bombay 400 020.

PROJECT HEAD
CHIEF EXECUTIVES DESIGNATE

NEW DELHI **TERMS NEGOTIABLE**

We are a large multi-unit, multi-product group of companies with interests in CONSUMER ELECTRONICS, HOME APPLIANCES, ELECTRONIC COMPONENTS, TRADING, EXPORTS, FINANCIAL SERVICES etc., backed by technological support from world leaders in various product lines. Our manufacturing units are equipped with the most modern and advanced facilities supported by nearly 50 sales offices and depots throughout the country, handling more than 1500 dealers. Our team of nearly 3000 personnel comprises large numbers of professionals in various disciplines including engineering, management, finance etc.

We have turned in excellent working results in all our activities over the past 7 years and have consistently commanded a major share of the national market in our product segments. We are now poised for a major expansion and diversification in our activities with fresh investments of around Rs. 100 crores in the coming 12 months. These are proposed to be financed through our considerable internal resources as well as public issues and institutional borrowings. Our current group turn over of around Rs. 400 crores is expected to double at the end of 3 years.

As part of our growth plans we propose setting up an integrated plant for manufacture of magnetic tapes for use in Video and Audio cassettes, Computer peripherals and other applications. This is proposed to be set up near Delhi in technical collaboration with the world leader in this field at a total cost of around Rs. 70 crores. Necessary clearances have already been obtained from Government and agreements in principle arrived at with collaborators. The project is expected to go on stream within 12 months.

The incumbent shall be expected to head the project team and guide it through to commissioning of the plant within the budgeted time and cost frames. He shall initially be responsible for all aspects of the project including government clearance where required, commercial dealings with collaborators and suppliers, construction, erection and commissioning of the plant. He shall also be responsible for planning the unit's recruitment and staffing, administrative infra structure and other related aspects necessary in setting up a new project.

Upon successful commissioning of the plant he shall take over the unit as its Chief Executive and shall then be responsible for its over all profitability and growth and he shall be supported by strong team of professionals in all functions and activities and shall report to the head of the company.

Chemical Engineers with around 20 years of experience of which atleast 5 years in general management positions in organisations of repute would be suitable. First hand experience in setting up new projects would be desirable. Strong techno-commercial skills and man management capabilities would be decisive factors in selection. Preferred Age Group – around 40 years.

Please apply within 10 days with full biographical details and record of achievements alongwith a recent passport size photograph to : **Box No. AA/353/LO/1, Business India, 59, Regal Building, Connaught Circus, New Delhi-110 001.**

VICE-PRESIDENT

Real Estate Development & Promotion

New Delhi

Our Client Company, part of a well-known Business House is involved in planning and development of a large, very exclusive and sophisticated Real Estate Project. The mission is: to make it absolutely the best in India, nothing less.

We are looking for an exceptionally talented and resourceful, top ranking Vice-President with previous experience in a similar position with Builders, Promoters, Developers, who can shoulder independent responsibility and deliver results to meet challenging standards of performance and innovativeness. He should be able to effectively follow-up with Government bodies or agencies. He should be able to progress all matters with the Government at various levels as well as to effectively communicate the Company's point of view to the Government.

The incumbent should have sufficient exposure to all legal matters connected with Real Estate/Land, especially relating to the drafting of Collaboration Agreements, Contracts, Land Related Litigation, Income-tax, Company Law and briefing Advocates. Experience in and exposure to Architecture, Town Planning, dealing with Banks, Civil Engineering and Real Estate Marketing would be added qualifications.

An aptitude for challenge, achieving results against all odds, excellent communication skills, negotiating ability, willingness to interact at different levels, and handling of multiple objectives, are essential attributes. He should have a proven track-record of achievement, high level of commitment, integrity, energy, and adaptability. Accountability, maturity and dedication to objectives would be automatic requirements. The remuneration package will be comparable to the best in the industry.

Those working only with contractors need not apply — we are specifically looking for people with all-round diversified Real Estate Project experience.

GENERAL MANAGER/DY. GENERAL MANAGER – FINANCE & ACCOUNT

New Delhi/Noida **Terms Negotiab**

We are a large multi-unit, multi-product group of companies with interests in CONSUMER ELECTRONICS, HOME APPLIANCES, ELECTRONIC COMPONENTS, TRADING, EXPORTS, FINANCIAL SERVICES etc., backed by technological support from world leaders in various product lines. Our manufacturing units are equipped with the most modern and advanced facilities supported by nearly 50 sales offices and depots throughout the country, handling more than 1500 dealers. Our team of nearly 3000 personnel comprises large numbers of professionals in various disciplines including engineering, management, finance etc.

We have turned in excellent working results in all our activities over the past 7 years and have consistently commanded a major share of the national market in our product segments. We are now poised for a major expansion and diversification in our activities with fresh investments of around Rs. 100 crores in the coming 12 months. These are proposed to be financed through our considerable internal resources as well as public issues and institutional borrowings. Our current group turn over of around Rs. 400 crores is expected to double at the end of 3 years.

In view of our considerable growth plans, we are now looking for outstanding FINANCE personnel to head the total finance and accounts functions in our publi limited companies. The incumbents shall be expected to establish proper systems and controls in these areas based upon the modern management principles and practices. They shall be expected to deal effectively with financial institutions and banks for raising resources, establish budgetory controls, management information and internal audit systems and finalise the accounts in multi-unit companies etc. They shall also be expected to computerise the finance and accounting system. They shall be supported by a team of professionals and other staff for various functions.

Chartered Accountants/MBAs (Finance) with around 15 years experience of which atleast 5 years as an independent head of finance and accounts in organisations of repute would be suitable. Excellent track record of achievements in areas indicated above, strong leadership and man management capabilities and ability to excel under pressure would be decisive factors in selection. Preferred Age Group – around 35 years.

Please apply within 10 days with full biographical details and record of achievements alongwith a recent passport size photograph to :

Box No. AA/353/LO/2, Business India, 59, Regal Building, Connaught Circus, New Delhi-110 001.

TITAN

R E Q U I R E S

GENERAL MANAGER – DECISION SUPPORT SYSTEMS

Location: Bangalore Emoluments: Excellent + House + Car

Titan Watches Limited, a Rs. 100 crore TATA Company, has emerged as the market leader in the fast growing Indian quartz watch market. Its success has been achieved by highly innovative approaches in different areas of its business – a direct outcome of an exciting and dynamic environment that encourages creativity, team-work and a high degree of commitment.

To meet its growing information needs, Titan Watches Limited has just completed the installation of state-of-the-art multi-user Data General hardware at its facilities in Hosur, its Corporate Office in Bangalore and at its Regional Offices in Bombay, Bangalore, Delhi and Calcutta. The systems run under Unix with MF Cobol and Oracle RDBMS as the main application development platforms. Functional areas for which applications have been developed are Sales and Marketing, Financial Accounting, Payroll, Personnel Information and Manufacturing Planning and Control. The Company has plans for further applications development in areas such as Maintenance Management, Operations Research etc.

The Company is now looking for a person capable of visualizing and helping define the information requirements of several functions within the company at various levels, and then implementing systems which would exploit the opportunities offered by advanced information technology to provide such information. The Company has assembled a team of experienced software professionals. Thus, while the candidate need not participate in software development, to be successful, he will need highly developed inter-personal skills, and will have to be familiar with the functioning of large complex organizations, their information needs and the workings of fourth generation relational databases, preferably Oracle, as also the Unix Operating Systems.

Preferably, candidates should be MBAs with experience in Systems Development for Manufacturing and Marketing concerns. Management Consultancy experience in Systems Development in diverse areas would be an asset.

Interested candidates are requested to apply within fifteen days quoting details of their qualification, experience and employment record including last salary drawn.

The application should be forwarded to:

The General Manager – HRD
Titan Watches Limited
Sona Towers
71, Miller Road
BANGALORE-560 052.

Please superscribe 'GM-DSS' on the upper left corner of the envelope.

CERA

Madhusudan Ceramics

Madhusudan Ceramics, a division of Madhusudan Industries Ltd., is a growth-oriented, professionally-managed unit. It manufactures CERA, the leading brand of premium sanitaryware in the country.

Madhusudan Ceramics now requires a team of highly motivated, performance-driven professionals at various management levels to implement its ambitious growth plans.

VICE PRESIDENT (WORKS)

He will be responsible for smooth functioning of plant operations and co-ordination of pre-production, P.P.C., production, quality control and engineering functions. He will also handle labour and personnel matters.

Applicants should be graduates, preferably with a post graduate qualification in Management and 8-10 years' relevant experience. They should possess keen commercial acumen, analytical abilities and inter-personal skills.

VICE PRESIDENT (PRODUCTION)

He will assume overall responsibility of achieving production targets and shop-floor management.

Applicants should be qualified Ceramic Engineers/Technologists with 10-12 years' experience, preferably in a sanitaryware plant.

PERSONNEL MANAGER

He will take up all functions pertaining to personnel, industrial relations and HRD.

Applicants should be post graduates in Personnel Management & Industrial Relations or Social Work, preferably with a qualification in Law, with 8-10 years' relevant experience. Knowledge of Gujarati language would be preferred.

MECHANICAL ENGINEER (MAINTENANCE)

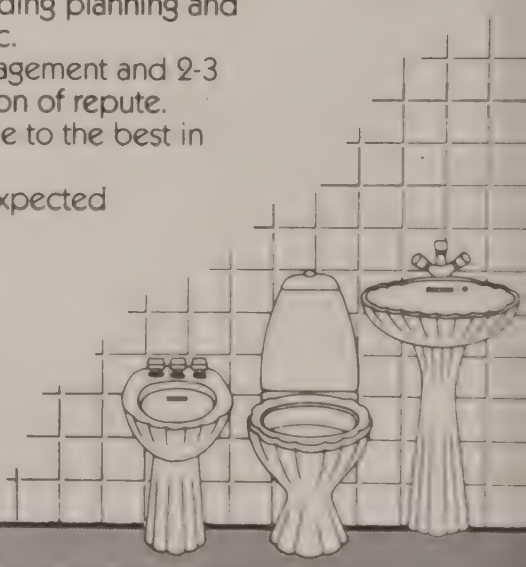
His responsibilities include undertaking breakdown and general maintenance work, introduction of comprehensive preventive maintenance systems and developing a cost-effective approach to ensure minimum plant down-time.

Applicants should be degree/diploma holders in Mechanical Engineering with 5 and 10 years' experience, respectively. They should be familiar with the operation and maintenance of D.G. sets, air compressors and thermic fluid heaters.

CERAMISTS

They will be required to take up the frontline position in various production, process control and quality control functions.

Applicants should be degree/diploma holders in Ceramics with 3 and 5 years' relevant experience, respectively. Fresh graduates in Ceramics with a good academic record may also apply.



MARKETING SERVICES EXECUTIVE

He will co-ordinate all advertising and promotional activities including planning and implementation of the direct mailing programmes, architect meets, etc.

Applicants should be graduates, preferably with a degree in Management and 2-3 years' experience in an advertising agency or in a marketing organisation of repute.

All positions carry an attractive compensation package comparable to the best in the industry and will not be a limiting factor for the right candidates.

Please apply within 10 days with resume indicating present and expected emoluments, to :

CHILD RELIEF AND YOU

MERCHANDISING MANAGER

(a multinational buying house)

Delhi **MS/5808**

A large international conglomerate with interests in aviation, property, shipping, industry and trading, wishes to appoint an experienced Merchandising Manager to help set up and run a buying house to source garments and home furnishings from India for prominent retailers of USA, Canada and EEC markets. The group's trading office has offices in the major manufacturing centres in the Far East, with sales development offices in London and Los Angeles.

The incumbent will help an expatriate establish the new office in India. Key responsibilities will include identifying & developing vendors, placing of orders, monitoring quality of merchandise as per principal's needs, ensuring timely deliveries and negotiating price with buyers. The job would require him/her to take several overseas trips during the year.

Applicants must have a strong track record in the export field (preferably garments) with minimum 5-7 years senior management experience in other leading buying houses or in marketing/sales division of a leading garment export manufacturer. They should have excellent peoples skills and ability to lead and motivate staff. They should demonstrate a 'hands-on' ability, particularly in the early stages of establishing a new office.

Age: Around 30 to 35 years.

The position offers good career prospects in an international organisation. Compensation package will not be a constraint in attracting the best talent in the country.

Please apply in strict confidence giving full details of age, qualifications, experience, salaries drawn, and telephone contact nos. within 10 days to:

A F Ferguson & Co.
Hansalaya
Barakhamba Road
New Delhi 110 001

All applications and envelopes should be marked with the **'MS'** number.

SRF

SRF LIMITED

SRF is a growth-oriented group with an enviable track record. The group turnover from a diverse product range, which includes nylon industrial yarns and fabrics, engineering plastics, fluorochemicals, ball and needle bearings, auto-electricals and financial services is expected to cross Rs. 300 crores in the current year.

To give thrust to our ambitious growth plans, we are on the look out for a young team of dynamic persons for a unit manufacturing polyester films for packaging and insulation industry.

HEAD OF MARKETING (DELHI)

The incumbent would have overall responsibilities of the marketing operations of the unit and would report to the unit head. He should be able to build and lead a highly motivated team. The ideal candidate should be an MBA with specialisation in Marketing from a reputed institute and with a Mechanical or Chemical engineering background. He should have at least 8-10 years of hands-on experience in field selling to industrial customers. An exposure to the packaging industry would be preferred.

REGIONAL MANAGERS – MARKETING (NORTH & EAST)

The incumbents would be responsible for the marketing of polyester films in the regions.
The candidates should be Chemical or Mechanical engineers with around 5 years of experience in the field of industrial/institutional selling of industrial intermediates, of which preferably 2 years should be as Area Manager. An exposure to the packaging industry would be preferred.

PRODUCT EXECUTIVE (DELHI)

The Product Executive will be responsible for sales co-ordination, formulation and execution of marketing strategies and product development related activities.

The candidate should be a Chemical or Mechanical engineer with 2-3 years of field sales and branch co-ordination experience in industrial products.

HEAD OF PERSONNEL

The incumbent would report to the Head of the unit. He would be responsible for the entire range of personnel related activities, including formulation of personnel policies, industrial relations, training & development, recruitment, manpower planning, wage & salary administration, performance appraisals, security and administration etc.
The person should have a post-graduate qualification in Personnel Management from a reputed institute. He should have 6-8 years of experience.

We offer attractive compensation packages and excellent opportunities for growth to ambitious and result-oriented professionals.

Please apply within 7 days, giving details of age, qualifications, experience and salary etc. and superscribing the envelope with the relevant position to:

Vice President (Personnel)
SRF LIMITED
Express Building, 9-10, Bahadur Shah Zafar Marg,

THE SHIPPING CREDIT AND INVESTMENT COMPANY OF INDIA LIMITED

SCICI — a fast growing all-India development financial institution — specializes in providing financial and developmental assistance to shipping, fishing, road and air transport, oil exploration and production, power generation and distribution, telecommunications, food processing, tourism and other allied industries. During the short span of its existence of four years, it has grown to a Rs. 1000 crore Company from Rs. 100 crores in 1986 and is also in the process of substantially diversifying its operations. The Company made a public issue of Rs. 25 crores in February 1991 and now has a paid-up capital of Rs. 75 crores. The Company's reserves aggregated Rs. 47.12 crores on March 31, 1991.

It is now offering professional opportunities to a few qualified and bright candidates in the following positions:

MANAGER — ACCOUNTS

This position would have overall charge of audit and accounts plus the computerised systems of SCICI. Candidates should be qualified Chartered Accountants and have atleast 5 to 10 years relevant experience with proven leadership skills as the job requires the putting together and management of a small team of qualified professionals.

MANAGER — SYSTEMS

The incumbent would have overall responsibility for the computerised and other automated systems for implementation of the ongoing projects and for maintenance and development later on.

Candidates should be post-graduates with computer background, financial orientation and excellent communication skills. Relevant experience in developing an online computerised environment is essential.

PROJECT OFFICERS

The job involves all aspects of project appraisal, marketing and financing, monitoring and review of credit in SCICI's expanding and diverse customer groups, besides interaction with other lending institutions and agencies of the Central and State Governments. Candidates should be either MBA's possessing a basic degree preferably in any engineering discipline or post graduates in fisheries, with one or two years relevant experience. Applicants possessing relevant or related experience shall also be considered for placement in the Company's Merchant Banking Division.

For all the above posts, acquaintance with computerised environment is a must.

The compensation package would be commensurate with the qualifications and experience of the incumbent, and would not be a constraint for the right candidate. SCICI provides perquisites like Provident Fund, Gratuity, Superannuation, LTC and Medical reimbursement. Residential accommodation could also be provided.

Please apply before September 30, 1991 giving complete biodata, educational qualifications, age (with date of birth), experience, present salary, etc to:

Marketing Chief
to reap what we have sown

We are an electronics design and manufacturing Company with a strong R&D base. We have a growing range of successful products in Indian and overseas markets. Our products which are used by major corporations like LIC, HINDALCO and ITI in India, Fountain Technologies and PC Designs in the USA, as yet, have no competition or alternatives. Formed in 1986 by a team of highly qualified professionals, and promoted by a reputed industrial group, we have a sound financial base.

We require a person with imagination, drive and experience to build for this Company a strong marketing operation. We have the products, the technological expertise and the R&D strength to be a leading Indian manufacturer. To make this a reality, we need a **Market Builder**. His primary tasks will be :

- **Formulation and execution of marketing strategies to establish our products in the market.**
- **Concept selling to large and medium private and public sector industries towards import substitution, electronification, modernisation — with cost benefits.**
- **Formation of an effective marketing team with existing and new personnel.**
- **Generation of new products based on the Company's R&D strengths and managing their sales.**

The right person will play a key role in shaping the Company's future. He will operate from our headquarters at Calcutta. Compensation will not be a constraint.

If you are weary of your marketing laurels and want life to begin again — even if you aren't quite 40 — please write within 10 days, stating details of achievements and expectations, to :

THE PRESIDENT
HAMILTON RESEARCH & TECHNOLOGY (P) LTD.

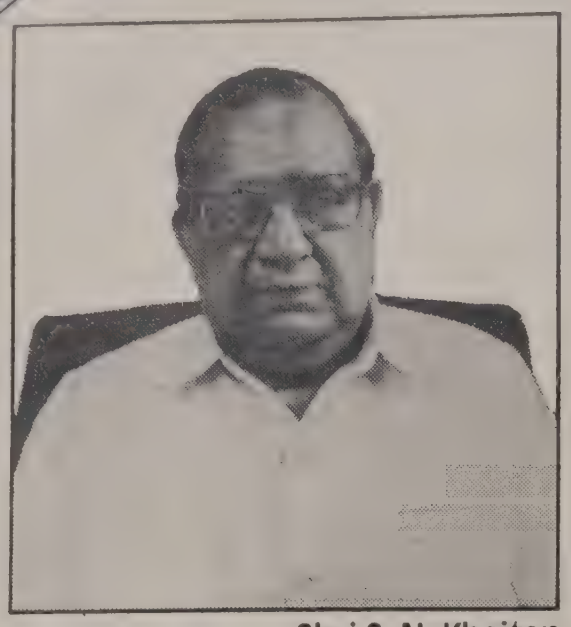
SENIOR DESIGN ENGINEER
(ELECTRICAL TRANSFORMERS)

VIRGINIA, USA **Attractive Compensation**

Our client, a progressive and fast growing manufacturer of electrical transformers, located in Virginia, USA, is seeking a Senior Transformer Design Engineer.

The successful candidate will be a graduate Electrical Engineer with an outstanding academic record from a reputed institution. At least ten years of hands-on experience in the design of oil transformers (upto 15 MVA 69 KV), dry transformers (10 MVA 35 KV) and Air Core and Iron Core Reactors for industrial power distribution and rectifier duty application is required. Additional experience in Test, Quality Assurance and Field Trouble Shooting will be an added advantage, as will be a Master's Degree in Electrical Engineering and/or Management.



This position is designed to attract the best candidates in the field with demonstrated success. Our client will sponsor and file for the appropriate visa and work permits. A competitive compensation package will be offered, and will not be a constraint for the right candidate.

Applications which would be treated in strict confidence should be sent within 10 days to:

A.F. Ferguson & Co.
Post Bag No. 1261
Madras 600 034.

giving full details of qualifications, experience and salaries drawn. Applications and envelopes should be marked with "MS/4416".

Accelerat

Shri S. N. Khaitan

Ladies & Gentlemen,
I take pleasure in welcoming you to the 28th Annual General Meeting of your Company.

The notice convening this meeting, the audited Accounts and the Directors' Report for the year ended 31st March, 1991, have been with you for some time and with your permission, I will take them as read.

RECORD TURNOVER AND PROFITABILITY

In the financial year under review, your Company has maintained its momentum of growth and has achieved yet another remarkable performance despite an environment fraught with uncertainties and economic upheavals.

The Company has recorded an all time high turnover of **Rs. 47.13 crores**, gross profit of **Rs. 6.20 crores** and net profit of **Rs. 2.97 crores**. You will observe that your Company has made rapid strides in turnover and profitability in the last **3 years**. Turnover has increased by **131%**, gross profit by **202%** and net profit by **244%** in the last 3 financial years. The phenomenal growth was made possible by implementation of continuous modernisation, expansion and diversification programmes at its plants, improvement of product quality, optimum utilisation of the financial resources and efficiency of internal controls. I believe that this continuous growth has been made possible, above all, by a high degree of motivation and personal accountability at all levels.

It is a matter of satisfaction that reflects in the **financial highlights** shown here.

CURRENT YEAR'S WORKING

I feel encouraged to inform you that the uptrend in operations and performance has been maintained in the current year. The cash generation in the first **4 months** of the current year was around **Rs. 2.70 crores** as compared to Rs. 1.74 crores during the corresponding period of previous year. It is expected that the current financial year will prove another milestone in your Company's march forward.

DIVIDEND

In keeping with the Company's philosophy of offering high returns to shareholders, the Directors have recommended an enhanced dividend of 30%. Thus, shareholders have been rewarded with a steady growth in dividend in the last four years.

EXPORTS

The Company continued its emphasis on development of exports. Exports grew from Rs. 86 lacs to Rs. 117 lacs in the year under review and is expected to be around Rs. 200 lacs during the current financial year. The Company is stepping up its efforts for develo export markets in the USA, South East Asia and the Far network of Sole Selling Agents and export promotional expected that in the context of ready acceptability of it international markets, the Company's exports will take leap, in the coming years.

MODERNISATION, EXPANSION AND DIVE

The modernisation and expansion programmes at its Ut Nasik units are progressing satisfactorily. The installatio width looms at Uttarpara will enable the Company to me growing demand of paper mills having wider width pape and newsprint mills. The expansion of copper strips facil installation of additional equipment will enable the Com strengthen its presence in the market.

This apart, the Company has ambitious diversification an plans involving investment of about **Rs. 300 crores** over t **4 to 5 years**.

This envisages amongst others, setting up a project for t manufacture of copper and lead from secondary process of Maharashtra. The Letters of Intent in the matter have b and Memorandum of Understanding with foreign collabo been signed. Preliminary work on the project has already and as soon as necessary clearances are received, the pro off.

ISSUE OF PARTLY CONVERTIBLE DEBENTU

As you are aware, the Company has received the consent Controller of Capital Issues for issue of partly convertible of Rs. 20.65 crores out of which debentures of the face va Rs. 13.78 crores has been reserved for the shareholders of Company on rights basis and employees. The balance amo 6.87 crores will be offered to the public.

The debenture shall have a face value of Rs. 100/- out of w will be converted into 2 equity shares of Rs. 10/- each at a Rs. 25/- per share at the end of 6 months from the date of The balance amount of Rs. 30/- shall be redeemed at the e 8th & 9th years in equal instalments. The Company propos the capital market shortly. The Shareholders, who investe earlier rights issue of equity, have been handsomely rewa dividends and capital appreciation. The equity shares of th are presently quoted around Rs. 100/- whereas the equity be offered at Rs. 35/- on conversion of debentures. The iss another attractive opportunity for you to acquire the shar growing company at a low price. I look forward to your co confidence for the success of our forthcoming issue.

THE ECONOMIC SCENARIO

The country is passing through an unprecedented crisis. A major problems are : **a) Foreign Exchange Crunch b) Budg Deficit c) Unemployment d) Inflation.**
It is time for all to think of the nation first. A feeling of nati commitment towards the nation is the need of the hour. G Japan set examples when, by keeping their national intere others, they were able to build their nation to the state wh now. All Indians will have to adopt a positive attitude in bu great nation.

e momentum of growth

Speech delivered by Shri S. N. Khaitan, Chairman, at the 28th Annual General Meeting of the Company held in Calcutta on the 23rd day of August, 1991.

	1988-89 15 months	1989-90 12 months	1990-91 12 months
) (Rs./Crores)	38.69	40.34	47.13
FORE ION (Rs./Crores)	4.11	4.34	6.20
ANNUALISED)	20%	25%	30%
	8.14	9.57	11.30
JE PER SHARE (Rs.)	25.70	32.88	41.35

the new economic policy of the Government, in line with hanging politico-economic scenario throughout the sated to dismantle the regulatory regime and eliminating bureaucratic procedures. This is a positive step in the on. It will certainly help in healthy growth of Indian nd inculcate the spirit of competitiveness both in the d the international markets.

o reduce fiscal deficit to 6.5% of G.D.P., prune fertiliser n non-plan expenditure of the Government, are laudable. e budget for 1991-92 lacks **integrated fiscal policy** support the series of trade and industrial policy reforms by the Government.

all that in my 1988 address, I had cautioned about the act of unfettered imports. While the recent measures like of the rupee, liberalised industrial policy and budgetary e expected to provide a boost to exports and expedite evelopment, the scope of taking full advantage of such will remain limited in the absence of such a policy. In 1966, was devalued to increase exports, the country lacked the nfrastructure to make full use of it. Today we are exporting tems and therefore can make much better utilisation of nity. **I feel that with this measure, along with the s contained herein, exports will increase and the value of se in next 3 to 4 years.**

ary proposals of reducing depreciation rate on general achinery from 33.33% to 25% and increase in corporate tax rove counter productive and defeat the objective of cal upgradation, global integration and international eness. Devaluation of the rupee, increase in borrowing ed by reduction in depreciation rate would directly on capital investment required for technological n and put Indian industry to a competitive disadvantage in tional market.

stry till now has been greatly protected. With the new olicy wherein we have to compete with foreign companies country and also to increase the foreign exchange earnings, most of the industries in India have to upgrade their plant and machinery by acquiring latest technology and equipment through imports. Some will require only selective import of machinery/equipment to balance their existing lines to compete successfully in the international market.

The positive effect of devaluation will increase exports only by offering products of International Standards and by adhering to delivery schedules. Towards this end, the Government should consider **treating import of plant and machinery for upgrading Technology and Quality on a similar basis as they do for advance licensing of import of Raw Material meant for Export with a value addition of 33.3%.** In case of capital goods import, the importer has to earn 200% added value in 4 years time i.e. 50% per year. Treat the import of such capital goods on the same footing as the Advance Licensing for Raw Material. This will benefit the nation in two ways : Firstly, it will upgrade our technology and thereby improve the quality of our products and put the Indian Manufacturer/Exporter at par with those in developed countries, resulting in more Foreign Exchange inflow. Secondly, the domestic consumer shall get a better product.

The other important **incentive to expedite industrial development and to get the benefit of free licensing procedure, is an investment allowance** which can offset the loss which industry incurs by way of higher corporate tax and reduced rate of depreciation. Without an investment allowance, it will not be possible for industry to meet the increased cost of plant & machinery and it will be difficult for the entrepreneur to avail of the opportunity of free licensing scheme introduced by the Govt. of India.

A minimum of 20% investment allowance on new machines incorporating the latest technology is imperative to neutralise the adverse impact of devaluation.

As for unemployment, I feel the Government should form a committee comprising engineers, scientists, bureaucrats and businessmen to suggest industrial units that can be set up with low investment and greater employment potential on the lines of ancilliary units in Japan. Today, in any industry, the investment for employing a person comes to around Rs. 5 lakhs. Industry in this country cannot afford to create employment on a large scale at this level.

ACKNOWLEDGEMENT

Before concluding, I would like to place on record my appreciation for the co-operation and assistance received from the Central Government, Governments of West Bengal and Maharashtra, All India Financial Institutions and Banks, our personnel and my colleagues on the Board. I would also like to thank the Shareholders for their continued support and confidence in the Company.

ACC

RCD's Artisan and Supervisor training programmes. So practical, even competitors' personnel attend them.

Technician training programmes offered by The Research and Consultancy Directorate focus on skill development in standard trade like welding and fitting and specialist trades like diesel engine repair. These include separate entry level programmes conducted by our Kymore Engineering Institute in Bihar, and refresher courses for cement industry technician at our World Bank / Danish International Development Agency funded Regional Training Institute, Jamul, Madhya Pradesh.

We are proud to say that a fourth of ACC's skilled workforce has been trained by us. That we train competitors workmen, and foreign technicians.

A measure of the importance we give to technical training is the information assimilated by us from our association with Lafarge Coppee, France for updating entry level training techniques.

We have the experience, equipment, pilot plants, workshops, laboratory facilities and infrastructure to ensure the highest quality training for plant operations and maintenance.

tting together

na, 57, is principal of Administrative llege of India, Hyderabad

us be together", says the motto the ASCI, set up 31 years ago at ad. This line, taken from the a, quite aptly epitomises princi- Sinha's contribution to the col- place where minds truly get

on 2 November 1934, Dharni- sad Sinha went from a child- Bihar to a doctorate degree at is University in the US. On the was a recipient of a Fulbright ip and others from IDRC, at nd UNIDO. He held visiting pro- ips at international institutes East-West Centre at Hawaii and hington University.

in India, Sinha has served on ental bodies, like the Planning sion, ONGC and Air India, and oards of corporate bodies like Labs. In a sense, his work has synthesis of two worlds — c and management. And all who to contact with Sinha profes- admit the cogency of his innova- s.

's experiments have dealt with His first laboratory was the nstitute of Management at Cal- nd then ASCI, where the experi- became bolder. He was instru- in elevating behavioural studies to the status of a scientific discipline in India. He says, "We brought in the concept of behavioural science and built it into the Indian concept of 'organised development'."

Sinha remembers a time, in the early seventies, when he had to convince companies about executive development programmes. These included giants like Tisco, ITC and HMT; but soon certain key people like Russi Mody were returning with requests for more tailor-made programmes. And gradually thereafter management development became an essential part of the Indian corporate ethos.

Sinha has also modulated his management knowledge to suit non-corporate areas like education. His pioneering exercises in Calcutta prompted ASCI to invite him to set up its education department in 1975. After that he helped set up the Royal Institute of Management at Bhutan, the Nepal Institute of Management, the Bangladesh Management Centre among others.

Sinha returned to ASCI in 1986, this time as principal, to introduce several innovative training programmes. These included one for officers and ministers during Rajiv Gandhi's regime, to "acquaint them with new decision-making skills." Also, early this year, the Commonwealth Secretariat sponsored a programme for creating managerial skills among diplomats.

In his five-year tenure, Sinha has raised Rs.2 crore for various professional chairs at ASCI. He has nurtured ASCI from a national to a global centre, not the least because he is concurrently president of the Association of Management Development Institutions in South Asia. "We have moved from being a college to a *collegium*," he says.

Sinha's aim is to make the people who matter in government realise the significance of management. For, as he says, "India is not under-developed but under-managed."

■ MEERA SHENOY

FRONTRUNNERS

"The one-year training I underwent at DCM Ltd was as good as an MBA course; or even better, because of the hands-on experience it exposed one to," says **Rohit Gandhi**, 30, regional manager (western region) of DCM Data Products, the first Indian company to manufacture computers indigenously. A BE in electronics from Punjab University, he joined the company in 1983. In 1984, he was transferred to DCM Data Products, a subsidiary, as officer on special duty.

Gandhi ensures the company keeps pace with an annual growth rate of 40 per cent in turnover. "We made sure dealers sold 35 per cent more than last year," says he.

■ S.C.

At 17, **Uttara Vaid**, assistant risk manager at Tata Risk Management Services was the youngest to join the Insurance Institute of India, the country's prestigious school for insurance managers. And at 21, she was the youngest to be awarded a fellowship diploma; this, while pursuing her B.Com degree at Bombay University.

Vaid was among the top ten who received the prestigious international Minet scholarship offered by the Institute of Risk Management, UK.

Now, at 26, Vaid's day-to-day activities involve offering consultancy services to a host of companies besides the Tata group on how to minimise risk by improving safety standards. "I also find time to lecture at the Institute of Risk Management," says Vaid. "I wish to adapt the principles of risk management practised in the West to suit the Indian environment."

ɔed of roses

nothing is this city known as the rose capital of India

go into raptures over roses in Bangalore, Lucknow and t if you're really *serious* about ıe is the place for you. For that s more roses than the rest of together; small wonder then le call Pune the rose capital of

, there were just two nurseries oday, there are 150 doing commercial n roses. These cover 0 acres under culti- ıd together produce ɔ 400,000 cut roses a something like 3 to nursery-grown rose our of the nurseries — approximately ach. One of these is Roses, which you beyond the winding f Ghorpuri. The e smaller, and usu- found on the city's

makes Pune the fo- of rose cultivation? ate, for one, is ideal. lkarna, a large nurs- er, explains, "For he year, it is cool and there is a ly good monsoon with enough ver. The soil is also fertile and black in some places."

all, commercial considerations he growers' preference for the ɔkarna, chief patron of the All se Federation admits that, "It is ɔre profitable to grow roses than es or fruits." His 18-acre nurs- ,500 varieties, and produces 500 owers daily.

hniques

-member Rose Society of Pune, in 1962 with Jaywantrao Tilak lent, has been doing its bit since beginning to encourage new ues. It has introduced growers to ilisers and techniques of cross- g with imported strains.

Pune-grown roses find their way to markets all over India. For example, Suresh Pingale, president of the Rose Society and vice-president of the Indian Rose Federation, says that he sells on a wholesale basis to other nurseries in Maharashtra, Gujarat, Madhya Pradesh, Karnataka and Andhra Pradesh. Cut roses go to the Pune and Bombay wholesale markets, from where they are dispatched countrywide. Daily auctions are held in the Pune wholesale market with rose prices fluctuating from Rs.2 in the monsoons to Rs.12 a dozen in winter. The total turnover of the rose business in this region exceeds Rs.1 crore.

This is a labour-intensive business — each acre requires 20 workers, making it a total of 3,000 in the industry. Another 5,000 are engaged in producing cut roses in Pune alone. Wages range from Rs.700 for an unskilled worker to Rs.2,000 for a skilled labourer who does grafting, budding and so on.

Perfection itself

It takes about a year to grow a rose plant before it is ready for sale. The life of a plant is about seven years. Under Pune's climatic conditions, the rose plant flowers round the year and is capable of producing 100 flowers annually. In the monsoon and summer seasons, though the number of flowers produced is much larger, the quality isn't so good. In winter, the plant may produce just one flower in a week, but that is often perfection itself.

Varieties abound. Fifty new ones are added to Pune's rose range every year. "We keep a watch on the market to see which are the most popular," says Pingale. Gladiator, Black Lady, Gold Medal, Landora and Bill Crosby are the current favourites. While reds are perennially popular, yellow and black roses are doing well too right now, according to Pune's rose growers.

Pingale: keeping a watch to see which varieties are most popular

Pune doesn't export its roses. The quality, Pingale concedes, is not yet on par with that available abroad. To achieve that, Pune's growers need greenhouses; and that means big money. But such facilities are slowly being put up — Jagtap Nursery has a greenhouse at Talegaon near Pune. In the future, hopefully the near future, says Pingale, Pune's roses should find their way into global markets. For now though, business at home is still proving to be quite a bed of roses.

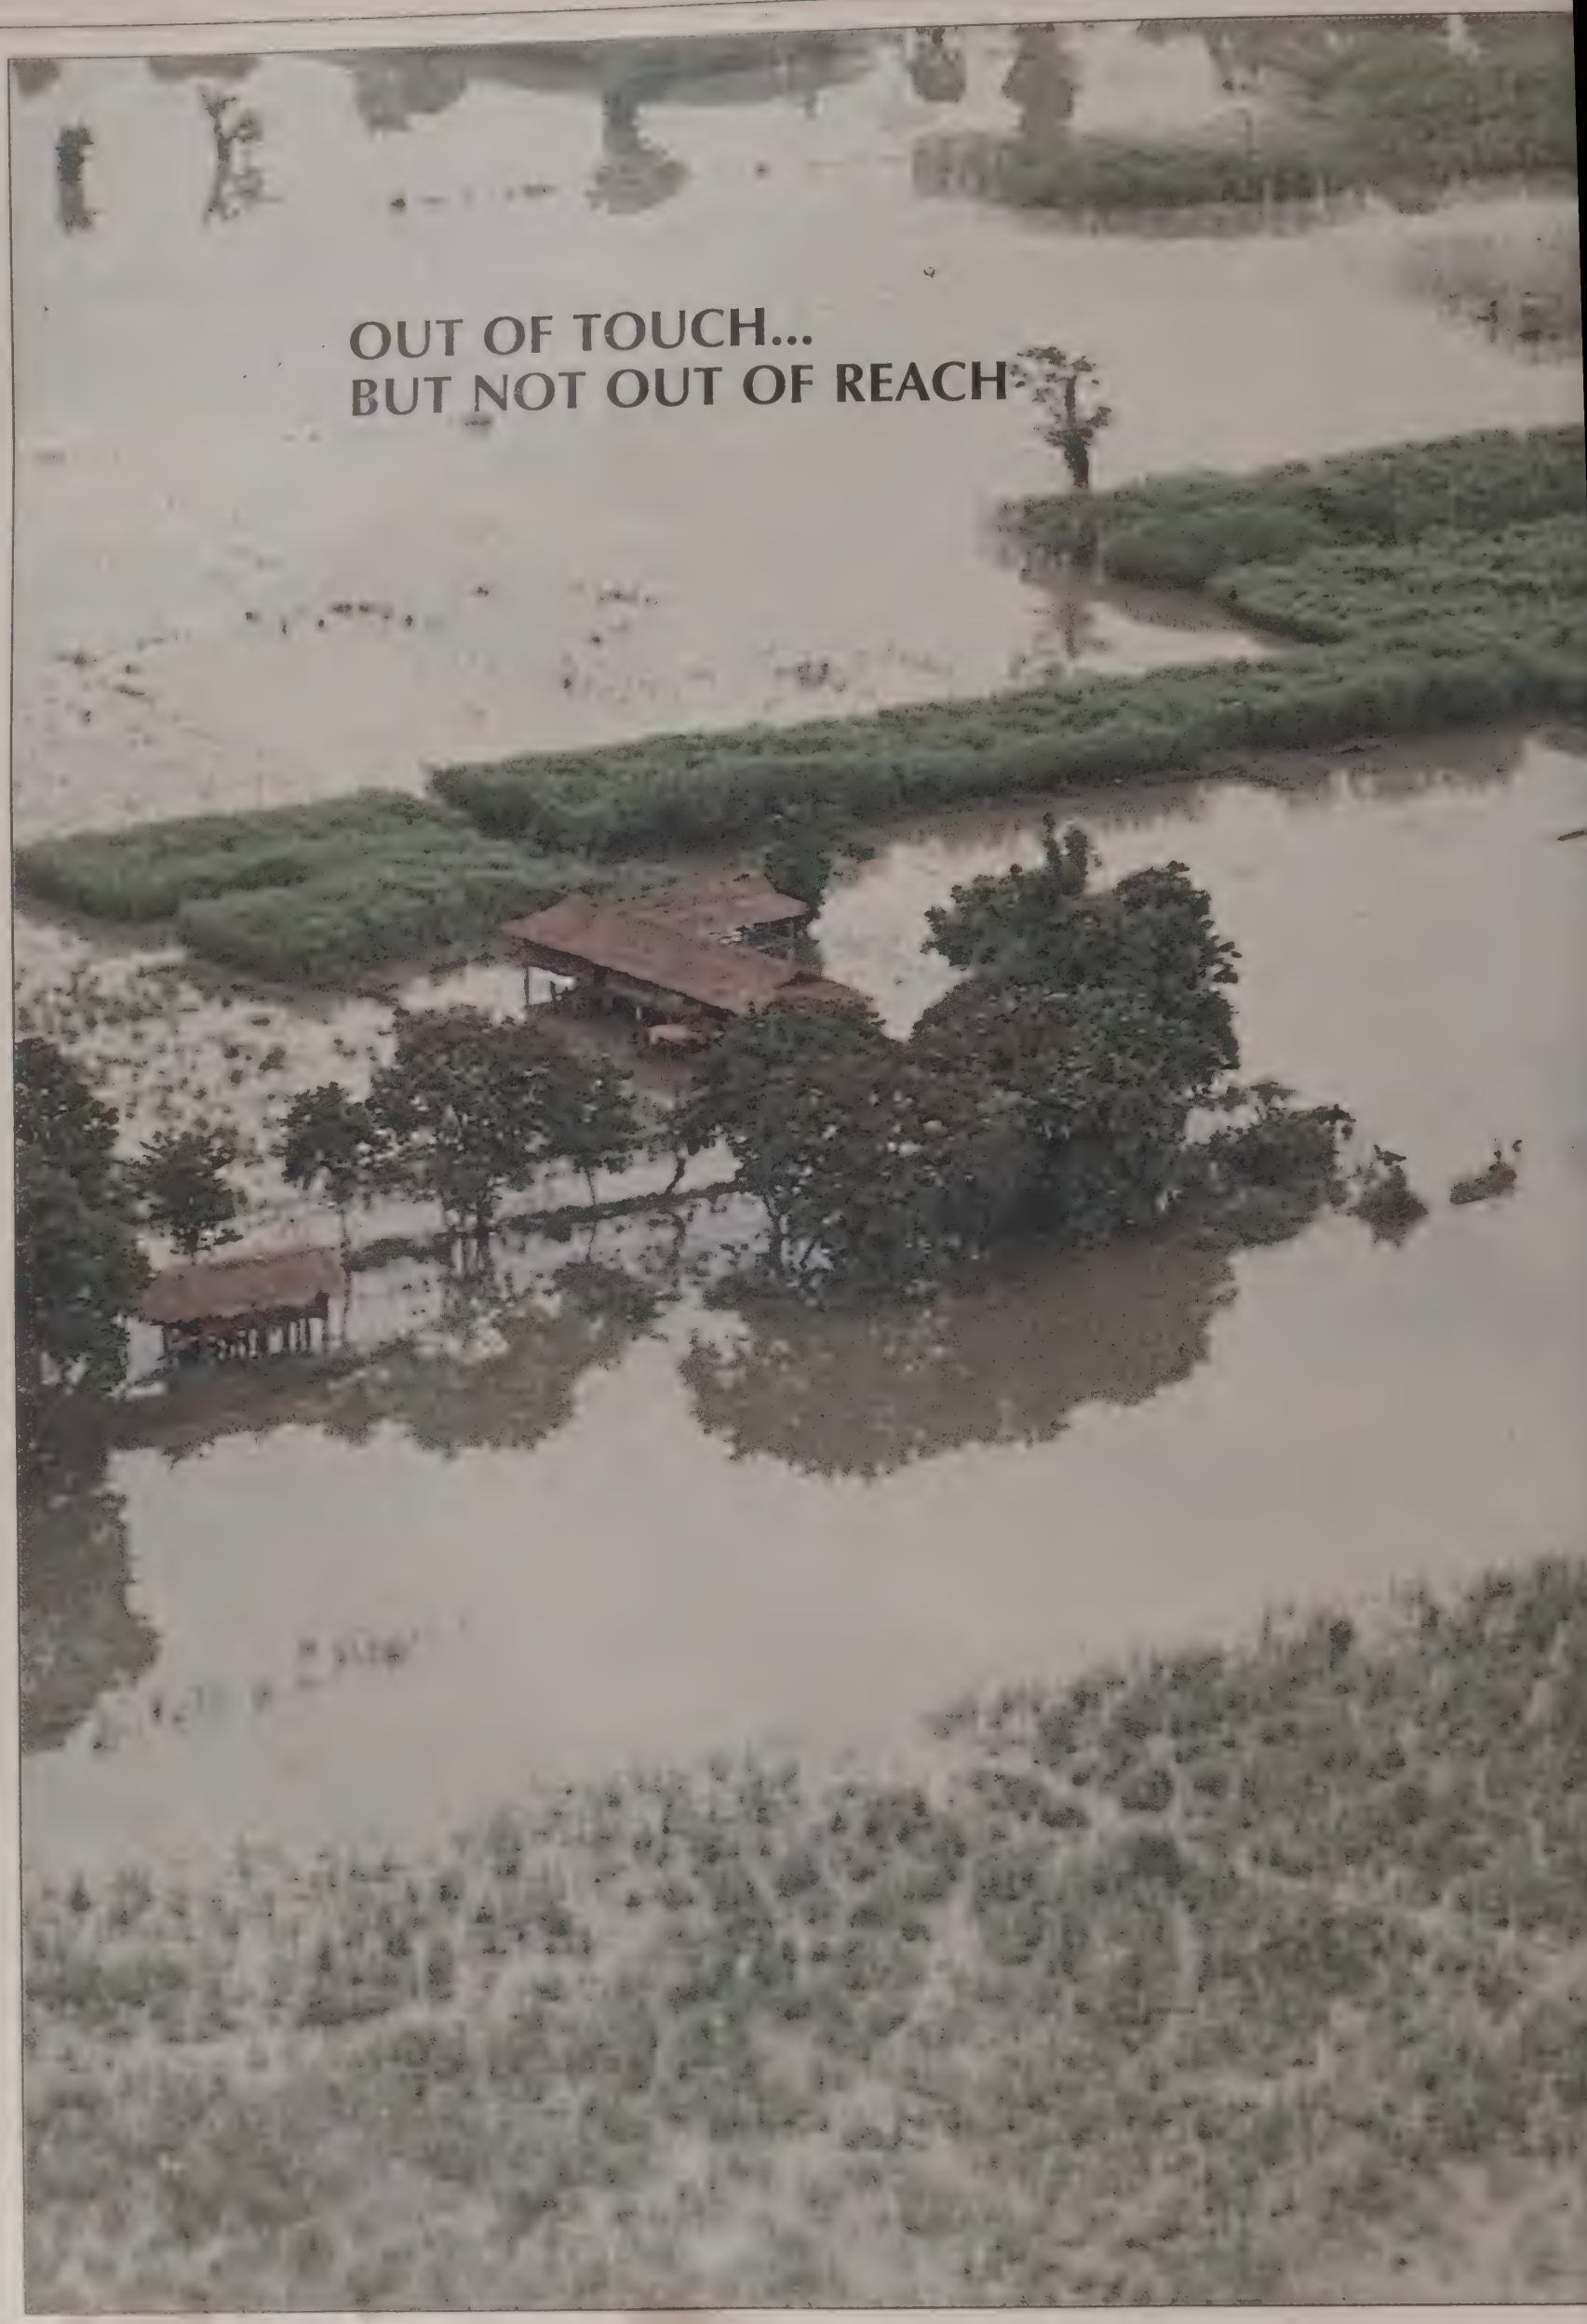
The products of B&L (sales: $1.4 billion), are scheduled to enter the Indian market next year. As a prelude, in keeping with its philosophy of ensuring "safety of the lens wearer by training the fitter", the US giant held the first of its many training programmes at L.V. Prasad.

Jaya Jhaveri is one lucky lady. She's doing something she "has always liked doing" and "getting paid for it too". Painting, that is. A Bajaj Institute management graduate, she was on a warm wicket at Blowplast's Leo Toys and doing "very well" as assistant marketing manager, but she chucked it last year to become a full-time painter. And well she did, if the reaction on the opening day of her third exhibition in Bombay was any indication. Family friend and guest of honour Hrishikesh Mafatlal, president of Mafatlal Fine, was impressed enough to pick up two paintings, both landscapes. So were Elizabetha Kerkar, senior vice-president of the Taj group of hotels, and Gautam Rakshit, CEO of Avenues Advertising.



Diversification plans were not revealed; neither did shareholders come up with any awkward queries. For this was a different kind of AGM Present were some of the 130 members of the **Cambridge Society**, a collective of Indians who have studied at the premier university. The exclusive list includes economists like D.R. Pendse, industrialists like M.S. Patwardhan (vice-chairman of NOCIL, R.D. Aga (managing director of Thermax), J.M. Chagla (managing director of Mafatlal Dyes) and Ajit Singh (CMD of Associated Capsules). A corpus fund set up by these members helps send bright youngsters to Cambridge.

Marriage and birth anniversaries may be *de rigeur* but ever heard of celebrations for the silver jubilee anniversary of a business partnership? Well, that is exactly what **Harsh Goenka** and his RPG Enterprises have lined up this week. For starters, there is a dinner in honour of B.G.Rethore, president of US-based Phelps Dodge Industries, which has links with two RPG companies — it is Asian Cables' collaborator and has

supplied the technology for Phillips Carbon Black. At another function organised by the Asian Cables Foundation, Rethore will present the K.P. Goenka Memorial Award for Environment for 1990. "We haven't planned anything flashy," says the youngish chairman. "Just a quiet get-together to celebrate what has been a very successful partnership."

OUT OF TOUCH...
BUT NOT OUT OF REACH

SHOULD WE ALLOW OUR VILLAGES TO BECOME ISLANDS?

Remoteness should not be equated with isolation.

Thanks to radiophones, reliable cable-free connections can sound an early warning to the remotest areas of the country.

But it shouldn't take a crisis to realise their importance. Because, even in normal times they provide the freedom and convenience of communicating with rural areas.

Making emergency medical assistance possible. Or providing farmers access to the weather bureau during seeding season. Even factories located in backward areas can communicate instantly.

Punwire, is playing a major role in setting up these rural communication systems.

Connected to a rural exchange, the systems work as radio extensions of normal telephones.

Which, if you live and work in any part of India, you'll admit, is really staying in touch!

PUNWIRE

helping you reach out.

HTA 7348

We can't allow unhindered access

What is the agenda before you?
Earlier our role was to comment on and criticise various government regulations. Now the government has set us free. It is now up to us to live up to the expections of the government.

Are you happy with the details of the deregulation proposals?
These dramatic changes will take time to percolate down to the lower levels. However, as long as there is clarity of purpose at the top, I see no problems in implementation.

Won't the bureaucracy scuttle these changes?
There will be resistance. However we have seen much worse. Things were much more regulated in the past. Government is now more willing to talk with industry. The Exim Scrip is an example: we wanted the 30 per cent replenishment to be changed to give more incentive to higher value-added products. Now they have made it 40 per cent for some items.

What are the prospects for foreign investment?
Very little in the short term. India has been like a wall with very small holes. As of now a country like Indonesia is more attractive. The policy changes made now have to be understood by foreign investors. Later, this understanding will have to be translated into investment decisions. Also you must remember that capital is in short supply around the world.

Are you happy with the extent of deregulation?
Yes, but we would have liked to see more. Everything other than defence should be delicensed. There is, for instance, no need to have licensing in automobiles.

Should India join the Paris Convention, given our position on patents?
As far as intellectual property rights are concerned we have a problem only with drugs and pharmaceuticals. We should publicly declare that we will fall in line with the Paris Convention in a specified time frame, say 10 to 15 years. The ultimate solution is to raise incomes so that people can pay higher prices for drugs. Now they can't do that.

What about other constraints in foreign investment such as paying dividends out of export earnings?
Foreign investors must accept that they will have to balance dividends out of export earnings. The government's stand in this regard is quite reasonable. At this stage of our development we cannot allow unhindered access to the domestic market with no export obligations.

What impact will the break-up of the Soviet Union have on us, considering our past dependence on them?
It will hurt us, not only because of disruptions in defence supplies and existing trade ties but also because international investment might now get diverted to the former Soviet Union. The western nations have a cultural affinity with the east Europeans which may work to our disadvantage.

What are export prospects like in the medium term?
Exports will not go up for at least a year. Industrial growth has been negative over the last month. We don't have an export surplus unless we squeeze domestic consumption. That may not be possible.

Won't the poor state of our infrastructure hurt industry?
Lack of coal and power will h
investment and exports. An i
solution may be to privatise t
Indeed we could convert the n
ports into free ports. Now ma
time to implement the Raunac
committee report.

From the Publisher

This is the second year that we are publishing the Business India Super 100 — our list of India's most outstanding companies. We do not look just at turnover, or assets, or profits, but a combination of all these factors and others, like market capitalisation, to arrive at our rankings.

While drawing up this list we have necessarily had to adopt some minimum criteria — such as only public companies were considered or only companies with a minimum turnover of Rs.200 crore were taken into account. There may well be some debate on the criteria adopted, but on the whole our readers will agree that the methodology adopted results in a ranking that is fair.

While producing any list, interesting patterns emerge. Also attention is drawn to particular features. And it is easy to see the exceptions that emerge. One thing that clearly emerges is that almost all our most successful companies are indeed asset-rich. This is not surprising considering all our long-term lending financial institutions are exclusively asset-oriented. Not surprisingly, then, Indian industry has had a rising capital-output ratio over the years. This is in spite of successive governments continuously professing a concern for increasing employment. The truth of the matter is that historically all tax allowances such as depreciation or investment allowance have encouraged investment in assets. By contrast not a single allowance is given for creation of permanent jobs as is common overseas. Similarly, given the fact that till very recently exports gave no advantage, most of the companies on our list are relatively poor performers in this field — though with export earnings being tax-free now, this is expected to change over the years.

Also the fact that there are very few relatively new companies on our list (Reliance being the obvious exception) or companies in hi-tech areas, only highlights the fact that our tax structure and the earlier licensing structure favoured old established money and helped keep out newer entrepreneurs and technocrats. One just has to compare our list with a similar list in the US to bring home the point that the environment created by government in the form of tax, licensing and other laws largely determines the shape business and industry take.

At long last our government, particularly the present government, has woken up to the need to fashion dynamic policies in keeping with modern global business conditions. If these policies do succeed then we are bound to see some very rapid changes, additions and drop-outs, in this list in coming years.

You don't have to be a f
to be a Raymond's man.

e Indian Derby winner

16 OCT 1991
C. F. T. R. I., MYSORE

In a nine-year racing career, 25-year old Pesi Shroff was voted Champion Jockey by the RWITC for fourteen seasons. He has contested 2383 races, won 746 and placed second or third in another 817.
A phenomenal record by any reckoning, Indian or international.

He has won the Indian Derby five times and the Indian Turf Invitation on four occasions, the 2000 Guineas thrice, the 1000 Guineas twice, winning most and placing in all the great Indian Classics.

When not showing the opposition a clean pair of heels Pesi may, on occasion, be seen showing off a more stylish length of leg in a light brown sparkle polyester, wool and silk suit tailored from that other winner, Raymond's "Silverene".

You don't have to be a racing legend to be a Raymond's man. For that matter, you don't even have to be a Raymond's man.

... but it helps.

Raymond's

Never say no to life.

Letters to the Editor

Distressing jump

While your cover story on the "Second Coming" (Cover Feature, 2 September), was interesting enough, the abrupt jumps were distressing. Also the article makes no mention of the impact of foreign investment on the development of indigenous technology. It is sure to have a deleterious effect.

SUCHETA PATEL
Bombay

Better links

The editorial, 'Four new stock exchanges' (2 September), makes interesting reading. For a dynamic capital market, improvement in the existing infrastructure and communication facilities is the need of the hour. An inexpensive and well-interlinked communication network will indeed be the first step towards 'a paperless society'.

LATHA LAKSHMINARAYANAN
Bombay

Meaningful article

I read with great interest and enthusiasm the article 'Selling middle-class dreams' (2 September). The in-depth study, the objective analysis and the presentation of market-oriented information throw extra light on the consumer durables market as a whole. This combination makes the article all the more interesting and meaningful.

H VASANTHAKUMAR
Madras

The tedious TDS

Besides the problems mentioned in the feature on banking (2 September), the proposed amendment to the Income Tax Act will also result in too great a workload on the income tax department. This is because there will be a good number of extra income tax returns being filed just for refunds of tax on fixed deposits in banks. About how difficult it is to get a refund from the income tax department, the less said the better.

The proposed measure must therefore be dropped.

MAHESH KAPASI
New Delhi

Wrong quarters

You have ascribed the sickness of Toshiba Anand batteries (Corporate Report, 2 September) to the failure of Japanese management techniques. The management of Toshiba Anand has always been with the Anands and not with the Japanese. Though they were the pioneers in metal jacket cells, no efforts have been made either in upgrading technology or taking effective steps to modernise and expand the capacity to become viable in the changing conditions.

Other battery manufacturers, with better foresight, are not in such deep waters, though some of them still follow Japanese technology.

B.R.R. IYENGAR
New Delhi

Agents of change

The banking community survey (19 August) is an in-depth study of great interest. In fact, the commercial banks are trying to reach new heights in their expansion programmes and change substantially the character of their business. These efforts represent a departure from the narrow concept of traditional banking. The new thrust is based on the idea that banking is an active instrument of socio-economic development. Its objectives have to be defined in terms of the needs and aspirations of society.

Today's requirement is that of a new breed of bankers — bankers who do not only dispense credit but create the conditions for its effective utilisation — bankers who are not merely managers of their branches but also agents of change in the community they serve.

Y.N. MANN
Kanpur

Little truth

We regret that the write-up 'Bailing out' (Listening Post, 19 August) states that we have differences amongst us. We are at a loss to understand the motive and the reasons for allowing such unfounded and unverified items to be published in your magazine. This leaves a wrong impression about us among the financial institutions, commercial banks, creditors, business associates and friends.

Serious impact

The steep cash margins on imports of butyl rubber has brought almost all tube manufacture to a standstill (Business Notes, 19 August).

At one time, banks were ready to finance tube plants, now they hesitate to give additional loans even to existing plants. This is because both availability of raw materials for tube manufacture and profits from the tube plants are restricted.

At a time when direct employment of 10,000 workers in this industry is uncertain, the import of essential raw materials for every industry, especially when the industry is dependent solely
port, should be ease

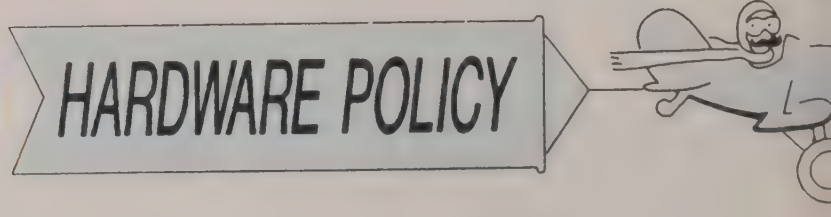
Larsen uninformation

The casualty in the latest Ambani failure to control Larsen & Toubro is not the ambition of the Ambanis. They will undoubtedly return in due course, if necessary by increasing their stake in the company. It is, partly, the credibility of the financial institutions which have kept their cards close to the chest and left both the Ambanis and (more unfairly) the public bemused about their role.

Meanwhile, rumours abound of deals done in Delhi, opposition by the public financial institutions and forged proxies. The truth, if known, will certainly affect the price of Larsen's share. It is the truth that the public ought to know.



Thus, one real casualty is the public's right to know. L&T is a company in which the general public is substantially interested. Although the company's listing agreement with the stock exchanges obliges only the company's management to publicly disclose material information related to the value of the share, there is a case for public disclosure here that SEBI ought to take up. Perhaps each major participant in the planned takeover, particularly the public sector financial institutions that own about 40 per cent of the company along with the Ambanis, ought to disclose their current level of information.

The second knock is to the independence of the public financial institutions from political interference. Following an uninspiring innings in the eighties, the role of public financial institutions is once again being seen as subservient to political prejudices and priorities. This is a dangerous trend. The government, which is increasingly looking to capital markets to fund economic growth in the nineties, needs to ensure the independence of the public financial institutions.

The third casualty is in the professional role of the i tutions. Even if political interference is absent, the ins tions — given their large holdings in a large numb companies — ought to clarify their policy on takeove they plan to take an activist role of supporting man ment or replacing it by votes rather than just through chases or sales in the marketplace, this should be st If, on the other hand, they intend to be passive invest then this should be publicly stated and followed. If plan to use their voting power to influence manageme strategies in order to protect the company's value, this role with significant implications for existing mana ment. In the Modi Rubber case, for example, the finan institutions used their voting power to control in group lending.

Several of the issues in the Larsen takeover case are culiar to India with no easy solutions or international allels, for example, the dominant role of family firm the large holdings of well-coordinated finan institutions.

Computers: lots to do

The Indian computer hardware industry — computers, components, and communication equipment — ought to be a high-growth industry in India. Huge markets and software development skills should have compounded the benefits of a growing economy and high growth in foreign demand. Instead, the industry grew by 13 per cent in 1990-91, a negative growth both after inflation and in appreciated dollars.

What has gone wrong? The development of the hardware industry has been held back by incentives to manufacture computers at home via cheap access to imported components and a ready export market to the So Union and Eastern Europe. The first factor prever economies of scale since large component manufactu in Taiwan and other countries could always underp Indian component manufacturers. This led to a large tage computer industry based on imported compon but was of no advantage to the organised sector — tho of great benefit to consumers (the real price of a PC c patible is down by over two-thirds since 1986).

The second factor, a ready market to rupee curre areas, was used by local manufacturers to fulfil exp

s and earn replenishment licenses. It did not develop rand-names or permanent markets via improved at- s to quality since these markets were protected. This et has now disappeared.

e realisation has finally set in at the DoE that the puter hardware industry is import intensive world- . This is because of rapidly changing technology n puts a premium on access to the best technology here in the world. It is finally being accepted that cannot develop competitive hardware by importing ology at a particular point in time and taking it up enously from there. This policy has only resulted in ing technology at the start-up date. This is exem- d by the GoI-owned minuscule (no pun intended) which — until it got burnt down in 1989 — was mak- bit microprocessors and plans to continue doing so the plant returns to operation. This while the world moved on to 32-bit microprocessors.

similar story can be told about 4-layer printed circuit ds, the import of which was banned to promote local ufacture. As the requisite quality is not available at e, it has led to smuggling.

e only way for the hardware industry to grow is to leverage access to international technology with local engineering skills and domestic markets. There is a growing international recognition that Indian software and design capabilities are excellent. With a duty-free structure paid for by foreign equity or Exim scrips, there is every reason to expect that both Indian and foreign manufacturers will scramble to invest in India. Such a policy has helped Thailand's and Malaysia's electronic industry export 50 per cent of their production within five years of starting off (despite a shortage of skills) compared with 11 per cent for India and an Eighth Plan target of 17 per cent.

What then will happen to the DoE? While its secretary seems popular with the industry, the fact is that the DoE's current talk of institutionalising the industry to gear it for manufacture and globalisation is no different in content from the jargon of the sixties and seventies. Such talk should end. The DoE should restrict itself to promoting computer education (via improving its shoddy CLASS project), setting quality parameters by which the industry's products are rated, propagating Indian markets and skills abroad and promoting improved infrastructure via technology parks. There is lots to do. The rest should be left to the industry.

entre-state relations

mil Nadu chief minister Jayalalitha believes in calling spade a spade. The centre, she feels, is too casual at Tamil Nadu's resource requirements.

such a statement had come from an opposition chief ster, it would have been dismissed as political rheto- Most states do not exercise fully even the powers that have. For example, mining rights come (concur- y) under the state's purview. Yet the centre has rou- y used industrial policy to allocate this right. Indeed, s ought to, but do not question the ongoing process rogation of their powers by the centre (begun under ru and continued by Indira Gandhi).

amil Nadu's situation is peculiar. The close relation- with the centre and the state came to an end in 1967, n the scdmk came to power. The DMK in its early days e a path of confrontation with the centre which did do anybody any good. The DMK was replaced by M.G. achandran and the AIADMK in 1977. MGR believed in g along with whichever government was in power at centre. Cosying up to the centre also did not help. The rn to power of the DMK in the state in 1989 coincided the most unstable period in the history of the country. The DMK was preoccupied with the LTTE as well.

Now Jayalalitha has provided the centre with the number of seats it cannot afford to ignore. Nor can it detach itself from the kind of compulsions she faces as a leader with a massive mandate. In the short term, the centre cannot do without Jayalalitha and in the long term, she cannot do without the centre.

Unlike her mentor MGR, Jayalalitha understands very well that to really improve the standard of living of the people of the state, she has to create employment opportunities. To achieve this, rapid industrialisation is a must. She also comes across as a chief minister who is genuinely committed to this cause.

Here is where the problems arise. Today one may not have to run to the centre for licences, but the influence and the power of the centre is all pervasive. Any state which wants to push ahead in industrialisation is benefited if there are at least a few mega projects. Tamil Nadu's indus-

trialists have become well known for their reluctance to invest in Tamil Nadu in any substantial way after the sixties. The Rs.1,800-crore joint-sector aromatics project which was expected to be a catalyst for downstream industries, received the approval of three successive prime ministers, but is yet to receive final clearance. The power-short state would like to invite private partners to exploit the abundant lignite deposits in the state. Although the Electricity Act has been passed, the centre has yet to allow the private-sector to enter mining. The state does not have a super thermal power station. The proposed atomic power project also needs central clearance. The state also has not attracted any major defence project for a long time.

Even if the state is able to attract new industry, its fruits would take many years to show. Jayalalitha has to also please her huge following by continuing the trad handouts. And fulfilling her promise of abolishi liquor. She also requires a sizeable infusion of tackle the security problem caused by the LTTE in All this requires a lot of money. There is a total d Rs.1,200 crore. The state clearly expects the c come to its rescue.

But will the centre be able to do so considerin itself is in dire financial straits? And how shou alalitha handle her relations with the centre? Sho continue to call a spade a spade or become submis her predecessors? The only answer to all these trick tions is that there should be more autonomy, fis otherwise, for the states. To allow them to be more trol of their fate. Then they might learn to be less gate as well. But who will bell the cat?

Is kerb trading bad?

It is true, as yet another panel on stock exchange reform has declared, that kerb trading is illegal and, therefore, ought to be strictly banned. The implication of this statement, that the BSE and CSE authorities have turned a Nelson's eye to kerb trades, is also true.

The volume of kerb deals is typically low (less than Rs.5 crore per day compared with an official average of over Rs.200 crore on the BSE).

So what's wrong with a little kerb trading, ask brokers. The problem is that kerb deals tend to be active just when they have the maximum potential to hurt investors. For example, when the finance bill was passed recently on a Saturday, kerb rates rose over the weekend. Thus, smaller investors were denied the opportunity to purchase shares at the lower rates available to kerb dealers through the weekend.

One can quickly dismiss the other major complaint against kerb trading — that it allows prices to be rigged on thin volumes. This does not hold given that a maximum of five scrips tend to be quoted on the kerb on any given day. In fact, the prices of the two most actively traded scrips on the kerb in recent times, Tata Steel and Reliance, have been among the least volatile of shares. For example, through August, Tata Steel moved between Rs.233 and Rs.246 (a spread of less than 6 per cent), while Reliance moved between Rs.176 and Rs.194 (a spread of about 10 per cent). During this same period, the BSE Sensitive Index moved between 1630 and 1845, a variation of over 13 per cent.

What needs to be done? "Strictly banning" kerb deals as the report suggests — even if effective — is a case of tackling the symp- ton, not the problem itself. The fact is that market respond primarily to information about the eco When information flows fast and thick, as in recent prices will move on the kerb (if possible) or, if kerb t is impossible, almost instantaneously to a new leve the market opens. Either way, smaller investors a likely to get the benefits of these price movements

Increasing the hours of floor trading beyond t rent two hours has not worked in the past becau umes tapered off sharply. The solution instea promote off-market trading after hours via quo computer screens. If communication facilities can proved, there is no reason why this should not be itable activity for stockbrokers.

The globalisation of financial markets has mea trading hours in other countries extend almost rou clock. This is an inevitable trend caused by flowing information. The government should rec this by promoting investor access to markets for periods. The disappearance of kerb trading will fol its own.

Lufthansa

In the top slot

In terms of the number of daily newspapers, India occupies the top slot in the world — 1,978 newspapers are published daily. The US ranks second with 1,657 dailies and the USSR third with 723. As many as 37 Indian dailies are over a century old and the *Mumbai Samachar*, which is now in its 170th year, is the oldest Indian newspaper in circulation.

Uncaged virus

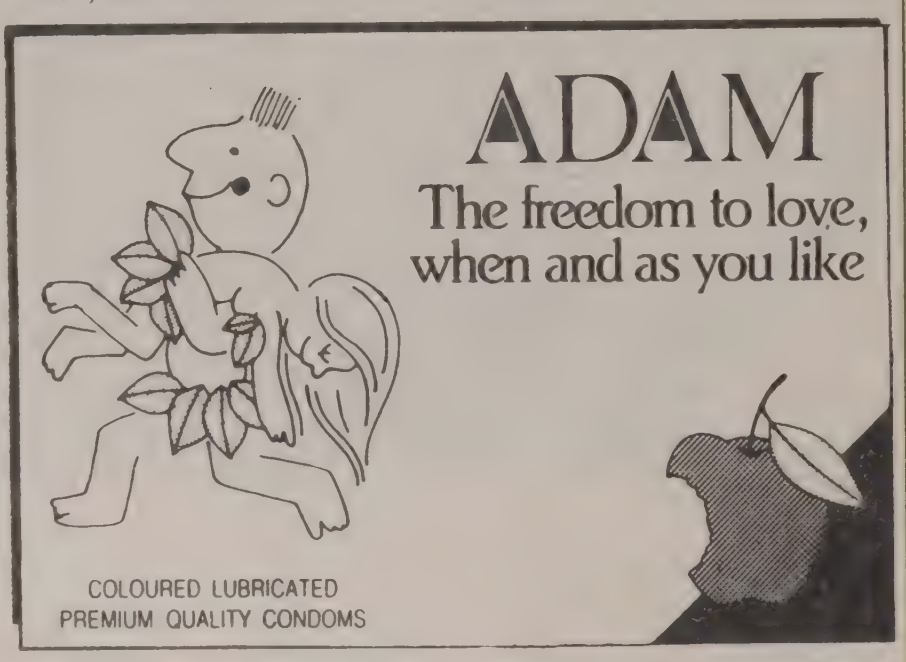
The "caged tiger" that is India, has been described as a "sleeping giant" by US representative Jim McDermott in an altogether different context. McDermott was referring not to India's economic potential, but the country being a fertile breeding ground for the deadly AIDS virus. In recent months, official estimates place the number of infected people at between 300,000 and 400,000. McDermott thinks that is a gross understatement and would place the figure at closer to a million.

The chief carriers are the prostitutes in Bombay who he reckons infect 600 people every month. The World Health Organisation has predicted that by the end of the century, 90 per cent of the estimated 30 million victims will be in South Asia and South-East Asia.

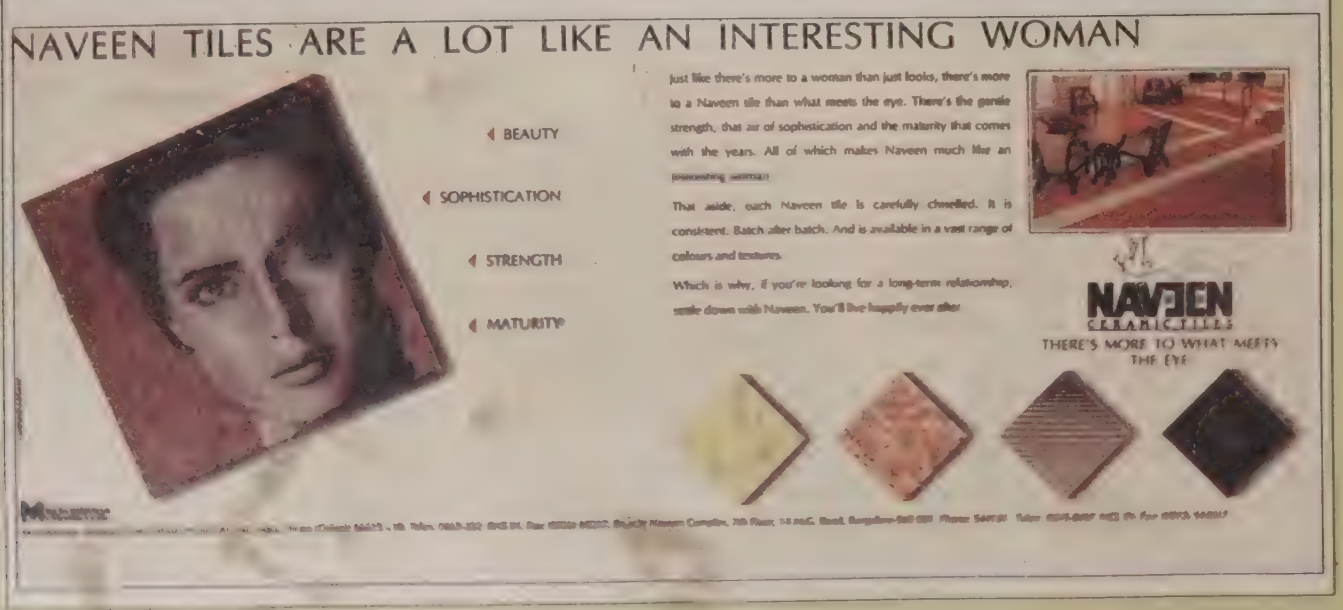
Environmentali in space

The Greens want to o out of space now. Bac by the US space agen NASA, a multi-nation satellite information gathering system on t earth's environment c the Earth Observing S Data and Information System has been set u EOSDIS will use the firs polar satellite to be launched in 1998 alon other platforms launc by Japanese and Euro agencies.

For 15 years thereaf these satellites, using a cross section of sensor will provide data at th of a computer key to thousands of researche around the world. To ensure that the data is tampered with, it can o be read.



Flat campaign for tiles



The Adam condom campaign has been creating a furore among feminists with lines like "Show her who's the boss" and an illustration of a man dragging a smiling woman by the hair.

Now, hot on its heels is another sexist ad that attempts to compare files with the female species. "Navneen Tiles are a lot like an interesting woman," declares the headline. And in case you're wondering what they have in common, consider the statement that both have "beauty. sophistication, strength, and maturity". Which is why, the ad advises, "If you're looking for a long-term relationship, settle down with Naveen." Of course, each Naveen tile is "carefully chiselled" and "consistent, batch after batch".

Amazing that Murudeshwar Ceramics Ltd, makers of these tiles, and their agency Clarion, forgot to add in their list of skewed similarities: "What's more, you can step all over them..."

ficiency-conscious
ese should take a

second look at their priorities, urges that country's Ad-Hoc Council For the Promotion Of Administrative Reforms. Its improbable sounding name notwithstanding, the council's findings, which were submitted to prime minister Toshiki Kaifu, are all too probable: that Japanese workers pursue productivity at the cost of their family lives.

The council wants the government to de-emphasise corporate profitability and focus on the family. It suggests that a five-day week should be introduced for workers and students alike.

Going places

Mahindra & Mahindra has been making waves overseas. The jeep manufacturer recieved an unusual honour from the royal government of Bhutan — a commemorative postage stamp showing a CJ4A transporting mail in the interior of the country was recently released. The tribute was in order, of course. The country which until now depended on Toyota and Isuzu 4WD vehicles is gradually switching to the M&M jeep. Last year the Royal Body Guards, a division of the Bhutanese army, bought eight CJ3B vehicles to be deployed as outrider cars for the King and other dignitaries. This year both the Royal Body Guards and the police force plan to purchase M&M jeeps.

Meanwhile the company will make 40,000 models of CJ-3, a designer jeep this year for export to Britain, Australia, Sweden and other countries in Asia, South America and Africa. Plans are also afoot to export to the US, where the jeep originated.

Inspector raj

It may be curtains for the licence raj but the inspector raj will continue. Take for instance the example of the small-scale sector. A small-scale unit not only needs sanction from half a dozen agencies before it gets going, but even after starting operations, it can have as many as two inspectors visiting the set-up daily with designations as varied as officer/ inspector, metal cutting licence department, or from the smoke and nuisance department.

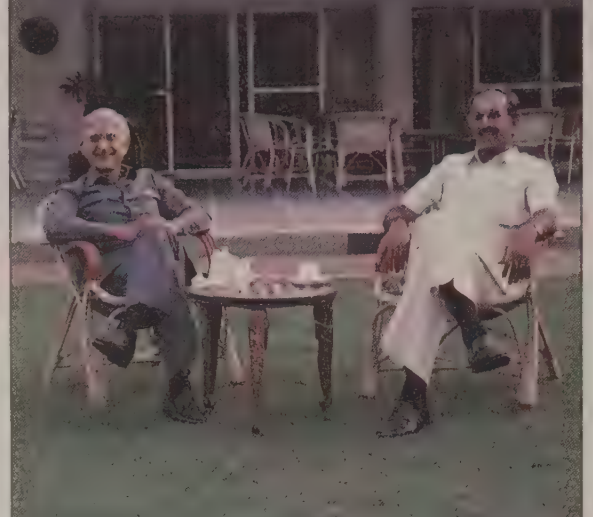
As many as 32 illustrious officers can drop in at your factory in a month; and that is only at the state level. Add to this another 35 central government officials. And you may weli have a total number of 67 officials visiting you every month.

Gainful acquisition

Computer Maintenance Corporation, the public sector software consultancy outfit, has just received the approval from the government to acquire Baton Rouge Inc., a software services company based at Baton Rouge in the US.

CMC will pay $800,000 for the acquisition. The rationale for the acquisition is that it enables CMC to own a company located in the US, which can enter into contracts with the overseas customers, and in turn, subcontract the project to CMC in India. Apart from the personnel (22 in number), the company's software for automatic teller machines will also come with the acquisition. CMC plans to transfer this software on to Unix platforms.

A brand new expense



Can bribes and commissions be passed off as business expenses? Goodlass Nerolac may be showing the way. While filing its latest income tax returns, the company classified bribe paid to sales tax and excise inspectors under the head "sundry expenses" and asked for a tax deduction on them. When the department refused to oblige, the company took the matter to the Bombay high court, which ruled in Nerolac's favour. The income tax department has now appealed to the Supreme Court. And if the country's highest judiciary body too rules in the company's favour, then it may well set a precedent — an unfortunate one at that.

Successor found?

Finance minister Manmohan Singh's search for a successor to fill C. Rangarajan's slot at the Reserve Bank of India is almost over. S.S. Tarapore, currently executive director, who has been involved with the credit planning exercise at Monetary Towers since the days of Manmohan Singh as RBI governor, seems to have got the nod. It is, however, not clear if a formal announcement will be made immediately or later this year when two other deputy governors will be retiring.

Ambitious target

The Kalyanis of Bharat Forge have set up Kalyani Agro Corporation Ltd as a diversification into agriculture. KACL has already exported 320 tonnes of mango pulp and slices, earning foreign exchange worth Rs.1 crore. The target over the next few years is an ambitious Rs.1,000 crore worth of agricultural products.

The Kalyanis: diversifying

The company has set up a biotechnology division, and plans to start a unit for tissue culture, green-house technology and a test laboratory for detection of generic purity of hybrid seeds. KACL would begin marketing its own improved variety of seeds from June next year.

Revving up

Unshackled from the chains of bureaucratic controls, the lone private sector steel giant, the Tata Iron and Steel Co, is revving up for growth. In approximately three years, its capacity will increase from 2.1 million tonnes to 4.5 million tonnes, making it the largest single steel unit in the country.

The idea first struck Tisco's management when the government, under a revised policy, asked for applications from entrepreneurs to set up one million tonne units. The Tata company, which is already implementing a modernisation plan which increases its capacity to 2.7 million tonnes, separately requested for a further 1.5 million tonnes exp

Today, the issue is on the backburner and no one is taking the trouble to initiate the next move.

■ SHAMPA KAR

YARN EXPORTS

Blighted hopes

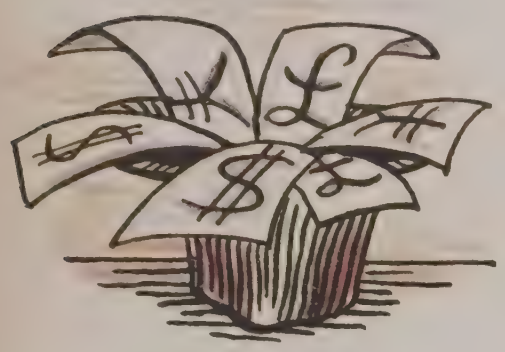
The cotton industry is livid with the decision of the union textile ministry to suspend all exports of cotton yarn for the time being. Said Mohan Piramal, chairman, the Cotton Textile Export Promotion Council, "This is suicidal. It will ruin the export market, and we will lose our credibility as reliable suppliers." The prospects for yarn export, which had seemed so bright exactly a year ago (*see Business India,* 29 October 1990) now appear to be blighted, say industry sources.

The government appears to have been inspired to take this ill-advised, populist move as a response to the news of the starvation deaths of handloom weavers in Andhra Pradesh. According to the union minister of state for textiles, Ashok Gehlot, precious foreign exchange has to be sacrificed to help handloom and powerloom weavers. The rationale behind the government's decision seems to be that the export of cotton yarn has created a shortage in the domestic market which has, in turn, pushed yarn costs up prohibitively.

Government responsible. On its part, the textile industry argues that the shortage of yarn is a direct consequence of the decision to export cotton in a bad crop year (1990). This provoked speculation by cotton traders, and pushed up the price of cotton by over 100 per cent.

In the production of cotton yarn, raw cotton constitutes 55 per cent of production cost, and wages, electricity and interest 35 per cent. According to The Southern India Mill Owners Association (SIMA), the price of yarn has not gone up to even 60 per cent of the increase in input cost, though the industry has absorbed about 40 per cent of this cost. A yarn exporter says the reason the mills are able to absorb costs is because of the profits they make from exports. Interestingly, SIMA has figures that show that whenever yarn exports fall domestic prices shoot up.

"Yarn availability has never been a problem," says a managing director of a cotton spinning mill. "Even today one month's production is available. The industry has repeatedly informed the National Handloom Development Corporation and other handloom and powerloom associations that SIMA will provide any quantity of yarn at market prices, but there have been no takers." The spinning industry accuses these associations of seeking cheap yarn and not yarn available at market prices.



Cotton yarn: no takers

Yarn exporters fear that the present suspension is going to affect the prospects for the future. India, which has made a breakthrough in the European markets, is appearing to get increasingly protectionist and could be branded an unreliable supplier. Customers might increasingly turn to Pakistan, Egypt and Indonesia. The efforts of the past few years, which have recently begun yielding results, will be wasted and the country return to square one as as far as yarn exports are concerned.

■ SUSHILA RAVINDRANATH

Money matters

Finance secretary S.P. Shukla, who flew to Paris hat in hand to plead India's case at the **Aid India Cosortium** meet last fortnight, returned with his pockets stuffed with pledges. Representatives of thirteen western nations and other international financial

institutions after hearing out the Shukla-led delegation agreed to pay out $6.7 billion of which $2.3 billion will be given on concessional terms and $700 million on an sos basis. Japan exhibited the most generosity agreeing to a Rs.2,000 crore concessional loan under the Overseas Development Assistance programme.

Companies that bring in **foreign technicians** for short working stints no longer need the Reserve Bank's permission for settling their fees in dollars if the per diem rate is under $500. Also, the wining and dining bills for overseas guests can be paid in rupees now without prior RBI approval. With winter round the corner, the visitors season, five star hotels should be choc-a-block soon.

Canbank has recently signed a 500 million Belgian franc (Rs. 68 crore) line of credit with Generale Bank, Belgium's leading bank. The credit is expected to finance import by medium-sized companies in India of capital goods of Belgian origin. Generale Bank has promised another BFr 30 million as suppliers' credit.

Revived plans

Having shelved its earlier plans of taking over Brooke Bond's scooter unit in Karnataka, **Greaves Cotton & Co** will instead invest Rs.25 crore in a plant in Baramati, Pune, to manufacture 30,000 autorickshaws. The company also has plans to make 30,000 automobile power transmissions as a co-product.

The BIFR has directed the Industrial Reconstruction Bank of India (IRBI) to submit a fresh proposal for the revival of the **Kelvin Jute Company Ltd**. The company had gone sick in 1989, following accumulated losses of Rs.16 crore. The BIFR had then approved a Rs.7.88 crore revival scheme, of which the IRBI was to provide Rs.3.36 crore. The rest of the money was to come from other financial institutions and a new promoter, as well as sale of land. There were delays however in the disbursement of these payments by the IRBI and other financial institutions.

Market capers

The big boys of the **Bombay Stock Exchange** feel that M.J. Pherwani, once the darling of the bull operators, has turned into a bad 'un. Pherwani's suggestion that a National Stock Exchange be set up at Vashi, New Bombay, is a wishy-washy idea they aver. What's wrong with the Old Lady of Dalal Street, they ask indignantly. To press its case, the BSE has issued a report which, while endorsing Pherwani's plea for a paperless trading system, underscores the need to computerise its own operations. That's called action on a war footing.

Merchant bankers have at last accepted the fact that they require to police themselves. Fifty two out of the total of eighty four authorised merchant banks have signed up with and paid the membership fees to the **Association Of Merchant Bankers'of India**. The Securities and Exchange Board of India has given its blessings to this self-regulatory body.

Sale signs

The public sector **Indian Drugs & Pharmaceuticals Ltd** is on the selling block. The government is scouting around for a private sector buyer for this perennially loss making drug unit. Apart from pumping in cash (estimated at Rs.100 crore), the investor would have to take tough decisions on trimming down IDPL's 12,000-strong workforce.

After its deal with Del based Flex Industries f through for want of fo exchange, **Swedish M AB** has been looking f another match for its I associate, Wimco. The controlled Asian Hotel is the newest suitor and to buy Swedish Match' per cent stake in Wimc

as revealed in the Economic Survey of 1990-91. With the recent hoo-ha about our fast track approach, we seem to be painfully slow in tracking our own progress.
An employment target of 900 million man days has been fixed under the **Jawahar Rozgar Yojana** for the year 1991-92. A variety of projects will be undertaken, including social forestry works, conservation and irrigation works.

Last fortnight, about 2,500 Delhiites — mostly students and volunteers — marched for a cause: lowering the **high level of illiteracy** in the capital city. Over a third (35.3 per cent) of Delhi's total population of 93.75 lakh use their thumbs rather than a ball pen to sign on a dotted line. Citizens in other metros are a more educated lot. Literacy levels are

roughly the same — about 72 per cent in Bombay and Madras; in Calcutta it's about 61 per cent.

Dire straits

The government's sudden decision to **suspend all exports** of cotton yarn so that supply-starved handloom weavers got their fair share, drew hoots of protest from textile mill owners. They said the step is nothing short of committing harakiri as yarn quotas to the EEC will go unfulfilled and exports of 25 million kgs, worth 100 million dollars, will be lost. Unmoved by such pleas, the textile secretary said that the suspension would hold good until yarn prices which have been rising by two per cent every week stayed put at a reasonable level.

According to the All-India Skin & Hide Tanners and Merchants Association (AISHTMA) the export of finished leather has been **virtually paralysed**, as a result of a commerce ministry export control order that bans export of cow hide, calf coloured linings, goat and sheep lining suedes and other varieties of leather. Although the order is dated 5 August, it is only recently that it has begun to be implemented by customs. Finished leather forms 50 per cent of leather exports out of Madras.

Food Corporation of India's employees launched an agitation on 26 August on different issues including wage revision. They have now threatened to go on an indefinite nationwide strike come 7 October.

Export drives

Engineering exports should get a boost with the commerce ministry's recent directive that 22 categories of items will be entitled to the higher 40 per cent, as against the standard 30 per cent, rate of Eximscrips.

The newly-reconstituted **Board of Trade** is putting together a group to focus on joint ventures and overseas acquisitions. To give exports a leg-up the Board will devise market-specific strategies. It will consider setting up mini clones at the state level too.

Exporters with a "satisfactory track record" can now maintain bank accounts in the **hard currency** (dollars or pounds) that they earn. This decision taken by the Reserve Bank of India should enable them to save on hedging costs against currency fluctuations and manage currency liability better. The RBI will also permit maintaining such accounts abroad, provided the overseas branches of public sector banks keep an eye on them.

Carnations and chrysanthemums should soon be blooming in Haryana.

Over 40 acres of land, including 20 acres under glass houses, have been earmarked for cultivation jointly by the Haryana Agro Industrial Corporation and Rockard Holding Pvt Ltd, in collaboration with the Dutch conglomerate Dalsem. This Rs.25-crore project is a **100 per cent export oriented** one.

Shutdowns

The government is considering **closing down** certain non-productive gold mines, according to the union minister of state for mines, Balram Singh Yadav. This is

because the cost of extracting gold at Rs.9,000 per tola exceeds the market value of Rs.5,000 per tola.

Copper shortage has compelled 80 per cent of the **copper consuming units** in Bangalore to shut down. Hindustan Copper Ltd, one of the two copper suppliers along with MMTC, decided this July to cut supplies down to 40 per cent of their entitlement upto September. This reduced supply has also been delayed by the company, causing hardship to copper consumers, especially to small scale industries in the South.

Stocktaking

The inter-ministerial committee on rail transport which has been trying to spot discrepancies between actual requirements and Planning Commission estimates, has asked major users — coal, power, steel — for their **estimated loading requirements** for the next 5 years. The Planning Commission has also been asked to give the proposed resource allocation and the freight targets for the eighth plan period.

Entry restrictions

The Bombay High Court has restrained the management of **Gammon India Ltd** from giving non-retiring status to a third of its board of directors. The appeal was filed by Elcano Investments, a Hong Kong-based company belonging to the Chhabria's, who continue to hold a 31 per cent stake in the company.

M.L. Fotedar, health and family welfare minister, has proposed that any person having **more than two children** should be debarred from an elected post. The minister hastened to clarify that the rule should be applicable with prospective, not retrospective effect.

When 13-year-old **Jaspreet Singh** decided to hang out at a skating rink in Virginia, Washington, the doorman

said " Hats off." The bewildered boy soon r that they meant his tu Jaspreet's plea that it a hat fell on obtuse ea issue, they said, was o safety. The boy's pare Sukhjit and Kitty Sing filed a complaint with Fairfax County Huma Rights Commission.

Secret plots

Five Bombay-based **diamond merchants** v lured to the capital by mysterious conman on pretext of doing busine an Italian company. Th have been missing ever Diamond industry spokesmen said they w shellshocked by the abduction. The Central Bureau of Investigation launched a country-wid search.

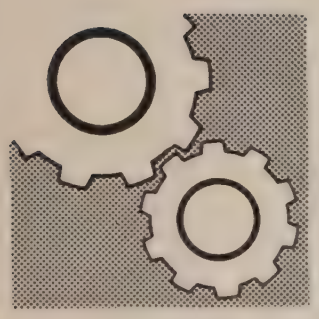
LANDMARKS

Awarded, the K.P. Goenka memorial award for environment, to the Deccan Development Society of Zaheerabad taluka, Medak district, AP. Instituted in 1983 by Asian Cables Corporation, the R.P. Goenka company, the award is given annually to an individual or institution for its contribution in the field of environment and ecology. DDS provides employment to over 2,000 women spread over 40 villages. The award was presented by B.G. Rathore, president, Phelps Dodge Industries, US, at a ceremony in Bombay.

Appointed, eminent educationist G. Ram Reddy as chairman of the University Grants Commission. Reddy succeeds Manmohan Singh, who has relinquished the office following his appointment as Union finance minister.

Appointed, Bharitya Janata Party leader Atal Behari Vajpayee as chairman of the committee on Public Accounts in Parliament; A.R. Antulay (Congress I) as chairman of the committee on public undertakings.

Recovering, N. Vaghul, 55, chairman and managing director of the Industrial Credit and Investment Corporation of India, after emergency heart bypass surgery at Apollo hospital in Madras.



Recovering, former prime minister Morarji Desai, 96, after surgery for a hip fracture at Bombay Hospital. He suffered a fall in the bathroom of his south Bombay residence.

Passed, in parliament, the cont versial Places of Worship Bill seek to maintain the status quo of r gious places as on 15 August 1947 the midst of a walkout staged by members. The party reacted in same manner to two other bills int duced in the Lok Sabha to strengt panchayats and municipalities.

Passed, a special protection bill the Rajya Sabha that provides se rity to prime ministers and their fa lies as well as former prime minist for a period of five years. Meanwh chief ministers are sore over Union home ministry's move to wi draw the national security gua cover accorded to them.

Relinquished, charge by C. Khosla, member (traffic) Railw Board, ministry of railways, who proceeding to Botswana as a gene manager of the Botswana Railwa M.V. Srinivasan, general manag Western Railway, will take place.

SUBSTANCE OVER SIZE

Which Merchant Banker would you prefer — the one you consider big or the one who considers you big? **T**he one who impresses you with size or the one who overwhelms you with substance?

Like what Indbank Merchant Banking Services did for the public sector Indian Railway Finance Corporation Limited. **F**rom formation, drafting of Memorandum & Articles of Association to handling the successive Bond Issues, Indbank has assisted in mobilising over Rs. 3000 crores. **D**emonstrating the power of substance over size. **A**s it has done in handling over 100 other issues. **F**or entrepreneurs as well as established giants. **M**aiden ventures to mega issues.

So the real virtue in choosing Indbank Merchant Banking Services over others, is that you don't choose between substance and size. You choose both.

Indbank

How to send your fragile cargo without subjecting it to this kind of abuse.

Cracks! Chipped pieces! Scratches! Truly cargo abuse is an ugly sight. Especially when it's your expensive and fragile equipment that could be at the receiving end.

Now GATI desk-to-desk cargo service takes the anxiety out of sending fragile time sensitive cargo. Because there are special containers to ensure there's no damage in transit. And GATI's All Risk Cover protects your cargo against any contingency.

Delivers desk-to-desk with one call: What's more, just pick up the phone and call. And GATI picks up your cargo, rushes through distances and delivers bang on time. Saving you the bother of dropping and collecting your consignments.

Your money back if we're late: GATI has standby modes of transport to take care of delays to ensure your consignments reach on time. Which makes us so sure of meeting delivery schedules that we're prepared to offer a Money Back Guarantee on a late delivery. Does anyone else offer this?.

So call GATI. Especially for medium-sized packages. Which means individual packages should not exceed 40 kgs. or 12 cubic feet in volume.

L.C. SINGH

When Tata Consultancy Services launched its new business accounting package, E-X, it went all the way. The presentation, combining audio-visual techniques with theatre, successfully sold the features of the package, targeted at the non-corporate market.

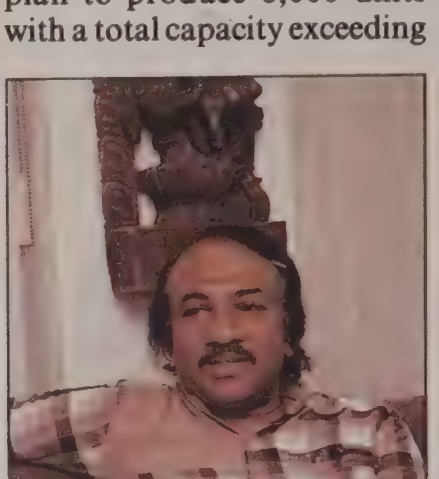
Project manager L.C. Singh, was secretive when he talked to the press about the

costs of developing this package. But, he was more forthright when he talked about what he expected from it. Says he, "If it doesn't become the industry standard, then we will have failed."

The package has an affordable price tag of Rs.6,950. And this comes with a reassuring guarantee. If a user can find a similar package with even half the features of E-X, he can take home the TCS package free.

JAMES RYAN

Many years of rich experience accompany James Ryan, who has just joined as director general, International Crops Research Institute for the Semi-Arid Tropics, Hyderabad. ICRISAT is part of a group which has 16 centres worldwide. Ryan was previously deputy director of the Australian Centre for International Agricultural Research, Canberra.



An agricultural economist, he was at ICRISAT during 1974-83, working on village and household economies, technological change and agricultural policies in the semi-arid tropics. In 1974, he was invited by the Ford Foundation to be a member of an expert study team to review oilseeds research in India.

Taking over the new assignment, he says, "I am optimistic that the various stakeholders in ICRISAT, including national donors and programmes, will continue to regard the centre as an essential ingredient in their agricultural R&D activities in the developing countries."

V. RAMAKRISHNAN

The Albukadir group, owned by Abdul Rehman Bukhadar of Sharjah Cricket fame, has invited the Madras-based Pentafour Products Ltd to set up a joint venture project in Dubai and Sharjah to manufacture a full range of air-conditioners, including a central air-conditioning system. V. Ramakrishnan, vice-chairman and managing director of PPL, recently signed an MoU with this group.

Under the arrangement, PPL will be exporting technology and also deputing a project team for setting up the company. Albukadir will own 51 per cent of the equity and the remaining will be with PPL. Says Ramakrishnan, "Before the summer of 1992 is out, we plan to produce 6,000 units with a total capacity exceeding

55,000 tonnes. There is a market for 90,000 units per year." According to him, the project will provide his company access to global markets, especially for products like automobile and train air-conditioning systems which are in great demand.

RESHNA HODIWALLA

She gave up her job in Walchandnagar Industries to start an import-export consultancy service. Reshna Hodiwalla soon realised that leather exports held great potential, and in June 1990 she set up Ariano Eleganza. By March 1991,

ounces helped it survive. Ever since, "innovation, feistiness and plain hard work", according to Pottasch, has kept Pepsi's advertising going, just that step ahead of Coke.

Their sixties' campaigns introduced a new genre of lifestyle advertising where the focus shifted from product to consumers. How well it has sold is reflected in rival Coke's recent decision to sign on Creative Artists Agency, a Hollywood talent agency, as its global media adviser.

LORING KNOBLAUCH

Recently in India to launch Tata Honeywell's automation systems, Loring W. Knoblauch, president of Honeywell's Asia Pacific region, was all praise for the performance of the joint venture.

Automation systems are used in buildings where the environment system needs precise controlling. Buildings such as hospitals, hotels, semiconductor manufacturers and food processing units are some areas which use these systems. A detailed survey establishes the market for this line of business to be in the region of Rs.10 to 20 crore.

Honeywell has a number of ventures in several countries, but Knoblauch singles out Tata Honeywell. Says he, "It is the most successful venture we have around the world. I honestly believe that Tata Honeywell serves as a model on how joint ventures should operate."

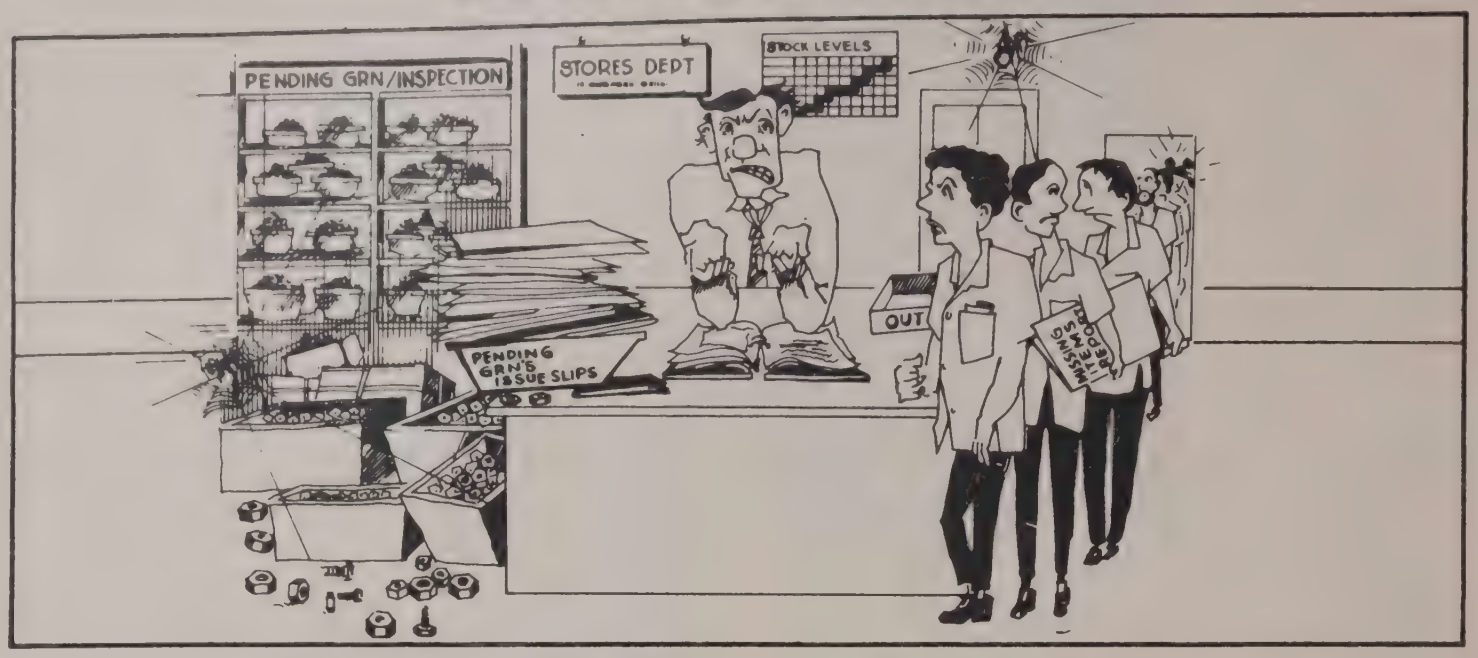
R.G. MILLER

"Never allow yourself to be in a position where the insurer knows more about the risks of your business than you do,"

says R.G. Miller, executive director of the Association of Risk and Insurance Managers in Commerce, London. He was in the country to present a paper at a risk management seminar arranged by the Indian Institute of Insurance and Risk Management in Bombay.

Miller spoke in detail about the situation in Britain where, unlike India, insurance companies are privately owned. According to him recording incidents, especially on the shop floor, is the best way of identifying a risk.

RAY SIMKINS



A 75-year-old Rs. 8-crore operation is bad news. Particularly, if it concerns the $600 million multinational Getz Bros & Co, which, since 1981 is a member of the Marmon Group of Companies — a $4 billion US-based international complex of more than 60 manufacturing and service

companies. But the dormant Muller & Phipps (India) Ltd, involved in the manufacture and trading of consumer products like Cuticura talcum powder, has been faced with peculiar problems.

"We ran a very good business in India at one stage," laments Ray Simkins, president of Muller & Phipps and senior vice-president, The Getz Corporation. "But the steep excise duties killed our manufacturing and trading activities." Confronted with this problem, M&P began a refocusing exercise which began with the retrenchment of two-thirds of its staff. "Now we are considering a total shift towards sourcing products out of India. We are intent on building our India operations, and if exports be the answer, it should be fine," says Simkins.

N PEPPER

aking a pounding

rld trade has never been overly ond of commodity agreements. ss the failures to work out pacts pper, bauxite, cotton and tea and, recently, the collapse of the coffee ocoa agreements. Hardly surprisherefore that the International Pepommunity — a 19-year old Third d grouping of India, Indonesia, l and Malaysia — could not agree common minimum export price for pepper, when it met at Kochi tly.

ntage short-lived. Some of the reg unhappiness disappeared soon when the rupee was devalued and n exporters could sell at the comve price of around 70 cents per d, compared to 95 cents in the days

n pepper is fast losing its competitive edge

e devaluation. But their smiles were -lived, as this advantage lasted for week. The other IPC members bid a goodbye to all semblance of camarie, as they scrambled to cut their prices.

azil began quoting between 58 and nts, Indonesia and Malaysia bet- 60 and 62 cents. Indian exporters thus forced to cut their prices first cents, then to 65 cents and finally to ents by mid-August. The small rs outside the IPC, notably Vietnam Thailand, added their bit to keep s down.

uch of the advantage from devaluawas negated almost at once by the t in domestic prices. Before devaluaone quintal of pepper fetched Rs.3,625 at Kochi, but afterwards the price rose to Rs.3,725. Though the price was subsequently driven down to Rs.3,550 by the lukewarm response from foreign buyers, the damage had already been done.

With Brazil offering its pepper for as low as 49 cents a pound "bringing down the whole roof", as one observer remarked, Indian exporters are taking a pounding. Brazilian production this year was 35,000 tonnes (against 45-60,000 tonnes of Indian crop and a total world demand of 120,000 tonnes). But some observers feel that at these prices, Brazilian farmers will begin to neglect their crops, causing a decline in Brazil's pepper output next year.

Such negative hopes may be comforting to Indian exporters, but Brazil has proved to be far too aggressive to allow for complacency, preferring to go its own defiant way. Significantly, Brazil did not participate in the recent IPC meet at Kochi. For that matter, it was never keen on joining the community and had to be wooed for eight years before it became a member.

The Russian effect. As if the Brazilian challenge was not unsettling enough, along comes the turmoil in the USSR. Russia — the erstwhile entity which used to stand for the entire union — has always been a major buyer. Indian exporters were banking on the Russians to buy an additional 5,000 tonnes over their quota of 12,500 tonnes, as they normally do each year during October. This, speculate Kochi's traders, would push down domestic prices and give Indian pepper a competitive edge once more. But with the current messy state of affairs in the USSR, speculation is fast turning to fear: if the Russians don't buy more, will Indian pepper exports dip to new lows?

That question only underscores what India needs to do to remain competitive in the world market — raise productivity and lower the unit cost of production.

■ K.G. KUMAR

IUF

HLL overreacts

The regional conference of the Geneva-based International Union of Food and Allied Workers' Associations which was held recently in Bombay, attracted far more attention than it otherwise would have, thanks to a rather intemperate press note by Hindustan Lever Ltd.

The conference focused on the functioning of Unilever in South Asia, with members from various Lever unions from all over the region participating. What made it controversial was the HLL allegation that the idea of the meeting was to draw up an action plan aimed at disrupting HLL's normal working.

Pin: "nonsense"

Liberalisation fears. IUF is a worldwide body of trade unions representing workers in food and allied industries. Founded in 1920 by the merger of three international bodies, it has over 2.1 million members in 250 member unions spread over 90 countries. In its statement, HLL alleged that the meeting had been prompted by the liberalisation measures adopted by the Indian government, which had raised fears among the European and American unions about investments shifting and the eventual impact of this on employment in Europe. It also made the allegation that these unions now felt the that the only way they could protect jobs in their region was by disrupting industrial activity in India, thereby making it an unreliable export base.

IUF regional secretary Ma Lei Pin dismissed these allegations as "nonsensical and totally irresponsible." He stated that as an international workers' body,

IUF provided a forum for trade unions from all over the world to exchange ideas, compare notes and to try and arrive at solutions to common problems.

Presentations at the conference focused on the global strategy of Unilever of disposing of what the company thought to be non-core activities. According to Paul Elshof, a researcher from the Amsterdam-based Research Centre on Multinational Corporations, who has been researching Unilever activities over the last seven years, the £22.2 billion giant has since 1983 acquired 216 new companies and sold off 136 companies. Among the major acquisitions were Brooke Bond, Calvin Klein, Chesebrough Pond's, and Northern International Fragrances which has been renamed Quest International.

Large layoffs. These activities had resulted in a reduction in the total number of Unilever workers in Europe from 180,000 in 1990 to 114,000. For the years 1991-93, Unilever had earmarked $320 million as payment to the 5,000 to 6,000 more employees it planned to lay off from its European operations, Elshof said.

Another aspect of the Unilever strategy was the restructuring of the management which had resulted in increasing centralisation of decision-making power with the division co-ordinators based in London and Rotterdam. Devised to give the company larger flexibility in the world market, the strategy had resulted in national level managers having very limited say.

"Labour practices are specific to social environments. Adopting a labour policy which has proved to be the best, say in the Unilever detergent plant in North America in an Indian environment, has a tremendous negative impact on labour," Elshof said.

General secretary of the Hindustan Lever Employees Union Bennet Decosta claimed that 14 per cent of HLL's soap production and 46 per cent of its detergent production was being subcontracted, while 500 workers in the Sewri unit of the plant were not being given any work.

Generalised strategy. According to Elshof, subcontracting was a part of a more generalised strategy by Unilever to reduce labour costs and get around strong labour unions.

A spokesman for Hindustan Lever denied that managers were becoming responsible to the co-ordinators and not the national management. "This is only true of Europe and that too only in view of the European integration in 1992. As far as India is concerned, Hindustan Lever Limited is a separate entity. There is no question of the managers reporting directly to some co-ordinators," he said.

Reacting to the allegation about subcontracting, the spokesman said, "These so-called subcontractors are actually units leased by the company or its subsidiaries."

Pin however is not convinced by these statements and says that the IUF plans to raise these and other related issues with the Unilever management and find a solution. "If the Unilever management refuses to discuss these issues, we will have to rethink and re-evaluate our strategy," he added.

■ RAJU KANE

INTRA-CITY COURIERS

Making both ends meet

Early each morning, 70-year-old S.G. Ghumatkar leaves his home in Thane, a Bombay suburb and makes the long trip into the city. There, he goes on his rounds, making deliveries all over town. He is a private courier mal liveries every day to houses and o the city and the suburbs — fron man Point to Virar and from V Terminus to Ambernath.

A love letter at noon or a bo champagne at midnight — these couriers deliver it all. Every da make dozens of deliveries and thi city business, populated by a h small operators, is quite flouri Common among their cargo are sh transfer certificates, cheques, invit and even cassettes. Says R D'souza of Pilot Couriers, "Wh don't normally make deliveries usual items, or follow odd timin make exceptions for clubs lik Belvedere."

The operations range from one shows like Ghumatkar's to small employing up to 30 people. The are irregular and may extend to pm. Express or urgent service is ch double. These operators manag flourish because most of the big gu not interested in the intra-city mark least not as it exists now.

Low margins. While the cost of an ation within the city is quite high, c expect a lower rate for intra-city eries, resulting in low margins, around 20 per cent. The margins fo domestic or international business a least 10 per cent higher. Says Sa Shah, managing director, Elbee Ser Ltd, "The dedicated manpower an frastructure necessary for the intra

High cost, low margins — intra-city couriers are a harassed lot

ess are not justified by the returns." -UPS does, however, deliver n the city only as an additional ser- or regular inter-city customers. In ase, the intra-city operations form ligible part of their overall business. her big operators like DHL World- Express, do not have any intra-city ations at all. According to Suresh ker, vice-president and country ager of DHL, "We have not examined iability of this market in depth, but ind of resources necessary to set up tra-city service could be more prof- y employed in other expansions."

d returns. Skypak Couriers Ltd ght differently and started an intra- division three years ago. Says chair- Dilip Kulkarni, "The business has been up to the anticipated mark due ie smaller operators, but we are do- well. And while the charges are low solute terms, the return is good in portion to the effort involved."

mall operators manage to make a it through low overheads and mar- . For example, Y. D'souza runs Pilot riers with the help of her four sons their home in Colaba. And many iers use public transport. Says A.D. iharan, of the City Parcel Service Pvt "Public transport is more economi- and brings down the overheads; it's y convenient too."

ften, the intra-city operators go be- d the conventional duties of cou- s. Functioning as a parallel peon ice, they undertake a large part of dispatch work for companies on a tract basis. At ICICI, for instance, dif- nt courier companies are employed ake care of delivering letters and doc- nts. Says P.A. Parikh, manager, ad- istration, "We prefer to use couriers use they are efficient, and there is per accountability."

ther innovations are also possible. ording to Pratap Nair, partner, tline Services, "We have now started verse service — picking up our cli- s' requirements and delivering it to n."

s long as the intra-city business con- es to be an unattractive option to the players, the small ones will benefit. ecially when all that is needed to get ng is a pair of feet. Says Ghumatkar, ntend to be around till 2001."

NRI FUNDS

The wooing game

Banks are assiduously rolling out the red carpet for NRIs. Professional, prompt service and innovative financial products are being promised. New consumer divisions and plushly furnished NRI centers are being opened. And a steady stream of glossy brochures, ads, magazines and gifts — like Citibank's Taj Mahal collection of audio and video cassettes — are heading the NRI way.

The earlier indifferent promotional efforts are being rectified with a vengeance. Particularly by the multinational banks like Standard Chartered, American Express, Bank of America and ANZ Grindlays which have recently begun pursuing the much-needed NRI deposits determinedly.

On 30 June 1991, NRI deposits totalled Rs.19,614 crore. But that's a fraction, less than 1 per cent, of the enormous potential which exists. The estimated 11 million non-resident Indian population reportedly has an annual investible surplus of $40-50 billion.

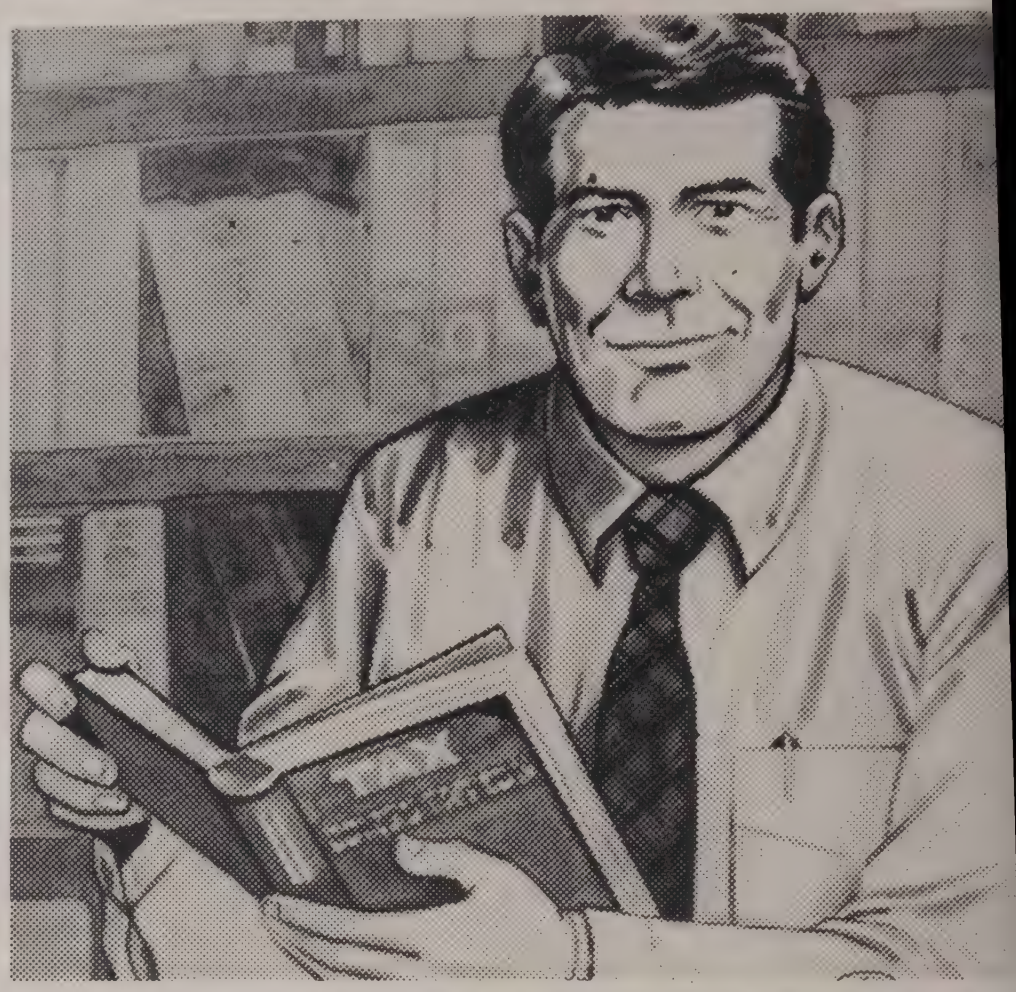
Good alternantive. Why are foreign banks eagerly tapping NRI deposits now? With a negligible local branch network, NRI deposits are a good alternative source of funds. And, as they have no statutory lending obligations, the multinational banks can use the money to circulate in the call money market where interest rates are shooting through the roof. The pursuit of the NRI makes very good business sense now, explains a banker.

That marketing aimed at the foreign-based Indian helps has been proved by Citibank. Within five years its NRI deposits collection far exceeds what many Indian banks have achieved in 20 years. Citibank today has 60,000 NRIS on its rolls who have collectively deposited over $1 billion.

Other banks are certainly finding a stronger marketing focus beneficial. Stanchart's personal banking division was started only in mid-1990, but is growing by 75-80 per cent annually, says Stanchart's NRI services manager, Sanjeev Gupta. NRI deposits totalled Rs.600 crore in 1991.

The audience needing special attention, says Citibank's vice president, NRI business, S. Khirwadkar, are NRIS in Europe and America. "As they have several investment options, India must be sold to them," he says. The savings-oriented Gulf NRIS don't need hard-sell as they have few investment options and most of them will eventually return to India.

By combining the ethnic and the sophisticated in their marketing strategies, banks are catering to both the Indianness of the NRIS and the standards they demand. "Grindlays even offers complex financial products like swap options for NRIS with investments over $20,000," says Naina Lal Kidwai, Grindlays' chief manager, NRI services.



To make NRIS identify themselves with its schemes, Bankam has given them an Indian brandname — Shubh Laabh. "We are the first bank, that too a multinational one," says Praveen Suri, chief of Bankam's non-resident business group, "to brand our NRI business."

Magazines are helping too. Bankam publishes *Home Word*, Grindlays has *IndiaScan*, Stanchart has *India News*, and nearly 70,000 copies of Citibank's *Citi-India* are mailed every quarter. These magazines, say bankers, aim at maintaining the NRIS' cultural links and appease fears by highlighting the positive economic and political developments in India, apart from serving as a regular, quarterly advertisement for the banks.

In addition, there are other forms of advertising through seminars, direct mailers, 30-second television spots on Indian programmes and ads in papers like the US-based *India Abroad* and *News India*. "In 1990," says State Bank of India's deputy general manager M.M. Mehta, "we released ads every week in Indian newspapers worldwide."

Several strategies. No bank, however, is concentrating on any one strategy, as each market demands a different mix. In the Middle East, television and press ads are considered more cost-effective. Direct mailers have best hit their mark in Singapore and Indonesia, while a combination of telemarketing, personal calls and mailers have helped in the US, says Khirwadkar. The multi-pronged approach becomes essential because, says Bank of India's chief manager, foreign business department, S. Bhaskaran.

"I studied all the schemes. And I chose this

MAXIMUM GAINS ON CAPITAL GAINS

Selling land, property, shares or jewellery?

Invest the sale proceeds in the best — Unit Trust's Capital Gains Scheme.

Highlights of the Scheme:

- 100% tax exemption from Capital Gains tax under Section 54 E of the Income Tax Act, 1961.
- Income Tax exemption up to Rs. 13,000 under Section 80 L of the Income Tax Act, 1961.
- The minimum investment under the Scheme is 500 Units and in multiples of 10 Units thereafter.
- Dividends are declared in June every year.
- Transfer or pledge of Units is not allowed.
- There is no repurchase of Units, for a period of 3 years.
- The scheme is open to all individuals (including minors), HUF, companies, corporations, trusts and partnership firms.

Growing Returns:

Year	Dividend
1988-89	9.70%
1989-90	9.90%
1990-91	10.25%

Bank of America: multi-pronged strategy

annot give undue publicity or ac-canvas our schemes overseas as lo-vs are strict. NRI deposits become empt both here and abroad. No n government really approves of

a counterpoint, banks have er ace. Knowing the difficulties of ting financial services to NRIs scat-worldwide, branch networks in and abroad are being beefed up. ally, multinational banks are le-ng both their international name heir parents' infrastructural facili-ndia desks are springing up even in ike Singapore and Sydney.

ough they cannot match the multi-nals' global branch network, the n banks do have a major asset too eir vast local network. Especially Kerala and Ahmedabad branches t substantial forex deposits as NRIs originate from here.

Indian banks lose out on another — services. Even Kidwai admits, NRI is not an easy market to service, the different time zones, currencies egulatory problems." And while n banks have greater funds, flex-and hi-tech telecom systems to re-l faster, Indian banks are hampered by red tape and cost considerations.

Indeed, cost is an important factor even in the marketing effort under way but bankers are tight-lipped on expenditure. All that G. Shekhar, director marketing, NRI business, Amex, says is: "To break even, the promotional budget should be 15 per cent of gross receipts." Hopefully, if the market expands following a new incentives package from the government, the bankers' current investment in wooing NRIs could pay off within a year.

COMPTOMETERS

Bowing out

Even as the trade unions find it difficult to come to terms with the computer, offices across the country are witnessing the decline and unceremonious demise of the first computer in Indian corporate history, the comptometer. A one-time indispensable aid to the boxwallah accountant, today the comptometer may be seen only in offices that have not modernised enough.

The comptometer is a mechanical computer often mistaken for a mere adding machine. But the machine is infinitely more versatile. It can handle multiplications and divisions upto 12 digits or decimal places. Bijon Bhattacharya, an operator at the almost defunct Oriental Gas Supply Company, Calcutta, demonstrated the use of the machine. He added up a ledger page of 16 columns, and 12 rows of three to six-digit figures, including two decimal places, in one minute and forty seconds. Bhattacharya says he can routinely handle 400 such ledger pages a day and that he had done operations research projects for Britannia and Metal Box, solving complex calculations on the comptometer.

Dying out. Tushar Naha, the doyen of the Comptometer Operators Cooperative, says, "The comptometer scores over every other system except the computer. A completely computerised system is cheaper and quicker. But in a partially computerised operation, as is the case in even the best of Indian companies, the comptometer is cheaper by a factor of 100 and quicker by a factor of a 1000."

Naha, who is also the president of the Comptomechanics Cooperative Industrial Society Ltd which services machines in over 250 firms in Calcutta, says, "This trade is dying. Progressive managements have been retraining operators into computer operators. Ever since 1985, when Rajiv Gandhi began his computer revolution, the number of operators we hire out to companies has halved from over 200 a month to about 110 today." Naha's cooperative has a panel of 100-odd freelance operators who are farmed out to companies on contract. Wages vary from Rs.30 a day in government companies to Rs.150 a day in private corporations. Machine hire charges vary between Rs.200 a month to Rs.600 a month.

Interestingly, in some offices the comptometer is utilised side by side with the computer. The West Bengal Higher Secondary Board of Education is one such. This year it was the comptometer working in tandem with the computer which prepared the examination results.

A comptometer: last days

MORE THAN JUST

Elefur

WORKING PAR

ELEFUR

It doesn't just sit there, it does something

Sit on an Elefur chair. In a few minutes you may give a standing ovation. Because the first thing it assures you is seating comfort. Something that merely dead wood and bent steel put together cannot.

Because Elefur believes that years from now the only deadwood in your office should not be furniture, we use the best of men, materials and machines to put a chair together. The steel undergoes anti-rust treatment. All the parts are degreased, pickled and Zinc Phosphated. The basic red oxide primer is followed by several coats of alkyd-amino paints. A scratch-resistant finish ensured by applying the paint electrostatically. And finally, baked at controlled temperature.

As you can see, we do a lot of things to ensure an Elefur chair does more than just sit there. A chair that's alive to your requirements. Like the rest of the furniture we make : Cabinets, Cupboards, Tables ... that are today working as hard as those who use them across the country.

Discover Elefur today. Furniture that's, well, not just part of the office furniture.

uters instead."

■ SUDIPT DUTTA

R INDUSTRY

g times ahead AP

ems the sugar industry in Andhra
desh has turned the corner at last.
is apparent from this year's best
financial performance by the 33
factories in all three sectors (pub-
rivate and co-operative). The pri-
sector Nizam Sugar Factory, for
ple, earned a net profit of Rs.4
as against Rs.2 crore for the pre-
year.

e most surprising performance
from the co-operative sector where
t of 18 factories earned a collective
t of Rs.6 crore when last year only
factories had shown positive results.
considerable increase in the pro-
on of sugar, improvement in recov-
ate and significant improvement in
financial performance, the mood in
ugar industry in the state is obvi-
y upbeat.

active prices. In all, 7.3 million
es of sugar cane, grown on an area
57,000 hectares, was crushed in 32
ories. The area under cultivation is
dually increasing since more and
e farmers are going in for this crop
acted by the good price and other in-
ives offered by the state and Central
ernments. Last year, the Centre had
d a minimum support price for sugar
e at Rs.230 per tonne. This was increased by the state government to Rs.285 per tonne; after inclusion of several incentives, the effective MSP worked out to a very attractive Rs.352 per tonne.

Apart from a good monsoon and attractive incentives, other factors too played a crucial role in the improved performance, particularly by the co-operative sector. According to industry watchers, a large part of the credit goes to Mohammed Jani, the state minister for sugar industry exports. Last year, he had made it a point to visit each sugar factory at least twice to keep the managements on their toes. "If somebody from the top takes an active interest in their work, then nobody will take the risk of being lazy and lax," is Jani's reasoning. Jani is optimistic about the future prospects of the sugar industry in Andhra Pradesh: "We should soon be in a position to cater to the needs of other states to a much larger extent than now."

According to M.M.G. Naidu, director (sugar) and state cane commissioner, the average capacity utilisation is normally about 93 per cent in all the factories. But during the last season it touched almost 100 per cent. Hence there is need for expansion in existing plant as well as opening of new factories, he says. Work on six new factories, each costing Rs.35 crore, has already started. Two of them are in the co-operative sector and the remaining in the private. Incidentally, the two coming up will be the last in the co-operative sector since the government has taken a policy decision of not encouraging co-operative sugar factories in view of their chronic problems.

Massive expansion. Meanwhile, the existing factories in all three sectors are poised for a massive expansion which will nearly double their capacity. Consequently the crushing capacity of six co-operative units will go up to the extent of 2,500 tonnes per day. Two units of Nizam Sugar Factory are also being expanded whereas two small units in Vijayanagaram district are being scrapped as they have small and unviable capacities 600 and 850 tonnes a day. In their place a new plant with a capacity of 2,500 tonnes is coming up. The KCP Sugar Factory in Krishna district is expanding its capacity from 6,000 to 8,000 tonnes a day and Jayepur Sugars in West Godavari from 3,800 to 5,000 tonnes a day.

A good monsoon and attractive prices

Apart from sugar and jaggery, other related activities like processing of molasses, alcohol and bagasse are also flourishing. Nearly 400,000 tonnes of molasses is being produced at the moment. Each tonne of molasses gives 240 litres of domestic or industrial alcohol. This is supplied to 30 distilleries through the excise department.

The most important by-product, however, is bagasse. Till now this waste material was being used in the factories as fuel for the production of steam. But now it is being replaced by the power and coal fired water boiler as other, more beneficial uses have been found for bagasse in the paper industry. Since bagasse is very rich in cellulose, it is being utilised for pulp and paper board, corrugated board, and provides effective insulation against heat, cold and sound. Bagasse is also an excellent source of chemicals like formaldehyde, furfraldehyde and certain plastic materials.

According to commissioner Naidu, apart from the six factories which are coming up in the state, there is potential for at least ten more factories.

PRATISAAD

Making the right moves

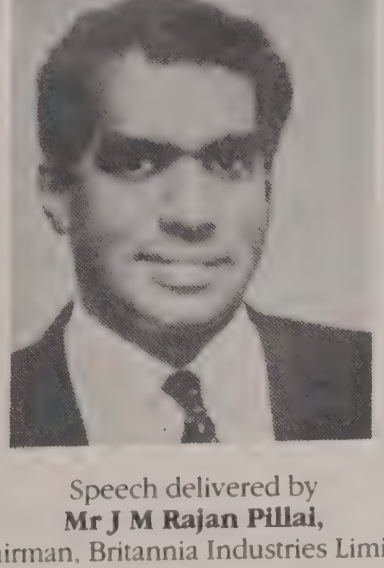
In 1990-91, the country's current account deficit increased to Rs.13,100 crore, as against Rs.10,391 crore in the previous year. This sharp increase can be attributed to the increase in petroleum imports from Rs.6,273 crore in 1989-90 to Rs.10,706 crore in 1990-91. There was also a decline in net invisible earnings, which were estimated at Rs.1,200 crore in 1990-91 — down by Rs.500 crore from the previous year. This was mainly due to reduced NRI remittances and a slowdown in travel and tourism. On the other hand, payments under investment income continued to rise due to higher interest payments on borrowings.

Even though in recent years India's exports have increased at a faster rate, the long-term performance is truly dismal. India's share of total world exports which was around 2 per cent in 1950-51 declined to 1 per cent in 1965 and has further declined to around 0.4 per cent since. Export growth suffered first after the second oil shock in 1979; but in the period 1985-86 to 1989-90 it picked up to a steady pace of around 15 per cent per annum. It is heartening to note that while exports of primary articles grew at 6 per cent per annum, that of manufactured products was up by 20 per cent per annum. This was mainly due to the greater incentives given for export purposes.

Little incentive

Hitherto, the protected Indian market gave little incentive for exports because the domestic market was protected and highly lucrative. In fact, it has been analysed that domestic profitability on total costs has been consistently high over the years while on the other hand export profitability (with incentives) has been negligible and even negative.

There is the urgent need now to build a system that encourages the growth of exports. For one, the trade regime — which is cumbersome and complex because of the multiplicity of administrative rules, regulations and exemptions — needs to be rationalised. Also, though a beginning has been made in simplifying the incentive structure, much more will have to be done so that the disadvantage of higher input costs is neutralised.



In the Indian context, as in other countries, there is a strong nexus between fiscal deficit and balance of payments. The reckless spending by the government has pushed up money supply which in turn has translated into an increased demand for imports. The government's decision to limit the fiscal deficit to 6.5 per cent of GDP should, in the medium term, have a positive impact on the current account.

Since bulk imports of essential items constitute nearly 50 per cent of total imports, the scope to reduce imports is limited. Also, imports are necessary if inflationary pressures are to be kept under control and industrial production not jeopardised. Therefore, the strategy has to be on increasing exports.

The medium-term outlook is not very encouraging. Even though the government has estimated that exports would be up by 29 per cent to Rs.42,000 crore in 1991-92, the chances are that exports may not exceed Rs.40,000 crore. Unless quick measures are taken, the competitive advantages thrown up by devaluation are quickly being eroded by inflation that is currently over 15 per cent per annum.

The government, on its part, will have to properly channelise the IMF loan to improve the competitive advantage of industry. Since this includes a change in attitudes, the process is a slow one. The government, albeit slowly, is making the right moves; it is now upto industry to respond.

■ ASPI CONTRACTOR

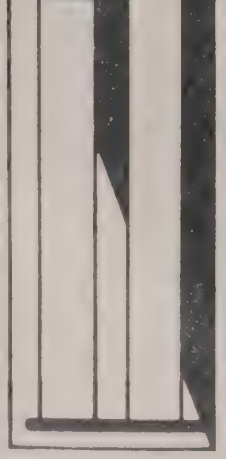
Speech delivered by
Mr J M Rajan Pillai,
Chairman, Britannia Industries Limited,
at the 72nd Annual General Meeting
held at Calcutta
on 25th September, 1991.

CHAIRMAN'S SPEECH

HIGHLIGHTS

- **The Company sustains a high growth rate.**
- **Dividend stepped up from 24% to 29%.**
- **A milestone in exports by being awarded the status of a Star Trading House.**
- **Company's Platinum Jubilee Year to witness a host of new products.**

Ladies & Gentlemen,



I am happy to welcome you once again to the Company's Annual General Meeting. The Annual Report for 1990 - 91 has been mailed to all of you and you would have had an opportunity of studying it in detail.

THE YEAR

The year ended 31st March, 1991 was yet another one of growth. The Company's sales grew to Rs.362.13 crores and profit before tax increased to Rs.16.50 crores. The Directors have recommended a final dividend of 17% which, together with the interim dividend of 12% announced earlier, aggregates to 29% for the year as against 24% paid for the previous year - an increase of over 20%.

The Bakery Division has further consolidated its market leadership. With the introduction of new brands, the Company is well represented in all segments of the market. The future augurs well for the Bakery business especially with the opening up of the rural markets.

The Company has been awarded the Star Trading House status by the Government of India for continuous excellence in exports. Only three other Companies have been accorded this signal honour.

The Annual Report for 1989-90 has been awarded the Silver Shield of the Institute of Chartered Accountants of India for the best presented accounts for the year 1989-90. We value this award as we look upon the Annual Report as the primary channel of communication with our Members.

THE ECONOMY

In May this year, 'The Economist' of London portrayed the Indian economy as a caged tiger and went on to make a strong case for freeing the tiger. I am happy that the new Government has started the difficult job of opening the cage doors. The New Industrial Policy, the Trade Policy, the Policy for Small Scale Industries and the Union Budget form a package of initiatives designed to put the Indian economy back on the rails and to prepare India to join the ranks of the world economic powers in the not too distant future. The abolition of many bureaucratic controls and the creation of an environment conducive to the inflow of foreign capital will lead to the country's industrial development and growth. The package of reforms is an expression of concern over the dismal foreign exchange position that is facing the country and provides avenues to improve the balance of payments.

I firmly believe that Indian industry can no longer grow, or even survive, in isolation and must go global; a closed economy is no longer relevant in India. The time has come for India to open its doors to foreign investment. Such investment is considered far more advantageous to the country than taking recourse to borrowing abroad, involving, as it would, interest and instalment repayment obligations.

India has passed through a traumatic twelve months. We have seen the fall of two Governments at the centre, the tragic assassination of Mr Rajiv Gandhi and violence and militarism in some parts of the country. Yet, through it all, we have completed a free election process and installed a new Gover democratic transition is most gra India stands out in the developing w political maturity.

The new Government has show tackle the political and economic facing the country. In the short te likely to face inflationary trends and of a changing system. This is inevitab long term results are well worth the ef tremendous task, the Government de support and co-operation from all o

Whilst the overall policy will go a in making Indian industry more co and will help to integrate India as a p global economy, there are a few are linked to our business which n Government's immediate attention. Th to the policy for the Bakery Industr Budget.

THE BAKERY INDUSTR

It is ironic that while the pa economic reforms will help boost the e the same package could spell disaste Bakery Industry. It is time that the Gov views the Bakery Industry as a s nutritious and hygienically package available at affordable prices to e poorest sections of society, both in th and rural areas.

I would not like to make an issu Government's policy in reserving the for the small scale sector; indeed I wou see the small bakeries manufacture pro a standard and quality which can compe market place. But, at the same time, **the large and medium scale units, w already in the Industry, should strangled.**

While the New Industrial Policy pr that, "all sectors of Industry, whethe medium or large, belonging to the public or co-operative sector, will be encou grow and improve on their past perfor the actual policy of the Government relating to the small scale sector provi existing large and medium scale u barred from effecting any expansion in c The production capacities of such u frozen at levels prevailing at the reservation and in some instances, whe were required to apply for a Ca Business licence, the licence was iss the basis of artificial norms such as annual production prior to a particular

From April 1978, when bread and were reserved for the small scale secto present day, the productive capacity and medium units has been pegged. same time, during this period, there ha steep and all round increase in input co as raw materials, wages, power and f While to some extent, cost increases

hrough price increases, there are extent of price increases because of s. Ultimately, cost increases can be only through achieving economies is is not possible where productive are artificially frozen. Existing oday, in duction, y were At the ; there centive ment in sation timately higher ty, better quality and lower prices.

ld like to make the following ns to the Government:

d medium scale units in areas for the small scale sector must be a natural growth in production each year. Such growth can be any macro economic indicator.

l scale manufacturers of biscuits and ter primarily to the lower end of the and do not have the capability of cturing premium varieties of biscuits. given the investment limit of cs in the small scale sector, it is not for such units to manufacture n varieties.

be prudent, therefore, to selectively ve the premium varieties of biscuits ciality breads and to allow existing id medium scale units in the Bakery y to manufacture such products any restriction in capacity.

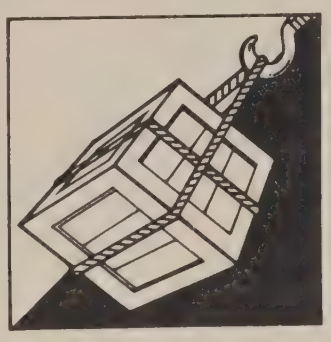
natural growth and selective de- on will not pose a threat to the ale sector as the two markets are exclusive.

ave already taken up this issue with the ent and hope that in the prevailing ent of pragmatism, the authorities will with sympathy and understanding to ems.

BUDGET

Budget proposals relating to excise ntain a grave omission as far as the ndustry is concerned. In order to give o the food processing and agro-based s, the Budget has exempted relatively products like milk powder, cheese, uces, jams and jellies from excise duty. gly, biscuits which are agro-based and re specifically to the lower income and the rural sector have not been d from excise duty. In fact, the excise iscuits has been increased from 10.5% to 11%.

I would like to place some facts for the consideration of the authorities:



- *90% of the raw materials used in the manufacture of biscuits are agro-based, viz. wheat flour, sugar and edible vegetable oils.*
- *Biscuits are the cheapest, most convenient, nutritious and hygienic of the processed foods.*
- *55% of biscuits in India are consumed in the rural areas. 37% of biscuits are consumed by income groups below Rs. 750 per month.*
- *Over 33% of biscuit production in the organised sector is by small scale units.*

On behalf of the Industry, I appeal to the Government to set right the injustice done by not exempting biscuits from excise duty.

Exports

The new Trade Policy and the instrument of the Exim Scrip will give a boost to India's export drive. However, the Budget proposal in regard to the amendment to Section 80 HHC of the Income - tax Act, 1961 will work in the opposite direction. The amendment seeks to withdraw the tax credit under the section in respect of traded goods, while continuing the exemption for manufactured goods.

I would like to go back to the original intention of this provision, which was to encourage large companies with international connections and a strong domestic business base to treat exports as a main line activity. That this intention was successful is evident in the story of our Company's success in exports - growing rapidly from a merchant exporter to a Star Trading House.

The development of exports in many countries has been achieved through trading houses which have the advantage of a solid financial backing and strong marketing support. A large trading house in India would be able to:

- *Use its international connections for developing export markets and procuring orders for a host of small scale manufacturers.*
- *Provide finance for purchase of raw materials and working capital to the small scale manufacturers for executing export orders.*
- *Work on minimal margins by passing on maximum profits to the small scale manufacturers while retaining only the tax benefits for themselves.*

I would urge the Government to encourage the growth of trading houses like ourselves who are involved in genuine export activity through appropriate tax reliefs.

THE TEAM

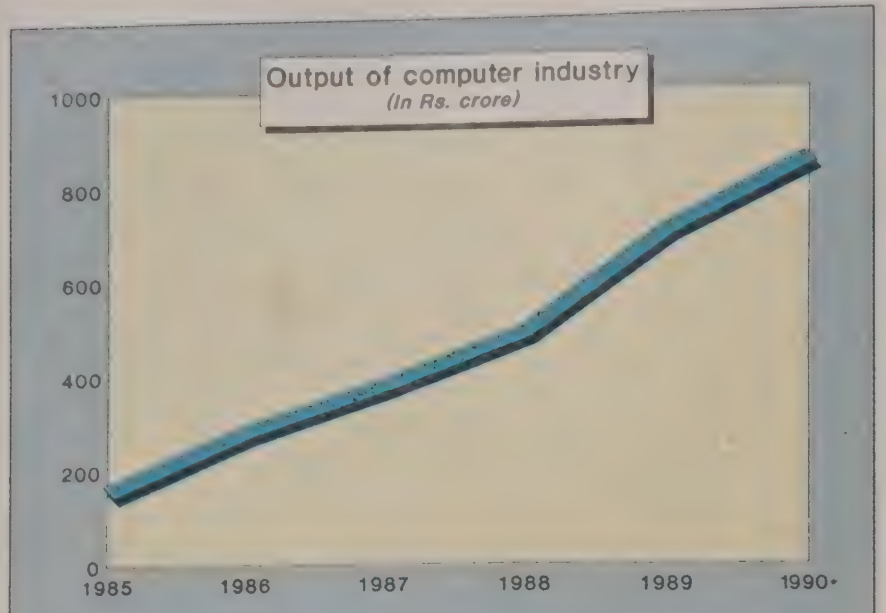
Owing to their other business commitments, Mr W G Dunnington, Jr. and Mr J E Willett have laid down office as Directors of the Company. Their advice and guidance over the years was of great value and the Board would like to place on record their sincere appreciation of the valuable contributions made by them. I would like you to join me in welcoming to the Board of Directors, Ms G N Pillai and Mr J R Gagrat who have been appointed in the vacancies of Mr Dunnington and Mr Willett. Ms Pillai is a Director of several Britannia Group Companies and Mr Gagrat is well known in legal and corporate circles. They bring with them a wealth of experience to the Board.

On your behalf, I would like to record our thanks and appreciation to the team of management, staff and workers ably led by Mr S K Alagh.

THE FUTURE

In two years, our Company will be reaching its 75th year. During this period, our various plans for diversification will move from the drawing board to reality. I expect to see in markets, both in India and abroad, a host of value added food products with the "Britannia" brand name. This, together with the growth in our traditional business will make our platinum jubilee year a fitting one.

Thank you very much for your presence this morning.



Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

BRITANNIA

Economic Indices

Computer production which was negligible in the early 1980s has emerged as a Rs.850-crore industry. About 100,000 computers were sold in 1989, of which 60 per cent were PCs, 25 per cent minis and 15 per cent main frames. In value terms the annual compound growth rate has been around 45 per cent.

Hardware accounted for nearly 50 per cent of the total sales revenue prisingly, software accounted for only 6 per cent. Over the next few industry analysts forecast that software will play an increasingly large

Wholesale price index: The wholesale price index of all commodities went up by a hefty 3.16 per cent during the month under review. In the case of primary articles the increase was nearly 5 per cent while for manufactured products it was 2.73 per cent.

(1981-82= 100)

At Shanthi Gears customer confidence nurtures growth.

Our Product range: Worm/Helical Gears and Gear Boxes, Geared Motors and Tailor-made Gear Boxes.

It is not surprising. Because customer confidence has resulted in increasing demand. And the only way to keep them confident is to grow. The result? Our turnover has grown six-fold in as many years; we are poised to double it.

No wonder that Shanthi Gears is the first choice of diverse industries like Textile, Cement, Rubber, Steel, Coal, Chemicals, Sugar, Paper, Pollution Control and Thermal Plants – among others.

India's opportunity

R RAHA

It would be petulant not to acknowledge the radical reforms that the new industrial policy represents. Pragmatism and the experience of Eastern Europe perhaps justify the caution that prevented greater change. Since the government's initiative will require industry's response, it is worth assessing what the apparent removal of the permit-licence raj actually means.

A primary objective of the new policy is claimed to be to attract foreign investment. Intentionally or otherwise, the arithmetic will have a limiting influence on the type of industry which can actually invest. Assuming a normal 2:1 debt-to-equity ratio and a foreign equity holding of 51 per cent, the extent of imported capital equipment thus permitted is only 17 per cent of the total project cost. Compare this with the 30 per cent of capital goods normally needed for high-technology areas, and it is clear that the advantage of this new regime can flow only to relatively low-technology areas.

Continuing obstruction

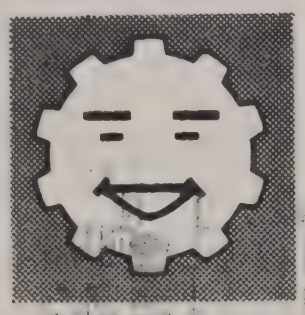
A second obstacle is the continuing obstruction in India to reasonable protection of intellectual property, namely enforceable patent rights. Any debate on this issue has tended to be sidetracked into socialistic philosophy, often a cover for the industrial lobby. As a consequence, it has failed to address the market truth that corporations will not risk the fruits of expensive research to wanton piracy.

Associated discrimination exists in areas like the policy on seeds, where foreign companies are forced to go through a process of certification which takes several years and testing, which in effect means licensing is under the control of the government.

Indian industry also has to be responsible. Relaxation on monopolies should encourage economies of scale in both plant size and business mergers. If, instead, this becomes synonymous with profiteering and price fixation, the critics' suspicions will have been justified. But rules on restrictive practices must apply to the public and private sectors alike. If our final product is expected to be cost-competitive in world markets, it cannot have the inbuilt handicap of a monopolistic raw material price or predatory pricing.

Just as our products need to compete in global markets, so let us recognise that India is going to have to compete for investment against alternatives of the Asia-Pacific, Eastern Europe and the likely upswing in the European and North American economies. Those who still believe in acts of faith and patient money are ignoring the fact that only a gambler would risk a long-term return on investment when an economy is undergoing such a massive upheaval as India's is.

The corporations most likely to invest in the first instance are the ones which are already here, have assets and so have a stake in India's future. The Indian government would be well advised to recognise that only if the companies reinvest will others be encouraged to bring in fresh investment.



If such reinvestment is to take place, the Indian government must support the need to reshape existing portfolios, allow the exit of unprofitable businesses so that managerial attention can be focused on newer technologies and emerging markets. Global competitiveness can happen only if we promote higher productivity of labour and capital, greater awareness of quality and customer value.

There are many factors in India's favour. Unlike the communist countries, we have a flourishing stockmarket and the foundations of a market economy. We have professional managers and established institutes to provide both technical and managerial resources. The Indian businessman competes favourably with the best. Removal of protective trade barriers will certainly be painful initially but there is no reason to presuppose that we cannot succeed.

Provided we mean it. The doubts about India's sincerity are centred around our commitment to reform. The financial crisis has left us with little option but to introduce some of these measures. But are the politician and the bureaucrat sufficiently convinced to follow through? Pandering to populist sentiments as recently happened in the case of the fertiliser subsidy suggests that the politican is still prepared to squander the national interest to fulfil his own. The bureaucrat still has a chance. If in the implementation of the new policies he follows the spirit of the reform rather than the minutae of residual obstructive legislation, India can move ahead in the critical phase of the next three years. If not, there will be no reform but disaster.

e author is executive ector of ICI India , based in Delhi

EFFICIENCY OVER EXPEDIENCY

Which Merchant Banker would you prefer — the one who merely offers you convenience or the one who backs it up with competence as well? The one who sees comfort in safety or the one who sees success in risk?

Like what Indbank Merchant Banking Services saw in NEPC-MICON's proposal for wind turbine engines. A venture in the field of non-conventional energy. The public issue, handled by Indbank, was oversubscribed more than 45 times. Or take the very first issue it handled – for UCAL Fuel Systems. Solely managed by Indbank, the issue was oversubscribed 37 times. You'll find this efficiency reflected in over 100 other issues handled by Indbank. For entrepreneurs as well as established giants. Maiden ventures to mega issues.

So the real virtue in choosing Indbank Merchant Banking Services over others, is that you don't choose between efficiency and expediency. You choose both.

war footing

ever thought that bureaucrats ld have little work to do after the re- al of controls obviously did not take account the ability of politicians political parties in power to create k. Almost the entire Indian bureau- y is working on a war footing to rn out a report on the achievements he first 100 days of the Narasimha government. But, says a senior gov- ment official, "many ministries have been able to write the first word."

ajpayee's golden affe

ontroversial proposal on gold de- its suggested by the BJP supremo Atal

hari Vajpayee is attracting consider- le flak in the capital, even from within e BJP. Apparently, the scheme was sold Vajpayee by the publisher of the now funct magazine *Imprint* and a stable less well known specialist magazines, V. Pandit, who though a Catholic, is a sympathiser.

The proposal, which Vajpayee ex- ounded in his personal capacity and hich he intends to introduce in the Lok bha as a private member's bill, envis- ages the floating of gold bonds. Gold deposited under the scheme would be exchanged through a variety of avenues. This includes encashment at the price of gold at the then prevailing international price. Alternatively, it could be exchanged for land from the Central government pool. Finally, the bonds could be swapped for shares in Indian private-sector companies held by the financial institutions.

The scheme is evoking sharp comments because, feel analysts, it would allow smugglers and other racketeers to become real estate owners and take over companies by the back door.

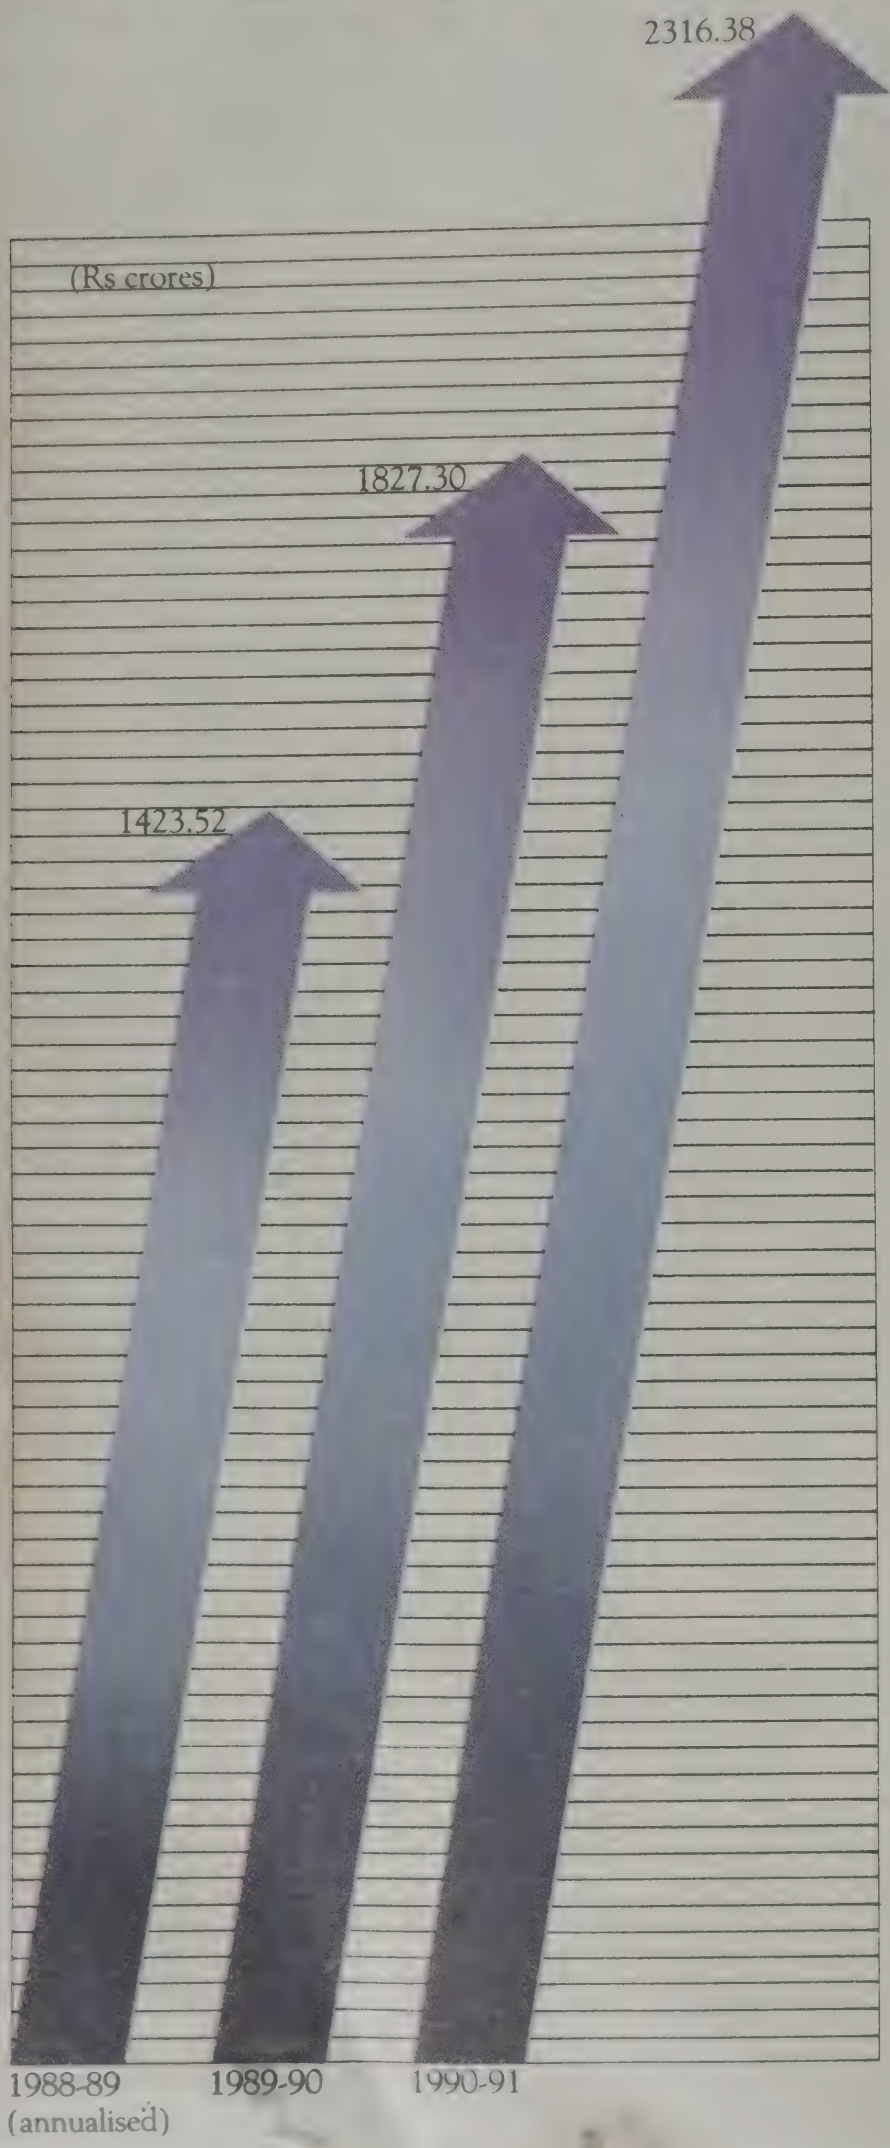
Planning seesaw

The eighties saw the initiative for economic policy shifting from Yojana Bhavan, the home of the Planning Commission, to the prime minister's secretariat. The nineties have seen that initiative shift from there to the finance ministry. Last fortnight, however, the Planning Commission emerged briefly from Manmohan Singh's shadow after its first full meeting chaired by prime minister Narasimha Rao. Deputy chairman Pranab Mukherji discussed the new role of the commission in an environment where the emphasis is progressively shifting to the market.

"Indicative planning is what we will concentrate upon," said Mukherji. He then went on to put forth two alternative growth prospects for the economy — one, where a 5.6 per cent growth rate would be sought and another, a more ambitious 6 per cent. The full commission meeting endorsed the former.

Growth rates in any case will be the least of the economy's concerns over the next three years. Issues such as public-sector reform, the exit policy and centre-state relations will be the chief concerns. Only public-sector reform has been entrusted to Yojana Bhavan. It will undertake a detailed scrutiny both sectorwise and, if necessary, unitwise to improve the profitability of public-sector undertakings. Obviously, the government is still uncertain what it should do about the companies it owns.

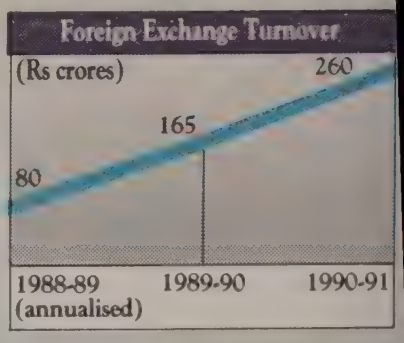
Again, the three-member committee, set up to reconsider the revised Gadgil formula on centre-state relations, will have finance minister Manmohan Singh as its chairman (the others being Pranab Mukherji and C. Rangarajan). The exit policy will more or less be the preserve of the finance ministry, considering that Pranab Mukherji said nothing about it. The national fund set up to retrain retrenched workers will be entirely managed by the finance ministry.



Manmohan foxed

In this year's Central budget, the government announced that the tax deduction at source scheme would be applicable to payment of commission on sale of lottery tickets by state lottery agencies. If finance minister Manmohan Singh thought he would add some revenue through this route, he is mistaken. He will not get even a single paisa. The reason is simple.

State lottery agencies selling a large number of tickets realised that if they had to deduct the tax on commission at source, they would have to hire additional staff. To get over this problem all of them are now representing that they are not paying any commission to lottery ticket wholesalers. Rather the whole transaction is shown as purchase and sale of goods.



ITC turnover crosses Rs 2000 crores.

1990-91 Highlights

- 3:5 Bonus Shares recommended (1:1 Bonus Share issue in 1989).
- 54% Interim Dividend recommended, highest ever by ITC.

The year ended 31st March, 1991, has seen ITC record growth in every area. Turnover at Rs 2316.38 crores was 27% higher than the previous year's (Rs 1827.30 crores). Profits after tax grew by Rs 24.90 crores to Rs 77.52 crores. And foreign exchange turnover of Rs 260 crores was 58% more than 1989-90's Rs 165 crores.

Indeed, earnings from international businesses accounted for as much as 25% of net income (Rs 1014.46 crores). And, with inflow being almost ten times the outflow, ITC emerged as the largest earner of foreign exchange in the private sector.

Today, an increasing number of value-added products and services from ITC carry the 'Made in India' mark with pride to foreign markets. And strategically-located offices worldwide are spearheading ITC's mission as the Indian International.

New horizons, new hopes.

THE BUSINESS INDIA
SUPER
100

The best and th

Fiscal 1990-91 will definitely go down in India's history as the year in which the country experienced some of its most turbulent times. Caste and religion-related riots, the violence of secessionists and months of political uncertainty are hardly the backdrop against which an economy does well. But despite these distractions, the Indian private corporate sector did exceedingly well during the year. This was one of the more interesting findings encountered while we were compiling the second annual *Business India* Super 100 list of India's most outstanding private companies. As last year, the best and the brightest of the corporate sector have been ranked using four parameters — sales, net profits, market capitalisation and net fixed assets.

The task was not very easy considering that even six months after the year-ending it is not easy to procure audited annual reports of companies. In fact, many companies are nowhere near having their annual reports printed and we have been constrained to use their last year's figures.

There is also the lack of a perfect indicator of performance to contend with. Investors might think market price and, hence, market capitalisation is a good measure, though a better social measure of performance, as measured by contribution to the national product, would be a company's sales. Fixed assets are a good measure for the capital intensive sectors but do not take into account the age of the assets or the effects of inflation. Also, the growing services sector will always appear assets-short (though it will be long on human resources) and is better measured by profits.

While staying with last year's measure for the Super 100 ranking, we have added a new dimension of labour productivity as a separate indicator. Capital was artificially cheap through the eighties and companies rushe acquire assets. Now, with liberalis capital is properly priced and the f belongs to those companies that ca the best out of their human assets.

A measure of the phenomenal n of corporate growth is that last y "cut-off" of a Rs.150-crore turnove inclusion in the rankings no lo makes sense. This year we have cho Rs.200-crore turnover as the quali mark; even then, the number of c panies in the list is 129. After compa were ranked in each of four separate egories — in sales, in profits, in a and in market capitalisation — the of these ranks determined their posi in the *Business India* Super 100 list.

No surprises about the overall win Despite losing out to stablemate Engineering (Telco) in the sales r Tata Steel (Tisco) retains its position.

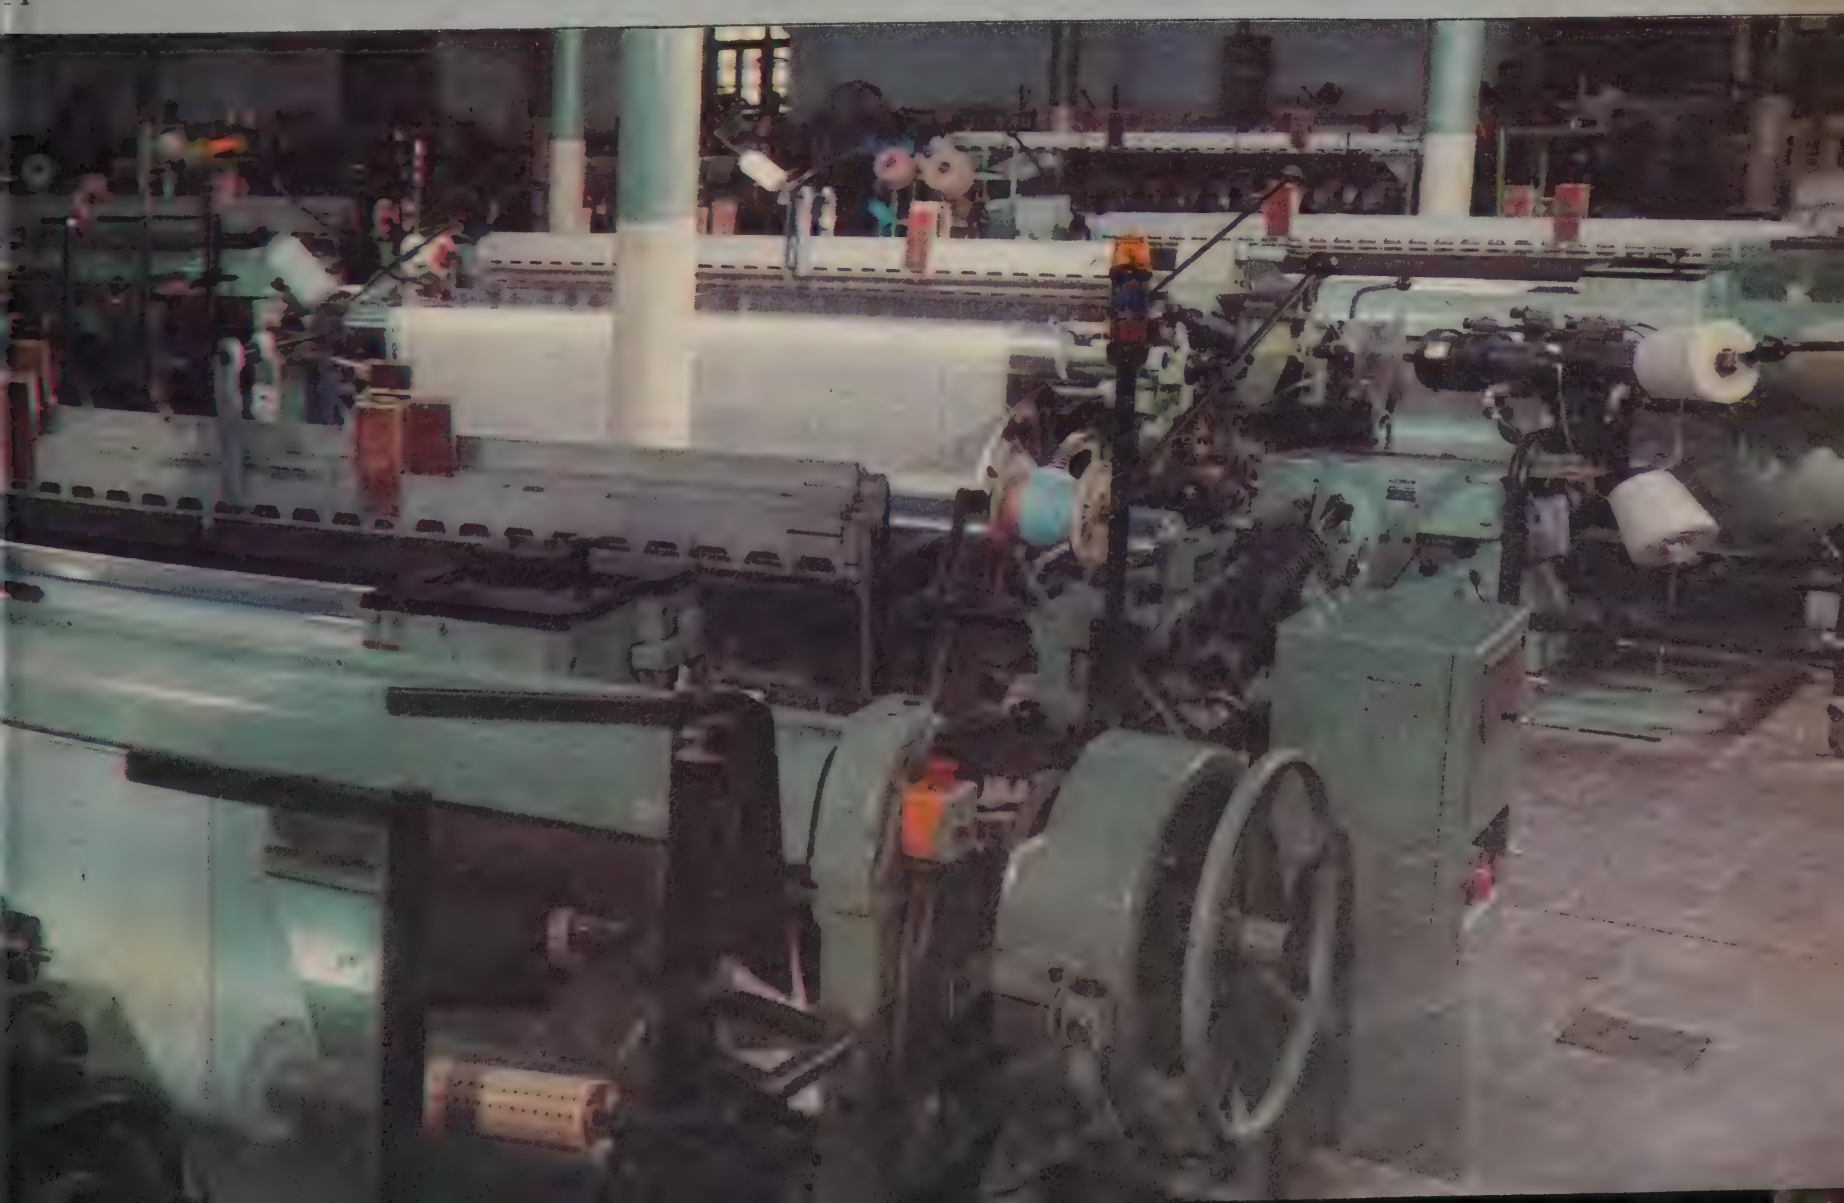
The surprise is the second ran

rightest

TOP 10			
Super 100 Rank '91	Super 100 Rank '90	Company	Group
1	1	Tata Iron & Steel	Tata
2	3	Tata Eng	Tata
3	2	Reliance	Ambani
4	4	Grasim	A.V. Birla
5	5	Larsen & Toubro	Professional
6	11	ACC	Tata
7	8	Century Text	B.K. Birla
8	9	Guj State Fert	Joint Sector
9	13	ITC	Multinational
10	6	Bajaj Auto	Bajaj

overtook Reliance for the second by virtue of its superior performce in sales and profitability. Reie was hamstrung over the year by a ession in petrochemical demand folng sharp increases in raw material s during the Gulf war.

hile the top five thus played musical rs, a new entrant into the top 10 is by virtue of cement's spectacular ormance in 1990. In fact, cement has ed several companies improve their tions this year by virtue of strong wings in the turnover, profits and ket value departments. Among the ers on this count are Birla Jute (from o 16), Jaiprakash Industries (from 30 2), India Cement (from 107 to 42), oram (from 83 to 54) and Mysore nent (from 90 to 56).



he laggards in the Super 100 list at- to the bad year that synthetic fibres had. Baroda Rayon, for instance, oped from 44 to 84 and Indian Organic from 72 to 96. Other industries that performed relatively poorly include breweries, paints and tyres.

New entrants to the Super 100 list come from a variety of backgrounds. There are the Munjals, newly in with a souped-up Hero Honda (87) and the Mittals with Nippon Denro (78) due to a large increase in assets deployed.

The high-profile R.P. Goenka group managed only 2 adjacent entries in the list with Ceat (44) and CESC (45). The troubled Chhabrias still managed 2 listings, Dunlop at 68 and Shaw Wallace at 90. The Tatas led the family listings with 10 entries with the B.K.-A.V.Birla combine following with 7.

Interestingly, 9 of the top 10 in the Super 100 list are managed by groups that are headquartered in Western India. So, too, for 56 of the total 100. This speaks volumes for the entrepreneurship of the west and, perhaps, for the relative decline of the east and south.

Capital intensiveness dominates every category's list, including that of the Super 100. Only 5 companies, ICICI (15), Tata Tea (29), Brooke Bond (46), HDFC (81) and Lipton (83), qualify as predominantly service industries. Yet their profit rankings, with the exception of Lipton, are in all cases much higher than their Super 100 ranking. There are no computer companies on the Super 100 list, although HCL just made it into the top 100 ranked by profits. It is quite clear, we have not made good use of our most abundant asset, labour.

28	25	Mukand	581.65	553.72	5.04

The Business India Sales 100 list starts with one major change: Telco has replaced Tisco as the leader. The change is due almost entirely to last year's Gulf war which raised the price of freight and coal (crucial ingredients for Tisco) and on-going steel price control which caused Tisco's sales to stagnate at an inflation-adjusted growth rate of −3 per cent.

Indogulf Fertilisers, which started operations last year, entered the list immediately. Another new entrant is Nippon Denro, maker of rolled steels, whose expansion project got off the ground last year. Two cement companies have also made it, thanks to the boom in cement — India Cements (92) and Mysore Cements (100).

The growth leaders have three cement manufacturers among them, while Peico makes the list as a result of its turnaround. The laggards have the common thread of fertilisers in three of them, while the rise in petroleum prices accounted for the fortunes of Baroda Rayon.

Overall, the compan

THE BUSINESS INDIA SUPER 100

PROFITS

There has been a major change in the parameter that we have used this year for ranking the top 100 companies by the profits they earn. As against the gross profit figure that was the criterion in 1990, this time it is net profit, ie, profit after tax and net depreciation.

Though not exactly because of the change in parameter, there are some remarkable ups and downs in the top 10 ranking for this year. Tisco continues to lead the pack with a total net profit of Rs.160 crore, but the growth it has managed to achieve is only of around 7.8 per cent. Though this is comparable to last year's 7.5 per cent, it is still poor, considering the inflation factor. Telco continues to be in the second position (last year's net profit figure was used for comparison). But unlike Tisco, the truck giant did extremely well recording a 38 per cent jump in profits. ICICI, though new entrant, is in the third position and Reliance Industries continues to be number four. Among the new entrants are ACC which jumped from rank 32 to 5, Larsen & Toubro (15 to 7), Century Textiles (from 12 to 8) and ITC (from 14 to 9) respectively. Of course, the success of ACC, L&T, Grasim and Century can all be attributed to the impressive performance of their cement divisions. Among those that lost out this year include Bajaj Auto (from position 8 to position 15); Cochin Refin (from 5 to 12); Hind (from 6 to 11) and In Aluminium (from 9 to

Cement continues an important factor i termining the top 10 ners this year in p growth. There are as m as five companies who benefited from the huge in cement prices ac 1990-91. These include oram (1688 per cent); Jute (742 per cent); I Cement (577 per cent); sore Cement (501 per c and ACC (424 per cent). big winner, of course, been Hero Honda wh had a spectacular tu around in the year go from a loss of Rs.32 lak a profit of Rs.15.84 cro

ICI, despite a poor formance, manages to ure in the winners' because of a crucial bala sheet adjustment. A fig of Rs.18 crore turned ou selling its Crescent Ho office building in So Bombay has been added to the profit figures. Am the laggard list is an arra names including Spic, C tury Enka, HCL, Shaw W lace, CESE and Hoec Spic's profits declined b much as 72 per cent.

On the whole, the profit figure of the top companies showed a 27 cent growth which was markable considering ri inflation. Total pro stood at Rs.3,075 cr which, however, works to less than five per cen the total sales figures of top 100 companies.

In a year when stock-market prices went through the roof, raising by more than 40 per cent, it wasn't surprising that the total market capitalisation of the top 100 companies in the country rose to a record Rs.60,000 crore. The figure for the last year was in the vicinity of Rs.42,000 crore. Tata Steel continues to be way ahead of the back with capitalisation exceeding Rs.5,400 crore — a jump of 34 per cent. Fellow Bombay House-based company, Tata Engineering, is similarly in the second position though it saw a better growth of 45 per cent. As for the top ten this year, there have been some interesting ups and downs. ITC moved into the fourth position from eleventh last year, largely on account of its excellent performance — rise in profits of nearly 50 per cent. Century Textiles, buoyed by the performance of its large cement division moved up from twelfth to the seventh position.

Among those who dropped in rank include Grasim Industries which slid from fourth to sixth position; GSFC from fifth to ninth; Larsen & Toubro from seventh to twelfth and Colgate from eighth to eleventh. For Colgate, this year has been a major disappointment. Compared 275-per-cent rise in ma capitalisation last year, year's figure was around 16 per cent.

India Cement was a gainer in the top hund recording a growth of 750 per cent though m less then last year's win LMW, the percentage growth of which was cl to 1,500. Apollo Tyres surprising second, hav grown by 449 per ce Among the big losers w ICICI, JCT and Cromp Greaves. Though notic bly, the highest loss in m ket value this year was o around 19 per cent, against 69 per cent last y recorded by Stand Industries.

As was the case last ye multinational compar continued to do well ove in market capitalisation compared to their as base. Colgate is ninety s ond on the asset list eleventh on the mar value list. Brooke Bond a rank of 124 for assets a 28 for market capitali tion. Nestle's figures for same are 66 and 21; IT 42 and four respectively. however, continues to b disappointment. It is fo seventh largest in terms assets, while its mar capitalisation rank is poor 57.

43	27	Mysore Cements	158.61	172.26	– 7.92
59	45	Orient Paper	109.22	118.59	– 7.90
6	3	Indogulf Fert	551.65	584.27	– 5.58
21	14	ACC	289.40	304.75	– 5.04
79	71	IOL	73.03	76.59	– 4.65
84	78	Dunlop	62.24	65.00	– 4.24

The growth of a company's assets is a measure both of its ability to tap various markets for funds and its profitable use of existing assets. Fixed assets are a good measure for capital-intensive sectors but do not take care of the age of assets or for the effects of inflation. The growing service sector will always appear assets short and is better measured by profits. Nevertheless, the size of fixed assets has traditionally been a criteria to judge a company.

The fixed asset figure referred to in this listing is the sum of net block, that is, gross fixed assets less depreciation, capital work-in-progress and advances against capital expenditure. Revaluations have also been excluded. Tata Steel has this year pipped Reliance Industries to emerge at the top of the Assets 100 list. Its fixed assets are now worth Rs.1,713 crore, a 42 per cent jump over previous year's figure. Reliance Industries, on the other hand, has had just 0.92 per cent increase in tangible asset accumulation in 1990-91.

The Calcutta-based R.P. Goenka company, Calcutta Electric Supply Comp which ranks 34 in the s list and 84 in the profits has come to acquire fixed assets worth ne Rs.626 crore, the third l est in the country's pri sector. In fact, in the to companies in the list t are two more power c panies — the Tata c trolled Tata Power the professionally- Ahmedabad Electric S ply Company — indicat the capital intensive na of their operations. Te features on the list at mber 7. Colgate wh ranks 25 on the profit li way down at 92 in the as one, indicating how we has put its asset to prof ble use.

As for the ones which had the largest addition assets this year Apollo Ty which is undergoing a ma expansion figures top on list with a growth rate of per cent. Ceat is second w 148 per cent, while Colg has also more than doub its assets this year to Rs crore. The laggards list is by the sick Shri Digvi Cement which had a 11 cent decline followed prime candidates Nirlon, ICI and LML.

WHEN THERE'S
NO POWER
SEND YOUR
TELEX
USING
A CANDLE

Or, maybe, a torch. And see how TELSTAR 1000 works when others can't. A power-packed telex terminal with a built-in Uninterrupted Power Supply (UPS) System, TELSTAR 1000 works even during power cuts. For as long as 10 hours. And keeps your critical communication channel going.

And there's more!

UNIQUE AUTO REDIAL PATTERN TO GET YOUR MESSAGES ACROSS

TELSTAR 1000 introduces CCITT U.40 Auto Redial facility (approved by TEC) for the first time in India. Now, depending on the condition of the telex network, it automatically dials your destination upto 9 times, if required, to get a message across.

Sounds incredible? You haven't seen nothing yet!

IT'S INTELLIGENT. IT'S VERSATILE. IT'S EFFICIENT.

The TELSTAR 1000 brings you a host of other advanced features which you wouldn't ever expect in a telex terminal

- Connectivity to your Personal Computer
- Printing of as many message copies as you require
- Delayed transmission to cut your telex costs
- Storage of incoming, outgoing and queued messages in the memory for future reference
- Checking of messages for errors on the display before transmission
- Whisper soft operation
- Compact and elegant design
- Designed to operate even in a non air-conditioned room
- User friendly — no need for trained operators

AND ALL THIS AT AN UNBELIEVABLY LOW PRICE!!

To know more about this wonder machine, call us today. And watch TELSTAR 1000 bring spark to your business communication. Even when there's no power.

But, make sure to keep a candle handy.

TELSTA
1000

THE BUSINESS INDIA SUPER 100

PRODUCTIVITY

ductivity is an im-
rtant criteria when
sessing the perfor-
of industrial estab-
nts. This is one of the
s why we have de-
o use it as a fifth pa-
r while ranking
nies in this list.
h these rankings
een excluded while
ting the **Business**
Super 100 list itself.
ital was artificially
all through the 80s
ompanies rushed to
e assets. But now
beralisation, capital
easingly being priced
stic levels and there is
ubt that the future be-
to those companies
an get the best out of
uman assets.
it is not very easy for
ers to measure pro-
ity in India as they do
e West. Per employee
ctivity is almost im-
le to assess on such a
scale because com-
s don't generally pub-
nformation on their
trength in the balance
. So we decided to use
hod slightly different
asure productivity of
29 companies in the
hough not exactly the
but under the circum-
es we feel it does pro-
ome indicator of how
oyees contribute to the
ss of individual com-

TOP 10

Ten laggards in productivity growth

Rank '91	Rank '90	Company	Productivity '91	Productivity '90	Growth rate (%)
4	2	Videocon Intnl	1.05	0.59	−43.81
8	6	T.N. Petro	1.77	1.45	−18.08
27	22	MRF	4.32	3.57	−17.36
57	43	Indian Org Chem	6.59	5.50	−16.54
46	36	Kelvinator	5.65	4.80	−15.04
49	38	Hind Lever	5.88	5.00	−14.97
32	24	GNFC	4.64	3.95	−14.87
13	13	Oswal Agro Mills	2.59	2.21	−14.67
20	14	Zuari Agro	3.36	2.91	−13.39
31	25	Apollo Tyres	4.61	4.00	−13.23

panies. The productivity definition refers to labour cost as a percentage of sales. A lower figure naturally means better productivity.

The list does throw up some interesting facts. None of the top ten Super 100 companies feature in the top ten productivity list. Reliance, for example, is number 43; ACC number 66 and Telco number 89. The winners are a motley group. Cochin Refineries emerges on top, followed by Nippon Denro, Jindal Strips, Videocon and Century Enka. There are two service-oriented companies on the list, ICICI and HDFC. The companies at the bottom of the ladder make an interesting group too. Voltas is at number 100, preceded by Peico, Kesoram, Bombay Dyeing, Birla Jute, Special Steels and Larsen & Toubro.

The 10 who show the highest growth in productivity has many surprises. The Delhi-based Jaiprakash Industries which is into construction and cements emerges at the top with an 83 per cent growth. On the laggards list is Videocon International and unexpected ones like MRF, Hindustan Lever and T.N. Petro.

THE INSTITUTE OF CHARTERED FINANCIAL ANALYSTS OF INDIA

CHAIRMAN'S SPEECH AT THE SEVENTH ANNUAL GENERAL MEETING

Dr. A. Besant C. Raj, *DBA (Harvard)*
Chairman

It gives me great pleasure to welcome you to the seventh Annual General Meeting of the Institute. Your Institute has made a steady progress during 1990-91 in terms of academic programmes, enrolments, publications and other activities.

The recent announcements regarding economic reforms specifically to the industrial policy, the trade policy, the changes proposed in the MRTP and FERA regulations indicating movement towards market economy, will bring into sharp focus the relevance of the educational programmes offered by your Institute. With the market orientation in the economy, candidates undergoing the ICFAI educational programmes would come across exciting and rewarding career opportunities in the years to come.

The CFA Programme

The CFA Programme, launched in 1985 by your Institute has been receiving an encouraging response. The total enrolments in the CFA Programme will cross the 16,000 mark in 1991.

Many companies in the corporate sector are reimbursing the CFA programme fee for their employees enrolled in the Programme. All the major financial institutions like RBI, NABARD, IDBI, ICICI, IFCI, UTI are encouraging their employees to enroll in the CFA Programme and are reimbursing the fee.

The CFA Programme continues to attract enrolments from professionals like Chartered Accountants, Cost Accountants, Company Secretaries, MBAs, Engineers besides executives from commercial banks, financial institutions and corporate sector.

The CFA designation offered by the ICFAI is now recognised by the Indira Gandhi National Open University as equivalent to masters degree for admission to their Ph.D., programmes in Management.

The Council of Chartered Financial Analysts (CCFA)

I am happy to inform you that a professional body titled "The Council of Chartered Financial Analysts" has been formed by the CFAs who have completed the CFA Programme. This professional body would be responsible for organising and developing the profession of Chartered Financial Analysts based on sound professional practices and an accepted code of professional ethics.

The Council of Chartered Financial Analysts has brought out a directory of its members along with a brief bio-data of each member. This directory is made available on request to financial institutions and companies in the corporate sector.

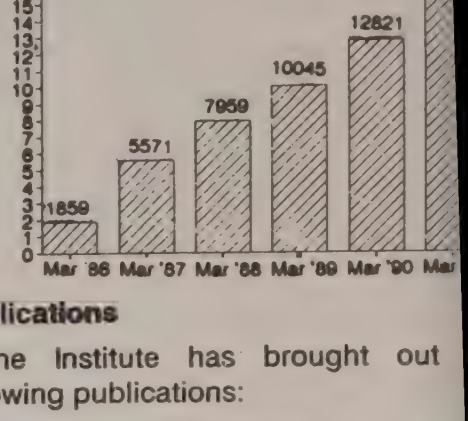
The DBF Programme

The DBF Programme launched by our Institute in 1988 is aimed at spreading knowledge and understanding of finance among non-financial executives. This programme too has been gaining popularity and todate about 1600 enrolments are reported. It is particularly found useful by those engaged in production, marketing, personnel, materials management, entrepreneurs and Government administrators. More than 300 companies in the corporate sector are now regularly sponsoring their executives to the DBF Programme. Abbott Labs, ANZ Grindlays Bank, Asian Hotels, Blue Star, CMC, Dalmia Industries, Federal Bank, HMM, HCL, Hindustan Ciba Geigy, ITC, India Cements, Mather & Platt, Nicco Steels are some of these companies.

Asian Securities Analysts Council

In 1986, ICFAI became a full member of the Asian Securities Analysts Council (ASAC) which was founded in 1979 to promote a co-operative relationship among securities analysts societies in Asia to develop analytical techniques and generally to contribute to the role of securities analysis. ICFAI participated in the International Seminar organised by ASAC at Bangkok in 1990.

International Co-ordinating Committee



ICFAI is also a member of International Co-ordinating Committee of Financial Analysts Association (ICCFAA) which consists of Financial Analysts Federation, USA; European Federation of Financial Analysts and ASAC.

Seminars

ICFAI conducted four MDPs during 1990-91. These Training Programmes were on 'Finance for Non-Finance Executives' for General Managers, and non-finance middle level executives of Ordnance Factory Staff College, Nagpur, BHEL, Hyderabad and Nagarjuna Fertilizers and Chemicals Limited, Kakinada.

ICFAI organised a seminar in October 1990 on "Growth Shares of 90s - How to Identify & Invest" at Hyderabad. A seminar on "Developments in Capital Market and Financial Services" was held at Bangalore in September 1990.

CFA ENROLMENTS

Publications

The Institute has brought out following publications:

- Economics for Managers
- Introduction to Accounting
- Stock Markets - Theories and Evider
- Capital Market - Functioning and Trends

Chartered Financial Analyst

The Institute brings out the 'Charter Financial Analyst' a bi-monthly publicati covering various topics of interest academicians, and practitioners alike in t areas of corporate finance, financ services and investment management. you are aware, we are putting in concert efforts to establish as a top professior body, engaged in imparting knowled and encouraging research a publications in these vital areas to t economy. 'The Chartered Financ Analyst' is a step in this direction.

Future Programmes & Plans

I am happy to inform you that with t steps initiated by us during 1990-91 we a now ready to launch a new programr 'Merchant Banking and Financial Service This course will be open to professiona and executives working in the financ services sector.

We sincerely believe that this new cour on MBFS will provide a sound foundati for development by this growing servi sector in our economy.

Acknowledgements

I wish to take this opportunity to tha the members and the ICFA, USA extending enthusiastic support for t development of our Institute. I would al like to thank the RBI, IDBI, IFCI, ICICI, U KSFC and NABARD for th encouragement and support to the C Programme. I also like to thank r colleagues on the Board, members of t Academic Council, various experts who a developing study material for us a members of staff of ICFAI for th continued support and help for our grow

EXPLANATIONS TO THE BUSINESS INDIA SUPER 100

ures used for compiling the **s India Super 100** listing are fiscal year ended 31 March cept for those who closed their s in June, September or De- of 1990. Some companies, de- nnouncing unaudited results year ending March 1991, don't heir audited balance sheets s yet, so we were forced into he previous years figures. Fig- e annualised where accounting differ from 12 months.

panies with calendar year end- December 1990: ABB, Bata, Bond, Goodyear, Hindustan Lipton, Motor Industries, Nes- Sandoz. Companies with year 30 June 1990: Ceat, HCL, dustries, Kelvinator, Modipon ippon Denro. Indian Rayon ar-end 30 June 1991. Com- with year ending 30 September MRF, Oswal Agro and Premier Automobiles. Companies with year ending 31 March 1990: Ahmedabad Electricity, Balmer Lawrie, GNFC, Greaves Cotton, Indo-Gulf Fertilisers, J.K.Synthetics, Kirloskar Electric, Modi Industries and Shri Digvijay Cement.

The companies with figures that needed to be annualised: ABB, Apollo Tyres, Century Enka, Century Textiles, Cimmco, Colgate, Coromandel Fertilisers, E.I.D. Parry, GNFC, Greaves Cotton, Indo Gulf Fertiliser, JCT, MRF, Modi Industries and Nippon Denro.

The definitions used:

- Sales is inclusive of excise and other income adjusted for non-cash items such as asset revaluations.
- Profit is net profit, that is profit after tax and net depreciation, i.e., after excluding depreciation on revalued amounts. Other non-cash items such as earlier year write-backs have been excluded.
- Market value is calculated on the company's equity as on the year-end adjusted for bonuses and other privileged capital issues.
- Assets refer to fixed assets and is the sum of net block, i.e. gross fixed assets less depreciation, capital work-in-progress and advances against capital expenditure. Revaluations have been excluded.
- Productivity refers to labour productivity measured by labour costs as a percentage of turnover. A lower figure naturally measures better productivity.
- Gross profit margin (GPM) is profit before depreciation and tax but after interest, as a percentage of turnover.
- Earnings per share (EPS) is net profit divided by the number of equity shares.
- Price-earnings ratio is market price times earnings per share.

SEEKING AN AGENT COMPANY

ading Swiss manufacturer of Controls for Air-conditioning, Heating and ventilation is oking for an agent importing and selling their products and systems (thermostats, ontrollers, valves, actuators, sensors etc...)

e candidate company should have:

relevant experience in air-conditioning - engineering capabilities

after-sales service - offices in major cities of India

e selected candidates will be granted exclusivity for the defined regions or the dian territory.

e candidate will have to import and buy the material from the parent company and sell in India.

e are also looking for O.E.M. opportunities with Indian manufacturers wishing to use ur Controls incorporated to their equipment.

terested companies should send application letters describing their activities nd experience to our contact in Switzerland:

en created, it is the section relat-
on-immigrants which will affect
e professionals the most. The
migration law will ensure, per-
at software exporters to the US
their *modus operandi*. Nor-
oftware exporters work at short
An Indian exporter gets a fax or telephone message from a customer who needs a software professional with a particular profile, say expertise on a specific relational database like Ingress or one of the IBM systems. The exporter then identifies the individual and applies for a visa. The entire process of getting a professional into the US took 48 hours.

This time lag resulted in Indian professionals being paid significantly less than their American counterparts. However, the new enactment does not make this possible any longer. Personnel working in the US will be subject to the same laws as an American employee — the same remuneration, social security and other benefits, including taxes. This, exporters say, will blunt the advantage of any cost edge they may have had.

Obtaining a visa will now become more expensive, adding to the exporters' higher labour costs. Since the H category deals with visas for employment, a labour certification and the assistance of a lawyer will be necessary in order to procure one. Says an exporter, "This will cost us between $500 to $2,000 based on the number of visas we need." What has the exporters worried is not so much the additional expense as the longer time cycle involved in getting a H category visa.

In, 1990-91, India exported software to the tune of Rs.200 crore. But the bulk of software exports, up to Rs.120 crore, is to the US alone. Of this, 80 per cent is prepared on site in the US. "Without the flexibility to move people in and out of the US at short notice, the bulk of our business will be affected," says Ravi Apte, chief executive officer, Citicorp Overseas Services Ltd.

Software professionals: visas are hard to get

Differing impact

The impact this new requirement has on a single company's exporting activities will differ. Those primarily into body shopping will be most seriously affected. Companies least affected are those who, over the years, have invested in setting up a large domestic infrastructure. Says Apte, "The new regulation will not have any dramatic impact, it will only be an irritant." Since 90 per cent of their work is on turnkey projects and 20 per cent of the company's employees go overseas every year, obtaining a visa will not pose a problem. Similarly, director-in-charge of Tata Consultancy Services, F.C. Kohli says, "We need about 225 visas annually, this shouldn't pose a problem as we are at the high-end of the software consultancy market."

Some exporters are unconvinced about the stand taken by the US government. They believe, a country like India with a large pool of technical labour should be permitted to use this facility in a manner suitable to it. Says an exporter, "This problem should be seen in the light of the GATT-Uruguay round. When everybody is talking of opening up services to developing countries, we should emphasise the acceptance of our humanware without any hindrance."

Exporters are now pinning their hopes on the commerce minister, P. Chidambaram's visit to the US. Trade bodies, such as Nasscom have represented their case to the government. Many hope a preferrential category like the E1, which is created for the Philippines could be worked out. But the crucial point, agrees Apte is, "We must talk of getting the visa expeditiously without any hindrance".

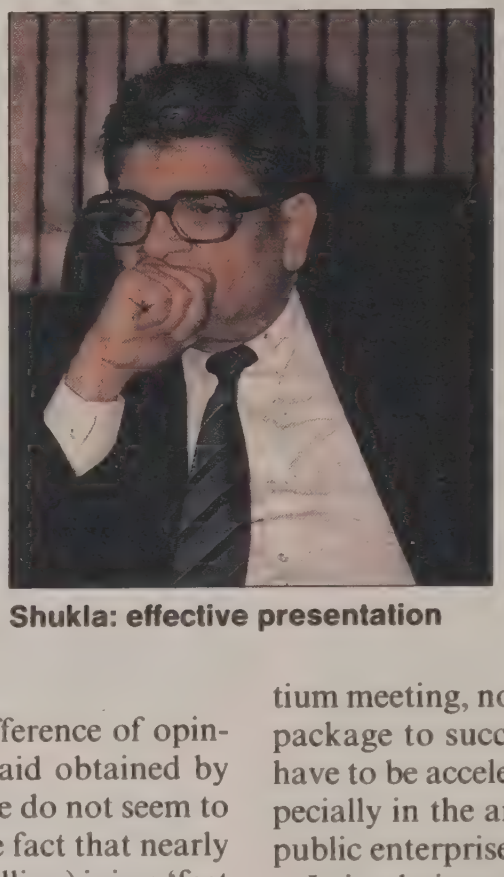
■ AROON SARKER

AID INDIA CONSORTIUM

A signal to the world

Notwithstanding the end of a period of uncertainty for India, nothing should be taken for granted

On 20 September, much to the relief of the Indian government, the Aid India consortium pledged aid of $6.7 billion to the country for 1991-92. That ended a period of uncertainty (at least temporarily) for policy makers about how the developed nations view the process of liberalisation now on in India. Analysts point out that with this, a signal will go out to the international capital markets that India is back on the rails.



That will make the process of borrowing from these markets easier than what it has been in the last few months, when the country's international rating took a sharp downturn. Says a senior finance ministry official, "It is obvious that the presentation made by finance secretary S.P. Shukla (who led the Indian team.to the consortium meeting at Paris) emphasised that the government meant business with liberalisation and it was 'irreversible'.

Sending strong signals

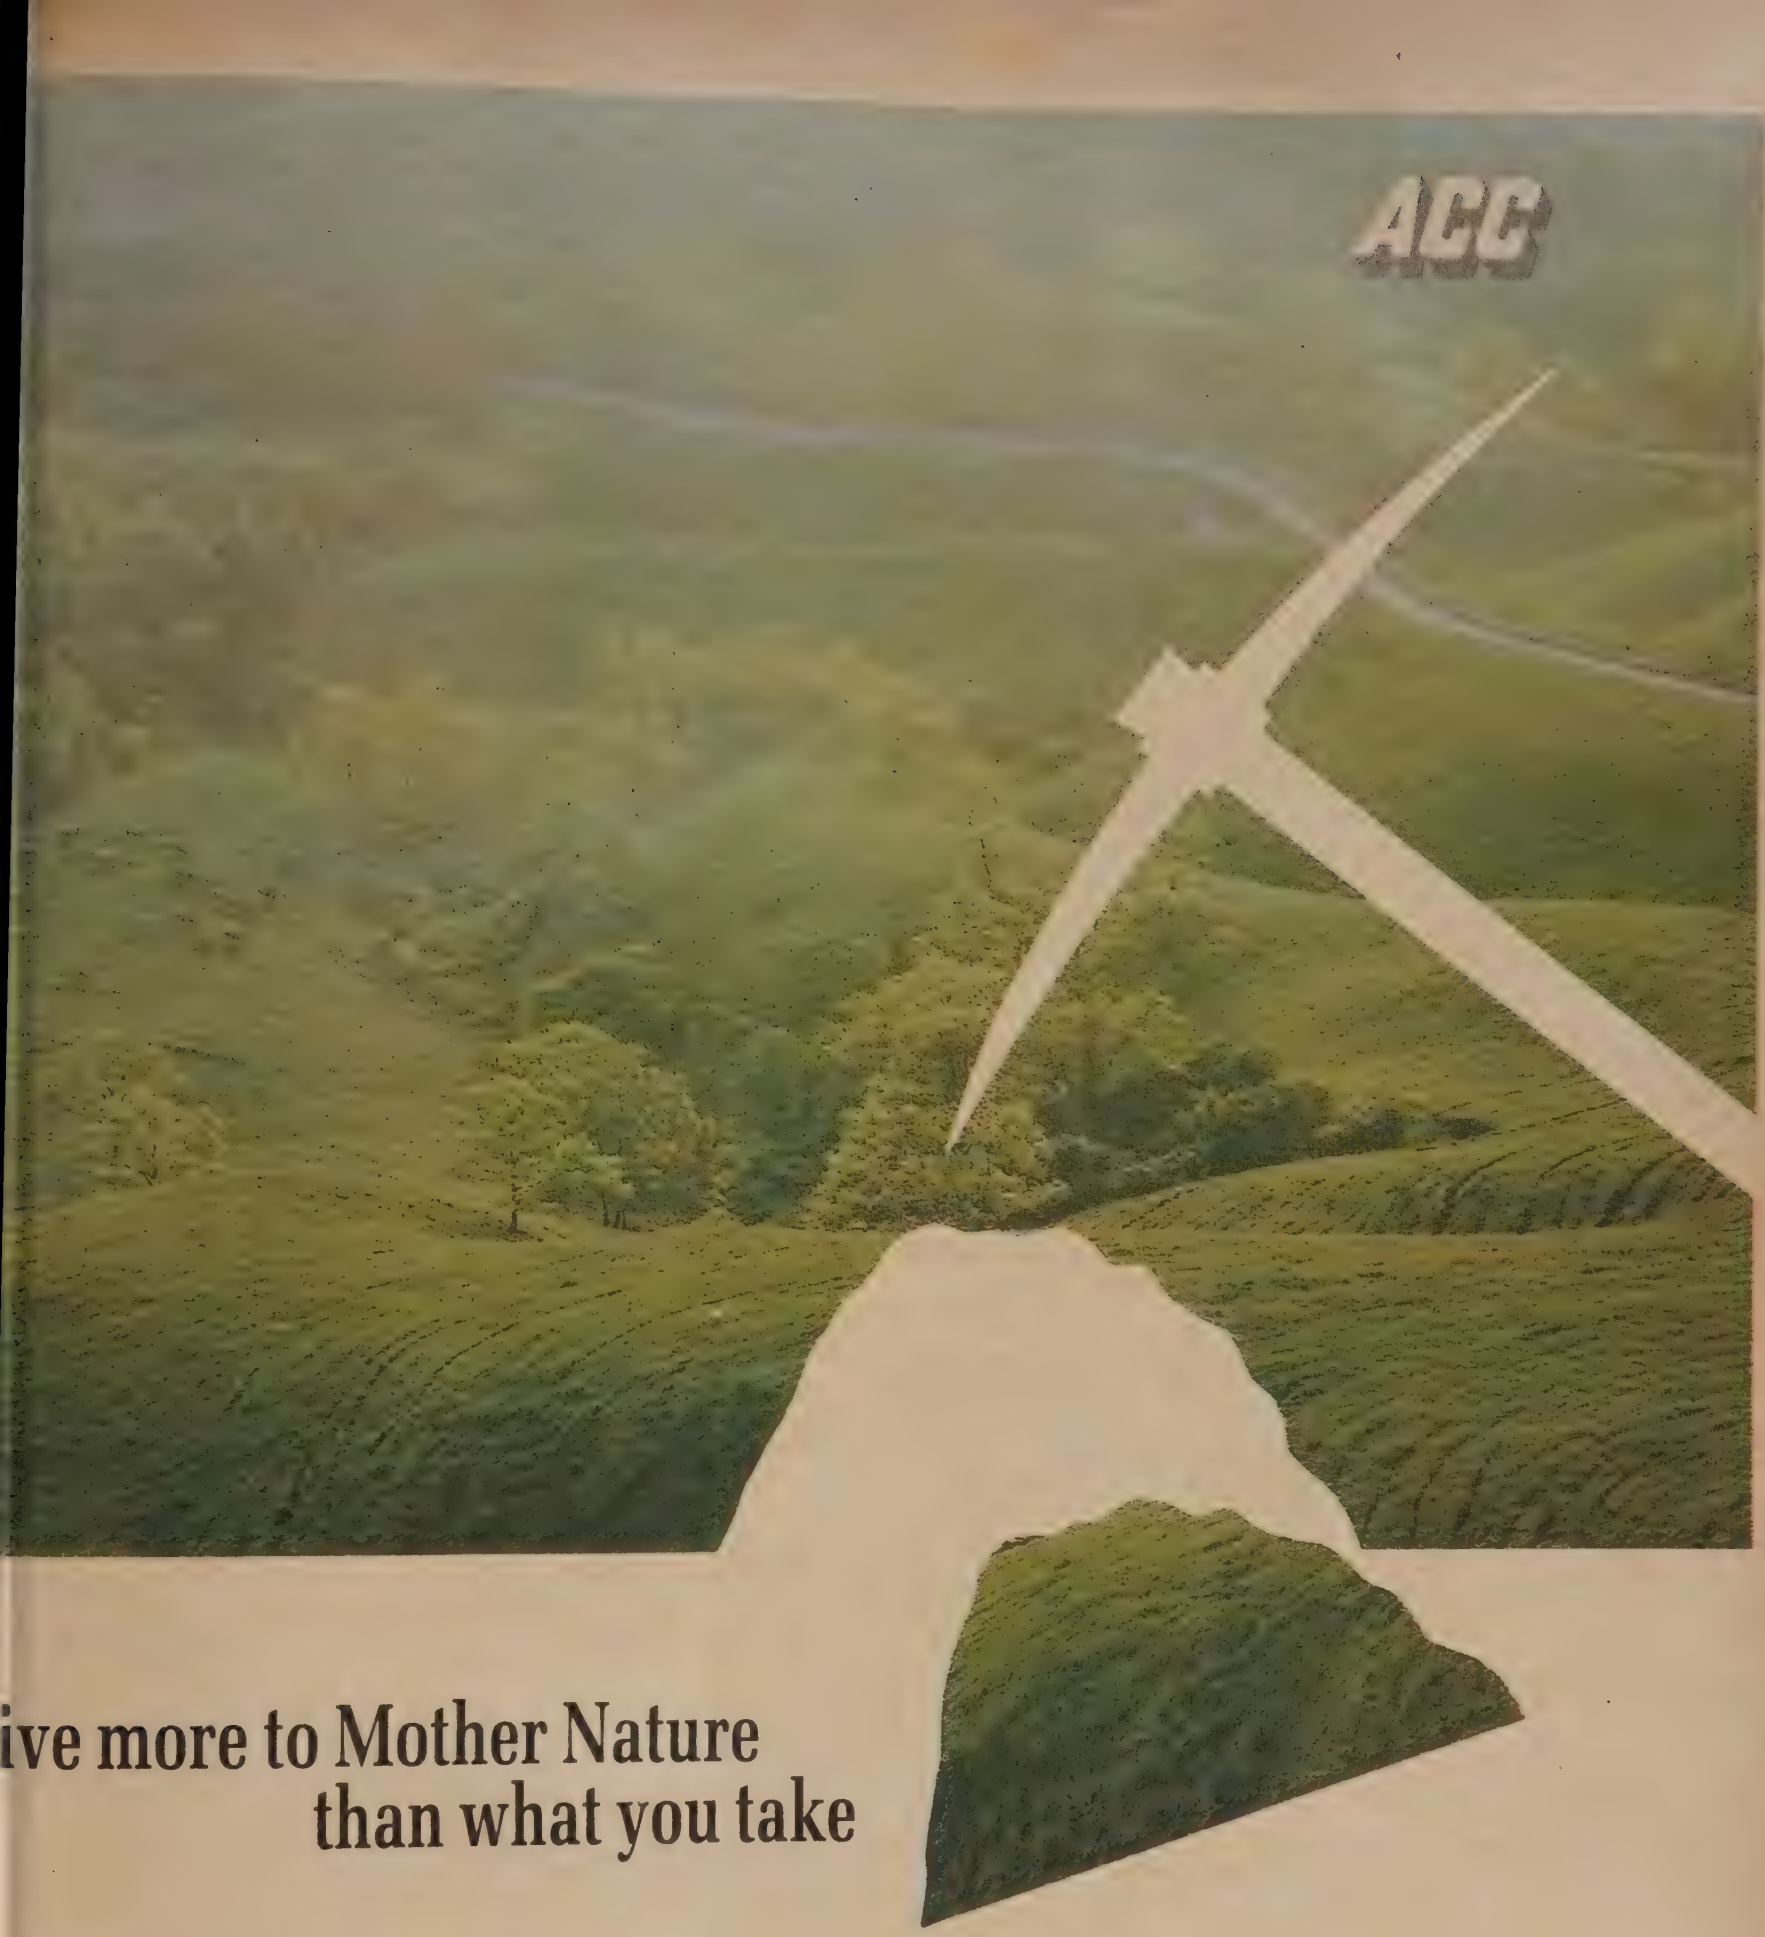
In fact, some of the donor countries specifically hoped that the fresh aid commitments would send strong signals to investors and the commercial and financial markets about the international community's commitment to these measures and support to tide over the difficult transitional problems. India's yearly dependence on external commercial borrowings has consistently increased during the eighties and over the last three years has averaged a sizeable $1.2 billion. But following the drop in credit rating these have come to a standstill over the last year. Also to be noted is that not too many tough questions were asked of Shukla and his team, which included chief economic advisor to the government, Deepak Nayyar."

In terms of hard cash, however, not much was achieved, because the 1991-92 figure of $6.7 billion is only marginally more than the 6.5 billion for 1990-91 and equal to that in 1989-90. Points out international trade expert Charan Das Wadhwa, "If you take into account the 5 per cent rate of inflation of the donor countries, what we have really got is less in real terms than last year or may be equal, and compared to what we got in 1989 what we have got now is certainly much less in real terms. We should also not get fooled by the devaluation of the rupee, which would only mean that in rupee terms we will be getting more money."

However, there is a contra view too. Says another expert who has worked in the World Bank for a decade and a half, but does not want to be identified, "At a time when aid to Africa and China is being cut, at a time when the whole focus of the western countries is on the Soviets – to whom they will lend no matter what has happened, just to save democracy — even the fact that we have got this much is impressive. Especially, when before the meet it seemed that India would get substantially less than what it got last year."

Shukla: effective presentation

Though there is a difference of opinion about whether the aid obtained by India is impressive, there do not seem to be two opinions that the fact that nearly a third of the aid ($2.3 billion) is in a 'fast disbursing form' is a considerable achievement by itself. In the past, much of the aid provided by donors had remained partially unutilised requiring matching rupee funds for utilisation, which the Indian government found difficult to provide.



An outflow

However, the fast disbursing loans will go mainly towards building the foreign exchange reserves of the country (which are abysmally low). And altho good for rebuilding the credib country, they will yield no they will not be deployed for i In fact, the loans will be utilis country's debt servicing and t timately flow out of the coun point must be kept in mind," hwa and the former World Ba mist also concurs. An unb record of debt servicing and a able foreign exchange positio of $4.5 billion) is essential for try's access to further foreign i and external commercial bo and, perhaps most important, a run on the foreign curre resident account.

However, that the don tries — whic Japan, the UK, Norwa mark, Swit France, Swe Belgium – ported the package un India, does that they w for all time In fact, th president World Bank Karaosmano chaired the tium meeting, noted that for the package to succeed, the proce have to be accelerated and deep pecially in the areas of trade p public enterprises.

It is obvious that the donor look for fresh initiatives in these the coming months. More cruci on the success of these present and those in areas still untouch as the financial sector, will India's access to the larger bo from the Fund's extended facilit is precisely here that, due to compulsions, the government be dragging its feet. Which me nothing can be taken for grante

■ KIN

ive more to Mother Nature than what you take

said that progress has always been at cost of Nature. Industrial waste. orestation. Pollution. Depletion of eral reserves. Et al. Stark evidence of perils of industrialization. Yet progress uld not be halted. Is it possible to have wth and quality environment? After thirty years of research, erimentation in the many laboratories, es and plants of our parent company, half a century of manufacturing erience, we at the Geology, ironment and Mining division of The earch and Consultancy Directorate have ne to the conclusion that it is possible to use one to achieve the other.
Our philosophy is simple: give back to Mother Nature more than what you take !
Our services are highly specialised. The expertise we offer includes

* Environment Impact Assessment
* Environment Management Plan
* Environment Monitoring
* Mine Rehabilitation
* Waste Land Development
* Industrial Waste Management
* Agro forestry
* Detoxification

This expertise serves every phase of project activity from preliminary studies to implementation of recommended strategies, separately or in combination.

In the Unix Universe,
now there's going to be no stoppin

Unify 2000 charged with ACCELL/SQL. A breakthrough in Application Development Tools to help you move forward to a more exciting future.

Win the race against time

You are about to travel in the Unix Universe at super speed and achieve the impossible. For instance, in just 15 man-months you will be able to complete an entire share registration system with 130 screens, 75 tables and 50 reports. With less than 10,000 lines of 4 GL code. Incredible, isn't it?

Get going with super ease

Imagine developing prototypes using simple fill-in-the-blanks approach with automatic code generation. And putting in processing logic through 4 GL later. From now on, life is going to be very simple.

Advance through portability

It's freedom with ACCELL/SQL and Unify 2000. Because your ACCELL/SQL application can be easily ported to ORACLE, SYBASE and INFORMIX. And work with M S Windows, MOTIF and OPENLOOK without any additional effort.

Stay ahead with ITC-Unify support

What does ITC-Unify support mean? It means quality training programmes to harness the full power of ACCELL. Answering user queries. Delivering software updates. And developing your applications as well. Always keeping you ahead on the Unix track.

Note: For details contact: Cal 299373, B'lore 561172, B'by 220222, Del 674622.

In 1990-91 Unify products outsold all competitors in the Unix market.

ITC UNIFY

When one leader supports another, confidence is re-defined.

ANI-L&T

he cakewalk that wasn't

country's premier industrial house walked into the largest neering company three years ago expecting little difficulty in ming total control. All they got in the bargain was controversy, and controversy. After losing effective control last year, their recent npt to grab the reins again appear to have run aground too. ow-by-blow account of what has been happening behind the scenes

n the morning of 12 February this year, D.N. Ghosh, then chairman of Larsen & Toubro, received a hone call from union finance secre- S.P. Shukla. The message: the gov- ent wanted him to quit. It did not the former banker much time to up his mind. Three days later, res- on letter in hand, he walked into n Block to meet finance minister want Sinha. The meeting was brief, which Ghosh submit- the resignation ad- ed to the finance ary.

edia went to town with ews that the Ambanis returning to L&T. But it ot happen. The *Indian ess* began its campaign a, the Chandra Shek- overnment was shaky their own pre- pation with Reliance ochemicals and king- ng in Delhi kept the itable" in abeyance. new government took in Delhi, and L&T was e news again. No one mentioned es, but it was as if the whole govern- , every political party and every ness journalist was involved. You either "pro-Ambani" or "anti- ani", like in the early eighties. The and the jokes about Dhirubhai ani's political invincibility were

nd then the Ambanis did the ex- d: they made their "rightful bid" to in control of L&T. They waited a th for the Narasimha Rao govern- t to settle down. The period was to finalise some of their long- ing projects, each with the prefix they had introduced to Indian industry — mega. With this, the stage was set for the next act of the "continuing saga of L&T".

The story is far from concluded, but the events of last two months are going to have a strong bearing on which way L&T goes. The renewed attempt by the Ambanis to gain control of L&T was drama all the way. The players were the same, only this time most of them were named, either by the *Indian Express* or *The Business & Political Observer*, the Ambani newspaper.

Pankaj Desai

Nusli Wadia and Dhirubhai Ambani: foes forever?

Business India tries to reconstruct part of the story, as it occurred, behind the scenes, from the time the Ambanis began planning their strategy in July.

Early July: Reliance group chairman Dhirubhai Ambani has two or three meetings with prime minister P.V. Narasimha Rao to discuss the state of the economy and ways to deal with the current crisis. The topic of L&T is also discussed though what emerged from the conversation is not known.

End July: Assisted by the chairman of Observer India Ltd, R.K. Mishra, Mukesh Ambani meets Manmohan Singh. The finance minister is informed that the various controversial issues had been resolved: the 3.9-million L&T shares Trishna had acquired from BoB Fiscal had been returned; the RIL shares held by L&T had been sold; and RIL had refused the Rs.635-crore suppliers credit from L&T. Moreover, Ambanis now held 22 per cent of the L&T equity, which was far higher than what the Tatas held in Tisco and ACC, Vijay Mallya in Best and Crompton, R.P.Goenka in CESC or the Ruias in SI Shipping.

The Ambanis were told that if they came "fair and transparent" through the shareholder-approval route, financial institutions will be allowed to decide on their own. Reliance sources say they were categorically told by the finance minister that institutions will either remain neutral or support them.

31 July: Trishna Investments, a wholly-owned subsidiary of Reliance Industries, serves notice for an EGM to L&T. Mukesh Ambani and other Reliance officials also met representatives of financial institutions and informed them about the method they were going to adopt to get back into L&T.

1 August: L&T's board of directors convenes the EGM and fixes 26 August as date for the meeting.

4 August: Through advertisements, Trishna hires 2,000 persons, mostly college students, all over the country for 16 days to collect proxies from L&T shareholders in its favour. The boys are told that they would have to collect at least six proxies a day to earn Rs.75 each day.

The following week: The *Indian Express* intensifies its campaign. Columnist and chief of *Express'* sister concern Sterling Newspapers, Maneck Davar, in a signed article, proves an alleged link between BCCI and Reliance group and L&T

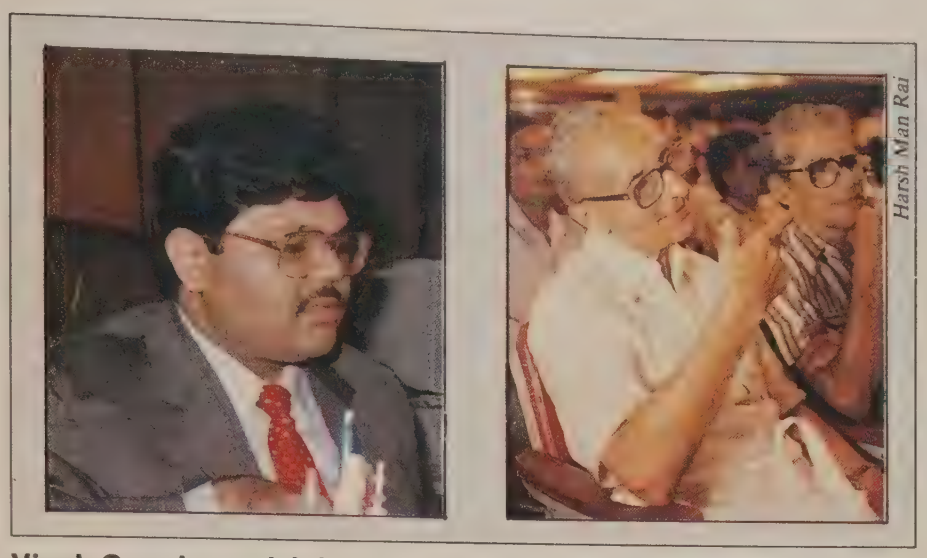
The Harvard Business Library



ver. Questions are in Lok Sabha by Jas- Singh, George Fer- es and other MPs. ge Fernandes writes a to Manmohan Singh e BCCI and L&T issue on ugust. Five days later, Singh also dashes off a ar letter on a National t letterhead to the e minister. Both cau- he government against ing over L&T to Re- e group.

ound the same time, airman M.G. Diwan, GIC chairman Moni, and UTI chairman S.A. Dave, e institutions together hold over 35 ent of L&T equity, meet to discuss sue. The decision is to remain neu- n the absence of advice from New i.

eanwhile, Bombay Dyeing chair- Nusli Wadia, who was in and out of Delhi throughout the last two ths, holds meetings with several MPs, ding Jaswant Singh and George andes. The new editor of the *Indian ress*, Prabhu Chawla, helps Wadia BJP leaders like L.K. Advani and indacharya. Publisher R.V. Pandit, se friend of Wadia who was in Delhi early three months as the BJP's ideol- on economic issues, also helps in matter.

eliance officials also activate their es in the Lok Sabha. They hold tings with MPs like Digvijay Singh, wajit Singh, Murli Manohar Joshi, nod Mahajan and Mukul Wasnik. Reliance team is also strengthened the constant presence of either ubhai or Mukesh Am- . A senior Reliance offi- M.N. Chaini is sent to i for the entire period e L&T tussle, in addition he duo of Balasubra- iam and Tony Je- san already there.

n 17 August, Jay Du- shi, an executive council ber of the BJP, in an in- iew with *The Business & tical Observer*, suggests L&T rightfully be ded over to the banis.

Harsh Man Rai

Vivek Goenka and Jajoo: carrying on the campaign

21 August: R.V. Pandit, a close friend of both Nusli Wadia and the *Indian Express*, meets Manmohan Singh. The discussion is basically about the BJP's views on the economy. During the course of the conversation Pandit brings up the L&T issue. The minister tells him that the matter will be decided on the basis of merit, but does not reveal the government's stand on it.

Obviously, the minister was under tremendous pressure to lay off the Ambanis from not only the events in Parliament but also ministerial colleagues and bureaucrats in his ministry.

22 August: R.V. Pandit, realising what was going to happen, meets *Indian Express* inheritor Vivek Goenka, who was also based in Delhi throughout the period, and gets permission to write an article on the subject. The article, *The Ambanis, L&T and the security of India*, appears on the front pages of the paper the next day. It was viewed as the voice of the BJP and virtually sealed the fate of the L&T case.

Mukesh and Anil Ambani: barred from the boardroom?

23 August: About 20,000 proxies collected by Trishna were submitted to L&T. National Front chairman N.T. Rama Rao issues a statement, without names, but, in effect, contradicting V.P. Singh's statement.

Another BJP MP, Arun Jaitley drafts the press note issued by Govindacharya, BJP's spokesman, opposing Ambani entry into L&T. L.K. Advani and Atal Behari Vajpayee express ignorance about the press release.

24 August: The remaining 87,000 proxies were also submitted before the deadline of 2 pm. At 6 pm the same day, all the proxies are carted away to L&T's factory in Powai, a Bombay suburb in eight tempos.

Manmohan Singh is convinced by an advice from the PMO and his bureaucrat colleagues in the ministry not to support Ambanis for the moment. He is told that any move in that direction will jeopardise the passing of the Finance Bill, 1990.

25 August: Special secretary, insurance, N.R. Ranganathan is asked to somehow get the meeting postponed. Late in the evening Ranganathan calls up Diwan, requesting him to find technical grounds on which the meeting could be adjourned. At a meeting of LIC staff, it is decided that a resolution seeking adjournment on the grounds of examination of proxies will be moved. This is conveyed to the chiefs of all financial institutions — Nadkarni, Vaghul, Dave and Moni — by Diwan, on the telephone. The strategy: to wait until someone proposed a resolution seeking the adjournment and then second it. Or else propose it themselves. Diwan calls up D.N. Chaturvedi of Reliance and tells him of the stand institutions were going to take. A.S. Gupta, chairman for the EGM, is also apprised of the situation.

26 August: In the morning, Dhirubhai Ambani receives a call from a "senior official in the finance ministry".

S.R.R. Subramanian, U.V. Rao and S.D. Kulkarni: impartial professionals

Handed with a *fait accompli*, the Ambanis acquisce, though they refuse to be the ones to propose the adjournment. Meanwhile, chiefs of all financial institutions meet at the board meeting of GIC and discuss the issue. Ranganathan, also a director on the GIC board is present. Representatives of all financial institutions meet at the headquarters of the LIC, the largest institutional shareholder in L&T, to discuss the issue.

That afternoon, the EGM is adjourned amidst pandemonium. Institutions fix September 16 as the new date for the EGM.

However, the announcement that proxies equivalent to 48.5 per cent of the company's equity were in favour of the Ambanis has its impact. Once again people expect that it is only a matter of time before the Ambanis regain control of L&T.

3 September: LIC writes a letter to company secretary K. Sethuraman to begin scrutinising the proxies. L&T acknowledges the letter two days later, saying the verification was being arranged.

7 September: A shareholder, Madan Gopal Jajoo, who had been campaigning independently against Reliance — which brought him close to Wadia and *Indian Express* — files a case in the Bombay High Court challenging the validity of the EGM and alleging large-scale fraud and forgery in the proxies. Justice A.A. Cazi grants permission to examine the proxies. Well known lawyer Ashok Desai appears for Jajoo.

12 September: Sethuraman writes to LIC to say that it would not be possible to complete the verification before the EGM. The letter is received at 5.30 pm by LIC executive director B.R. Gupta. The *Indian Express* publishes a copy of the letter the next day. The persons who get the letter for the *Indian Express* are Maneck Davar and Jajoo.

The High Court issues an ad-interim injunction preventing the EGM from taking up Mukesh Ambani's appointment as managing director. This time, Ram Jethmalani appears as counsel for Jajoo.

13 September: Ranganathan returns from London, where he had gone to explore the possibilities of entering into reinsurance arrangements with international agencies. Defence minister Sharad Pawar seeks a meeting with this Maharashtra cadre officer. Nusli Wadia is also present at the closed door meeting.

George Fernandes tables "evidence" of forgery in L&T proxies by Trishna Investments in Lok Sabha.

15 September: Ram Jethmalani moves the court again to get the meeting postponed on grounds of evidence of forgery. Being a Sunday, Justice Cazi holds the hearing at his Colaba home. He dismisses the petition.

At 5.30 pm, two L&T managing directors, U.V. Rao and S.R.R. Subramaniam go to the LIC headquarters to meet Diwan. Others present are N.N. Jambusaria, LIC's managing director (investments) and B.R. Gupta, executive director. Subramaniam informs that out of the over 107,000 proxy forms submitted to L&T, nearly 20,000 are duplicates. Proxies equivalent to only 34 per cent of the equity could be verified, of which signatures for only 21 per cent tallied, cards equivalent to 7 per cent of equity were missing and, therefore, could not

fied, forms for 3.5 per cent of th
were without signatures and sig
for 2 per cent did not tally at all.

At 7 pm Diwan gives the de
Ranganathan. The special se
calls back at 9 pm to say that the
minister would like the meeting t
journed again. He overrides D
pleas that it would be embarrass
LIC to do so again.

16 September: EGM concluded
shna withdraws its notice.

At 4 pm Jajoo, accompanied b
hesh 'Tony' Jethmalani, appe

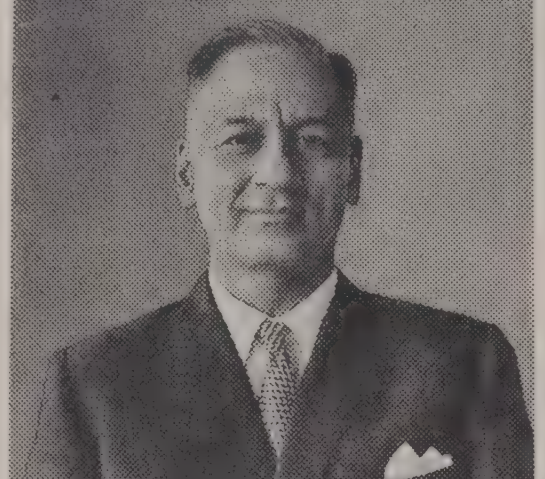
■ MADHAV

IMPOSSIBLE"

That's the word I used when my friend suggested that I use Speed Post. But, one day, my courier's man failed to show up. And I decided to give it a try.



Believe me, that day changed my life! The Speed Post man was efficient, and their service charges were surprisingly low. When I also discovered that they covered many more stations than the others, my mind was made up.

It had to be Speed Post. The rest? Impossible!

Sundaram Finance Limited

21 Patullos Road, Madras 600 002

Ladies and Gentlemen,

I have great pleasure in welcoming you all to the Thirtyeighth Annual General Meeting of your Company. The Directors' Report and the Audited Accounts for the year ended 31st March, 1991 have been with you for some time and with your permission, I shall take them as read.

WORKING RESULTS

During 1990-91, your Company registered yet another year's excellent performance, setting a fresh record both in hire-purchase and leasing payments. The total receivables under hire-purchase, leasing and factoring reached an all time high and crossed the Rs. 500 crore mark. Your Company has maintained its position as the premier composite hire-purchase/leasing company in the private sector. Your Directors have recommended a dividend of 25% on the capital of Rs. 12 crore enlarged by a 1:1 bonus issue during the year, which on an adjusted basis works out to 50%.

POLITICAL SCENE

The successive and quick changes in the Union Government in the last one year and communal strife threatened to affect the political and social fabric of our country. The new Government is facing serious problems created by the law and order situation in the North, East and recently in the South, which resulted in the tragic assassination of Shri Rajiv Gandhi, the former Prime Minister, in the prime of his youth. However, in spite of all this, we, as a nation, have demonstrated great resilience and derived from our commitment to democracy. I welcome Prime Minister, Shri P V Narasimha Rao, a schol statesman, and wish him well in his new office.

ECONOMIC SCENE

The immediate task before the new Government was the worsening balance of payment, reducing deficit fi and containing inflation. The bold policy initiatives taken the imbalances in the economy are welcome. The devalu the rupee twice in quick succession should take the r a realistic level vis-a-vis the major currencies, boost expo cut down non-essential imports. The new industrial poli step in the right direction. The liberalised licensing pro the virtual scrapping of the MRTP Act and also per foreign investment up to 51% would create an atm conducive to industrial growth. I welcome the initiatives pragmatic budget presented by our learned Finance M Dr Manmohan Singh. It is hoped, with this clear of direction set by the new Government, the econom march forward.

MONETARY POLICY VIS-A-VIS FINANCIAL COMPANIES

As observed in the Directors' Report, the Reserve Bank o has been following a dear money policy affecting the avai of funds from the banking system. Further, there has agai a steep increase in the interest rates charged by bank financial institutions as well, which will increas funding costs.

The Reserve Bank recently announced policy changes Non-Banking Financial Companies (Reserve Bank of Directions, 1977. The interest rate payable on deposits increased by 1% from 14% p.a. to 15% p.a., besides the imp of certain restrictions on premature withdrawal of deposi granting of loans against deposits. Earlier, the ma interest rates on bank deposits were also increased in stages since October '90 by 3%, from 10% p.a. to 13 reducing the differential between the bank deposit rat company deposit rates from 4% p.a. to 2% p.a. These c have made deposits with Non-Banking Finance Compani attractive.

Your Company has been built by the trust and confidence 200,000 depositors and we have represented to the Reserv

ech Delivered by
ri T S Santhanam, Chairman,
HE 38TH ANNUAL GENERAL MEETING OF SUNDARAM FINANCE LIMITED
D ON 29TH AUGUST 1991 AT MADRAS

hitting us to pay the increased interest rates on the deposits also and for certain relaxations in the amended ns.

ibly, there is a feeling in some quarters that Non-Banking Companies have emerged as competitors to banks in the tion of deposits. The total deposits held by Non-Banking Companies is less than 1% of total bank deposits. I make t appeal to the authorities concerned to appreciate the e role played by the Non-Banking Finance Companies ilising household savings and channelising them to ve uses. They play a complementary role in the economic ment of the country. It is necessary to create a climate ve to the orderly growth of such companies and encourage assist the Government in its efforts to speed up economic ment.

AL CHANGES

ent Budget has increased the corporate tax rate by 5% etaining the surcharge @15% and has also reduced the ation allowance admissible for tax purposes. This will e the tax liability of your Company substantially. The proposes to revive the Interest Tax Act, enlarging its to cover Non-Banking Financial Institutions including rchase companies. Hire-purchase transactions are not lending transactions. Therefore, they should be excluded ne Interest Tax Act. There are manufacturing companies nsact hire-purchase business in large volumes running to hundred crores of rupees and there are also leasing nies who transact hire-purchase business and their share -purchase business may be over 40%. Therefore, it is an ly that these companies do not come under the purview of erest Tax Act.

D TRANSPORT INDUSTRY

e fourth year in succession, the monsoon has been good throughout the country. This will help increasing ltural production and augmenting ground-water supplies. lly, after the present credit restrictions are removed later ear, the liberalised industrial policy should create a able climate for sustained industrial growth. These efforts bear fruit if the road transport industry, which provides sential infrastructure to the economy, is not given the right y. It is regrettable that the road transport industry still shes with high tax burden, diseconomies caused by higher ing costs aggravated by bad road conditions and unremunerative freight rates. I hope that the Government will give serious attention immediately to revive this industry to achieve speedier economic development. There have been frequent increases in the prices of vehicles, tyres and spare parts during the last year and also the current year, causing great strain on the viability of the road transport industry. Unless the passenger fare and freight rates are raised, the road transport industry may not be in a position to absorb the current production, leave alone increase in production.

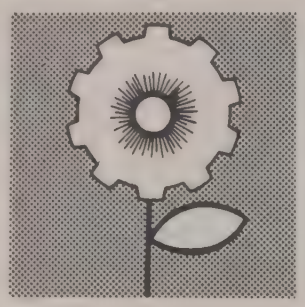
BUSINESS PROSPECTS

The mounting credit curbs and the fiscal changes will affect the volume of business to be transacted both in Hire-Purchase and Leasing and their profitability as well. Your Directors, therefore, hope to achieve only a marginal growth in the Hire-Purchase and Leasing business during the current year and consolidate the gains of significant growth registered during the past few years.

SUBSIDIARY COMPANY

India Equipment Leasing Limited, your subsidiary, fared well during the year under review and earned a profit before tax and depreciation of Rs. 263.53 lakhs as against Rs. 182.86 lakhs in the previous year. After providing a higher sum for depreciation and taxation, the profit after tax amounted to Rs. 65.54 lakhs. The Company has paid dividend at 14%.

DIVERSIFICATION



The proposal to extend financial services through a subsidiary in a phased manner is being pursued. The subsidiary will have the participation of the General Insurance Corporation of India and its subsidiaries and the State Bank of Mysore. It is expected to commence business by the year-end after getting necessary approvals, which are awaited.

ACKNOWLEDGEMENT

On behalf of the Board of Directors and on my own behalf, I convey my sincere thanks to the customers, depositors, bankers, financial institutions and the shareholders for their support and co-operation. I also wish to place on record my sincere appreciation of the excellent work done by the employees of the Company.

Note: This does not purport to be the proceedings of the Annual General Meeting of the Company.

RESULTS OVER REPUTATION

Which Merchant Banker would you prefer – the one who is known for long or the one who is known for results? The one with a record number of clients or the one with a record performance?

Like Indbank Merchant Banking Services. Who has successfully lead-managed the public issue of several Blue Chip clients such as Lakshmi Synthetic Machinery Manufacturers Ltd. An issue that was oversubscribed a record 101 times. And SM Dyechem, whose issue was oversubscribed 11 times. Indbank has more such results to show, in over 100 issues it had handled. For entrepreneurs as well as established giants. Maiden ventures to mega issues.

So the real virtue in choosing Indbank Merchant Banking Services over others, is that you don't choose between results and reputation. You choose both.

Indbank
Merchant Banking Services Ltd.

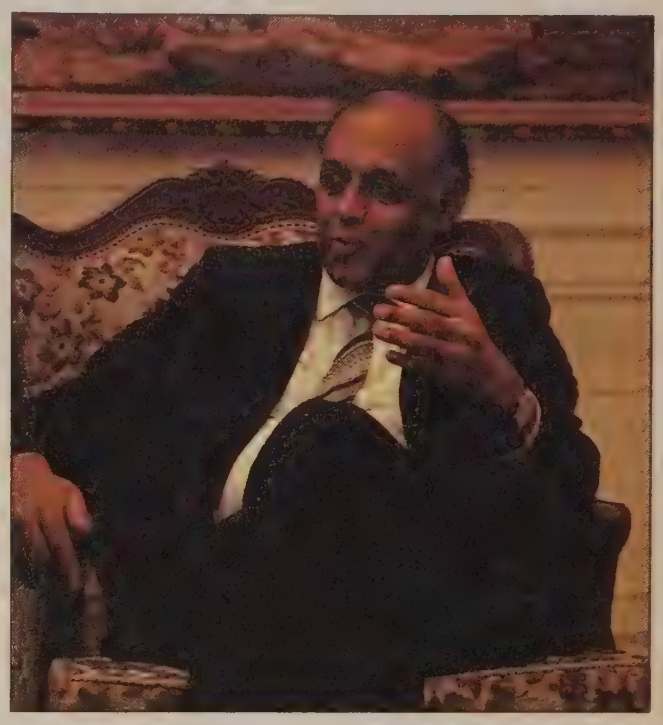
uding stagnation

for more than just a phenomenal growth in the eighties, the ny ventures to infuse more shine into steel



ink Big' is a slogan that typifies Rajan Mody these days. The uave, and erudite fiftythree-year-irman of Hindustan Develop-orporation (he is also a Sanskrit) is getting ready for a major 0 crore expansion. Not content e phenomenal 32 per cent annual which marked HDC through the , Mody has huge investments in eline, primarily in steel.

; immediate and prime project is itious Rs.380-crore steel project boration with Hamburger Stahl of Germany, for the manufacture e-added shaped steel products. project, with a capacity of 0mt per annum, set up near r in Madhya Pradesh, is expected n stream in February next year. nat time, 70 per cent of the first f 125,000 mt per annum will be ssioned. This new steel division nceived in 1987, at a project cost first phase, of only Rs.67 crore. lisation and inflation have d all this. Targeted capacity has now doubled. HDC is all set to enter the capital market with a rights issue of partly convertible debentures, at Rs.50 each to raise the equity component of Rs.294 crore. The foreign exchange component of Rs.24 crore has already been raised earlier. Ambitious plans indeed, but their performance has been lacklustre.

For the financial year, 1990-91, sales was stagnant while the 33 per cent jump in net profit to Rs.16 crore (*see table 1*) was due entirely to a Rs.5.75 crore leap in interest and dividend income. Without this extra income — which largely came from temporary placements of the new issue money raised last year — net earnings would have been lower than last year. Given the current inflationary pressures on steel processors, especially the 25 per cent rise in the price of scrap steel this year, one should expect the pressure on net earnings to last for at least another year until the steel plant gets underway in 1992. Not surprisingly, the scrip has been a stockmarket laggard in the current boom (*see table 2*).

is for railway wagons: a specialised product

Mody: "no project below Rs.500 crore"

A low-profile company ("We don't deal in consumer products," says K.C. Jain, president, finance), HDC is certainly no stranger to the investing public. It has assiduously tapped the capital market in the last decade, no fewer than eight times via a series of non-convertible and partially convertible debenture issues, the most recent being last year's mammoth rights equity issue. While the total rakings are estimated to be in the region of Rs.160 crore, Rs.67.5 crore alone was raised in the new issue of 1990. Mody expects the steel project to break-even in the first couple of years, add to turnover to the extent of Rs.500 crore and to profits in the region of Rs.100 crore.

This is a far cry from the company's early beginnings, when it was a sick engineering unit in the sixties, run by a predominantly Bengali management. At this time Rajan Mody who had a family business in oils and lubricants, took over HDC. He steered it during the seventies and eighties, and today, it has metamorphosed into a highly diversified company with ten plants producing a range of strategic industrial products (*see table 3*) in five states.

The company is secretive about the contributions to its different divisions, and prefers not to reveal the product-wise turnover in its annual report. However, analysts estimate that engineering products account for 60 per cent of total turnover, its monopoly item — calcined petroleum coke — for 20 per cent and other chemicals for about 10 per cent.

Jain: serving vital sectors

The rest is contributed by the unprofitable insulator and jute divisions. The engineering division, which alone has five plants — three at Calcutta and two in the north at Bharatpur and Faridabad — has a turnover of Rs.150 crore, and is easily the mainstay of the group.

What is creditable is that in the midst of assorted products, HDC has been able to do well for itself in the area of certain specialised products. For instance, railway components which includes chassis for bogies, rolling stock, and cast manganese points and crossings, covers 95 per cent of its market share and is valued at nearly Rs.60 crore. The only companies currently manufacturing these products are the public-sector engineering units and Chittaranjan Locomotive Works, which, according to Jain can compete with HDC neither in product quality nor delivery schedules.

Apart from supplying to Indian Railways, HDC exports a sizeable chunk of railway components to the USSR and other Third World countries. The steel castings unit at Bamunari which accounts for one third of HDC's engineering activities is being expanded. The technology upgradation and increased capacities to be spread over the next two years will involve nearly Rs.70 crore.

The engineering division is certainly the largest of HDC's operations, but the most profitable is the cyanide division at Olpad in Gujarat. Several new products — all standardised ones — sodium cyanide, potassium cyanide, downstream chemicals like diphenyl guanidine and, the latest, cyanuric chloride are manufactured.

The cyanides and chemicals company, as this division is formally known, is concentrating on capacity enhancement, to meet both domestic and export commitments. Exports from this division accounts for 40 per cent of its turnover. This high profitability is because the western world has banned cyanide manufacture and competition is low.

Another performance raiser is the petrocarbon and chemicals unit at Haldia, with a turnover of Rs.40 crore. HDC is the largest manufacturer of calcined petroleum coke (CPC), used in the aluminium industry and has a virtual monopoly in the market. Diversification is to take place with a Rs.50-crore caustic soda plant.

The laggard performer has been the company's new ceramic division which makes insulators for the power sector. Vikram Mody, Rajan's son and heir apparent who looks after this division, blames losses of this division on the slow development of the power sector and the bankruptcy of electricity boards — the major customers for insulators. Competitors however point to the poor quality of these products and the need for marked improvement.

The Dalhousie Jute Company Ltd, also handled by Vikram has turned the corner after a long recessionary spell and has shown cash profits to the tune of Rs.3 crore. This was a sick jute unit with liabilities of around Rs.8 crore when it was taken over by Mody in 1988 as part of a tax-beneficial deal with the BIFR.

Growth at HDC is largely attributed to Mody's "professional style of functioning and pragmatic choice of product lines". The consensus view is th has displayed an uncanny mar in the case of CPC, or even cyanid Gujarat Alkali has been their competitor. However, engineeri ucts, specially in the eastern reg always been subject to market tions depending on government at that time. Timely diversificat profitable sunrise areas — ch and petrochemicals — when th been relatively fewer competito private sector, has paid rich di Choice of technology, especiall cyanide division has been apt an tionally, the bulk of products fr division are import substitutes.

Mody says it is the firm's mana style which has made all the dif finance management being the growth management. "We are rich company because we believe retention, low borrowings and ployment of short-term capital fo term projects," says Mody and p the new steel project with an inc low debt of just 5 per cent.

He prefers to delegate respon at the highest levels, each divisio three-tiered, consisting of a pre vice-president with technical qu tions and a backup team. Mod ever, does not believe in recruitn the top. The president in charge o sion, he says has to be a person w been with the company for at l years and has worked his way countability at each level is so marcated that barring certain corporate decisions, all is left to management.

Interestingly, all of Mody's ne jects: steel, a Rs.700-crore spon project and a Rs.2,000-crore pow erating unit are likely to be based around Madhya Pradesh. Th doubt, is to avail of the significa cessions the state might have to unlike West Bengal. West Beng has a discouraging history of

says Mody who hopes for more liberalisation. Current interest rates on long-term capital are high, over 16 per cent. This results in higher import bills (especially for imported scrap, the basic raw material for HDC's line of products) and subsequently raises capital costs, complains Mody.

Unfazed nevertheless, by criticism, Mody intends to go full steam with all his projects. "We are not going to touch any project less than Rs.500 crore," he asserts. "The inherent strength of the company has made future diversification possible and within a span of three years we should make about Rs.800 crore in the way of turnover." This will mean that the company will seek public participation to part finance its projects quite frequently over the next few years. Says Jain, "We have never gone to the markets with amounts larger than needed, that is why it appears more frequent."

Rajan Mody clearly hopes that steel will be his source of glitter. While most other industrialists play current favourites like cement and petrochemicals, he believes this is the right time to invest in steel. The shine is already visible at Mody house which reflects all the trappings of the image-conscious industrialist: 7,000 sq ft of carved wood panelling, endless marble and glittering chandeliers and Mody's personal suite of offices which is said to have outdone even the much talked about suite of offices of the Chhabrias, at Shaw Wallace house. Given Mody's confidence it is perhaps only a matter of time before the glitter is real.

OM CABLES

t breaking point

rospect of ruin faces the Rs.800-crore industry largely because forex crisis

the telecom cable industry, the y of reckoning has finally arrived. e foreign exchange crisis is taking and the prospect of bankruptcy large over the Rs.800-crore tele- ble sector, which relies heavily on s. Production at a large number com cable units, including the ta-based giant public sector un- ing, Hindustan Cables Ltd (HCL), ding to a halt. This is due to an shortage of vital raw material copper, and the inability of the ment of India to release forex to etals and Minerals Trading Cor- on (MMTC), the canalising agency, ports to replenish stocks.

. Gupta, chairman, HCL, puts on a front, claiming that HCL's inven- osition reflects adequate stocks of r to tide over the coming month, ich time he feels the crisis will have over. Abhijit Sen of Telelink , an affiliate of the Calcutta-based group, paints a far more dismal e. According to Sen, uation is quite desper- hich could even result ss-making situation at d of the current finan- ear, if the required in- don't come through. of the cable com- s, are virtually eking hand to mouth exis- and there have been action losses on ion.

duction slumped 735,800 km in March 1,600 km in April and er still to 495,800 km in Industry sources ad- at production fell fur- n subsequent months Says S.G. Chowdhury, y finance manager at Beltron, "It doesn't sense for us to down shutters as we might ultimately have to, if the situation doesn't improve, since we have orders in hand, and the Department of Telecommunications (DoT) is presumably in need of cables."

Photos: Goutam Chatterjee

Sen: the situation is desperate

Input costs account for about 70 per cent of the price of cables. Though the raw material content of a jelly-filled telecom cable varies with the type and size of cable, copper, polyethylene and filling compound together roughly account for around 60 per cent, with copper alone accounting for 30 per cent.

Indigenous capacity for the three forms of copper used — copper wires, bars and continuously cast rods, or CC rods, through which copper wires are drawn — is grossly inadequate. Whereas the cable industry has a registered annual demand of around 150,000 tonnes, Hindustan Copper, the primary

les, as imports through the MMTC become increasingly irregular of opper cathode supplies to Hin- Copper have dwindled, and ty utilisation at its new plant is low 30 per cent.

ugh copper cathodes had been de- ed much earlier, supplies were not ed as 25,000 tonnes of cathodes nported by Hindustan Copper an- against supplementary licences. the government decided it could are forex for such imports.

top of this comes the cash crunch. ding to S.R. Khastagir, executive or (commercial) of Hindustan r, the tight liquidity position has day-to-day operations tough.

only course left to the industry, at ncture, therefore, is to make use of im scrip route. But that would up- e economics of each of the com- . Says N. Sen, "If we have to get pper under the exim scrip, we can't to pay the steep premium, in addi- o the customs duty which works around 200 per cent. There has to ationalisation at the customs level, ternatively let us import under On the other hand, adds Sen, "so e government hasn't actually said tems will not be decanalised or be imported by the MMTC, but the isation has been crippled because k of funds."

e biggest argument for the industry st import under OGL is that the facturers would find it difficult to pass on the hike in input costs (estimated at nearly Rs.25,000 per metric tonne) to the DoT. The reason is that while the DoT's contract with the industry includes a price escalation clause, which covers a hike in copper prices, it applies only to copper imported through the MMTC, and not OGL imports. Besides, this year there has been no revision in the selling price of cables, and the DoT continues to offtake on the basis of repeat orders at last year's prices.

Despite volumes being severely affected, Hindustan Copper expects to place about 60,000 tonnes of copper products including its stock of imported cathodes in the market this year. But Chowdhury is not convinced. He claims that Hindustan Copper has cut supplies to about 40 per cent of the requirements since April this year.

Whereas last year there were no setbacks and stock rolling was on a monthly basis, a cable company now needs to build up stocks for at least two or three months to keep production on an even keel. This would mean an additional funds requirement of Rs.2.5 crore to Rs.3 crore. However, bankers are assessing credit limits on the basis of last year's stock limits putting manufacturers in considerable difficulty, complains Chowdhury.

Polyethelene used in insulating and sheathing compounds too is in short supply. Indian Petrochemicals Corporation Limited (IPCL) is the sole producer of base LDPE resin, a major ingredient for the compound, which has to be imported in sizeable quantities as the domestic output within its naphtha cracking facilities is insufficient to cater to demand. Though there is some indigenous production of HDPE, by blending imported LDPE resins, the quality according to G.M. Apte, technical director at HCL, is inconsistent. The shortage is likely to be partly overcome when IPCL's gas cracker complex at Nagothane begins to deliver. But then, the installed capacity at 10,000 tonnes of cable grade LDPE will be only half the industry's requirement.

As with copper, imports of polyethylene are no longer easy. Earlier imports were much cheaper, and cable manufacturers either imported the compound directly or procured it locally from those who manufactured it from base resin obtained from IPCL. Since April 1990, both HDPE and LDPE resins have been declared restricted items, and the availability of insulation compounds of acceptable grades fell. On the other hand, OGL imports, with margin money at 200 per cent together with devaluation, have become prohibitive. This could well become a permanent problem.

Unfazed by all these problems, a senior executive at Hindustan Copper says confidently, "It won't be long before the allocations are made and business will resume as usual. The recent crisis was more of an aberration." The cable industry is however not quite so sure.

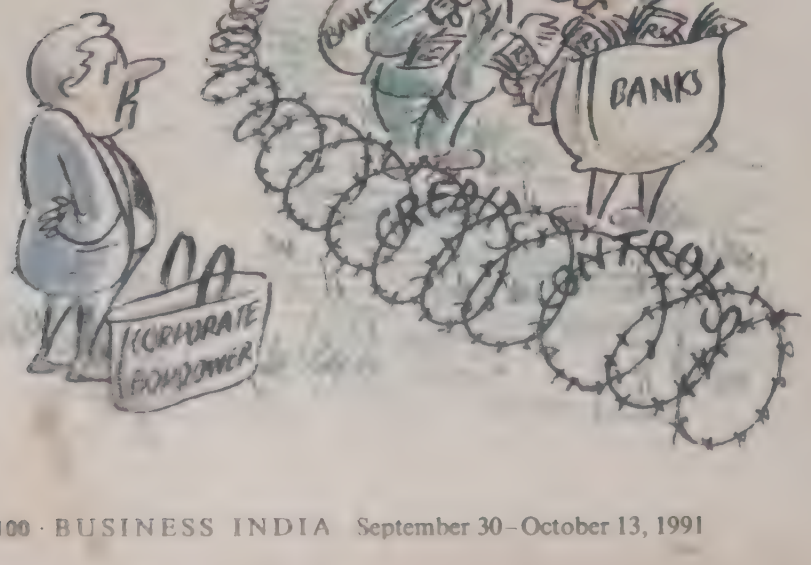
■ MADHUMITA BOSE

MONEY MARKET

Much money, high interest

Though the call market rate has eased, there is no relief for the industrial borrower and the consumer

After the extremely tight conditions that banks experienced in the last few months, there are now signs of relief. The call market rate has ruled between 12-15 per cent for over a month now, which is quite low compared to the 50-75 per cent between May and July. (The past month's rate is, however, higher than the normal levels of 4, 6, and even 10, per cent in the comparable period last year.) The low rate in the money market indicates that there is enough money in the banking system. This could be because banks are only taking a breather before the busy season brings on yet another cash crunch in the call market when the demand for credit rises.



But all this money will not be available to the industrial sector, the milch cow of the economy. A few months ago when the money market was tight banks made industry pay through the nose. Pleading a resource crunch and pressure on profitability, they pegged interest rates to the call rate, thus passing the high cost of their borrowings on to industry.

But now when the call rates have fallen, banks show no signs of lowering their rates. Reason: the floor limit on the rates, fixed by the Reserve Bank of India at 18.5 per cent, does not permit them to charge non-priority borrowers less. On the other hand, the tight credit policy of the RBI — aimed at curbing liquidity in the system and, thereby, inflation — does not allow banks to release a larger amount of credit to these borrowers either.

So, where is all the money going? For that matter, where was all the money a few months ago and from where has it come now? May to September is the slack time for credit demand every year. This year, however, was unusual, in that May-June experienced tight money market conditions. Fund managers in banks cite several reasons for this, the most important being recycling of funds between banks. Says one manager in a foreign bank, "The unforeseen curbs clamped by the RBI on credit and imports affected asset maturities."

In other words, having to place 200 per cent cash margins for imports without getting any additional credit (coupled with a freeze on credit eligibility) took most corporate borrowers by surprise; they defaulted on their repayments. With time, however, say bankers, the corporate sector adjusted itself to the situation and now recycling of funds has considerably improved. There is also less pressure on banks as imports have slowed down, thanks to the RBI's stern measures.

This year about Rs.3,000 crore came into the system through deposit accretion and about Rs.1,200 to Rs.1,400 crore via the turnaround in food credit. However, credit creation being at a slower pace, this money remained within the system. Banks are supposed to use the call market to bridge short-term (from overnight to three months) requirements of funds. They must also fulfil their statutory obligations on a fortnightly basis depending on their demand and time deposits. To meet the shortfall in statutory requirements banks often have to access this overnig ket at the last minute.

With liquidity in the market c ing to increase, even tradition chronic borrowers have begun comfortable. According to a fund ager at a nationalised bank, a fe borrower banks have become m lenders and the demand from others has halved.

There are other reasons, too, market being easy. For instanc Unit Trust of India comes in ever to the call market after its coll drive in July, and stays till these are invested. NDDB too has repaid Rs.300 crore, as it is not importing oils at present and, therefore, do need credit immediately; this am naturally, has been absorbed by th tem. Repayment of government bo ings worth more than Rs.380 cror interest payments of over Rs.1,000 have also come in. The net effec been that, from the total dema Rs.4,000 to Rs.5,000 crore in th market, more than half has already satisfied through recycling of fund

Bankers are not expecting th uidity to be sucked up, at least ti middle of October, in spite of th vance tax due on 4 October and in application to accounts at the e September. The market, in other w is likely to remain easy till mid-Oc this year (some bankers extend the line by a month) as against the 7 cent interest rates ruling aroun same time last year.

All the same, industry will con paying high rates of interest — than the RBI's tight money credit polic official of a nationalised bank say should help banks recover the losse made in borrowing at an exorbitan between the time the call rates spi and the time banks jacked up the in rate. Which means, banks will re their costs from industry and ind in turn, will pass on these costs t consumers. This brings us to the c question: from whom will the ha consumer recover his, or her, costs

TERENE/WOOL WORSTED FROM GWALIOR SUITING

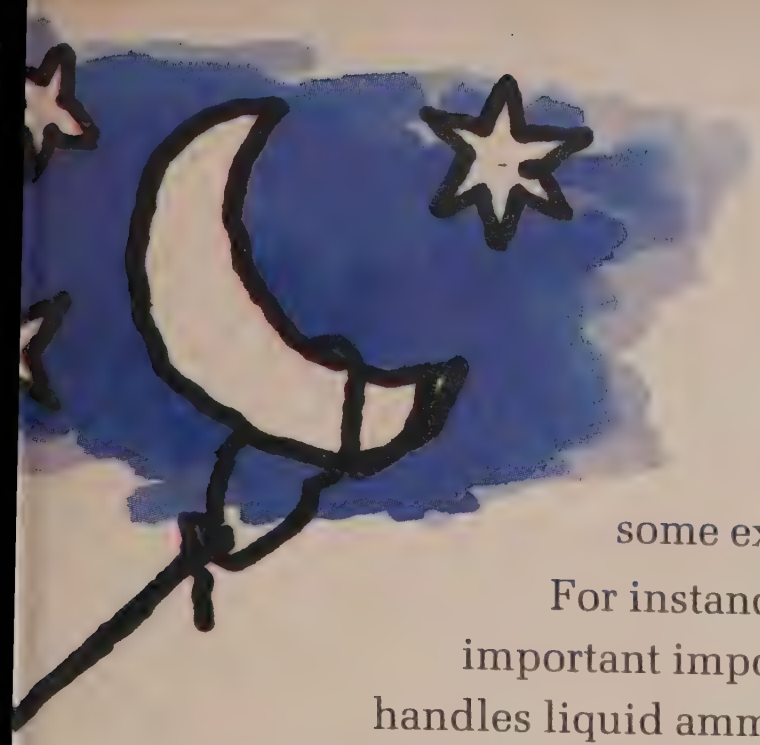
GRASIM
GWALIOR SUITING
IN A CLASS OF ITS OWN
A PRODUCT OF GRASIM INDUSTRIES LTD.

MAPP-GR-90-1271-PUN

We've been striving for the impossible...

... but that's what helped us achieve some of India's 'firsts'.

At Kirloskar Brothers, we have always aimed for the stars.



And so, words like 'challenge' 'difficult' and 'impossible' hold a special place of honour in our vocabulary, sending our adrenaline surging.

Our technological excellence and flair for innovation prompts our clients to set us daunting challenges, repeatedly.

We have justified their faith. Always.

KIRLOSKAR BROTHERS LTD. UDYOG BHAVAN, TILAK ROAD, PUNE 411002

As a result, we have pioneered some exciting 'firsts' in the country.

For instance, the first canned motor pump. An important import substitute. The canned motor pump handles liquid ammonia at –33°C and is vital to the manufacturing of heavy water, a critical requirement of atomic power plants. Fully enclosed and inaccessible to servicing for extremely long periods of 2 to 3 years, these pumps run for a marathon 20,000 to 26,000 hours. Nonstop!

Special offshore fire fighting pumps for ONGC. Another first. Another import substitute. Equipped with a pneumatic control panel, these pumps were custom-built from an extremely difficult-to-cast alloy. To operate 'fail-safe' under the harshest of conditions.

They successfully met the stringent standards of the American Society of Testing Materials and the National Fire Protection Association, right down to the highly compact design of the pumpset.

As a result of the highly satisfactory performance of these pumps, new orders are coming in from all over the country.

Over the years we have diversified successfully into sophisticated machine tools, hermetic compressors, valves and turnkey project engineering.

So when the going gets really tough and you are up against a wall, come to us.

We'll reach for the moon, together.

■ PRODUCTION COST : ↑ ■ PROFIT : ↓

PITY : YOU MIGHT LOOK AT ENERGY CONSERVATION

Your machinery is modern, your product is great and your cost of production a little above competition. So to compete in the marketplace vou reduce your margins. In other words you dip into your profits.

But with a little search for the culprit you can start the long haul back to lower operational costs.

If you're part of an industry that uses traditional insulation materials, you'll probably discover heat losses are driving up your production costs.

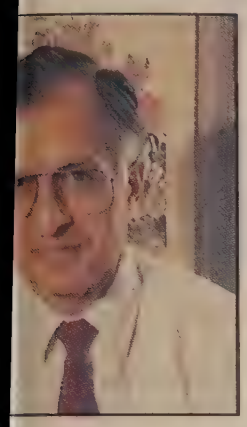
That's why it makes sense to use a new generation insulation material —HYSIL.

Because Preformed Rigid HYSIL Thermal Insulation material conserves heat more effectively at higher temperatures and allows the designed temperatures to be maintained in the furnace, oven, pipeline, or any other area requiring energy conservation. HYSIL is not affected by foot traffic, mechanical abuse, or weather conditions. Enabling it to be installed on pipes within the plant, or outside. And its limiting temperature is as high as 950°C. HYSIL is reusable. The physio-thermal properties of the product remain unchanged during its entire life, which spans decades.

Why not write to us for details.

We could tell you how to change the direction of the arrows.

HYSIL



CALCIUM SILICATE

Managing complexity

India has developed a high-cost industrial structure behind walls of protection. Liberalisation is now compelling Indian industries to modernise and offer greater variety. Increasing manufacturing complexity will put further pressure on costs. Simplification of the product range and delaying modernisation are inappropriate responses. They may ease cost pressures in the short term but will increase long-term cost problems. Indian industry needs "appropriate management technology" to manage these complexities cost effectively.

Our industries were created for the small Indian market, not the world arena. Import controls and tariffs made it necessary for them to make or buy locally a very large part of, if not all, the inputs of materials, components, equipment and technology they needed. Thus they have grown up, both smaller in size than their competitors in other countries and more vertically integrated. This is a recipe for potentially high production costs.

Upholding the obsolete

Protection against foreign competition has allowed many Indian companies to offset the problems of high fixed costs per unit sales to some extent by simplifying their product range. Models have been kept in production long after they were obsolete elsewhere in the world, like Hindustan Motors' Ambassador car. Standardised products have served a variety of different market needs and thus high volumes per model have been built, like the Tata 1210 truck and bus chassis and the Bajaj scooter. These strategies become less viable as the companies venture abroad or face more competition domestically. Products have to be upgraded more frequently and a greater range has to be offered.

It is apparent that companies that have responded to the need for variety, and provided targeted products for specific customer groups, have been successful in increasing market share and volume. Which should not detract from the lesson Ford had taught the world earlier. Standardisation and large scale production do reduce unit costs, enabling producers to charge lower prices which can also lead to an increase in market share and volume. The challenge is to produce a greater variety of products, introduce new models more frequently and at the same time reduce costs. Neither General Motors, nor Ford, nor the large European automobile producers have been able to meet this challenge.

New approach

Toyota has and so had Honda. Their new approach to production management is described by Womack, Jones and Roos in their book, *The machine that changed the world*, based on MIT's five year worldwide study of the automobile industry. Ford developed "mass production" which earlier revolutionised manufacturing and was applied in several industries — automobiles, radios, TVs, home appliances, etc. Toyota subsequently developed "lean production" which is being applied by world leaders in these same industries to overtake those who are as yet in the "mass production" mould.

Mass production is based on concepts of division of labour, specialisation and standardisation. Notions of economies of scale, minimum batch size, and economic order quantity, drive decision-making at various levels. Competitive advantage and low unit costs are derived primarily from size. This model leads to industrial strategies which are concerned with attaining size by structural means; mergers and acquisitions of firms in free economies; capacity management and industrial licensing in centrally planned economies.

Lean production is based on concepts of flexibility, team work and continuous improvement. This model leads to industrial strategies concerned with extended cooperation throughout a process chain, across boundaries of firms.

Lean production is not "Japanese" production. It is a cost-effective approach to managing increasing market complexity. It has enabled manufacturers to reduce to one-fifth the number of units of a new model required to amortise investments. Greater variety can be produced within smaller total volumes. Product development is much faster, less costly and less risky. Lean production is "appropriate management technology" for Indian firms that want to improve their domestic competitiveness and increase exports. They must modernise their products, increase product variety and reduce costs at the same time.

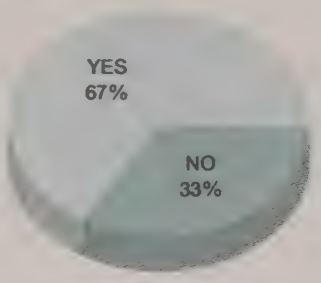
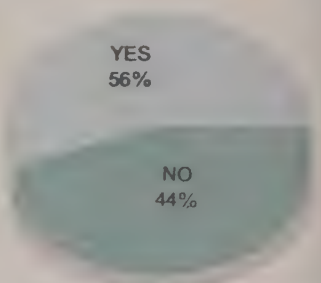
FOREIGN PORTFOLIO INVESTMENT



An exciting new option

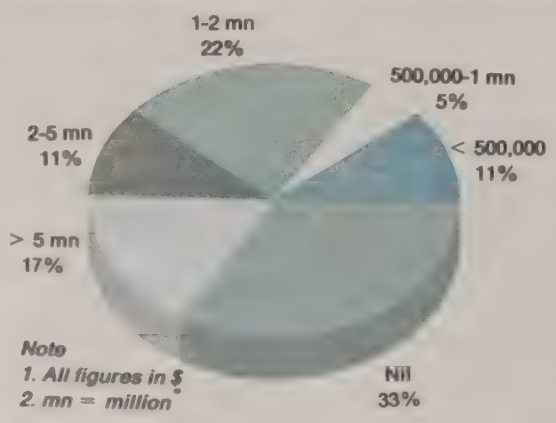
Over the last few months, there has been a growing realisation that India needs to increase the inflow foreign capital. While, in the eighties, India had used foreign debt as a means of financing its growth, nineties saw the country's credit rating taking a knock, because of higher debt-service ratio. The gove is now examining new options to increase its foreign exchange inflows pursuing non-resident Indians up projects in India and encouraging multinationals to invest in India

But there is one avenue that the government has overlooked — foreign portfolio investors. Collectively, these global money managers control over $3 trillion in cash, of which nearly $500 billion has been invested in the emerging markets. In order to find out whether these money mandarins would be interested in investing in the Indian stockmarkets, the Bombay-based Quantum Financial Services surveyed foreign portfolio investors in Hong Kong, Singapore, and London, to find out what they would like to see happening in the Indian markets and the kind of money they would like to invest in India. The respondents, at present, account for a little under 10 per cent of the money that has already been invested in India, through the existing India country funds. As a group, they collectively control over $250 billion in the global markets.



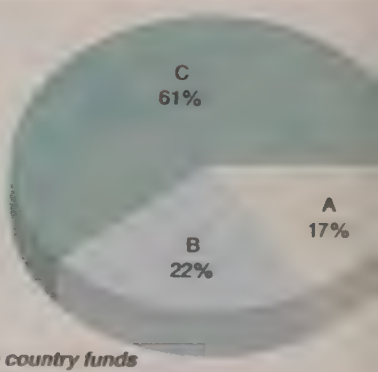
The survey indicates that foreign portfolio managers would like to see the Indian markets opened for foreign direct investment. The amount of money coming into India, in their view, would be over $500 million. The foreign investors would not be perturbed by the 1 per cent and 5 per cent limits that now non-resident Indians under the folio investment scheme. All tha serve Bank of India needs to do this source, is to delete th "Indian" from "non-resident and amend its existing scheme to *any* non-resident to acquire share the existing NRI portfolio inve scheme. In fact, the Reserve B India already permits foreign tions to open FCNR accounts; and cently announced Inward Remi Scheme permits any non-resid send money to a beneficiary in I

Is your institution a shareholder in any of the existing India country funds that have been launched?



As many as 67 per cent of the respondents had investments in at least one of the India country funds that have already been launched. Some respondents who did have investments in India country funds had divested at the time of the survey.

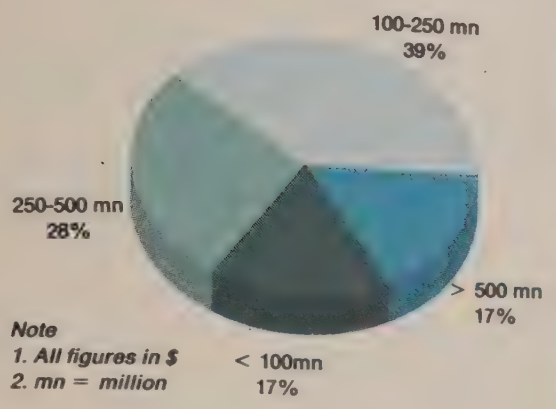
In your view, are international investors interested in investing in more India country funds?



There are more than six proposals pending with the min finance and the RBI to launch more country funds to inves Indian stockmarkets. However, a substantial number cent) feel that international investors are not interested.

What is the value of your institution's investments in India through the existing country funds?

The respondents had collectively invested in excess of $30 million in various India country funds. This is a little under 10 per cent of the total amount of money invested by all foreign institutions in the India country funds. Collectively, the institutions who have responded to the survey have more than $250 billion for investing in the global capital markets.



What should the government of India do next? (Please rank 1, 2 and 3 in order of priority)

A: Give permission to launch more country funds
B: Allow Indian companies to issue Euro-convertibles
C: Give foreign investors an opportunity to buy shares directly in Indian stockmarkets

An overwhelming majority (61 per cent) of foreign invest that the government should let foreign investors buy sha rectly in the Indian stockmarkets. While 22 per cent recon that it allow Indian companies to issue Euro-convertibles, cent feel that it should let them launch more country fun

If the government prevented any single international portfolio investor from acquiring more than a 1 per cent equity stake in a listed Indian company, would that stop you from investing in India?

Under the existing non-resident Indian portfolio investment schemes, no individual NRI is allowed to buy more than 1 per cent equity stake in a listed Indian company.

A majority of foreign investors (88 per cent) feel that this 1 per cent limit would not act as a obstacle to investing in India.

If the government limited all investment by foreign institutions in a listed Indian company to 5 per cent of the equity capital of that company, would tha stop you from investing in India?

Under the existing non-resident Indian portfolio investment schemes, NRIs collectively can acquire more than 5 per cent of the equity capital of a listed Indian company. Assuming a $30 billion capitalisation of the Indian stockmarket, NRIs could have collectively acquired shares valued at $1,500 million. However, the collective investments in the equity markets from NRIs is not more than $100 million — only 7 per cent of its potential.

As many as 83 per cent of the foreign investors state that this 5 per cent limit would not act as an obstacle to investing in India.

Given your experience in other emerging Asian markets such as Indonesia, Malaysia and Thailand, what should be the settlement time for any transaction you may make in the Bombay Stock Exchange?

An overwhelming 95 per cent of the respondents feel that the settlement time for transactions they may make in the Bombay Stock Exchange should be less than 14 days. The settlement period on the Bombay Stock Exchange is, at present, between 10 to 20 days and will meet the approval of the foreign investors.

A TILE OF RIKVIN FLOORING WON'T CAUSE A FRACTURE IF YOU DROP IT ON YOUR FOOT.

NOW, DRIVE A FORKLIFT TRUCK OVER BOTH AND SEE.

Introducing Rikvin Quartz Reinforced Flooring. ■ So light, it can be misleading. Until you lay it out, then drop some weights on it or drive a forklift truck over it. ■ Why is it so tough? Because it's made of a unique mixture of quartz (the second hardest material after diamonds), PVC, plasticisers etc. ■ Whatever you do, Rikvin won't complain for a lifetime. Even if you spill acids and chemicals on it. ■ Rikvin is anti-inflammable and self-extinguishing, not even letting out toxic fumes. ■ In case you thought that something so enduring has to be ugly, look again. Rikvin is available in a variety of hues and colours, sure to give your factory a facelift from down below. ■ Rikvin Quartz Flooring is manufactured in collaboration with Rieber & Son a/s., Norway – the pioneers of quartz reinforced process technology. And is popular in more than 100 countries. ■ Whatever your need be, Rikvin Flooring will suit them all – industrial, commercial heavy duty, commercial and residential. ■ From now on, if you think your factory, office or home doesn't look pleasing when you glance down, contact Rikvin. You won't feel that way after 24 hours.

e Don Beveridge way

g awaited event did not disappoint; it made at least some people -look at their occupational roots

industry that is buckling under ressures of reduced marketing ends find the time to dwell on ch as personal and corporate Going by the attendance at the training workshop organised the Federation of Advertising India, the International Adver- ssociation and the Ad Club the answer, amazingly, is a re- "yes".

ornight, over 300 advertising nals and marketers gathered in to listen to the gospel according Beveridge. Often described as a's most outstanding speaker', ge commanded rapt attention or his powerful orational skills, ontent of his presentation.

essional motivator and interna- nsultant to companies in the 500 league, the well-travelled ge speaks with the voice of expe- le worked for 10 years with Mo- 'got bored" and switched back st love: teaching. From 1971 to s year, he taught at the Manage- stitute of the University of Wis- Along the way, he also wrote the ng *The Achievement Challenge*, ed by Dow Jones.

uestions

ng the competitive edge' was the f the workshop which began veridge asking each participant their answers to the three most nt questions of their career/ s: Where are you today? Where need to be? How much time have to get there?

nswers, according to him, would clues as to the reasons why suc- businesses often don't stay suc- Beveridge said that the cause of s not a deficiency of knowledge eficiency of execution, which he n to explain by saying, "You o out of business because you now your business. It's because ses don't do what they know to

He added, "Successful companies often lose the desire to compete and turn fat and lethargic. You make decisions that are good for you and not good for the business. Success therefore breeds failure."

According to Beveridge, the only way to score over competition is to be pro-active rather than just re-active. Which means that businesses need to be customer-focused if they are to stay successful. But in six times out of ten, customer satisfaction is traded for employee satisfaction. "And when this happens," he warned, "you're on your way out of business."

Deepak Tolani

Beveridge: commanding rapt attention

Buying has to be made a pleasant experience. Research shows that 87 per cent of Americans hate the process of buying a car. Companies should ask themselves, "Why do our customers buy from us?"

The bottomline

Further, Beveridge opines, every business must have its own non-negotiable standards. The bottomline of these should be: the customer should be more than satisfied. Beveridge cited the example of the chief executive of fast foods giant MacDonalds who spends one day every month in a restaurant actually serving Big Macs to customers. "If you are not serving the customer, you'd better be serving someone else who is," he warns.

Speaking on achieving positive customer responses, Beveridge said that 80 per cent of corporate brochures are a disaster. Most brochures still carry the picture of the founder or the managing director or a picture of the corporate headquarters. Such symbols only satisfy the manufacturer's ego and are of no interest to the customer.

Comparing yesterday's selling skills with those of today, Beveridge said that today's salesman must know his customer's business as well as he knows his own. Talking of the product in the initial sales contact is taboo, according to him. Top performing salesmen tell the customer what he needs rather than asking the customer to choose from the range of products that the company offers. Above all, the salesman must be accountable to the customer.

Admittedly some of these golden tenets hold true only in competitive markets rather than a protected market like that in India. But with the catchwords today being 'liberalisation' and 'opening up', hitherto monopolistic manufacturers would find their bastions vulnerable to global forces. The time has come for moving and shaking. And those who imbibed Beveridge's lessons, realise this all too well. As one of the participants remarked: "Beveridge made me take a re-look at my roots, go back to the very beginning of my career and from there assess my objectives under a new perspective."

Udaipur, 19 June 1991:

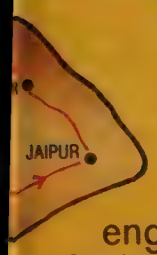
At precisely 10.12 a.m. two young Indians, Rajendra Singh and Lal Singh, finally completed an amazing feat which has won them a place in the Guinness Book of Records.

In their Tempo Trax, they set the World Record for the "Longest Fuel Range" – driving 2,605 km non-stop, without re-fuelling (and breaking, in the process, the earlier record that had been set by an Australian team in a Toyota Landcruiser in 19

In order to set this new record, the two br literally had to make a journey through hell. across the blazing deserts of Rajasthan at the height of summer. And battling against obsta like eye-splitting sandstorms, temperatures hi 45°C, and torturous roads that were covered anything upto 6ft of shifting, treacherous san

It was the ultimate test of man a machine pitted against a hostile environment... and triumphing over it, spectacularly.

Rajendra Singh



Lal Singh

"Frankly, to take on a challenge like this, there was only one vehicle we would trust: the Tempo Trax."

S BOOK OF RECORDS, ROUGH HELL.

nazing vehicle behind the amazing feat

vehicle the Singh brothers chose to break the Record with was, of course, a Tempo Trax. ique rough-road vehicle that's been entirely d, engineered and manufactured by Bajaj Tempo in Pune – a triumph of indigenous Indian technology. The Tempo Trax delivers everything you could look for in a rough-road vehicle: • A 65 BHP OM616* engine for unmatched power, reliability, fuel economy and low-noise performance • High performance gearbox and axle

• Tough, stylish pressed-steel body with full doors for complete safety • Superb handling, excellent riding comfort • Spacious, comfortable, well-furnished interior • Available with a choice of canvas, PVC and FRP tops • Comes with the longest warranty of any Indian rough-road vehicle.

* Made under licence from Mercedes Benz AG, Germany.

SARDAR SAROVAR PROJECT

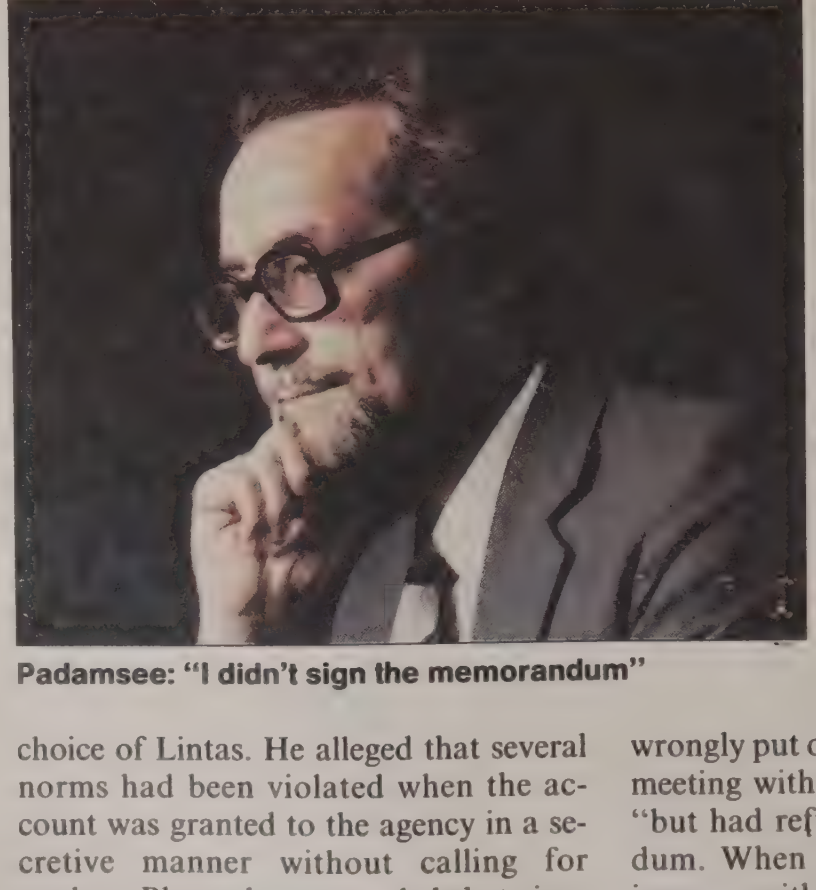
Lintas backs out

Neither Alyque Padamsee nor the authorities expected the hue and cry that followed the choice of the former's agency to engineer the Narmada dam project's media blitz

Mounting pressure from the public has ultimately forced Alyque Padamsee, the high-profile chief executive of Lintas India, to decide against taking up the Rs.5-crore advertising account of Sardar Sarovar Narmada Nigam Ltd, the Gujarat government corporation engaged in construction of the controversial Sardar Sarovar dam on the river Narmada.

Dubbed by some as the "lifeline of Gujarat" and by others as an "environmental and social disaster", the Sardar Sarovar Project has been at the receiving end of bitter opposition from environmentalists and hostility from the media. To counter this, SSNNL had decided to mount a multi-crore media blitz to convince people of its desirability.

The corporation invited four top agencies to make presentations. These included Lintas, Hindustan Thompson Associates, R.K. Swamy Associates and Mudra Communications. In the end, Lintas was decided upon.



According to an SSNNL spokesman, the account involved a budget of Rs.1.18 crore for six to nine insertions in 19 urban dailies and 10 rural dailies and six insertions each in nine periodicals. A sum of Rs.31 lakh was earmarked for 15 spots each of 30 seconds on the national network and Rs.61 lakh for 15 spots of a minute each on the regional centres of Bombay, Ahmedabad and Delhi.

Lucrative deal

Lintas was obviously in for a lucrative deal; over and above its well-imaginable fee for engineering the media blitz, the agency was to charge Rs.10,000 per press release and Rs.40,000 for organising a press conference.

But neither SSNNL nor Lintas expected the storm of protest that broke out once the agency's choice was announced. The fact that Lintas is well-known for its public awareness advertising and socially responsible stands only made matters worse for the agency. Activists opposed to the SSP were quick to condemn the move as "a sell-out" and accused Padamsee of "shortselling environmental concerns for business". Some of Padamsee's close associates, like Anand Patwardhan, who has been involved with Padamsee in a communal harmony campaign, also publicly denounced the Lintas chief executive. Worse still for Padamsee, some activists allege that in June 1988 he and 50 other prominent personalities, had actually signed a memorandum calling for a halt on all work on the project.

The entire affair was given a curious twist when a Bharatiya Janata Party MLA from Gujarat, Ashok Bhatt, moved a writ in the Gujarat High Court against the choice of Lintas. He alleged that several norms had been violated when the account was granted to the agency in a secretive manner without calling for tenders. Bhatt also contended that since the SSNNL was not manufacturing or selling anything, there was no need for any advertising. The High Court had granted a stay in the matter.

Padamsee: "I didn't sign the memorandum"

Faced with this barrage of criticism, Padamsee had a meeting with SSNNL chairman C.C. Patel and advised him that advertising for the project was not a good idea. He instead recommended that Patel call a conference of environmen discuss the issue.

Padamsee says he has reason actions. He says, "When we m presentation for the account we v that the project was going to water to 30 million people by disp few thousands. When you don't client, you take facts given to you But later, various representatio to me pointed out that the figures a little different. It was then tha cided to opt out of the account."

Project not right

But why didn't he check out the f forehand? "It has happened b Padamsee says. "We have gone by client has told us and prepared c sentations. Later, if we found t product was not ri decided against count. If we have for products, ther reason why we not do it for proj any case, I felt tha tising was not a idea. I conveyed the SSNNL chairm he accepted it."

Padamsee clarif while his agency h granted the acco contract had a been signed. He a that he had not a signed the memo for the project a his name had wrongly put on it. "I had a two-ho meeting with one Mihir Shah," "but had refused to sign the me dum. When some people broug issue up with reference to the ac asked them to produce a copy wh ried my signature. They failed to d

Undoubtedly, Padamsee's decis save Lintas' image of a socially agency. And for SSNNL, it seems, t lic relations problem it has on ha now not only continue but becom vated with Lintas' refusal.

ECTRIC COMPANIES

ore fuel for controversy

ver company's proposal to set up a new quick start-up facility aground with more and more objections being raised

ay in environmental clearances e ministry of environment for ectric Companies' 180-MW d cycle plant, to be based at , has added fresh fuel to an al- ated controversy surrounding osal.

eady runs six units at its Trom- er station; these include units I, of 60 MW each, unit IV of 180 d Units V and VI of 500 MW e fresh proposal consists of a able of generating 120 MW gas turbine and 60 team turbine by re- pent heat.

ed for the new unit by an expert com- nquiring into the f grid failure which d Bombay on 23 November last year. uded that a major or the delay in res- of power was that units at Trombay uick start-up power ties; this, the ex- , could be provided MW gas turbine.

roposal was cleared tate government in y this year. The ministry of environ- d forests, however, the final clearance TEC's compliance tain conditions laid when a similar clearance was for Unit VI. Says Debi Goenka, y of the Society for Clean Envi- t, "The ministry had stipulated company should scrap units I, II after commissioning unit VI. But ough Unit VI has started func- , I, II, and III have not been d."

according to Goenka, TEC has mping flyash into the creek adj- ereby violating an environment y ban on such dumping. Also, by using coal as a fuel in Unit V, he says the company is violating a Maharashtra government ban on the use of coal as an industrial fuel in Bombay.

Goenka, in fact, has a basic objection with the argument that TEC requires new quick start-up power facilities at all. He says, "MSEB has huge gas-based turbines across the creek at Uran. TEC could easily use power from these units for quick start-up."

S.P. Manaktala, vice-chairman and managing director of Tata Power Ltd, retorts by saying that these accusations have "no basis in reality". He adds, "All the stipulations that TEC has been accused of violating have either been modified, rescinded, their implementation postponed or they never existed."

Are the environmentalists' fears unfounded?

Manaktala says that while unit VI had been completed, it was facing teething problems and will be fully commissioned only by next year. "As for scrapping units I, II and III," he says, "it is the Maharashtra government itself which has asked us to continue generation till the combined cycle plant is commissioned." This is confirmed by U.K. Mukhopadhyay, the state government's secretary for power.

Mukhopadhyay, who also happens to be the environment secretary of the state, adds that unless the 180-MW unit is commissioned there will be a constant danger of grid failure. He feels that the environmentalists' fears are unfounded as "the combined cycle plant will not be a base-load plant but only provide auxilliary power".

"In any case," Mukhopadhyay says, "the pollution load will not be allowed to increase. The clearance granted by the state government clearly specifies that the permissible limits of pollution will continue to remain at present levels."

Regarding the siting of the 180-MW unit, Manaktala points out that it is logical to have a quick start-up unit close to the main units. A TEC spokesman says, "In case of a grid failure, the MSEB facilities at Uran are useless to us." Flyash, the spokesman adds, is not dumped into the creek but released in a bunded area. At the instance of the government, TEC has already signed an agreement with Aardite Holding of Holland to make flyash aggregates. And Manaktala points out that the ban on the use of coal as a fuel does not apply to TEC since it is not an industrial unit but a utility.

While the debate on the plant continues, the delay in obtaining the environmental clearance is costing TEC dearly. It has delayed the utilisation of a $158-million loan from the International Finance Corporation. The loan was meant to cover the costs of the controversial plant as well as a 150-MW pumped storage project located at nearby Bhire. Now, with Goenka threatening to go to court over the issue, an early resolution of the controversy is unlikely.

■ RAJU KANE

TATA STEEL

Changing priorities

A record export of Rs.207.01 crore in 1990-91 marks a watershed in Tata Steel's export strategy. This year's target is over Rs.300 crore but the profile of products exported will be very different. "The new policies of the government have been least beneficial for the export of engineering goods," says Aditya Kashyap, executive director (corporate), Tata Steel. "I see a situation where non-steel exports will grow much faster. In the future we will look more like a trading house and steel exports will not be a primary thrust area."

This decision comes as a big surprise, especially since Tata Steel has been able to carve a niche for itself in the area of steel exports. In 1988-89, these exports stood at Rs.33 crore, which grew to Rs.85 crore in 1989-90 and to Rs.144 crore last year. While the largest portion of such exports are in tubes, seamless or otherwise, the newest stars are the value-added products.

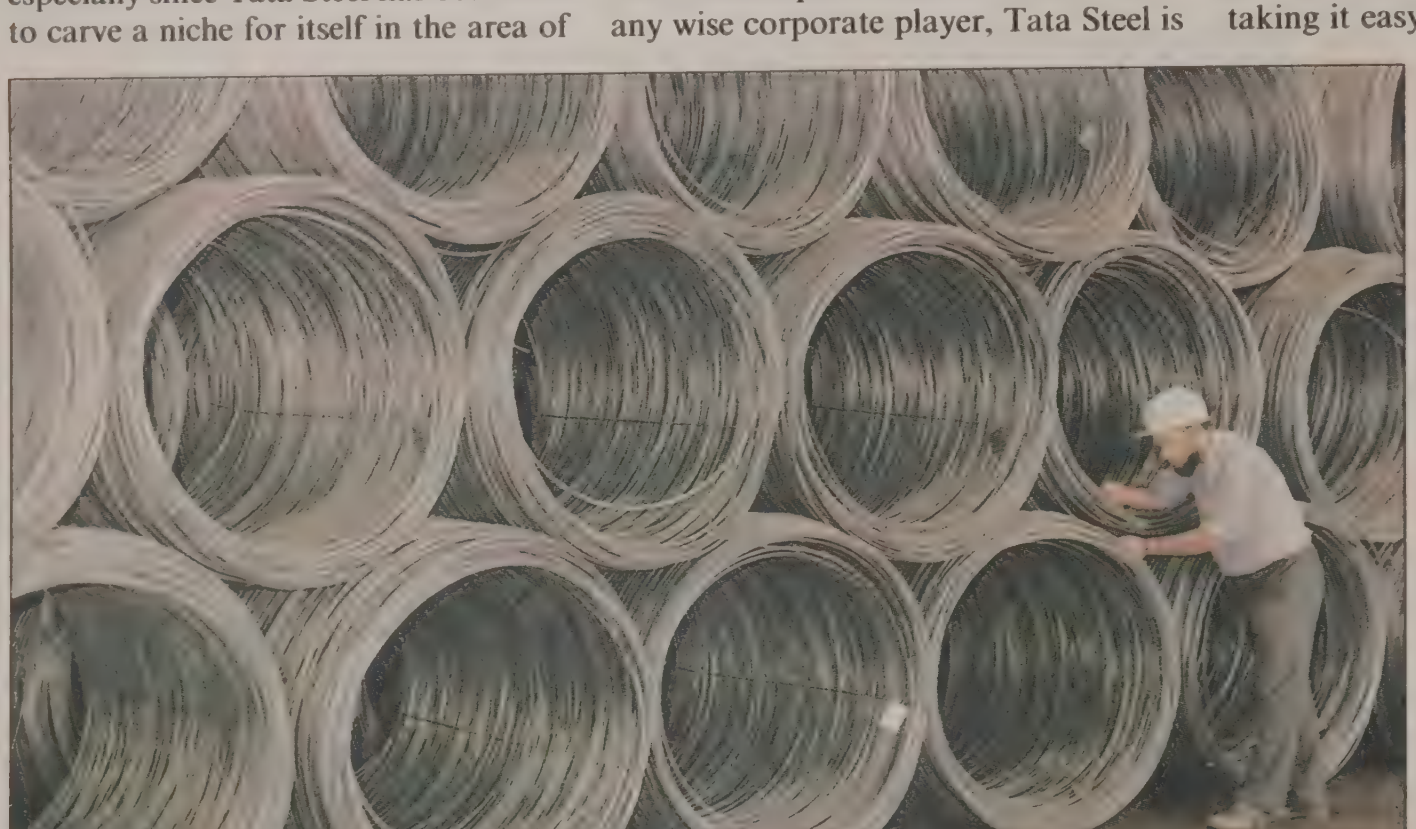
Unique product

One of these is the thermo-mechanically treated Tiscon 50 ribbed bar rods, or TMT bars, used for reinforcing concrete in the construction industry. The product, according to officer on special duty and developer of the product, K.S. Lakshman, is unique because it allows the reduction of steel used by 50 per cent over conventional mild steel rods and yet provides the same strength to concrete. Australia, Iran, Iraq, Sri Lanka, Nepal have been buying the TMT bars and would want more; but every ton exported leads to howls of protest from the domestic construction industry. At the moment, Tata Steel exports about Rs.45 crore of TMT bars.

But then, the decision to stay away from steel exports makes sense for, like any wise corporate player, Tata Steel is merely reacting to the reality of world markets. There exists a steel glut — the world production is 800 million tonnes per annum as against demand for 700 mt. No wonder there is cut-throat competition in the world market place.

On the other hand, Indian steel prices are higher and there is a wide gap between supply and demand. This gap is likely to widen. "No doubt, steel can be exported to meet import requirements but the export push can also come through other products. Coff per, for example," says Kash

According to the executive makes better business sens grated plants like Tata Steel trate on the domestic marke manufacturers who have ac electric furnace route used to mt of steel scrap annually. I w they will now afford it with th rupee. So there is going to b market availability from that



Not enough steel

Besides the call of the domest there is another reason for T taking it easy on the export fr just do not more steel to e produce 1.6 mt The joint pric mittee of the ce ernment allov export only 10 of this total q says Kashyap bulk has to be to the JPC for b in the controlle The little left o the free dome ket. "Even if s trol goes — government h stressing that i — the premiu domestic marke make it more a to export grea tities," adds Ka

Recent go policy changes last nail in the coffin. The cash satory scheme for steel en goods varied between 6 and 8 After it was discontinued, Ta margins on export earning shrinking.

All these factors, thus, ha Tata Steel avoiding engineerin While this may have come as pointment for overseas clie buyers must be overjoyed.

▪ s

Coils ready for despatch: adverse policies

Exim scrips: the next step

BALKAR

The ministry of commerce is to be congratulated for launching nothing short of a revolution in the Indian business climate by its announcement of the new foreign trade policy: when the author first proposed the Exim scrips scheme, such a revolution was not merely expected — it was intended! The adoption of Exim scrips will change the lives of businessmen in so many interesting ways that many people may not have grasped the full extent of these enormous changes.

In terms of the Indian business climate, Exim scrips represent not just one but a collection of several revolutionary reforms in terms of:

• Freer imports without quantitative and other restraints, enabling industries to respond to domestic market/model acceptance fluctuations as well as supplier market fluctuations overseas. This new found flexibility will challenge businessmen to show nimbleness in their response to market dynamics. No more need they be worried that a phenomenally successful product may not be in adequate supply because of import licence restrictions on quantities and sources. Conversely, if some products do not quite fly in the marketplace, businessmen will have the flexibility to make more of those that do succeed.

• Elimination of the pernicious phased manufacturing programme (PMP) mechanism that tied up industrialists in knots. A tortuous way of reducing forex outflow on components and raw materials, the PMP had become a regulation more often observed in its breach. The new mechanism gives financial incentives to manufacturers to indigenise on account of the expected premium price of Exim scrips.

• Elimination of paperwork and procedural hassles in terms of import licensing is an obvious outcome of adoption of cash-like Exim scrips. This will also mean avoidance of interactions with a whole layer of bureaucracy.

• Better realisations for exporters will now be possible through expected Exim scrip premiums of the true value of their exports, which should be measured in terms of what useful goods (and services) they will buy for the country. This is the strongest incentive one can give exporters who have hitherto merely supported those who prospered in the expanding domestic market based on the forex earned by the exporters.

• The elimination of unsustainable subsidies from the Union budget. The expected premium commanded by the Exim scrip also eliminates quite naturally the need for artificial props and subsidies such as cash compensatory support to make exports profitable. It also avoids retaliation by buying countries who dislike export subsidies by supplier countries as they fear that these subsidies distort their own markets.

While it may take businessmen several months to realise the extent of the revolution that is likely to be, this is also the time to look ahead at the next step — having only tariff barriers.

All the benefits of this revolution can be nullified by the perpetuation or indeed introduction of physical restrictions on imports through the import list. There need be only tariff barriers, no non-tariff ones. The imperative of the hour is for removal of physical restrictions on imports; ie no banned items and no quantitative restrictions or actual user type restrictions.

To those who react in horror, one need only point out that the benefits of market responsiveness conferred upon the business community by Exim scrips could be drastically reduced by such backdoor quantitative restrictions.

Indeed, if only to make a point it is even instructive to look at extremes: take luxury automobiles, for instance. Most socialists would consider the import of automobiles to be the ultimate nightmare of liberalisation; yet our nation's languishing tourist trade that cannot yet match that of the lone city of Bangkok, might find this a valuable "industrial" input to their business! It does take all kinds to keep an economy going.

Prejudging what the economy will need and in what quantities is an unworkable approach as we have discovered over the past four decades of centralised planning. We would be repeating the same mistake if we carried this process to the import list. The same goes for the mistakes of the past of prejudging what industrial processes ought to be undertaken in the country, regardless of whether they add significant value or not. To illustrate, the Bureau of Industrial Costs and Prices (BICP) report on personal computer manufacture highlighted this folly several years ago, yet last year's import list banned the import of any populated printed circuit board no matter how essential (even one or a small number which would be impractical or uneconomic or impermissible to manufacture locally). For this reason, there should only be tariff barriers. Essential but impractical to manufacture components should be importable freely provided

...or is president ...Tech, an ...onal business ...ncy firm based ...ay

Exim scrips are purchased and the appropriate tariffs paid.

In the initial announcement, the small-scale sector has been exempted from the Exim scrips mechanism. If this is meant to give them time to understand how the mechanism works, this is all right. However, in the medium and long term, there is no logical basis for exempting their imports from the same linkage to exports, even if it is to someone else's exports. The prevalence of oxymoron-like small-scale giants in several industries is further proof that our artificial definition of smallness is inadequate reason for extending the sweep of trade reform to this sector as well.

All the benefits of the Exim scrips revolution can be nullified by the perpetuation or introduction of physical restrictions on imports through the import list. There need to be only tariff barriers, no non-tariff ones, i.e. no banned items and no quantitative restrictions

In the area of capital goods, once use of foreign equity to purchase imported capital goods is conceded as being a good idea, it is not at all clear why capital goods imports by domestic companies should be out of subsidised "free" foreign exchange. The recent clear trend towards capital-intensive technologies and inflated project costs would suggest quite the contrary. What better way to inject sense into the investment process than to make imported capital goods, not funded out of capital inflows from abroad, bear their true cost to the nation by insisting on their being funded through Exim scrips?

Most readers know that the current supply of Exim scrips is related to exports by the 30 per cent formula. Those that recall the author's column in 1988 on the Exim scrips scheme will remember a key concept known as the balance of trade target or "BoT-Target" which is precisely this ratio of Exim scrips to exports. That the BoT-Target cannot be kept as low as 30 per cent for long is pretty obvious — the past year's import bill of S14 billion or so (Rs.28,000 crore) in imports other than "essential goods" is certainly more than 30 per cent of the same year's e some S16 billion (Rs.32,000 crore). tinuance of such a low BoT-Target v creating a recession in the Indian Yet, the current run on FCNR accoun availability of forex reserves for ess ports until release of IMF funds, re obligations of short-term commer rowings, etc, clearly present a sound temporary diversion of a large chu port earnings to those needs.

Over the next three months, the r IMF funds should raise forex rese enable essential imports of S1 billio ally, which in turn would enable t Target to 50 per cent. In anoth months, the confidence of NRIs shou stored and prompt them to renew t posits maturing this year, amou another S1 billion enabling the BoT-T be raised to 70 per cent.

The third and final step towards cent will, however, take time. This is of our long-term debt service obl which are about 30 per cent of export will need large and continuing capital

In the absence of an increase in NRI (as opposed to mere restoration of levels to earlier levels upon re-establ of confidence), which seems unlikely retrospect undependable, only larg term capital investments by multina can help us. The latter process will least two years to have a visible impac tor confidence takes a long time to b lished, especially when investor attractive alternatives.

In any event, use of Exim scrips to goods should be made as easy as g bank draft for payment of a magazi scription from the local bank is today the banking channels instead of the the Joint Chief Controller of Import ports to issue Exim scrips would perm Banks could square up their Exim scri tions each day quite easily, as they forex today.

As outlined above, the revolution w through the means of the new foreig policy will take some two to three y work itself out and reveal the full be impact on the nation. Impatient tinke those looking for quick results and fixes can only recreate that monster o tionary controls and hurdles that we h demolished. Patience, on the other ha surely yield its own rewards.

ISTRIBUTION SYSTEM

anging attitudes

e recent dramatic changes in s trade and industrial policies, imha Rao government is faced gigantic task of restructuring ucracy. Judging by the atten- to a meeting of the advisory the public distribution system last month, the government have decided to begin with the meeting was addressed by the nister. "Previously these meet- to be a formality," says an

me minister's personal interest g about a change of attitude. can play an important anti- ry and anti-poverty role. In the a more open economy might ll sections of the on. But in the n, measures like on could have an ary impact. An PDS could act as a t to millions who benefit imme- om the process of tion.

system

as it is currently ed, suffers from bias as well as a bias. In the rural e PDS works well ne southern states arly Kerala and adu) and in West Also the states of P, Madhya Prad- asthan and Ori- unting for 52 per he population be- poverty line, get only 12 per cent pplies. The weakness of the PDS ral areas of the northern states is of the absence of a co-operative nt, says M. Subrahmanium, griculture secretary. According ata, in 1986-87, UP and MP, eat eating states, got only one and 0.5 per cent of the wheat by the system.

mbat this bias, a restructured PDS would now focus on areas covered by the drought prone areas programme (DPAP), the integrated tribal development plan (ITDP) areas and hilly and desert areas. Out of a total of 5,100 blocks in the country, 1,700 to 1,800 blocks have been identified as needing special attention. The poorest families are to be benefited in these areas.

For instance, the advisory council meeting has decided to increase the range of commodities to be distributed through the PDS, including such things as tea, salt, soap, match boxes and exercise books. "This will involve no additional subsidy except for dhotis and saris, which we will have to buy from the National Textile Corporation (NTC)", says civil supplies secretary B.K. Goswami. "The other commodities we will purchase direct from the wholesalers and sell below market prices by cutting out the middleman."

Deepak Tolani

Unloading foodgrains: distribution problems

For the urban areas, the government proposes to provide better coverage to slum dwellers and workers in the unorganised sector such as construction labourers. However no plan seems to be on the anvil to exclude the better off sections of the population from the ambit of the PDS. "The dual card system has not worked in Andhra Pradesh, where 70 per cent of the population claims to be below the poverty line," says Goswami.

As part of the overall strategy, the advisory council meeting took a number of other ambitious decisions. Problem villages are to be identified within one month and a number of fair price shops are to be opened within three months. Requirements such as transportation and storage facilities are also to be identified within three months.

Grain delivery linkage

The other important change is to link delivery of foodgrains to employment generation programmes like the Jawahar Rozgar Yojana (JRY). The quantum of foodgrains distributed through these programmes had reached 2 million tonnes in recent years, but has dwindled to insignificant levels in the last financial year.

Payment through food will ensure targeting of the poorest sections of the rural population as they are the only ones who are willing to work on such programmes. Participants in these programmes normally want to be paid in cash. But officials feel payment in kind will ensure that liquor cannot be bought and this could help attainment of minimum nutritional norms.

Fundamentally, the problem is one of political will. The states where the PDS is strong, particularly in the rural areas, are those which have implemented land reforms and have strong co-operative movements. In the absence of these measures, a strong PDS is unlikely to emerge in the problem states of UP, Bihar, MP and Rajasthan.

■ BODHISATVA GANGULI

End of a stormy relationship

Amid a flurry of charges and counter charges, Sealand Service has terminated its 13-year-old association with Ranadip Shipping

On 17 September when the world's leading container operator, Sealand Service Inc (turnover: S3.5 billion), issued a 90-day notice for termination of the agreement with its Bombay agent, Ranadip Shipping & Transport Co Pvt Ltd, it marked the end of a 13-year association. With that, Ranadip, owned and managed by the high-profile Dilip De, is certain to lose the bulk of its business.

The trouble, brewing for quite some time now, came to a head in June over two issues. One, when Sealand decided to try out a new service, Ranadip refused to hand over Sealand's 46 empty containers lying unused in its Mulund depot. But Sealand nevertheless managed to shift the containers from Mulund to Nhava Sheva. Bill Burns, Sealand's India representative, was arrested for alleged "misappropriation and fraud", and released on bail.

Secondly, in June this year, Sealand sought to appoint a new agent for New Delhi, which was being handled by Ranadip since 1981. A major dispute arose when Sealand tried moving three containers by train from Madras to New Delhi in the name of newly-appointed Delhi agents Paramount Intermodal Transport Pvt Ltd on June 28. Ranadip cried foul because the main application to form Paramount was dated 5 July.

De: losing business

R.R. Joshi, chairman of Paramount, clarifies that since the original application to form Paramount, made in March, was unacceptable, registration was delayed. And once the error — of moving material in the name of a non-existent company — has been rectified with a formal registration soon thereafter, it is not illegal.

Why did Sealand terminate its relationship? "Their unco-operativeness," says Burns, "forced us to take independent charge of our operations." Besides, Sealand, which records an estimated annual S 40 million in freight earnings from India, found that its container traffic was declining. From 298 containers handled by Sealand between January-June 1990, the number had halved to 112 for July-December 1990. The "quality" of service from Bombay and Delhi, says Burns, had suffered tremendously.

The Ranadip-Sealand relationship has in fact been stormy ever since Bill Burns came to India in August 1988. "By the beginning of 1989, we knew that we could not work with Ranadip," says Burns. "We had told De that we were willing to take his cavalier attitude up to a limit. But he never listened, and very quickly he crossed the limit."

Indeed, apart from a personality clash, Sealand has been unhappy with the functioning of Ranadip Shipping. Consequently, it has been forging new alliances, cutting itself loose, in the process, from Ranadip. The first to go, on 7 March 1989, were the unviable Calcutta operations, handled by Integrated Marketing Pvt Ltd, a sister concern of Ranadip.

Apart from appointing new agents, other indicators also confirm Sealand's growing dissatisfaction with Ranadip. In January 1987, Sealand shifted from a 'cost-plus' to the straightforward 'agency commission' deal. For four months, beginning January this year, Sealand held back on its payments to Ranadip. It also cancelled reimbursements for travel and entertainment. Simultaneously, Sealand appointed Arthur Anderson to audit the Ranadip accounts. Moreover, which had to be paid within were invariably paid on the las

Meanwhile, Sealand's conf the Customs and the Reserve India cannot be glossed ove back as 1980, the Bombay Cust started adjudication proceeding

Burns: fraud charges

Sealand for alle sion of duty Rs.46 lakh. D that Ranadip, Sealand's agent, involved in that The matter is court.

When underta handling, transp and destuffing o cargo in the docks last year, charged arbitrar "It was only weeks," says Burns, and the high were charged to compensate losses Sealand was suffering on bound cargo.

Bombay Customs has also be vestigating an 'alleged fraud' co on the Dutch shipping carrier, N Lines. On 25 July this year, Shipping Agencies, agents for N complained that Sealand, in conj with Paramount, had illegally us general bond number while dec Rs.19-crore bond to the Delhi C Forbes Forbes Campbell, Trider ent company, also complained land. Paramount claims it to clerical error", since the agency been set up and the directors wer bai at the time.

Whether these instances were ate attempts at sabotage or gen rors, one fact cannot be denie Ranadip-Sealand association is over, though De is certain to con plague Sealand in court. Accor him, "the dispute between Seala Ranadip arose because Ranadip willing to be a party to the crimi spiracies hatched by Sealand to c Indian economy." Who finally whom is, as usual, debatable.

ears of research have culminated in a production breakthrough

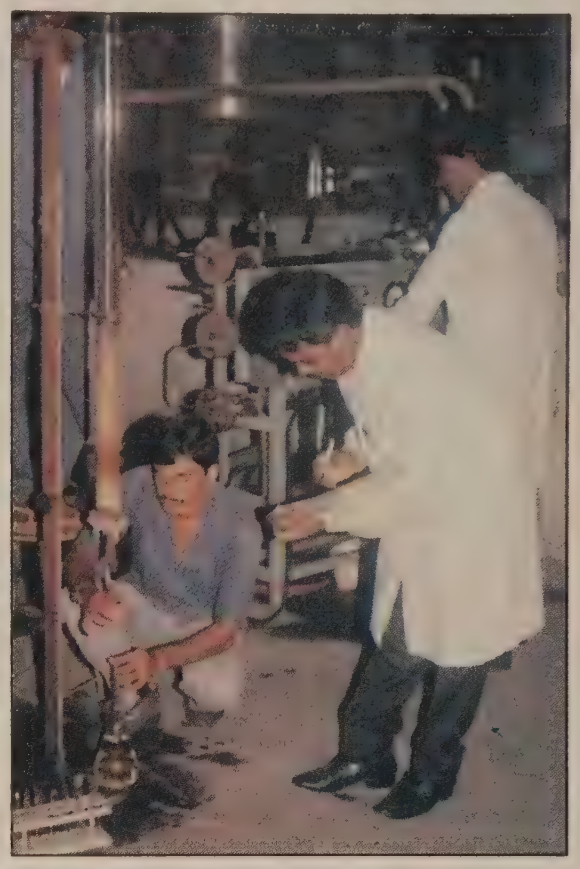
abad-based Andhra Synthetics Antibiotics Ltd has become the mpany in India, and the second orld after Schering Plough of the develop and manufacture sis- a broad spectrum antibiotic. the culmination of four years of by P.K. Bhattacharya and his ASAL's unit at Jeedimetla in Hyd. sisomicin, currently imported t of Rs.4 lakh a kg, will now be e at Rs.2 lakh.

arch and development has been iorte. Where public sector com- had failed to manufacture gen-, another antibiotic, even after ng technology worth $350,000, d succeeded in 1987, being again Indian company to do so. The ny owes its success to its mastery ermentation process.

rugs are basically made through ocesses: synthetic where there is ogical process involved, for eg, as manufacture of the painkiller fen; and fermentation which in- micro-organisms. Besides ASAL, re only four other fermentation brought together voluntary or- tions, researchers, bank officials, vernment and NABARD representa- "The discussion centred around quest of voluntary agencies to let lp groups get bank credit from na- ised banks, and the possibility of tary agencies getting some com- tion in money for the work that are doing," said Dinkar Rao of organiser of the conference.

nks have several social banking pro- mes, but they are faced with prob- while lending to the poor. The loan nts are small, identification of cli- ifficult, and repayment levels low. luntary agencies have been playing le of an intermediary for social programmes. However, this is not ut related problems — the banks nonths to release the loan, there are procedures (say, in one case, 28 tures are required). As an alterna- voluntary agencies can organise self

of contamination are great. When air is passed through the culture, an alien micro-organism can enter and vitiate the whole process. Also, the entire process takes three years after commissioning of plant. And last, but not the least, there is a scarcity of trained technologists in the fermentation field."



The first step is getting the culture. There are two main sources — the American Type Culture Collection Centre in the US and the National Chemical Laboratory, in Pune. The culture which gives some indication that sisomicin could be produced is bought. Then experimentation begins with developing a culture which gives a slim positive indication. Through mutation techniques, the positive activity is increased till 600 micrograms of sisomicin is available per mililitre. At this point it is viable to start industrial production.

Scale-up process

Industrial production involves a process of increasing the growth or biomass of organisms. The dormant refrigerated culture is revived for 10 to 15 days in a

has 10 members, eac carbon and nitro- contribution of Rs. l iomass, there is a group meets and th process when the lected is loaned to d through 1-litre 1991, 58 such groups 2,000 litres, in the says V.C. Nadarajar pre-fermentation Pradhan (Professio Development).

Last

Separation: the final stage

year 25 kg of sisomicin were imported. Today, ASAL has a capacity of 15 kg. It plans to market sisomicin itself in the form of eyedrops and injections. Says Pratap C. Reddy of Apollo Hospitals, "After an operation a patient is normally treated with gentamicin. But soon he develops resistance to gentamicin through continuous use. Then we switch to sisomicin."

The demand-supply gap for gentamicin in India is large, with local demand being partially met by Hindustan Antibiotics and Fulford India selling the formulations produced by its parent company. The residual demand is met through smuggled gentamicin. The main buyers of gentamicin produced by ASAL are IDPL and Karnataka Antibiotics; ASAL also sells its own formulations.

"Ultimately we plan to expand our gentamicin capacity to 1,500 kg and 400 kg of sisomicin. This would need an investment of Rs.1 crore totally, Rs.25 lakh being the requirement for the first phase, for expansion and upgradation," says Bhattacharya. With the US patent for sisomicin, held by Schering Plough, expiring in 1992, large export potential also exists for ASAL. Already there have been positive developments towards exports to the Russian and Hungarian markets.

st established a fran- chise network? Why has it not invested in the respective bottling companies? For one, these companies do not exclusively bottle Maaza. Other local soft drink brands are also manufactured by them. Adds Mungale, "Even in India we primarily have franchise arrangements, and these work especially well overseas, as the franchisees know the local markets, laws, etc, best."

New markets

Parle's commitment includes helping the bottlers in commissioning the plant, providing technical and marketing knowhow, training the staff, and supplying the concentrates and mango pulp. Growing at a rate of 15 to 20 per cent, Parle's annual export turnover from mango pulp and other soft drink concentrates is Rs.5 crore. Encouraged by the progress, Parle is eyeing other markets like Zambia, Mauritius and even some of the erstwhile East Bloc countries like Bulgaria.

In the Soviet Union, Parle has been persuaded to participate in a joint venture for the first time. In the Rs.8 crore project to be located in Nukus in Uzbekistan, Parle will have a 49 per cent stake, with the remainder 51 per cent being contributed by Uzibank and the Nukus Brewery. The plant will have a capacity of 24,000 bottles per hour. As Russians are hearty drinkers, Thums Up will be packaged not in 220 ml but in 330 ml bottles — that's Maha, Maha Cola.

With so many new projects ready to take off overseas, its seems like thumbs up all the way for Parle.

■ INDIRA KHANNA

YOU CAN GET MORE MILEAGE FROM EVERY LITRE OF PETROL AND REDUCE YOUR BILLS BY

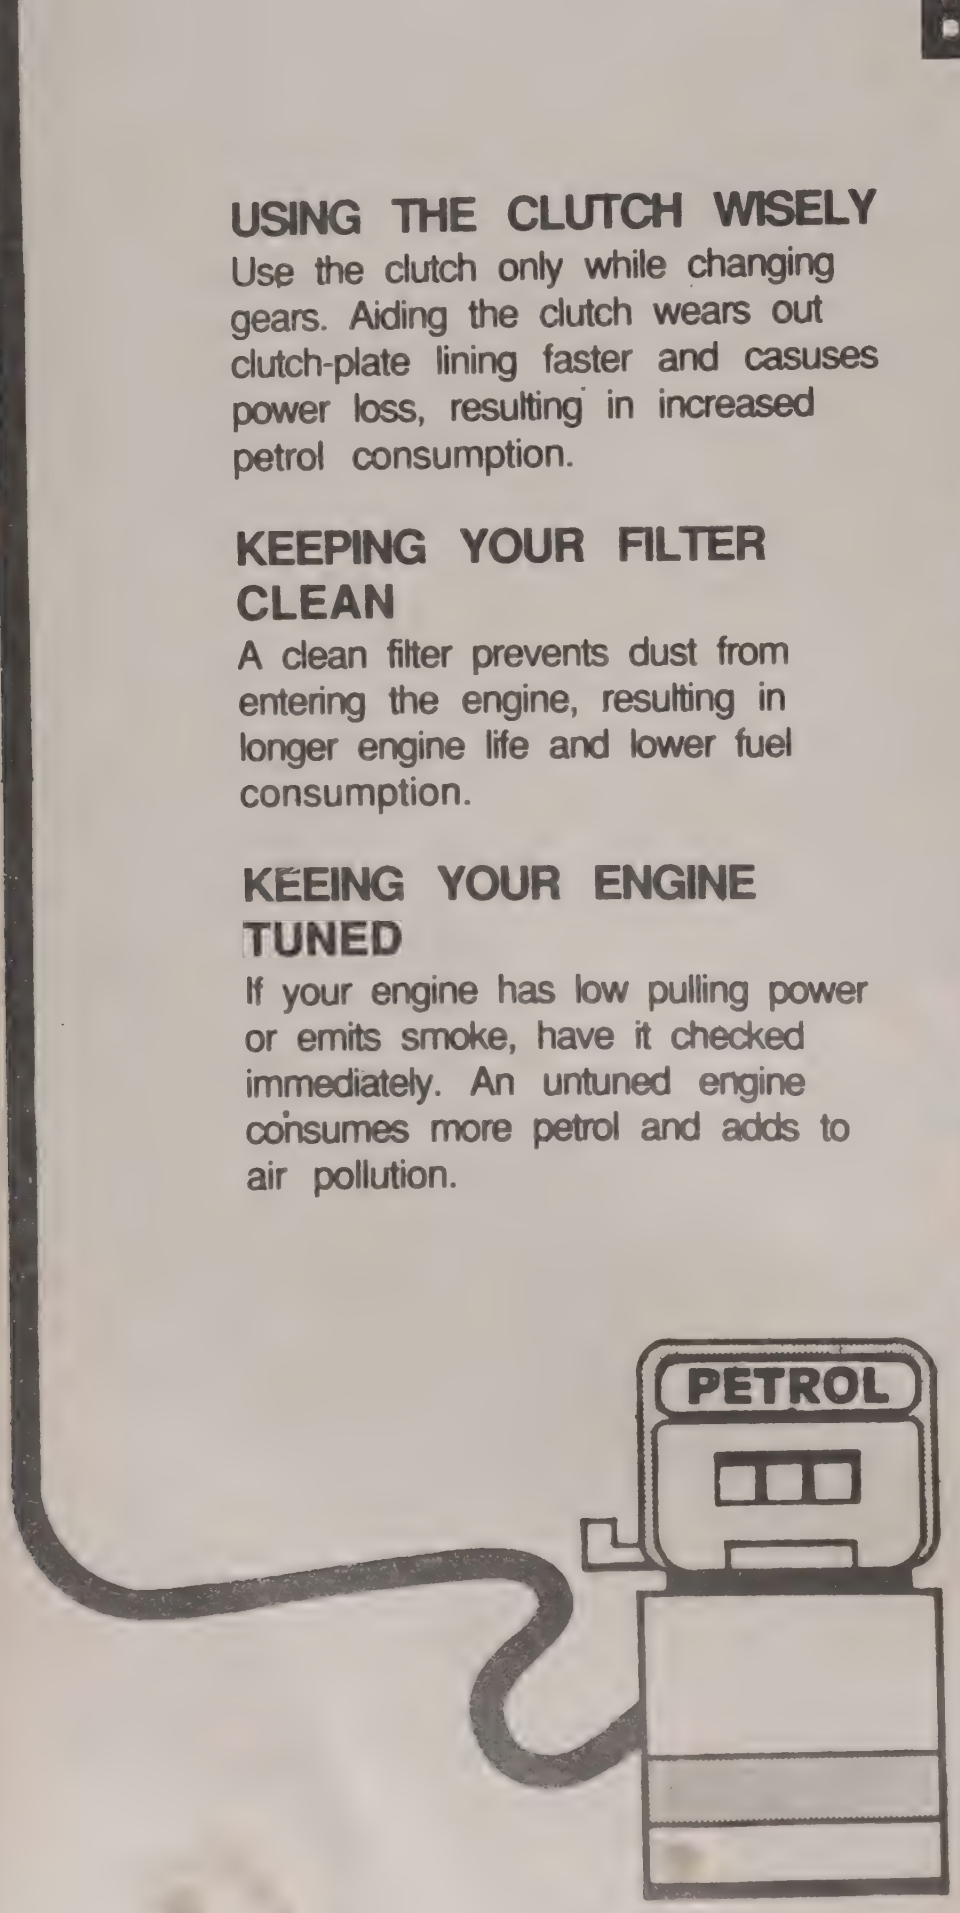
USING THE CLUTCH WISELY

Use the clutch only while changing gears. Aiding the clutch wears out clutch-plate lining faster and casuses power loss, resulting in increased petrol consumption.

KEEPING YOUR FILTER CLEAN

A clean filter prevents dust from entering the engine, resulting in longer engine life and lower fuel consumption.

KEEING YOUR ENGINE TUNED



If your engine has low pulling power or emits smoke, have it checked immediately. An untuned engine consumes more petrol and adds to air pollution.

USING THE RIGHT LUBRICANT

Use only the right grade of lubricant recommended for your vehicle.

ENSURING RECOMMENDED AIR PRESSURE

Right air pressure is crucial. Under-inflated tyres can cause a waste of upto 25% of Fuel.

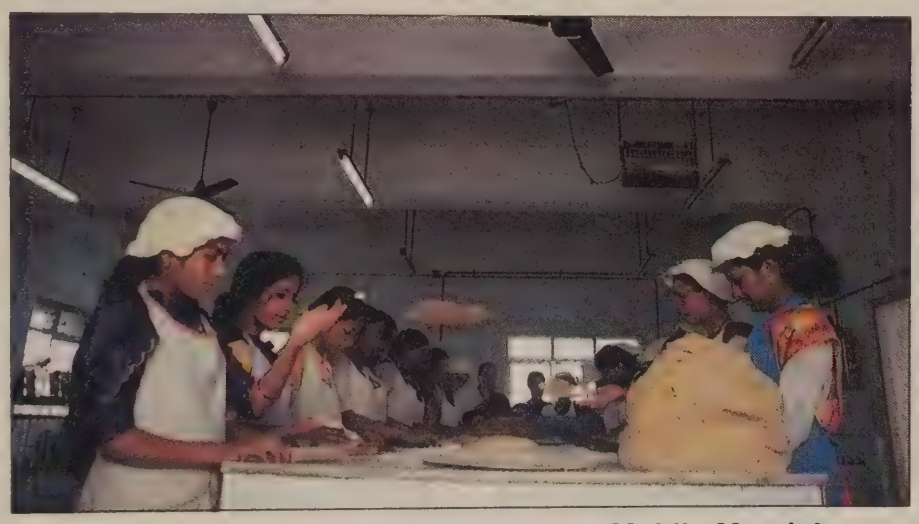
ELP GROUPS

eeking recognition

tary agencies have organised the small workers into self help s. They now seek recognition and aid from nationalised banks



can banks channelise money for poor? One possibility would be ognise small self help savings and to make them eligible, as a for credit from nationalised

mibai, 42, lives in the slums in a Bombay suburb. She cooks for es who work at a textile mill. She *anawali* who earns her living by ching prepared meals male migrants in the no have left their fam- hind in the village and ying in the city mainly n their livelihood. Laxmibai needed , she would go to a lender, who charged cent interest a month. , she is part of a small s group which lends its ers working capital.

orkshop on women's s and credit, organised 23 July at the National ite of Bank Management (NIBM), brought together voluntary or- tions, researchers, bank officials, vernment and NABARD representa- "The discussion centred around quest of voluntary agencies to let lp groups get bank credit from na- ised banks, and the possibility of tary agencies getting some com- tion in money for the work that are doing," said Dinkar Rao of organiser of the conference.

ks have several social banking pro- nes, but they are faced with prob- vhile lending to the poor. The loan nts are small, identification of cli- ifficult, and repayment levels low. untary agencies have been playing le of an intermediary for social programmes. However, this is not ut related problems — the banks nonths to release the loan, there are procedures (say, in one case, 28 ures are required). As an alterna- oluntary agencies can organise self help savings groups but the money thus raised is insufficient. Hence the request follows that these groups be directly lent some money.

Three case studies were presented at the workshop, of groups that are experimenting with this concept. "In the drought zones of Chittoor, Cuddapah, Kurnool and Anantapur in Andhra Pradesh, a voluntary agency has organised thrifty self help groups. Each group has 10 members, each making a monthly contribution of Rs.10. Each month, the group meets and the total money collected is loaned to a member. By June 1991, 58 such groups were functioning," says V.C. Nadarajan, project executive, Pradhan (Professional Assistance for Development).

Midday meal getting ready at Annapurna Mahila Mandal

According to William D'Souza, project manager, Myrada (a rural development agency), "In South Arcot, Salem and Dharmapuri districts of Tamil Nadu, Tamil Nadu Women's Development Project has a programme of upliftment for 40,350 poor rural women." Myrada will identify the women clients, establish them into self help groups, organise a regular savings scheme, in addition to assisting in selection and supervision of staff. The Indian Bank has agreed to provide credit to the groups for agriculture, horticulture, animal husbandry and cottage industries. Myrada will be paid Rs.16.25 lakh by the Women's Development Project for a three-year period for the organisational work they have undertaken.

"Annapurna Mahila Mandal (AMM), Bombay has helped 50,000 women get loans of over Rs.15 crore from banks since it was established in 1975," says Prema Purao, founder of AMM. The repayment rate has been 90 per cent. "Because of problems of working with banks, Annapurna set up its own registered credit co-operative, where a woman can become a shareholder by 4paying Rs.50. We keep accounts like a regular bank. Now, Dena Bank and State Bank of India have agreed to compensate us with a two per cent commission of the repayments that we get on loans taken through their banks.

Says D.K. Jadeja, assistant general manager, Dena Bank, Bombay. "From the bank's viewpoint, we have to fulfil our targets in the social banking programmes. But we have problems in reaching out. Voluntary agencies are doing us a service by identifying clients. Plus, Annapurna is also keeping the account records of 1,000 women. Paying them two per cent makes economic sense."

There are several similar groups also engaged in such activities that have been unable to get bank support. Banks, however, have a problem. Most self help groups are not registered. What securities should be provided for against such loans? Also, the legal angle: who is responsible when only three persons of the group repay?

Banks are interested in lending to self help groups. First because it is cost effective, second, it increases their savings, and since the loans are linked to personal savings, repayment possibilities are high. Senior NABARD officials attending the meeting indicated that policy changes to allow lending to self help groups are under consideration.

GKB OPTHALMICS

The vision of success

A commitment to quality has enabled the Gupta brothers to make their lens-making company a formidable player in the field

When you come across a company with prestigious foreign collaborations, that manufactures optical lenses, markets them all over India and exports them virtually worldwide, it is something of an eye-opener. That is precisely what GKB Opthalmics have achieved. From their nondescript beginnings of manufacturing in a residential garage, GKB now own industrial units in Goa and Agra, with marketing headquarters in Bombay. In the process, they have achieved a respectable sales turnover of Rs.7 crore.

Like many good stories, this one too has a beginning that is as interesting as it is inspiring. In a reminiscent mood, K.G. Gupta, chairman and the driving force behind GKB, goes back to 1960 when the decision to start out "on his own" was resisted by his father, a salaried man. "Business meant all manner of risks and dealings that to a salaried person seem unnecessary and highly insecure."

K.G. Gupta: no looking back

But once the decision was taken, there was no looking back. So Gupta, just out of college, and his elder brother pooled together their resources of Rs.15,000 each and set about looking for ideas. They hit upon optical lenses. Why lenses? No specific reason, except that Gupta's brother had once worked in a lens factory in England while he completed his insurance training.

With the true spirit of entrepreneurship, the two brothers set about doing their utmost to make their business a success. "We set up base in our home town Agra, where we had a house. We bought a couple of local machines, employed five workers, got blank lenses fabricated in Delhi and started production in our garage. Only to find out that whatever my brother had learnt in England was of absolutely no use, because our machines were elementary, the workers were untrained, and we ourselves inexperienced," recalls Gupta.

But what is entrepreneurship without hurdles? Undeterred, the brothers took on an acquaintance who knew a little about lens-making and cutting, and went about getting orders. Those early days included going around to opticians with brief-case in hand and gratefully getting orders for Rs.100 or more.

"One of the most important lessons we learnt during this period was that we could not sacrifice quality at any cost," says Gupta. "We spent a lot of time and effort on making sure that our lenses were as perfect as possible. We imported expensive raw material from England even though cheaper material was available elsewhere. We checked and checked for scratches and flaw evenness. The outcome of this we were more expensive than petitors. Which meant that it much more difficult to get orde

Despite a slow start, GKB ca associated with quality and thi years secured for them foreig orations that kept them ahead.

first ten years, growth was ver Says Gupta: "During this time, I ally visited numerous opticians the country. I found that peop unconcerned about lenses. The they chose was more important lens they bought."

The first breakthrough came when they heard that someone i bay had imported a lens-m machine, but was not using it a looking for a buyer. The decision that machine was their first majo ware investment.

The Guptas used to employ ha ting techniques, which involved a coarse abrasive between the

d the lens. There was always a ity of human error, and conse-, rejection and wastage. The es, on the other hand, were ed with diamond cutting tech- Layers of glass were peeled off ly, precisely, allowing no flaws. GKB was assured of the quality re so insistent on. "We were con- that our product was truly the laims Gupta. "We went out with d vigour. This time we found a stomers who even today stock KB lenses."

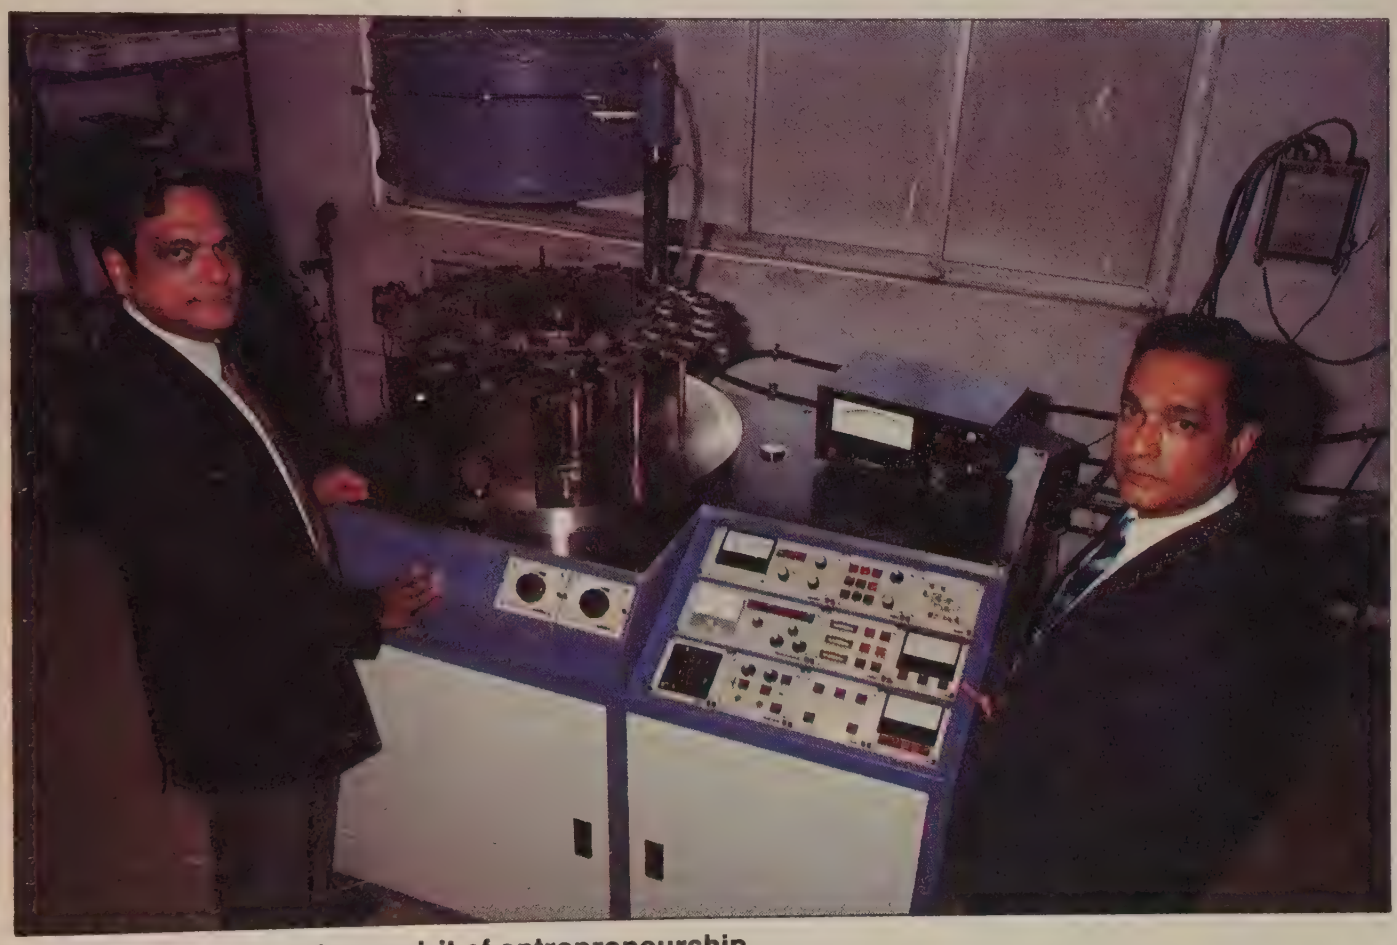
as Gupta says, the marketing ms did not end GKB lenses were o expensive, and as worse was that tomer had no way owing why and ne lens was better nother. Opticians, convinced of the , were unsure sales and there- eluctant to stock lenses. Disheart- y the domestic re- , and goaded by father, they set sights on foreign , and gunned for s.

alls Gupta, "My ip abroad cost me gering Rs.20,000, we could ill afford se days. I simply d a bag of samples lew to Saudi Ar- checked into a ho- ked for the addresses of the local ans, and landed at their doorstep my wares. I had no contacts." He nbers being all but thrown out of a because of an earlier unpleasant ex- nce an optician had had with er Indian supplier. "I kept my showed him my lenses. Today, so years later, that optician stocks GKB lenses."

at first export trip brought in or- worth $8,000. After that, they con- ated on exports. Every trip saw new ries coming into their fold. Soon had buyers from the Middle East, ar East, France, England, Austra- d the US. In 1979, the Guptas got the ultimate honour — the CAPAXIL Award for excellence in exports.

Subsequently they began to streamline their operation. They were exporting so much that they decided to set up a 100 per cent EOU in Goa. "People thought we were crazy to set up this unit without having any assurance from our foreign buyers. But we were confident of our product," says Gupta. Nor did the product fail them.

Within no time, the Guptas had not only begun to repay the loans they had taken, but their exports, at Rs.3 crore, had begun to account for a sizeable portion of their turnover. "It was our father's dream coming true," says Gupta. "It was now time for us to realise his other dream — that of having GKB outlets all over the country. People abroad knew us so well. We felt that it was time people in India knew us as well."



It was as much with a view to educating customers, as realising a dream, that the Guptas started their franchising operation called GKB Eye Care Centres. Here, customers are not only offered check-ups, but also advice from optometrists on the best type of spectacles and frames for their particular needs. "Customers need to be told what frame is suitable for them; the frame has to be fitted right, and there must be the right follow-up."

The eye care centres also solved another marketing poser that GKB faced — that of assuring the customer that for the price he was paying, he was indeed getting the genuine thing. "Till now, people have only been told about the frame. At GKB Eye Care Centres they are told about lenses. They now have a way of checking what they have got," says Gupta.

It was not just quality that GKB came to be associated with; it was also variety. And this came in the form of their collaborations with Corning and later Essilor of France. Today, GKB is able to offer customers a variety of lenses to choose from — ranging from the most common single vision lens to Varilux Multifocals (without the bifocal demarcating line) to non-reflecting lenses that are thinner and lighter.

What of the future? Further collaborations are in the offing. And many expansion plans, both in the domestic and export markets. So, a few more eye-openers can be expected from the Guptas.

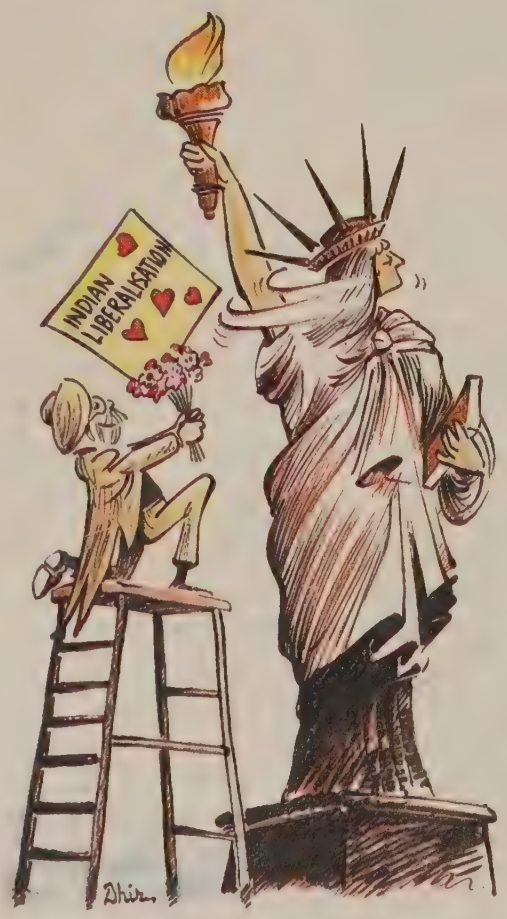
hy India must move fast

ake more than just announcing a liberalised economic policy to merican business to India

3rd-floor office of Shreedhar on, deputy president of the an Express Bank, at the World al Centre in downtown Manhat- w York, exudes a distinctive ura. It is from here that Menon he international business of the ecides on investment policies and s whether India can ever become omic giant. When *Business India* last month, he had just returned Washington after a marathon g with the Indian ambassador ussein. The subject of their dis- : how to get the American indus- gernaut rolling into India.



nwhile on the west coast, in Palo the heart of Silicon Valley, a orporate lawyer Fred Greguarez wick & West is also trying to fig- how to lure his clients into the pened Indian market.

Menon and Greguarez, like others, confront the same a. Is the Indian government ? Will the recently announced s be implemented? Or, will the ment go back on its word as it has the past? Important questions to which there are few answers. ndian government has to take se- ction to make increased invest- a reality," says Menon.

sh Chugh, managing director of w York-based Morgan Guaran- st, says there is a "guarded enthu- in the US regarding the major sation effort in India. Even Rajiv a, president of the New York r of the Indo-US Chamber of erce and a partner in the law firm uf, Lamb, Lieby & MacRae, feels hanges in India might be too little o late". Khanna's firm deals with JS corporations and advises them nt ventures across the world. His t target? No, not India, but the Union.

t year the Soviet Union received n investment totalling $40 billion ared to a mere $120 million that flowed into India. Even countries like China, Malaysia, Thailand and Nigeria managed to get many billions. Where lies the problem then? According to Khanna, the major issue is that the "Indian government feels it is the privilege of the investor to invest." American business has a divergent view. Why should they, while being wooed by many others, decide to come to India, asks an investment expert on Wall Street?

The Indian government has few answers to that question. According to Menon, "inward looking self-reliance has left us behind". Add to that the fact that most American businessmen are remarkably ignorant of India and you have a pot-pourri of reasons why Americans are not coming in in a big way.

However, says Chugh, US corporations like IBM, Coca Cola, DuPont, Ford Motors, Motorola, AT&T, Harris Corporation, etc are extremely keen on tapping the Indian market. In the time it takes to get their proposals accepted, they can have joint ventures in other countries fully operational. Moreover, India's bad image, carefully constructed over many years, leaves little ground for optimism. Menon cites an instance. When American Express wanted to computerise its activities in India, it bought the hardware in the US and shipped it over. This was specifically done to prevent eyebrows being raised at the Reserve Bank over outflow of foreign exchange. Despite this precaution, it took nearly six months for the equipment to be released.

The US administration too, while welcoming the reforms as "promising", feels that until the policies are implemented their impact will not be felt. According to a senior official of the US commerce department, India is seeking capital when there is very little available. Moreover, as the international economic and trading system has shown some ageing, irritants like restrictions on the operations of foreign banks, insurance companies and the entire services sector needs to be opened up. "India will not benefit by being part of a regional trading bloc," says the official. However, he also strikes a note of hope in India today exporting a greater diversity of products. He thinks high technology areas hold much promise; Hewlett Packard and Digital coming to India being examples.

The Silicon Valley Indian Professionals Association (SIPA), too, feels high technology can be tapped for joint ventures and much needed capital. Its president, Prakash Chandra, however, says some issues need to be first sorted out, like "changing the role of India's customs department from that of policing to promotion", providing better telecom links and allowing electronics

companies access to areas different from the ones they invest in. He cites the Chinese, who allowed NEC, Japan to sell telecom equipment in China while requiring them to set up a state of the art fabrication plant for making integrated circuits for export.

The fact that the changes in India have not been well publicised is also proving to be another deterrent. Says Somshankar Das (a former IAS officer and director, industries, in Maharashtra), now settled in San Francisco, "It will take months to educate people in the US about the potential of the Indian market." But while India is asking for technology, money and market access and industrial transplantation, it is offering little in return. Das asks why the consumer electronics segment should be treated as lousy technology and need licences for foreign participation? Worldwide, this is the segment which has given birth to the rest of the electronics industry. According to Das, the only way "India can benefit is by hanging on to the coat-tails of international companies," and not by rejecting them.

But major bottlenecks persist in promoting India as a point of investment. While it is fine to harp about NRI investment, nobody realises that at least in the US this group does not have access to large sums of money. For other investors, India is low on the list of recommended countries for investment. The Geneva-based World Economic Forum ranks India 10 in the list of ten developing nations where government policies favour investment and growth. Investment promotion organisations like the India Investment Centres, specially the one in the US have failed to change this image. The officials there waited for people to inquire rather than go after them.

What the government really needs to do is to target specific centres and companies. For a start, it could open promotion offices in Silicon Valley, Tokyo, Munich and Taiwan, places from where investment can be garnered, says Chandra. But it has to first implement its policies if it is to move really fast. Can India do it? is the question being asked in the US. Unfortunately, the sceptics outnumber the optimists.

Networking Europe

The French Groupe Bull, the Italian Olivetti and the German Siemens have decided to join hands in a pan-European computer project. The first joint venture of such major proportions, the European computer manufacturers have signed an MoU to jointly design and set up a computer network for the entire continent. The system of large computers connected by telecom links is to provide an information technology infrastucture as well as give a boost to Europe's ailing computer companies beset by the ills of falling sales and increased competition. The trio, however, has yet to get approval and funding from the European Commission which proposed the project some years ago. American firms, including IBM, are the other contenders.

Scuttled shuttle

Northwest Airlines' plans to operate Trump Shuttle, the New York shuttle service owned by Donald Trump have run aground. Northwest had reached an interim agreement with Trump's bankers, headed by Citicorp, to operate the shuttle for ten years for a fee, but the baggage handlers and workers' union differed with Northwest about acceptable labour contracts. Donald Trump, who had borrowed $135 million from banks to buy the shuttle, was willing to transfer control. This would have freed the troubled millionaire from his debt to the banks, and was a part of the plan for restructuring his disintegrating empire. The banks, however, are hoping for other parties to come forward to take over the Shuttle.

The chips are down

The Silicon Valley semiconductor giant, Intel Corporation is expecting bad times. Third quarter earnings will be below expectations. Intel, whose quarter earnings were $650 milli till now escaped the ill effect weak economy and the uncerta the computer industry. This q though, heavy price discounting markets of standard memory ch personal computers, micro cont and PC platforms has affected ea adversely. Intel's share pric by 12 per cent in response t news.

Changing colours

Colgate-Palmolive has anno another major plan for restructur part of the changes which have bee ing place over the last few years plan, however, requires the compa pay $243 million after-tax charges, ing the company into the red for the quarter of the year. In the second ter, Colgate Palmolive had a net in of $184.6 million and total sales billion.

Colgate-Palmolive will close dow of its 91 factories worldwide, and 2,000 jobs, approximately 8 per ce its workforce. The savings from th structuring will generate resource new product launches.

Hatchet job

The British aeroengine group, Rolls Royce is set for a further trimmimg exercise. Around 3,000 employees were made redundant in the first part of 1991, and another 3,00 4,000 are due to go next year. The will bring the total workforce dow 26,000, at a time when Rolls Roy fiercely competing with American f General Electric and Pratt and Whi for declining defence spending. In aviation too, Rolls Royce recently long-time customer British Airway General Electric. BA opted for Ge Electric engines for its new flee Boeing 777 twin jet aircraft.

ill the confederacy work?

a man as ambitious as Mikhail geyerich Gorbachov, the greatest to retaining political power is the olved question of legitimacy. He ved the Union of Soviet Socialist blics, the heirs to the Tsarist Em- and replaced it with a nebulous of republics. Despite his glorious to Moscow after the collapse of y's most inept putsch, the peoples former Soviet Union seem wary of achov's authority. The American cal scientist Michael Mandelbaum hat no one outside the Kremlin notice of what the president says or

rbachov's rival, the Russian presi- Boris Yeltsin, is one step ahead: he o the people of the federation and gave him the mandate. If Gor- v wants to exert his authority and nue building his new union of sov- republics, his first objective d be to go to the hustings. At pre- is legitimacy is based on the vote of deputies who represented the peo- f the USSR, which is now officially

rbachov was brought back to Mo- by the consent of those political rs of the republics who really do not him; in short, as the republican cians do not trust each other, and of the 14 republics have faith in in, the only way out of the dilemma to put Gorbachov back in the nlin.

ke Gorbachov or not, neither the les of the "Soviet Disunion" nor leaders have any one of stature to h him at home or abroad. But Gor- ov must go to the polls, if he wants mandate to push through his new ederacy. To avert disaster he will to act swiftly. Already with the de- of central authority, the republics created a situation not unlike oslavia's prior to the outbreak of ilities there. Said the Ukrainian er Leonid Kravchuk: "There is a that a (central) government is being ed by representatives of the (Rus- republic."

rong-arm methods are instruments of power for Boris Yeltsin. His aptitude for sensing the mood of a situation helped him act with Cromwellian audacity. But with success and obvious worldwide media attention, this burly Siberian might go one step too far. Yeltsin's outburst that Russia would reserve the right to claim territories with large Russian populations in other republics have angered many.

Gorbachov: must go to the polls

There is no way of reverting to the status quo prior to Tsarist and Soviet Russification. It would be sensible if the republics accepted this historical fact and moved forward, instead of reverting to ethnic squabbles.

Unlike China's Deng Xiaoping, Gorbachov firmly believes that personal liberty precedes economic liberalisation. Well and good, but he should realise that political success goes hand in hand with a stable economy. In this field the president of the "Disunion" has demonstrated no workable concept. His idea of competitive state-run enterprises has proved a dismal failure. With no proper incentive for profit-sharing at factory level, the state-run industries continue making massive losses, producing substandard goods and pleading to the central government to bail them out. This Gorbachov does in good socialist manner: he increases the circulation of printed money.

When US president George Bush was asked why he did not intend to pour vast sums of dollars into the Soviet basket, he replied that he did not know whom to give the money to and for what. Though Gorbachov now also, like rival Yeltsin, pronounces liberalisation as the path to recovery, this catchword has not attracted many investors from the West. Unless Gorbachov takes radical steps to curb inflation by cutting back on subsidies, which permeate every walk of Soviet life, there can be no definite move towards monetary stability.

Furthermore, denationalisation of state-run industries would put 30 per cent of the workforce temporarily out of jobs, and this, coupled with a cut-back in subsidies for food and clothes, would bring the enraged and impoverished people out on the streets.

If this former socialist giant wants economic success, then it will have to start from scratch. It will require the West's technical assistance in every commercial and industrial sector. It will be no easy task to convert 300 million citizens of a system that never grew up understanding competition and profit, or what it means to be a shareholder.

It is now left to Gorbachov and the leaders of the republics to build a workable confederacy. Mandelbaum foresees that "on constitutional issues, political passions and economic good sense may prove to be at odds with each other: if so, and if modern history is a guide, politics is likely to prevail."

utomobile industry is the turbine which s the economies of many countries wide. But not in India. Strangulating rnment controls over the last four des has made sure that its true potential ver realised. Despite the constraints,

interesting new possibilities, and the industry is also showing signs of responding well. In this survey, which is the first of its kind we look at various aspects of the Indian automobile sector — including those concerning future prospects, technology and most importantly exports, which increasingly looks crucial for its growth and prosperity.

ever, the industry is 0,000 crore strong today. a is the world's largest ducer of tractors and e-wheelers, and the ond largest manufacturer vo-wheelers. But on the le, we are nowhere near g among the top mobile producing ntries of the world. blems, particularly those cerning technology, are pervasive. The new ustrial policy has, vever, opened up

Export is the key

On 14 September 1991, at Paris, the $300,000 Bugatti EB110 was unveiled amidst spectacular media attention. The $50-million project to relaunch one of the world's most coveted automobiles — Bugatti — was born of a passion. It may not eventually make commercial sense, yet, Romano Artioli persisted against all odds, putting in much of his hard-earned money into his company, Bugatti Automobili Spa.

Helping Artioli's dream come true were the best-selling Japanese car in Italy, the Suzuki SJ410/SJ413 (the importing and distribution of which he had undertaken), and Italy's latest rage, the Maruti 800. His income from the non-refundable booking deposits against Maruti is to the tune of $18 million. Belying earlier hopes of about 3,500 car sales in Italy for 1991-92, Italian car buyers have taken quite a fancy to the little Maruti 800, some 12,000 enthusiasts putting in a non-interest-bearing deposit of $1,500 each to importer Artioli's Autoexpo Spa, to secure delivery.

Maruti's success story has been the same everywhere. France is planning to purchase over 2,000 cars this year, having bought 2,800 Marutis to date. Hungary will add 13,200 cars to its existing fleet of 3,000 Marutis. Poland will take almost 5,000, and Yugoslavia another 9,000! In total, 33,000 Maruti 800s will go to Europe this year, and 2,000 more to other Asian countries, Africa and Australia.

Maruti Udyog Ltd (MUL) expects to earn over $110 million (almost Rs.300 crore) for 1991-92, the largest ever by any single company in the automobile industry, beating erstwhile export leader Telco. But MUL's imports being considerable, the net foreign exchange it may earn will amount to only a few crore, Telco officials point out. (MUL puts it at Rs.34 crore).

Telco exported 3,052 trucks and buses in 1990, an almost ten per cent increase over 1989. During this financial year, Telco's foreign exchange earning for export of vehicles and spares is expected to be Rs.200 to Rs.250 crore, ensuring that Telco remains the largest net earner of foreign exchange amongst all Indian automobile companies. Most of Telco's exports are directed towards the Third World, though now there is a shift in focus to Europe. Telco entered the export market in the late sixties when it started selling to the Third World, to tide over the post-devaluation recession in the domestic market then. In this foray, Telco's companion was Mahindra & Mahindra (M&M). M&M's earliest efforts were very productive. Its participation in trade fairs paid off, with the Yugoslavian army ordering 600 Jeeps. In 1969-70, totally 2,200 Jeeps were exported to Yugoslavia, and another to other countries. But in the seventie the domestic market boomed, exp were relegated to the background. when Iran asked for 15,000 Jeeps in form for assembly in a former GM pla the early eighties, did M&M resume exp seriously.

In 1983, M&M set up Mahindra Hell in Greece, initially to assemble Jeep the Greek army and to use it as a ma facturing base for exports to the market. Since regular duction began in 1986, " has sold almost 500 J in the UK, 400 in another 400 in Germ 250 to Spain and s to France," expl Bharat Doshi, ex tive vice-president porate affairs). M&M also been exportin South East Asian Australian markets. year, M&M's total exp were 3,693 Jeeps, up six

om 1989.
pared to the 1989 figures, the jump rts of the two- and three-wheelers year 1990 are impressive — 50 per the case of two-wheelers, and 73.1 nt for three-wheelers. But these figepresent barely 1.1 per cent of the production. Bajaj Auto exported two-wheelers and 7,677 threers of which 6,102 were in CKD form. ic Auto exported 5,325 mopeds ini-motorcycles representing 7.7 nt of its total production. Kinetic eering managed to export 1,972 ds — up 673 per cent from last nascent efforts. But TVS-Suzuki pointed — merely 1,074 twoers exported as compared to 4,772 9. Factory lock-out stalled its ambiexport plans. Since April 1988, TVSi has exported more than 20,000 heelers to countries as varied as ary, Yugoslavia, Mauritius, the rlands, the Ivory Coast, the Mal- Tanzania and Senegal. According manager (exports), M.G. Vidyadhar, ast another 30,000 should leave shores within the next two years.

ilar optimism was expressed by aj Munjal, managing director of Motors, a division of Majestic Auto nd makers of the Hero Puch minicycle. A state-of-the-art design, the Puch, industry experts believe, has derable export potential, especially e high-volume EC market. Spain's st two-wheeler manufacturer, Derbi, believes so, and has decided to im,000 Hero Puchs in the coming year, marketed as Derbi in Spain, and as or Puch in other markets.
rope seems to be the destination of of the two-wheeler manufacturers , Enfield India Ltd and Kinetic Engi- ng Ltd included. Everybody is think- n terms of exports seriously. So are ndian component manufacturers, exports growing at the rate of almost er cent per year for the last five years figure of Rs.240 crore for 1990-91. it is being realised that the Indian abile industry is perhaps a leader in ng foreign exchange.
l now, India has been a net importer automobiles and components. ther it be in technology, quality or e, our automobiles have just not ched Western products. This image lem was compounded by a lack of idence and desire to export on the of the Indian manufacturers. And as nsider puts it: "With the monopolistic situation at home, we were forever chasing demand."

Many myths have been created by the industry — myths that say that Indian vehicles are priced too high, that Indian vehicles are not exportable, that the industry suffers from uneconomic scales of operation, that technologically our products are too behind the times, that the size of our domestic market is inadequate...

Devaluation has put paid to the first myth — today most Indian automobiles are highly price competitive. As M.G. Vidyadhar of TVS-Suzuki points out, TVS mopeds go for $245 f.o.b., as compared to French rival Motobecanes that sell for anything between $700 to $1,500. The Maruti 800's export price is about $3,200 (Rs.83,700) whereas a Suzuki Alto car retails for £5,600 (Rs.2,35,200) in the UK (and this price makes even our Rs.2 lakh Maruti 800 look good). The French retail price for the car is about 38,000 francs, and the 800 undercuts rivals Fiat Panda and the Yugo 45 by around 2,000-4,000 francs.

Uneconomic scales of operations no longer apply to many segments of the Indian automobile industry. The two-wheeler segment can use this excuse no longer, nor can tractor manufacturers. M&M is one of the larger manufacturers of cross-country vehicles, making thrice as many as Steyr-Daimler-Puch's production of the Mercedes-Benz G-wagon and till recently, more than the production of Land Rover of the UK. And Telco is one of the world's top ten largest manufacturers of medium and heavy commercial vehicles.

Economies of scale has been made possible by the burgeoning domestic market, especially in the case of two- and three-wheelers, tractors, cross-country vehicles and commercial vehicles. Even the car market is large enough to justify economical production scales for at least two distinctive model ranges, the Maruti 800 being a case in point.

With a production volume of 100,000 per year of the Maruti 800 and the Omni (with whom it shares components), MUL can competitively price the car for the international market. Matters are helped further by the labour cost factor of barely two per cent in the price of the car. As MUL's managing director R.C. Bhargava has repeatedly pointed out, the labour cost for the same car in Japan is 12 per cent of the cost of the car, despite Suzuki's worker productivity being twice that of MUL's. This is cited as one of the reasons why Japanese and other major car manufacturers are moving further upmarket, steadily vacating the bottom end of the market to South Korea, Malaysia, Taiwan and others.

Interestingly, MUL's export drive is a fairly recent effort. When the joint venture began in 1983, exports were last on the

agenda. In fact, while negotiating for a collaborator for the newly-formed public-sector company, attempts to find a partner who would export came to nought, and eventually it was decided to abandon the stipulation of a buyback clause.

MUL's export urge came about with the realisation that the way "the balance of payments situation was developing, MUL had to go in for exports in a big way," explains Bhargava. The company has been, over the years, accused of being a major drain on foreign exchange with imports since the joint venture costing the country an estimated half a billion dollars! Collaborator Suzuki has realised that for future growth via new products into the Indian market, some amount of foreign exchange earnings are politically expedient.

Also, Suzuki Motor Corporation, due to quota restrictions, had withdrawn its small car, the Alto, from the European market, to shift its thrust to the larger models. And MUL has taken good advantage of this.

MUL's export experience, aided by collaborator Suzuki, contrasts with that of other Indo-Jap ventures. Unconfirmed reports say that both the Honda collaborations have had problems in exporting their output, as have the others. In the case of Escorts, the Nandas have openly expressed their unhappiness at not being able to export the Yamaha RX100 due to restrictions imposed by its collaborator. Interestingly, Yamaha does not even have a stake in Escorts; the collaboration is purely technical.

Escorts, wisely, has chosen BMW as its new collaborator for a project to make a new BMW-designed motorcycle. Planned exports are for 32,000 bikes out of a total production of 100,000 annually. Obviously, such a project will be a net earner of foreign exchange to the extent of Rs.100 crore. Similar tie-ups are in the offing, like that of Hero Motors with Derbi of Spain.

Two-wheeler manufacturers who made the earliest attempts to export were Enfield India Ltd and Bajaj Auto. Enfield's attempts to send its bikes to the UK, despite early enthusiasm, fizzled out, partly thanks to its importers Slater Brothers and later, Evesham Motors. But Bajaj Auto was very successful. Bajaj scooters and three-wheelers were well received in the South East Asian markets. Exports went up rapidly, peaking at 40,000 units in 1980 — 12 per cent of India's total two-wheeler production that year. Since then, both in absolute terms and percentages, there has been a rapid decline. Bajaj has been knocked out of contention by a Japanese re-entry into the scooter segment, with decidedly more modern products.

The company that renewed efforts early was Enfield. Credit must also go to Enfield's importer in the UK, Raja Narayan. Single-handedly, Narayan relaunched the classical Enfield Bullet 350 in the UK market in 1986, and the Bullet 500 in 1990. This year over 1,000 Bullets should leave our shores for the UK, France, Italy, Spain, Belgium, Holland, Germany, Australia and New Zealand.

Enfield, through Raja Narayan, is also exporting the Explorer as the Zundapp CS25 speed-limited version, with a pedal start and hand shift. Exports have been averaging about 700 per year and Enfield hopes to touch 850 units this year. Also, 600 of the company's Silver Plus have been exported to Surinam.

Obviously, the encouraging results of India's limited automotive export drive throws up certain possibilities. There is scope to export some of our old-technology products to the niche markets as th surgence for classics ensures a demand for the Enfield Bullet and hindra Jeep. The Ambassador, the olde dame, may also find a few b with a passion for nostalgia, in the

The Bullet and the Mahindra Jeep appeal to the bottom rung of the sized motorcycle and off-road ve markets respectively, as do mo India's 'modern' offerings, the Marut and the TVS, Kinetic and Hero mo The main market for these is Eu where consumer preferences are no similar to that of India's.

More than three-quarters of wheeler buyers in Europe purchase smaller displacement machines of than 50cc to 125cc. In Italy, for insta 86 per cent of two-wheeler purchases in the less-than-125cc category. Big b like BMW and Ducati sell in very small mbers of 25,000 and 8,000 per yea spectively. Thus, most of Ind production is similar in size configura to that of European demand.

In the moped, scooterette and sco segments, technology is not highly vanced, and consumer requirements for reliability, finish and aesthetics easily attainable by Indian manuf turers. Dimitri Korres, a Greek importe two-wheelers, says: "Indian two-whee seem to be very reliable. But finish aesthetics need a lot of improvement given these, Indian two-wheelers car world-beaters."

Europe, which imports more t 750,000 two-wheelers every year, is tentially the single biggest target mar though margins may be lower and market more competitive. South E Asia, the Middle East, Africa and L America, despite lesser sales poten are fairly lucrative as margins can higher there and selling easier. The N American market, the second larg after Europe, is at present out of reach it is into bigger vehicles.

But for the tyre manufacturers and components industry, the US represe the single biggest export market. The b of MRF, Ceat and Dunlop tyre exports to the US for the truck tyre replacem market. American trucks still use cr ply tyres, a technology now superce by radials.

Most tyre manufacturers are fore exchange neutral, and some, like C are planning major export thrusts. cording to P. Majumdar, vice-presi (technical) of Ceat, "To put up a ra

A closer look at fuel economy.

The oil pump on India's latest 100cc two-wheelers. It's hidden from your view.

But let us uncover some hometruths for you, like how Pricol engineered this oil pump. To satisfy the precision standards set by the Japanese.

The result: fuel economy. And equally important, import substitution.

The same quality care goes into handle bar switches and precision gears too. Import substitution again.

Now stand back and admire the perfection of Pricol automotive meters on two-wheelers, cars, LCVs and even trucks.

And UPS, SMPS systems and small Machines Tools too.

And you never thought a closer look would reveal so much.

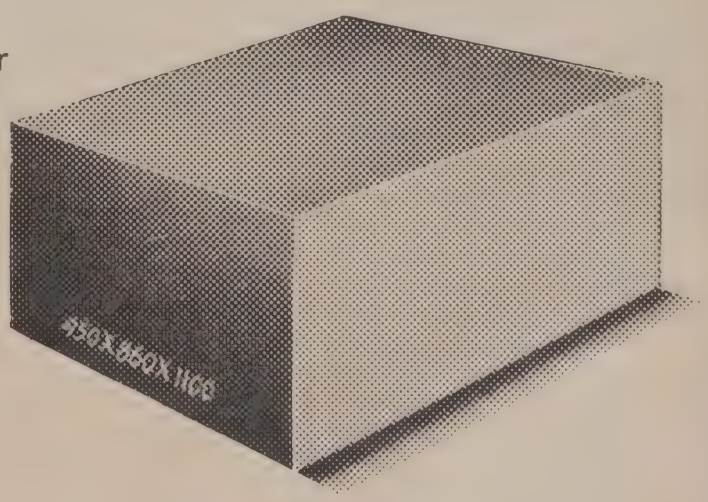
WE'RE SAVING PRECIOUS FOREIGN EXCHANGE BY FORGING OUR OWN DIE BLOCKS

NOW WE CAN DO THE SAME FOR YOU



rat Forge...
a's largest forge shop is dily forging an national profile for itself. pen Forge Division pped with most modern C Press with integrated ipulator, manufactures an y of heavy forgings in on, alloy and stainless l.

de-to-order die blocks from rat Forge
ng its state-of-the-art nology, Bharat Forge has n saving precious foreign nange by forging its own Blocks. The Company now ers the same for you. Die cks to DIN 2174/2173 and er specifications to suit the uirements of Close Die ging. Other Tool Steels uirements for Plastic ulding, Sheet Metal, Die sting Industries can be plied to your precise uirements. Payable for in ian Rupees and delivered mptly.

Bharat Forge Advantage...
- raw material from neighbouring Kalyani Steels equipped with LF-VD/VOD and ESR facilities.
- fully equipped plant with 1600 Ton oil hydraulic CNC Press with railbound manipulator and turntable.
- heat-treatment shop to normalise, harden and temper up to 8 M length.
- well-equipped quality assurance facilities duly approved by Lloyds, Nuclear Power Corporation, Bureau Veritas, EIL, etc.
- in-house heavy machining and fabrication facilities to supply a variety of finished forgings.

Open forgings in a wide range...
Our forgings as well as finished machined components are available in all grades of Carbon, Alloy and Stainless Steel up to a single piece weight of 12 tons. Some of the typical products are -
- heavy duty crankshafts and eccentric shafts
- plain, multi-stepped and roller shafts
- hollow cylinders and thick walled shells
- tube sheets, large flanges and nozzles
- trunnions and trunnion pads
- wheels and axles
- gear blanks and pinions
- rings
- hydraulic manifolds and fluid ends
- rotor shafts
- piston rods, tie rods, rams, guides, sowblocks and tieplates for hammers and presses
- special- purpose forgings....

TOOL STEELS (ESR melted) also available

No questions asked.

Standard Furukawa extends its unconditional guarantee on all its Car, LCV, HCV and Tractor batteries.

Buy a Standard Furukawa for your vehicle today. Because the Standard Furukawa Battery is made in collaboration with the Furukawa Battery Co. Ltd. of Japan, suppliers of O.E. batteries to Suzuki, Toyota and Honda of Japan. What's more it is made with selenium, coupled with the lowest antimony content, and is probably the most advanced battery in India today. So if anything, repeat anything, happens to it within a year, we'll replace it. Free of charge. With no small print. Now that's what you call an unconditional guarantee. And no, there are no questions asked.

plant, the economies of scale volumes which the domestic nnot take. So, we will have to east 50 per cent of our produc- able to justify our Aurangabad vestment." He also points out ts, to date, have been mostly a activity, "just to make your an- t look good, or to ease govern- earances. The attitude will have e — we must be able to export and with a long-term ve."

otive exports must contend with nal expectations that are differ- ocal requirements. For instance, dian consumer, the mileage on a tyre is most important, so dials are two-plies. Whereas, in rip, roadholding and handling important, which are possible mono-ply radials. Hence, the the Dunlop and Ceat radials fit- e export Maruti 800 might earn a e and hurt future export pros- these companies. MUL's export at present, do not justify the in- for a mono-ply pattern (appar- has readied a mono-ply steel- dial for the 800).

, the UK, France, Germany, Aus- e Middle East and South East e been identified as principal for the components sector, placement, though an increas- ing number of Automotive Components Manufacturers Association members have begun to export to OEMS.

A case in point is Bharat Gears Ltd — a German ZF-collaborated project. With exports at Rs.10 crore — 16.7 per cent of the turnover — the company's biggest customer is Dana Corporation of the US. The company makes a family of heavy duty truck axles, over 100,000 sets of which have been exported to Dana, which in turn, supplies aggregates to truck manufacturer Navistar Corporation. B. Shankar, vice-president (marketing and exports), explains that "Our main competition was from South Korea. But competitive pricing, along with quality, ensured our getting the order."

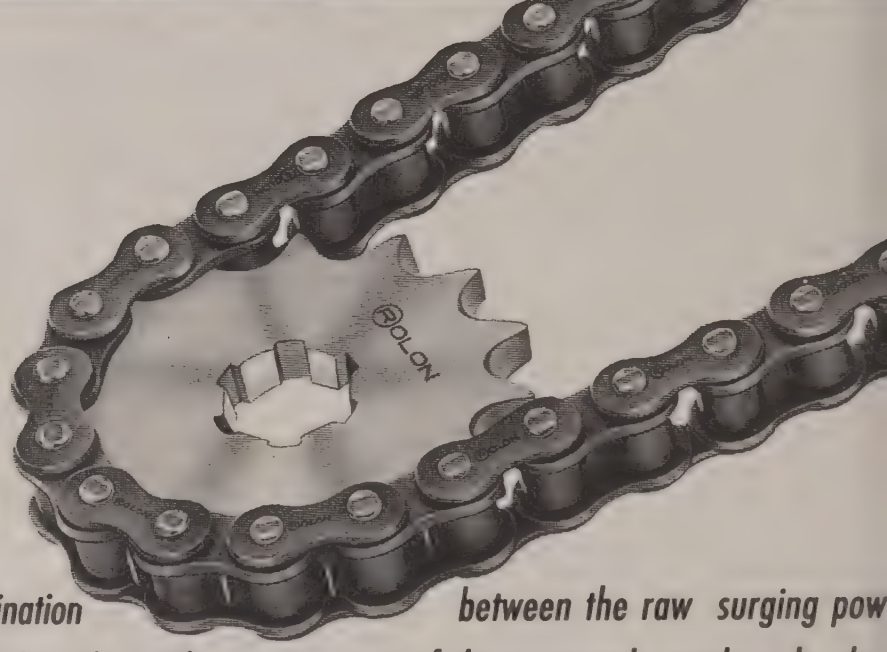
Says B.K. Shankaran, assistant director, ACMA, "The most serious problem faced by exporters is that they pay higher prices for their imports than their competitors abroad." Recognising the importance of raw material imports, the government allows exporters to import them, but the exporters find the red tape highly obstructive.

ACMA has identified the US and Europe as the two thrust areas and export targets. The US imports over $20 billion (Rs.500 billion) worth of auto parts on an annual basis and Europe's share is Rs.70 billion. The major supplier of auto parts is Japan, with the other leading players being Brazil, South Korea, Mexico and Taiwan. India's share is only marginal.

During the eighties, some countries of the Far East and North Africa, and Portugal recorded spectacular growth in component exports. Taiwan increased exports from $95 million to over $600 million, South Korea from $2 million to $180 million and Portugal from $7 million to $130 million during 1980-87. Taiwan's component exports grew 60 times, Portugal's 19 times, and South Korea's eight times in one year!

Between 1980 and 1985, India's exports went down in dollar terms, but since 1985, have grown at about 25 per cent per year. The assessment in many quarters is that, perhaps, India is missing the bus, though ACMA estimates that component exports could touch the Rs.500-crore mark in 1995, and Rs.1,000 crore by 2000. Various associations and bodies, including Exim Bank, have identified components as the more important thrust product for exports, but industry experts believe vehicular exports can yield larger sums eventually. Components are too low-valued to generate large figures, whereas CBU and CKD exports of automobiles make more sense. If MUL manages to export the 70,000 cars it plans to, by the mid-nineties, more than Rs.600 crore can come from just one company.

As per the estimates made by the Association of Indian Automobile Manufacturers, prior to the recent devaluation, the Indian automobile sector would be foreign exchange neutral by 1991-92, and by 1994-95 foreign exchange positive by over Rs.700 crore, if imports other than raw materials are considered. Unfortunately, steel imports constitute a substantial sum and taking this into account would change the estimate to over Rs.400 crore forex positive by 1994-95.



Despite being a foreign exchange user of less than Rs.100 crore (as compared to Rs.2,500 crore for the electronics industry), the automobile industry has had a raw deal as regards the new trade policy. Exim scrips are applicable for OGL items for PMP units, and for residual items for both, PMP and non-PMP units. AIAM is lobbying to get the policy changed to allow free foreign exchange for all items. The ministry of commerce recently allowed Eximscrip of 40 per cent, but with a strange rider that it would apply to vehicles that meet our fuel efficiency norms, which would affect some of our more exportable automobiles such as Telco trucks. S.G. Shah, AIAM's executive director, says, "The association finds a common denominator, despite varying interests, and is suggesting positive changes in policy with a view to the market for the next five years, both domestic and exports. We would like to work with the government to get the industry's policy tuned to that." Shah also suggests that new strategies for exports have to be worked out.

Hero Motors is a good case in point. It bought the designs to the Steyr-Puch range of two-wheelers cheap as the

The scene today

The new industrial policy has, at long last unshackled the Indian automobile sector. Manufacturing has been delicensed, though production of the vitally important passenger cars continues to be as tightly regulated as before, but even this might not last too long. But, can the industry catch up with its counterparts in the West?

At least in the short run, auto companies are not expected to do too well. During the final three quarters of 1990 and the early part of this year, a number of factors adversely affected the industry, with some of its segments taking most of the brunt. Sales of jeeps, cars and mopeds fell, compared to sales in the financial year 1990-1991, for the first time since the early eighties; there was a slow down in the growth of scooter and motorcycle sales following disturbances due to religious and political factors at home.

The situation was compounded by the Gulf crisis and repeated fuel price hikes. The price rise in petrol and diesel, the increased cost of imports due to devaluation and the cost of margin money, a hike in excise duty from 40 to 50 per cent and then to 66 per cent for cars and jeeps, and the reduction in depreciation allowed for vehicle users from 33.33 per cent to 20 per cent — all combined to affect different segments of the industry, differently.

As the commercial vehicle segment keeps growing (8.4 per cent for April to July 1991 over the same period last year), Telco marches on as impressively as ever. Gaining 11.2 percentage points in the medium/heavy sector, and 47.3 per cent in the LCV segment, Telco continues to make rapid inroads, mostly at the expense of the Indo-Japs. DCM Toyota and Swaraj Mazda lost ground, as did Mahindra Nissan and HM-Isuzu (which has virtually shut shop). Even Bajaj Tempo, erstwhile LCV leader, have had to move over in favour of Telco. Only Eicher Mitsubishi and Ashok Leyland have held their own, and shown some signs of growth.

For cars and jeeps, the scenario remains rather bleak. Though companies like Hindustan Motors (HM), Premier Automobiles Ltd (PAL) and Mahindra & Mahindra Ltd (M&M) are now making predominantly indigenous vehicles with minimal import content, all but Maruti Udyog Ltd (MUL) have lost considerable ground. R.K. Pitamber, M&M's managing director, explains that this is due to the reduction in the depreciation allowance and the restrictions on automobile purchases as institutional, specifically governmental purchases, constitute a substantial slice of the sales of all three manufacturers. However, buying the Maruti 800 still entails a waiting period of two months, says G.S. Maheshwari, MUL's regional manager (west), though the Omni will be available off-the-shelf.

The scooters segment continues to grow, with market leader Bajaj Auto topping the charts, with a sales increase of 21.9 per cent this April-July compared to the same period last year; the sales of sister organisation Maharashtra Scooters also is growing, though at a slower five per cent. Kinetic Honda Motors Ltd impressed with a 32.7 per cent sales increase. However, Lohia Machines Ltd (LML) and Gujarat Narmada Automobiles Ltd (GNAL), have declined by 43 per cent and an amazing 82 per cent respectively. The change in market share could be a reflection of changing consumer perceptions. Though Kinetic Honda has regularly increased its prices, there is still a big waiting period for this high-tech scooter.

The motorcycle segment saw a fall in demand, with market leader Escorts Ltd registering the greatest fall of over 10,000 units (19.3 per cent) for the April-July period. While sales of the Yamaha RX100 set new records, the good old rural bike, the Rajdoot range, suffered massively. Bajaj also declined, with both its M80 step-through mini-motorcycle, and the

ite denials, the general feeling
he trade is that tyre manufacturers
been experiencing good times,
thanks to the price cartel. Dunlop's regional manager Vijay Pahwa states that his company "in the last six months has seen better growth than in the last six years."

There has also been a lot of change in the attitude of the retail trade. Dealers have had to sit up and make concerted efforts at keeping up flagging sales. N. Dwarkanath, the managing director of one of Bombay's leading dealers, Autoriders, says "No more should dealers be considered an extension of the manufacturer's arm. They have to become the arm of the consumer."

The contradictory performances of the Indo-Jap collaborations put paid to the opinion that the Japanese "can do no wrong". And the fall of the trusted old-generation vehicles sounded the death knell of ancient technology. From now on, it's progress or bust.

The road ahead

The days of the licence raj are over. The new industrial policy has opened the doors of the automobile industry wider than ever before. But what major changes can we expect in the industry? Will there be new entrants? Will multinationals rush in to do business? If yes, what will happen to our more inefficient automobile manufacturers?

Weaned by a highly-protective regime, the automobile industry's current strengths and weaknesses are a direct result of past government policies. A brief let-up in the seventies in the close-fisted licensing policy saw some 45-odd two-wheeler companies with licences to manufacture. The intense competition that resulted put paid to the hopes of several manufacturers. Now barely ten groups/companies remain in business, namely Bajaj Auto (and Maharashtra Scooters), TVS-Suzuki, the Kinetic Group (Kinetic Engineering and Kinetic Honda), Escorts, LML, the Hero Group (Majestic Auto, Hero Honda and Hero Motors), Enfield India, Kelvinator, Gujarat Narmada and Ideal Jawa. Though the last four have considerable potential, they have been going through rough times recently and may not be around for long.

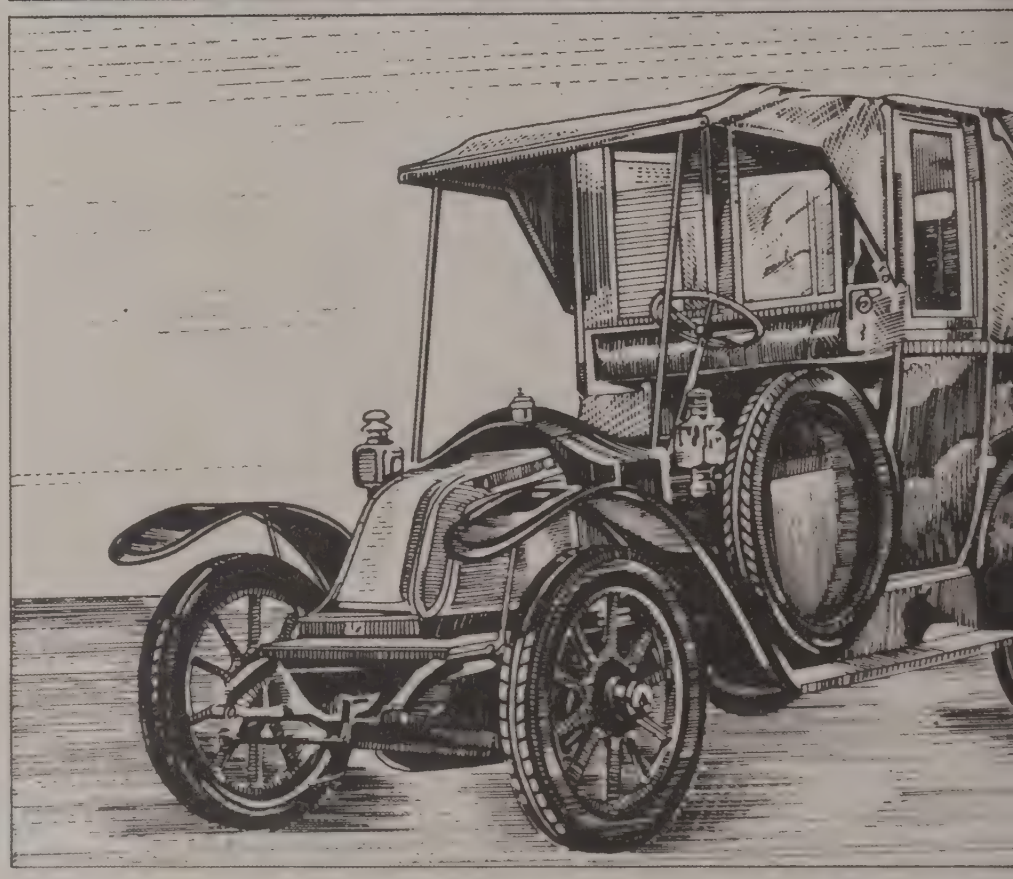
Nonetheless, by the mid-nineties, India may become the largest two-wheeler manufacturer in the world. This segment is also expected to show the biggest export-led growth. The government's attitude in encouraging competition has paid dividends, though, at a cost. However, competition casualties become acceptable when you consider that today's Japanese Big Four (Honda, Yamaha, Suzuki and Kawasaki) are the only survivors of a 50-strong field of also-rans of the early fifties.

Till about the early 1980s the jeep, car and commercial vehicle segments sat pretty in what was a fairly monopolistic situation, with only one manufacturer of cross-country vehicles (Mahindra & Mahindra), three car makers (HM, PAL and Standard Motors), two LCV manufacturers (Standard Motors and Bajaj Tempo Ltd) and four makers of middle and heavy commercial vehicles (Telco, Ashok Leyland, HM and PAL). In the early eighties,

Demand for Maruti ensure full capacity utilisation

four more Japanese-collaborated LCV manufacturers were let in. And in early 1985, one of late prime minister Rajiv Gandhi's first moves towards liberalisation was to broadband the four-wheeler segment for existing car and truck manufacturers to manufacture any four- (or more) wheeler without fresh licensing.

As indigenous capabilities were limited and most manufacturers needed a foreign collaboration to be able to make any new kind of vehicle, there were many applications for technical collaborations. All these applications were rejected, the government citing a shortage of foreign exchange for the rejection. Only Telco developed indigenously, successfully foraging into the LCV market with the 407, and now with a jeep (the Tata Sierra) and a car (the Tata Estate), based on the less successful Tatamobile 206 pick-up. Bajaj Tempo, too, entered the jeep sector with the Tempo Trax. Hindustan Motors' attempts at re-entering the commercial vehicle segment with the HM-Isuzu HCV met with failure, while the rest remained in their respective categories, unable to capitalise on the opportunities thrown up by broadbanding.



With the latest policy pronouncements, the doors to the car segment have shut tight once again. Or have they? Apparently broadbanding still holds true — there have been no announcements to the contrary. So, can anyone get down to making a commercial vehicle or a jeep and then proceed to make cars?

One unexplored niche opening up rapidly is that of the 'miniped' or moped with engines less than 35cc. Not needing a licence, these sub-35cc motorised bicycles do not come within the purview of the Motor Vehicles Act and offer a cheaper, more fuel-efficient alternative to mopeds. Though single-seaters, they are expected to fetch new users — the under-sixteeners, the elderly, the low-income group who want to graduate beyond a bicycle but cannot afford a moped and, also, those who do not want to be bothered by a licence. The current leaders of the moped market — Kinetic Engineering Ltd and TVS-Suzuki Ltd — have been the earliest to get on bandwagon. But Enfield beats the its 24cc Mofa.

Moving up the ladder (in terms gine size) in the two-wheeler seg though no new niches may be cr detailed upgradation of technolog wider model choices become d possibilities. As the moped segme minishes, newer kinds of moped other alternatives such as scoote and small-displacement motor take on greater importance. From a ket of predominantly single- mopeds, the 50cc-75cc segment w variator transmission automatics multi-speed vehicles in the gui mopeds, scooterettes (like the Sunny) and mini-motorcycles.

Market leaders, Kinetic and Suzuki, are expected to introduce n more efficient models such as the K Safari, the TVS Eko (for the domestic ket) and the TVS Champ variomatic, while market leader Majestic Au expected to make a comeback wi Austrian Steyr-Puch-derived moped

It takes a lot to be a pioneer, a leader. Determination. Technology. Obsession with excellence. Gajra Bevel Gears has it. Making it a leader in gears in India. Plus a reputation in 37 countries abroad. Now gearing up for globalisation with a whole new thrust in overseas markets.

Gajra Bevel Gears is committed to the drive towards expansion and globalisation. An ambitious Rs. 12 crore expansion and modernisation programme will widen its horizons – boost capacity from 2500 tpa to 6300 tpa. Yes, Gajra Bevel Gears surges ahead – setting the pace with the changing face of progress.

ins great hopes on its Voyager

CD100 from Hero Honda and turn its non-performer, the nto a high-performance, sporty haps with a larger displacement gine. TVS-Suzuki has come out h-performance versions of its erived 100cc motorcycle, in 11.5 rsepower (bhp) and (even more ve) 16 bhp versions.

while, Escorts is expected to ex-e performance image of the RX100 with more powerful, ngined versions of the bike and is eously working on a more fuel- replacement of its ageing Ra-nge with a little help from AVL, and IAD of the UK. These efforts llowed by a BMW-designed joint A much revamped version of the Fury aimed at catering to the per-e end of the market and a new Gilera-derived bike from LML Ltd on the cards.

at Narmada Auto Ltd and LML readying rear-engined auto-ws for the lucrative three-wheeler as is API, after trailing Bajaj in the three-wheeler sweepstakes. All these rear-engined three-wheelers may be developed into personal transport vehicles (at last, a people's car?). This idea has been taken up by Kerala Automobiles Ltd in its new three-wheeler.

Maruti Udyog Ltd is lobbying for permission to make a new small car, ostensibly for the post-1992 EEC market, while Premier is updating its ageing Padmini. Hindustan Motors continues to work on improving the Ambassador. In the long term, HM has plans to revamp the Contessa's body drastically with help from General Motors-owned Lotus Cars of the UK. An even more ambitious plan is a new car altogether, made by HM with direct GM involvement in the form of equity participation. Apparently, GM is planning to source components from India — Sundaram Fasteners, who has met ISO 9000 standards, is among the earliest to have been identified — to build up an export credit to pay for the import of the required equipment and components.

M&M is introducing a new five-door ten-seater stationwagon, the Voyager, which, with its other ten-seaters, should lead to the company's resurgence. M&M also has the Peugeot 504 pick-up up its sleeve and new engines, both diesel and petrol. Bajaj Tempo is refining its Trax and is planning to slate its Mercedes-Benz-collaborated Traveller for the personal van market, while Telco is introducing its jeep, the Sierra and its car, the Estate. Telco chairman Ratan Tata has been talking of introducing an altogether new car in the Maruti 1000/Contessa Classic segment, mid-way through the decade.

New vehicle possibilities in the commercial vehicle sector include more LCVs from Telco, Bajaj Tempo, Ashok Leyland and Mahindra Nissan, with tonnages ranging from two to six. Various buses, including integral coaches, rear-engined intra-city and trailer-type may also be expected.

Buses gain special importance with projections for the year 2001 that the road-to-rail passenger ratio will increase to 73:27. The road-to-rail ratio for freight is also expected to go up: In the event of a five per cent growth rate of national income in this decade, the demand for commercial vehicles in 2000 AD could be 300,000 — more than double the current demand. Passenger cars, cross-country vehicles and two and three-wheeler manufacturers will all double production levels!

A new segment that has the potential to open up is that of electric vehicles. Kinetic Engineering's MD, Arun Firodia says, "We are working on an electric moped and we hope to productionise it soon." Incentives such as a Rs.1,00,000-subsidy and 100 per cent depreciation in the first year of operation for public limited companies might spur entrepreneurs and innovators into working towards an electric car.

All this optimism, though, must be tempered by the fact that purchasing power is still limited in per capita terms. Though a substantial percentage of our population now constitutes the burgeoning middle class, their purchasing ability remains limited. Also, 40 per cent of the total population of our country is under 14 years of age.

MAKING IT HAPPEN

THE FIRST DECADE

Moulding a new era

Ten years ago, the Ceat Glass Fibre Division ushered in a revolution. By putting to innovative use its technologically superior glass fibre range - Decca Fibre. And Ceat is making it happen by meeting various needs of different industries. Be it Building, Chemical, Automobile, Marine or a host of others.

Ceat's involvement with the industry is total. Be it product, process, technology or design. This commitment to the growth and development of the composite industry has resulted in the creation of the state-of-the-art R & D Centre - the Glass Fibre Technology Centre (GFTC). As a result, Ceat today enjoys a position of pre-eminence in the Indian industry.

To meet the growing need in India and abroad, Ceat's new plant with more than double the present capacity will go on stream in October '91.

Ten years have gone by. It has been a period marked with achievement and promise. But there are more trails to blaze and more ideas to shape. And Ceat Glass Fibre Division is making it happen. Through a commitment to quality and service ...

arly eighties proved to be a water-
the Indian automobile industry

The Formula Maruti: engineering skills developed through motorsport

and saw a marked change in the government's stance. This came with a growing realisation of the strategic importance of the automotive sector. Following broadbanding, the doors were thrown open once again to collaborations and the industry was injected with new technology as never before. Maruti Udyog Ltd is a textbook example of how contemporary technology provided by a foreign collaborator, ie, Suzuki Motor Corporation of Japan has helped make an Indian-made car, the Maruti 800, acceptable in the international market today.

Unfortunately, though, our indigenous research and development capabilities are still obsolete when compared with international standards. R&D in the passenger car segment, with the exception of Telco, is minimal, and except for undertaking minor modifications to existing models born out of foreign collaborations, Indian manufacturers are still incapable of designing a new car indigenously.

Still, with the spurt in competition brought about by broadbanding, Indian vehicle manufacturers have been jolted into improving their products. Hindustan Motors, secure for 30 years with steady sales of its out-dated Ambassador, has now come to realise the need to improve its work-horse; it has now pulled in Riccardo of the UK to update the car's ageing 1498cc engine and gearbox. HM's Contessa is also scheduled for restyling.

Meanwhile, the Premier Padmini, age-old rival to the Ambassador, has also undergone some changes recently, to combat competition, especially from the Maruti 800. Premier has sought help from AVL of Austria to improve its Fiat's 1089cc engine.

The commercial vehicle and two-wheeler sectors are undoubtedly far ahead in terms of their R&D. Telco is India's shining example of a technologically self-sufficient set-up that possibly houses the best R&D capabilities in the country. Since 1970, when a 15-year collaboration with Daimler-Benz came to an end, Telco has been manufacturing completely indigenous commercial vehicles that sport inhouse-developed engines, transmission and axles. Telco's R&D setup has played an important role in the success of its light commercial vehicle (LCV) range, the Tata 206 and its derivatives - the Sierra and the Estate. The latter is the first totally indigenous car produced in India.

Another company with a strong R&D base is Bajaj Tempo. This company has utilised the fallout from its current collaboration with Daimler-Benz to manufacture the Tempo Traveller, for its other products. The Tempo Trax is one such indigenously designed vehicle that uses the Benz engine as its powerplant. Bajaj Tempo's Matador has now been developed into an impressive range. According to Abhay Firodia, managing director of Bajaj Tempo, "This is a result of the synergies of all our aggregates and by using the technology bought from our collaboration with Benz."

Historically, the two-wheeler industry has never been as laid back as the passenger car industry, it being far stronger and more competitive than any other vehicle sector. Bajaj Auto, India's largest scooter manufacturer, began the manufacture of its 150cc scooter and three-wheeler, in collaboration with Piaggio Vespa. Following that, the company upgraded its scooters and effected a number of cosmetic changes to the Chetak, which saw exports. The three-wheeler

WHY INDIA'S HI-TECH AUTO COMPANIES HAVE GIVEN BAPL THE GREEN SIGNAL.

BAPL today, is an established name for hi-tech engineering components. Boasting a range of high-quality products, BAPL components match the highest international standards.

It's no wonder that BAPL components have become vital parts of Kinetic Hondas, Tatamobiles, Eicher Mitsubishi LCVs and other hi-tech vehicles.

The fact that big names in the automotive industry trust BAPL, says a lot about the quality of our products.

than TVS-Suzuki, manufacturers ave yet to realise the full benefits port. MRF, India's leading tyre cturer, is perhaps the most ac- olved in motorsport; the radial tyre, used on the Gypsy, is a product born out of motorsport.

The competitive environment surrounding motorsport has also helped foster brilliant engineering skills; S. Karivardhan of Coimbatore whose design and engineering skills are unsurpassed, for instance, conceptualised and designed the Formula Maruti, a single-seater racing car based on the mechanicals of the Maruti 800. Then there's Jayachandran from Coimbatore who is single-handedly designing the fully-indigenous Mayura car — a classic example of reverse engineering based on the Volkswagen Jetta.

Instead of spending foreign exchange on getting products developed abroad, the industry needs to tap indigenous talent of this sort wherever possible. However, since the Indian automotive industry does not yet possess much by way of in-house styling and design talent, and manufacturers are compelled to take their products to design houses abroad — The services of Indian design specialists like Rajesh Mirajker and Dilip Chhabria, could also be tapped at a fraction of the cost. Mahindra & Mahindra had recently commissioned Chhabria to aesthetically revamp its Jeep, with results that have been encouraging.

The tyre industry has opened a new chapter in technology with the introduction of the radial tyre. New-generation cars like the Maruti 800 and the 1000, the Premier 118NE and the Contessa Classic, have suspensions that are best suited to radial tyres.

Among radials, the steel-belted variety, which have steel belts in the carcass of the tyre, incorporate the latest technology. The manufacture of steel-belted radials is complex and intricate but has the best characteristics amongst all radials, if properly constructed. Currently Ceat and JK are the only manufacturers producing steel-belted radials for cars. The manufacture of radials for commercial vehicles is the next step for the Indian tyre industry.

In the final analysis, the technological status of the Indian automobile industry is still a long way behind international standards. R&D, vital for technological self-sufficiency is still being neglected, with Indian manufacturers, on an average, allocating less than 1 per cent of their turnover to R&D as against 3 to 5 per cent in the case of leading international manufacturers.

Foreign collaborations have undoubtedly provided us with better vehicles, some of them even measuring upto international standards. They have given us quality products that were in the realm of dreams just a few years ago. But, are foreign collaborations really the answer?

Apart from the huge foreign exchange outflow, it has been observed that most companies with foreign collaborations have relied heavily on technical assistance from their collaborators and have neglected the development of indigenous technical knowhow and capabilities (TVS-Suzuki is one exception). Hence they are not technically self-sufficient. Hero Honda, for example, was unable to restyle its CD100, and had to rely instead on Honda of Japan to design the new-look Sleek.

Buying out technology or commissioning consultancies to provide technological packages could be a practical approach to technological upgradation. A modern design may be bought outright, complete with the manufacturing process, and later worked upon, like Hyundai of South Korea does. The company purchased Mitsubishi mechanicals for a body it had designed by ItalDesign. This package was then developed and improved inhouse. Hyundai is now a healthy contender in the world market.

Industry experts believe that India should follow this example. The role of consultancies abroad has assumed new importance in the Indian automobile industry today, providing the Indian industry with the latest and most appropriate technology. AVL of Austria and Riccardo Engineering of the UK have established a strong presence in India providing technological services over a wide range.

In the long term, the Indian industry must strive to match international standards to get a toe-hold in the world market. To reach state-of-the-art levels in technology will not be possible for many years. Instead, the industry should look towards developing a simple vehicle combining aesthetics, reliability, economy and an acceptable level of finish, that also meets the basic homologation requirements of safety and emission.

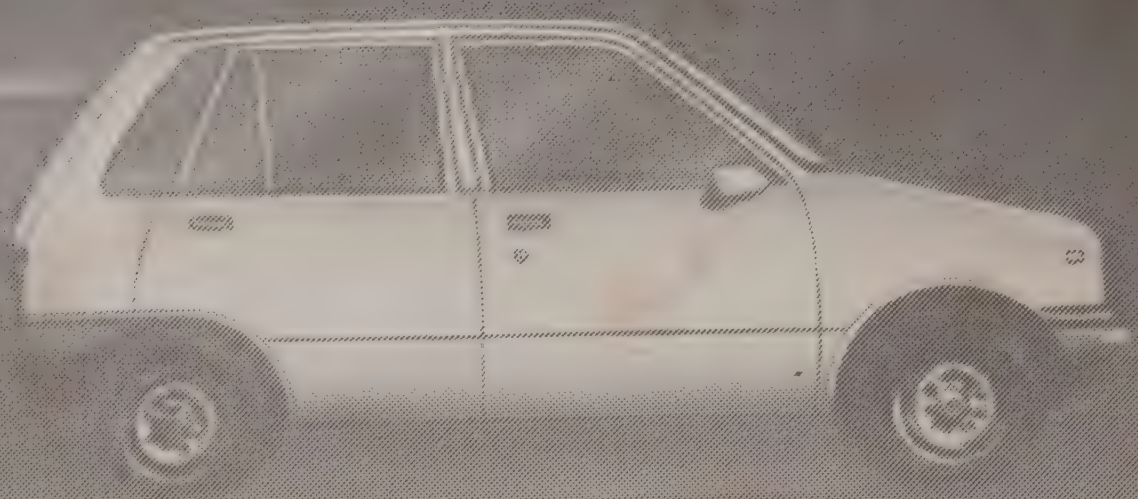
Rs.317.50 and Indian Rayon at Rs.269. B Group record makers included Chowgule Steamship at Rs.131.50, India Cement at Rs.350, India Steamship at Rs.32.50, Mysore Cements at Rs.217.50 and S.I.Viscose at Rs.2,100.

The preponderance of cement and shipping in the list indicates the hot favourites that made the market of 1991. However, sponge iron has turned dull with the fall in worldwide steel scrap prices leading to Essar Gujarat staying stagnant at Rs.102.50 and Bihar Sponge rising only marginally from Rs.37 to Rs.39 over the fortnight. Correspondingly, scrap users such as Mukand and Jindal Strip firmed up with Mukand rising to Rs.180 from Rs.160 and Jindal rising from Rs.335 to Rs.360. The perpetual on-again, off-again rumours of steel decontrol also helped steel makers, particularly Tata Steel which rose from Rs.234 to Rs.239.

The Larsen takeover fiasco had its repercussions in the stockmarket, the scrip falling to Rs.142 from Rs.147 after peaking at Rs.154 in mid-fortnight. The market is betting that the Ambanis are likely to lie low until their Rs.1,000 crore Reliance issue is through by November, before making their next move to control Larsen. Thanks to the strict imposition of trading curbs on Reliance, volume in Reliance was quartered to about Rs.6 crore from the previous fortnight averages of over Rs.25 crore per day.

Market declines.Market watchers attributed the decline in the market towards the end of the fortnight to profit booking by Harshad Mehta, reputedly a large trader in ACC and Century. However, this was denied when *Business India* contacted Mehta. Says he, "I am a long-term investor. We do have a trading wing which regularly buys and sells scrips on a regular basis. However, on 20 September, when the market fell

sharply, even the trading wing was not involved in any major selling. In fact, our selling orders on that day were lower than usual."



Some people certainly sold, and the list includes some of the larger speculators. Another possible reason for the decline is the proximity to the end of the fiscal half-year. Given that corporate results for the half-year might be below expectations, some profit booking was inevitable. However, the timing was a little earlier than what the market expected given that result announcements will start only from mid-October.

Government policy was stated to be the third reason. The apparent interference in the Larsen takeover could bode ill for the future confidence of markets. Its stand on reservations could also be destabilising.

With corporate performance in the fiscal year showing encouraging initial trends from half-yearly results to June and good AGM pronouncements, the market's sharp fall towards the end of the fortnight was viewed as a "healthy correction". As in the United States, where both good and bad news on the economy has, of late, caused the markets to go up (the latter because it means that the American Central Bank would probably lower interest rates), even declines can be good news for the determinedly optimistic. Nevertheless, as a result of the fall, the undertone of the market at the close of trading was distinctly weak.

In all probabilities, GHCL which is on the turnaround track, may even wipe out accumulated losses by 1993-94.

TRENDS

Modern Suitings

From Modern Suitings Ltd's results for the six months ended 30 June 1991, it seems the company is maintaining the status quo, with only marginal increases in gross and net profit over the same period last year. Operating profits are up by 13.20 per cent, while net profit margins have increased by 21 per cent. Material costs have gone down by 4.05 per cent. Net profit margins are 7.99 per cent, as against 6.92 per cent for the same period last year. Gross profit margins, at 10.1 per cent, are slightly higher than last year's at 9.1 per cent.

The company's Rs.41.45-crore project to set up a 100-per-cent EOU to manufacture 7.2 million metres of denim was expected to commence commercial production by July this year. But now, trial production is expected to commence only by the end of September.

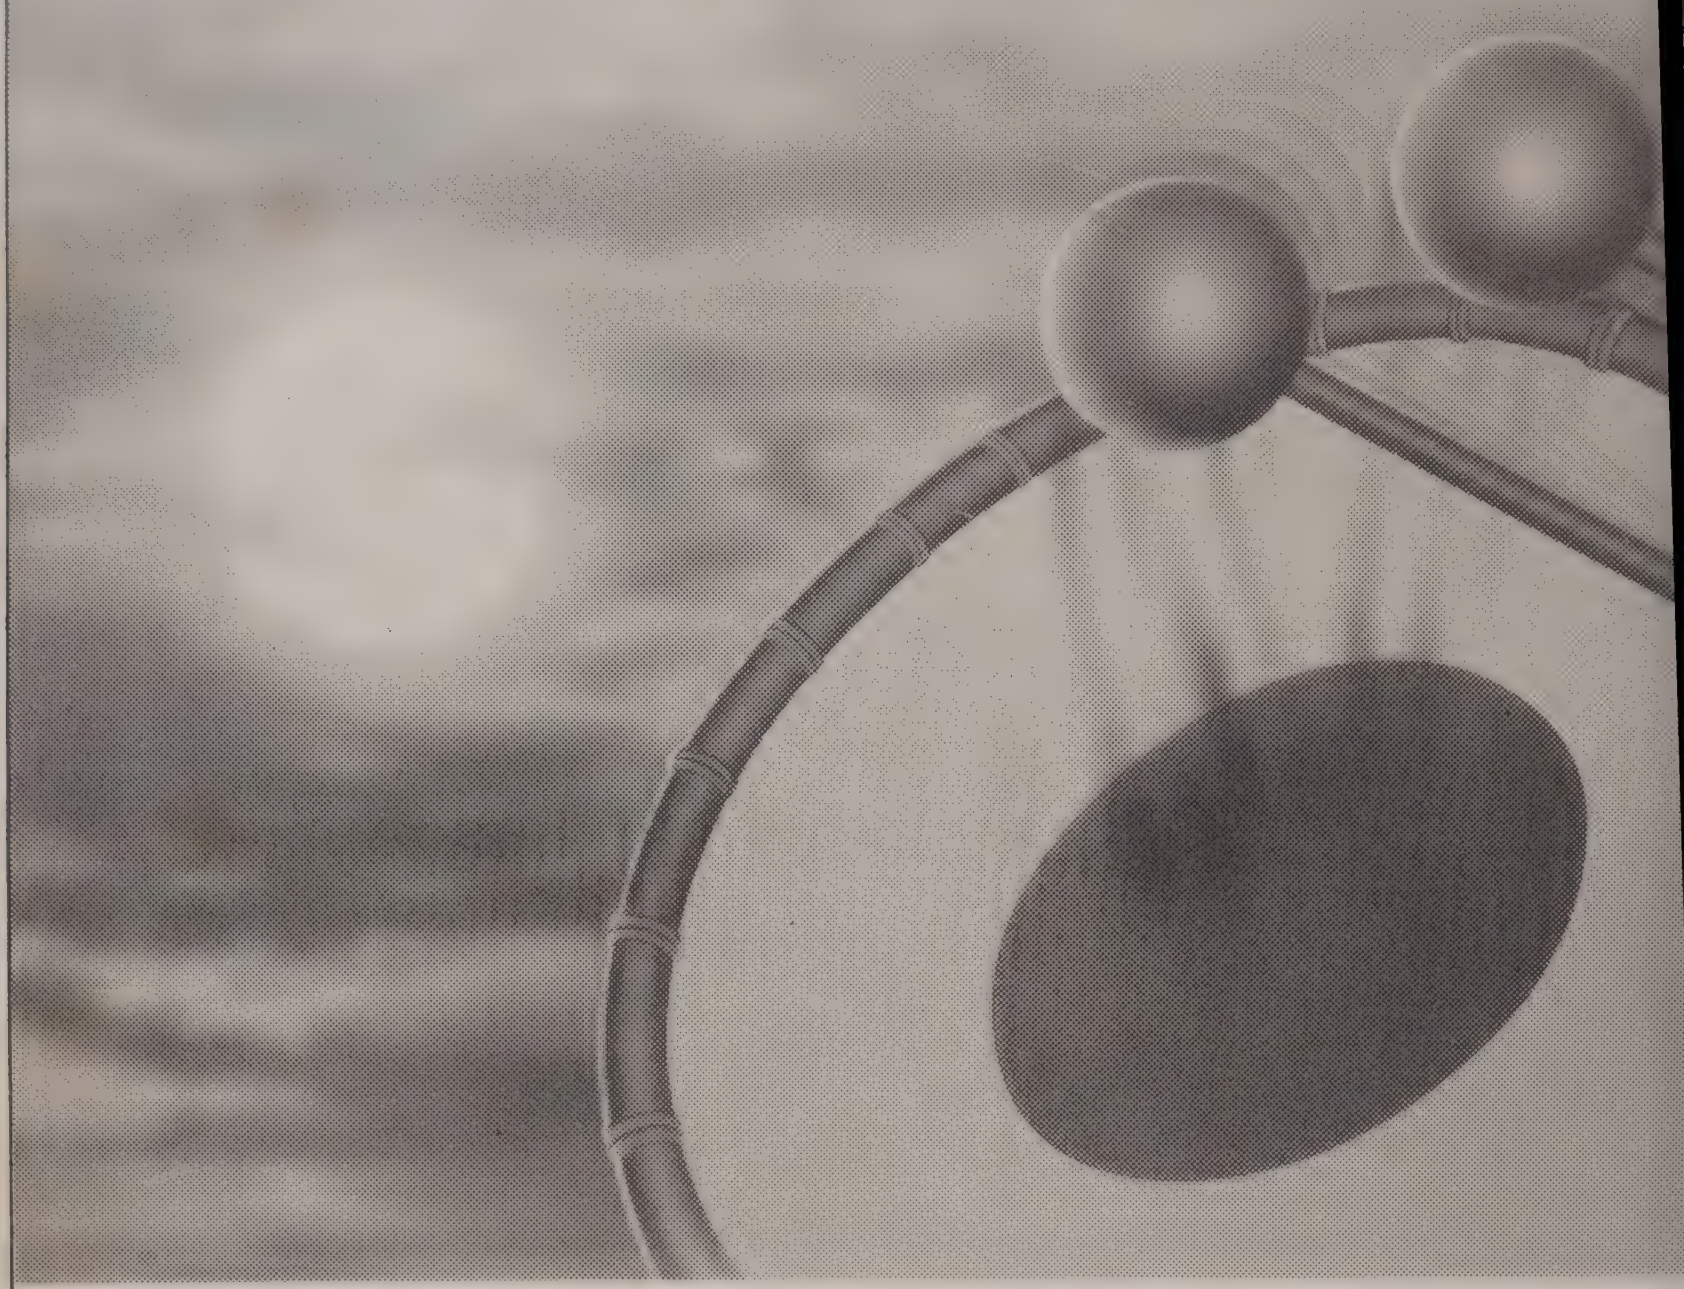
RESULTS ANNOUNCED

Antifriction Bearings

Sales up 23 per cent; expansions plans shape up; trend for the first five months of the current year look up

For the year ended March 1991, the company has posted a 23 per cent higher turnover of Rs.63.05 crore. However, with manufacturing and other expenses keeping pace with the increased turnover and the more than proportionate increase in depreciation and financial charges, the net profit has jumped by a mere 8 per cent to Rs.2.88 crore. According to company sources, during the first five months of the current year the company's sales are up 27 per cent.



Meanwhile, the company has increased the production capacity at its Lonavla plant in Maharashtra from 1.7 million bearings a year to 3 million. Also, a new unit with capacity of 5 million bearings has been set up at Bharuch in Gujarat at a cost of Rs.20 crore.

IN BRIEF

Goa Electricals and Fans, a joint-venture company set up by EDC of Goa and Crompton Greaves, has reported a turnover of Rs.5.37 crore, netting a profit of Rs.12 lakh for the year ended March 1991.

The Rs.50-crore Hyderabad-based **Satyam group** is setting up a software technology park as a 100-per-cent EOU for exporting software. Towards this, Satyam Computers, a group company, has signed an agreement with John Deere & Co of the US to tie-up exports.

WAKE UP TO A NEW FORCE IN FINA

Shriram. The name that's upfront in truck financing now teams up with the giants in road transport industry: **TELC Ashok Leyland.**

An association born out of their participation in the recent Convertible Debenture Issue of Shriram. A Group th grown remarkably in a matter of just nine years. More than Rs.80 crores of deposits with a **net increase of Rs. 24 in 1990.** Rs.100 crores of stock-on-hire with nearly 100% recovery rate. And a nationwide network of 55 offices

And now, this association with **TELCO** and **Ashok Leyland** means a lot more.

To Shriram, an opportunity to gain a greater insight into the road transport sector.

And to you, a sound and fast growing company to grow with.

tilayer laminated films are today ed over conventional packaging l such as tin, glass, jars and bot- ney are cheaper, reduce transpor- ost and storage space," explains Kumar Jhunjhunwala, managing of UML. Again, flexible packag- gained popularity due to its in- features like ability to block re, oxygen and carbon dioxide ; to aroma retention and ed product shelf life.

ort Metallizers	
opens	: 3 October 1991
f the issue	: Rs.10.72 crore
dian public	: Rs.3.46 crore
ment	: Equity shares of Rs.10 each
oters	: Vinod Jhunjhunwala and Vimal Kumar Jhunjhunwala
ct	: Setting up a plant for the manufacture of 3,200 tpa of multilayer, metallised, coated and laminated printed film and paper
ct cost	: Rs.28.74 crore
location	: Waluj, Aurangabad
g	: Calcutta, Bombay, Delhi, Ahmedabad

ording to estimates, the market d by end-user industries for mul- laminated films and co-extruded s expected to be around 16,900 s by 1994-95 as against the in- l capacity (including future pro- under consideration) of 20,125 s. "Changing lifestyles and west- fluences have contributed to the growth in demand for the conve- foods and to that extent the pro- cessed food industry has been booming," adds Jhunjhunwala.

So far, the company has commenced trial production for metallisers, slitters, coaters and laminators. "For the year ended March 1992 (consisting of six months) UML will clock a turnover of Rs.18 crore. However, in the subsequent year, the turnover at 100 per cent capacity utilisation will be Rs.38 crore and the gross profit is expected to be around Rs.6.5 crore," adds Jhunjhunwala.

Mansarovar Beverages & Industries

Originally incorporated as Mansarovar Beverages Ltd in July 1987, the company was renamed in April 1989 to reflect the proposed project for manufacturing coated triplex board.

Both promoters, S.C. Agarwal, chairman and Dinesh Chand, managing director, are businessmen with interests in varied industries like agro-food products, lease finance and *kattha* (coir) products.

Mansarovar Bottling is engaged in the manufacture of soft drinks under a franchise agreement with Parle (Exports) Ltd. Listed on the Delhi Stock Exchange it quoted around Rs.21 in early September 1991.

As per the information in the prospectus, Mansarovar Beverages and Industries Ltd has not earned any income since incorporation and accumulated losses are around Rs.2.4 lakh.

Under the present project, based on indigenous technology, MBIL will produce triplex coated board — a paper board of higher grammage consisting three plies bonded without adhesives.

According to the promoters, recycled waste paper will be the basic raw material. However, to maintain quality, provision has been made to produce long fibre pulp from hessian, rags, cotton cuttings, etc, the company also hopes to supplement the above with imported bleached chemi-thermo mechanical pulp.

Plant and machinery, which constitutes around 37 per cent of total project cost, is to be obtained indigenously. The company hopes to commence trial runs in November 1991 and go ahead commercially soon thereafter.

Mansarovar Beverages & Industries	
Issue opens	: 8 October 1991
Size of the issue	: Rs.6.89 crore
To Indian public	: Rs.3.78 crore
Instrument	: Equity shares of Rs.10 each
Promoters	: S.C. Agarwal, Dinesh Chand and Mansarovar Bottling Co Ltd
Object of the issue	: To set up a plant for the manufacture of coated triplex board, installed capacity 10,000 tpa
Cost of the project	: Rs.11 crore
Plant location	: Bijnor, Uttar Pradesh
Listing	: Bombay, Delhi, Calcutta, Ahmedabad, Kanpur

Coated triplex boards are resistant to oil, grease, water and as such are used in consumer products like pharmaceuticals, cosmetics, etc. Triplex boards laminated with food grade foils can be used to package edible items. According to the prospectus, the growth rate for paper boards is estimated at 8.5 per cent per annum and the projected demand for 1994-95 is 320,000 tpa against availability of 296,000 tpa.

MBIL's project is being financed through 63 per cent equity capital and the balance through rupee term loans.

Welspun Polyesters

Welspun Polyesters Ltd (WPL) is an existing company. It established a yarn texturising unit at Palghar, Thane, way back in 1986, with one machine of 216 spindles capacity. In March 1989 an identical unit with the same capacity was set up at Silvassa. A year later, the company's polyester filament yarn (PFY) came up at Achhad, Thane.

For the recently concluded year ended March 1991, WPL posted a 58 per cent higher turnover of Rs.30.25 crore. With profit after tax placed at Rs.1.37 crore,

100% EOU for the manufacture of Opthalmic Resin Lenses.

Guaranteed buy back of 50% of installed capacity.

Production expected to commence by February, 1992.

Technical & Financial Collaboration with VESIL spa of Italy.

Cost effective human resources gives us an edge over international competitors.

Could any investor ask for more?

Public Issue of 35,00,000 Equity Shares of Rs.10/- each for cash at par.

ISSUE HIGHLIGHTS

- Project promoted by a group of NRI professionals from USA.
- 100% Export Oriented Unit.
- Buy back agreement entered into for 50% of installed capacity.
- Hard Resin Ophthalmic Lenses, a modern, superior substitute to glass lenses.
- Consumer product with patented technology.
- Global demand for the product is estimated at 374 million pieces by the year 1993 and is increasing at a rate of 13% p.a.
- Cost effective manpower gives an edge over international competitors.
- Technical collaboration with M/s. VESIL spa of Italy, who have developed and established many patented proprietory processes to manufacture hard resin ophthalmic lenses.
- Equity participation by foreign collaborators.
- Equity participation by LIC and SBI Mutual Funds.
- 80M, 80L and Wealth Tax benefits.
- Listing at Hyderabad and Bombay Stock Exchanges.

Risk Factors: (1) Raw materials are imported. (2) Escalation of 5% to 7% in the project cost is likely due to recent rupee devaluation.

Perception of the Management: (1) Company's requirements in foreign exchange for import of raw materials would be about 17% of export earnings. (2) Recent rupee devaluation and trade policy of Government of India would enhance the Company's earnings and profitability.

**If the Company does not receive the minimum subscription of at least 90% of the issued amount, the entire subscription will be refunded to the applicants within 90 days from the closure of this issue. If there is a delay in refund of such amount by more than 10 days, the Company will pay interest @ 15% p.a. for the delayed period.*

ıpany increased the dividend by nts to 14 per cent. WPL's current visages increasing its capacity for l texturising it at Silvassa and .. This will be done by inducting a n-Teijin Seiki draw twisting e, which will take the capacity up 200 tpa to 3,500 tpa.

ntran Polylenses

ın Polylenses Ltd (TPL), promoted K.V. Rao and Krishna Dev Rao, the second company in India to project to manufacture hard re- naimic lenses. Set up in technical nancial collaboration with VESIL aly, the technology is the state-of- finish casting of hard resin lenses. is superior to the conventional nished casting technology and in- a patented monomer preparation , a patented mould assembly and ng process," says K.V. Rao. VESIL supplying the main plant and ery and TPL hopes to commence rcial production in February The resin lenses are lighter, shat- of, can be dyed and tinted in var- shades and even reduce the ce of cataract.

, enthused about the business cts states that hard resin mic lenses are fast replacing con- al glass lenses in Europe and the th the demand for resin lenses growing by about 13 per cent per annum. He also stated that the project was more lucrative in the Indian context as there was a tremendous saving in labour costs. According to Rao, while labour costs in the US were $12.5 per hour they work out to a mere $0.7 in India.

Techtran Polylenses	
Issue opens	: 9 October 1991
Size of the issue	: Rs.6.73 crore
To Indian public	: Rs.2.91 crore
Instrument	: Equity shares of Rs.10 each
Promoters	: K.V. Rao and Krishna Dev Rao
Project	: To set up a 100 per cent EOU to manufacture hard resin opthalmic lenses
Cost of the project	: Rs.18.42 crore
Plant location	: Medak, Andhra Pradesh
Listing	: Bombay, Hyderabad

TPL's plant will have an installed capacity of 2.5 million pairs per annum. Rao expects capacity utilisation of 65 per cent in the first full year of production, 1992-93. As per the prospectus, TPL has already entered into a buy-back arrangement with VESIL whereby the Italian collaborator will pick up 0.5 million pairs in the first year. The contract is renewable yearly. Another Italian firm, Margi has also contracted to pick up 0.5 million pairs. The management is confident of obtaining foreign buyers for the balance and projects a turnover of Rs.10.5 crore with a net profit of Rs.90 lakh for March 1993.

On the raw material front, TPL will have to import all major items like monomer, catalyst, temperable mould glass blanks. Imported raw material is expected to be about 17 per cent of export earnings, states the prospectus. TPL's present equity capital of Rs.2.74 crore will increase to Rs.9.47 crore, after the public issue. While the promoters are taking up 33 per cent of the total issue, the collaborators' contribution is around 5 per cent.

Forbes Forbes and Campbell, a Tata company, is the only other producer of resin lenses in India.

Ind Bank Housing

There has been a spurt of institutions which promote housing finance ever since the National Housing Bank was set up in 1988. However, judging by the gap between the demand and supply of dwelling units, which is expected to touch 40 million units by the end of the century, there is considerable scope.

Indian Bank with more than 1,300 branches, as of March 1991, has teamed up with the Housing & Urban Development Corporation Limited (HUDCO). Each has a 25 per cent equity participation. The company will benefit from the expertise of HUDCO in appraising housing projects and providing the technology.

Ind Bank Housing	
Issue opens	: 7 October 1991
Size of the issue	: Rs.2.40 crore
To Indian public	: Rs.1.90 crore
Instrument	: Equity share of Rs.10 each
Promoters	: Indian Bank and Housing & Urban Development Corporation Limited (HUDCO)
Purpose	: To part finance its financing programme taken up in southern states
Proposed sanctions	: Rs.100 crore during the first financial year
Listing	: Madras, Bombay

The company aims to sanction Rs.100 crore in the first financial year which should not be a very difficult proposition. According to NHB estimates, the total rural and urban housing shortage in the southern states is over 6 million units. Beginning in April 1991, the company has already sanctioned Rs.3.75 crore. Of this Rs.2.40 crore has already been disbursed at the end of August 1991 while the company has Rs.39.20 crore worth of applications pending.

Using the Indian Bank branch network will serve to save costs substantially. Being a housing finance company, Ind Bank Housing will also benefit from concessions such as creation of an income tax-free special reserve up to 40 per cent of its income.

Random walk down Dalal Street

An uncanny resemblance strikes one in the behaviour of the markets during July-August last year and July-August of 1991. Both periods have been witnesses to international and domestic turmoil. August 1990 saw the Iraqis in Kuwait. This sent oil markets into confusion and caused the major stockmarkets to go into a tailspin. In August this year, the world waited with bated breath when Gorbachov was held under siege. Yet, on both occasions it was as if Dalal Street did not take these political upheavals seriously.

BSE: bucking the trend
(Percentage change in market index)

	Saddam effect	Gorbachov effect
Tokyo	− 16.6	− 5.9
Hong Kong	− 11.2	− 8.4
London	− 10.6	− 3.1
New York	− 2.4	− 2.4
BSE-30 Index	+ 13.5	+ 1.3

Closer home, a parallel political scenario exists which is rather striking. Total uncertainty persists. Today, we have a minority government carrying on a daily lease without any kind of tenancy protection. BJP, although a supporter of the government's economic agenda, may not like passing of the bill on preserving status quo in religious places. The enemy of the finance bill, the Janata Dal is, however, the government's ally on the issue of religion. Ballroom dancing with different partners is all very well at birthday parties, but certainly not for political parties running minority governments.

Market mood. If politics is peripheral to the movement of stockmarkets, surely economics is central, and market moods must reflect the health of the Indian economy and the direction of the economic policy. Unfortunately, neither provides cause for comfort. The economy is plagued by high inflation, high interest rates, and a huge debt burden which will take a long time to be wiped out. The successive devaluations of the Indian rupee, made in an effort to contain the existing economic burden, only contributed to the spurt in inflation rates which has zoomed to over 15 per cent from 10.2 per cent between July and August.

With 55 per cent of India's import price inelastic (crude oil, fertilisers, edible oils, and capital goods), devaluation was a senseless decision. Our economic *gurus* justified the devaluation by saying that Indian exports will increase rapidly. The fact is that textiles and diamonds account for a third of our exports and both these product lines are in a state of stagnation in the global marketplace. While we are competing with Bangladesh and Pakistan for a piece of the same pie, they too have devalued their currencies or given benefits to their exporters to maintain a price advantage.

There are rumours of a third devaluation. If this were to happen, India will only end up as a banana republic — the Latin America of the nineties. The higher interest burden coupled with the reduction in depreciation allowance from 33.3 per cent to 25 per cent and the higher tax burden should make things difficult for the Indian corporate sector.

A booming economy will probably offset all these negatives. But even the RBI feels that GDP will grow by 2.5 per cent in the current year. The corporate sector, hit by higher input costs, will try to pass the burden on to the consumer who is likely to defer spending. If, additionally, we had been hit by a food shortage, inflation would have crossed the triple digit mark. It is shameful that even after forty years of planning, we still have to thank the rain gods for keeping us above water.

What cheer in 1991? The new industrial policy introducing an "unfettered" economy has caught many a businessman's fancy. Every industrialist now wants to set up a power plant, a cement plant, EOU units, giant petrochemical complexes, and steel mills. Some ventures will materialise, yet others will not. An open economy does not guarantee profits for everyone. Some will make money and others will lose — but this is the law of free markets.

What then are we celebrating? A revolution in economic thinking? A new India controlled by private businesses in which the government maintains law and order and provides the basic legal and social framework? I wish th be true. Actually, factions within ing Congress-I party seek to b forted by the fact that the Ne concept of socialism will not be nated. This has, in practise, give several absurdities.

> With 55 per cent of Ind import price inelasti devaluation was a senseless decision. There are rumours of third devaluation

The Electricity Act for instan amended to allow private secto "because of the circumstances we and not because the government b that their system of planning has failure. "Privatisation" is defined ing 20 per cent of a public secto pany's equity to the public to money while the control of the ma ment rests with the government. selling our national assets ("liabilit a better word) because the gover needs money and not because the sector has failed to achieve what supposed to. Formulating the eco policy in India is still locked government-knows-best moul thinking. The new policy, in my v merely a political admission of wh happened in the economy since rather than a blueprint for the fut

So, what is Dalal Street che With the BSE-30 Index selling at a earnings ratio (PER) of 25 time March 1991 results, the market is sive. Lending money appears safer assuming a 10 per cent growth in rate earnings for March 1992, th spective PER is still 23 and re expensive. Of course, the index wil 3,000, but it should probably rev 1,500 before it makes that move. on expectations is what stockma are created for. But living on drea quite another thing.

P/E: Market Price/Earning per share
Yield: Dividend as a percentage of market price
•: Based on unaudited net profit. Dividend for such companies pertains to the previous accounting year.

Lucky winners

The market being closed on 9 September, we have taken 6 September as our closing date. Congratulations to all the 85 winners of IC 351.

Given below is a new list of six scrips, and their closing prices on 20 September 1991. Pick the share that you think will rise the most in percentage terms by 21 October 1991 and rank it number one. Then choose the one that you expect will rise the second most and rank it number two. Then number three, and so on till rank six. It's as simple as that!

So, in this Investor Contest, you don't have to predict the price of shares; you merely have to rank the performance (in percentage terms) on the basis of the prices you expect each to reach on 21 October 1991. You don't have to tell us the prices nor even the percentage changes you expect — only fill in the ranks from one to six.

Please note that if you assign the same rank to two scrips, then the following one should be ranked the next consecutive number. For example, if you rank two shares at number three, the next will be number four (in which case, of course, your last rank will be five).

(Note: The cut off date for IC353 is 3 October and not 17 September as printed in our previous issue.)

Scrips	Prices as on Friday 9 August 1991 (Rs.)	Prices as on Friday 6 September 1991 (Rs.)	Ranks
Arlabs	180.00	182.50	4
Jain Irrigation	150.00	160.00	3
Jindal Strips	270.00	345.00	1
Mah & Mah	105.00	90.00	6
Nalco Chem	260.00	250.00	5
Premier Auto	54.00	58.50	2

Rules:

1. There is no entry fee.

2. The price mentioned last in the official quotation list will be taken as correct for the purposes of calculation. If the stock exchange remains closed on the stated last day, the closing price on the prior day will be used.

3. Entries must be on the printed form given below. Any other entries will be disqualified.

4. Only one entry will be permitted per form.

5. Envelopes sent in should be marked Investor Contest. All entries should be sent to: Investor Contest, **Business India**, Wadia Building, 17/19 Dalal Street, Bombay 400 001, by 5 pm, 17 October, 1991.

6. Business India's decision on the winning entries is final and binding, and no correspondence in this regard will be entertained.

7. The contest is open only to residents of India. No employee (or any direct relation of an employee) of the **Business India group of publications** is entitled to enter the contest.

8. The prize of Rs.5,000 will not be carried forward if there is no winner. In the event that there is more than one winner, the prize will be shared equally.

TRANSPORT CORPORATION of INDIA Ltd.
1-7-293, M.G. ROAD, SECUNDERABAD-3 (A.P.)

owing is the text of the speech by . Agarwal, Chairman of Transport ion of India Limited, at the 26th General Meeting held on 20th ber, 1991.

. AGARWAL

and Gentlemen,

eased to welcome you all to this 26th General Meeting of your Company.

nual Report for 1990-91 has been u for sometime and I hope it has d you the desired information.

ter half of the year 1990-91 probably e of the worst phases of political and urmoils in the post independent era country. Added to this was the um crisis thanks to the Gulf War. factors did have a destabilising effect economy. Despite this, your Company ntinued its progress and growth. You d it heartening to note that the ny recorded a growth of 16% in er and 17% increase in gross profit. I te this creditable performance mainly factors a) the synergistic strength of mpany to face up to unfavourable l environment and b) the trust and nce reposed on the Company by our customers. It certainly reflects the lity that your Company enjoys. Our hip in the goods transport industry s intact.

t profit during the year is lower due k loss on account of transfer of one of its i.e. Bangalore Wire Rod Mill and lacs of Customs Duty liability of the us years in respect of Bhoruka Textiles. e this the Board has recommended a nd of 18%, in order to maintain able return on investment of olders.

he transfer of Bangalore Wire Rod Mill ith Bhoruka Textiles becoming public, ompany now has the profile of an ve service organisation.

WTH THROUGH EXPANSION DIVERSIFICATION

Company, in its pursuit of growth h customer servicing, had commenced nes of business - Shipping, Wheels -Car and GATI Desk-to-Desk Cargo. s Rent-A-Car was formed in collaboration with "Hertz" (USA) to bring international standard car rental facilities to India. It offers both chauffeur driven and self driven car facilities in select cities. A tie-up has been signed with Citibank to enable Citibank card holders direct access to this service. New markets are also being identified for the division's network expansion.

GATI Desk-to-Desk Cargo was introduced to provide a unique, swift service that removes the time and tedium involved in sending or receiving cargo. This service, which was commenced with 9 branches, today has a network of 38 stations. GATI has now been declared a division of the Company in order to give it greater thrust and momentum.

The shipping division is continuing to make progress. The division has already commenced its operations to some South East Asian Ports.

The Transport Division will of course attain further heights in growth which has been its trend in all the years.

PROGRESS WITH A VISION AIDED BY STRATEGIES

The new government at the centre, through its Industrial and Trade Policies has paved way for a situation that existed never before. It will be a phase of opportunities and hence challenges. There is bound to be a spurt in healthy competition both in the domestic and international markets. Organisations which are built on sound values with a clear vision and committment will be able to create opportunities. Successful organisations will be those who have shown dynamism in their approaches and strategies.

Your organisation is alive to the emerging realities and shall endeavour to carve out a niche for itself through appropriate strategies, both for building internal strength and for providing quality of service.

VALUES WE CHERISH

Excellence cannot be sustained without consistent policy of business ethics and cherished goals.

Your Company has lived with certain business ethics which form the basis for our policies and plans. The Company has crystallised its corporate mission to be a customer oriented, multi-specialist transport system in the Indian and International markets with a proven committment to excellence in every facet of activity and pursuit of value based policies, to satisfy aspirations of society, customers, vendors, employees, shareholders and the transport industry.

UPDATION OF TECHNOLOGY

Excellence is an outcome of an urge combined with adoption of appropriate methodologies. It is here that technology becomes an important consideration. When excellence means doing things excellently, the possibility of creating excellence depends heavily on the extent to which an organisation is able to innovate on and adopt new technologies. The customer requirements being varied, it is the adoption of multiple technologies that will lead to all round leadership. Your Company has taken a planned approach to technology updation in transportation and is open to enhance its technological capabilities, to further improve its quality of service and its leadership position.

QUALITY. THE KEY WORD

In almost all walks of life quality has assumed greater significance. Quality is a matter of the mind. It is a process in which effective linkages are established within the organisation to ensure a defect-free output. People will be the key to achieve quality, more so in a service organisation. It is the ability to see each role in the organisation as complimentary to another that will pave way to quality. Synergising human capabilities will be the essence of management in the times to come. It is the product of collaboration among people that should become the focus in our organisations. We have over the years been endeavouring to create a culture of interdependence in our organisation. We have been proceeding on the firm conviction that the output of well knit teams is far greater than the sum total of individual output. We plan to activate this conviction more vividly in the future.

CONCLUSION

Your Company over the years has been performing creditably thanks to the untiring efforts of over 4000 employees, patronage of customers, support of its shareholders and involvement of the Board of Directors. I put forth my sincere thanks to the dedicated efforts made by the employees in pursuance of our mission. I also express my gratitude to the Financial Institutions and Banks for their support.

Over these years, your company has been able to nurture values of ethics and fairness. Your company as one entity has been able to face up to challenges. The future will demand stronger applications of cherished values. It will call for a clear vision and choice of strategies. It will require greater collaboration within the enterprise - so that the Mission of Excellence and Quality will become a permanent reality.

This does not purport to be a report of the proceedings of the 26th Annual General Meeting.

The hijacking of the IMF

ENOUGH IS ENOUGH:
Dear Mr. Camdessus... Open letter of resignation to the managing director of the International Monetary Fund
Davison L.Budhoo
Apex Press, 1990.
Distributed by Other India Bookstore, Goa.
pp.120, Rs.75

According to the *Observer*, London, this book is "a severe indictment of (the Fund's) practices, its racist attitudes and the high living of its staff". Racist? Well, South Africa is classified as a European entity in the IMF's organisational structure! And if this is not disquieting enough, read on.

Set up after the Second World War, the IMF was meant to help countries avoid deflation, which was till then the only means of escaping a balance of payment crisis. That the concentration of these problems has been in the developing countries (at least over the last decade), has made the Fund's influence over these countries unparalleled. Moreover, the IMF is no charitable organisation. The latest OECD report reveals that, in this time of capital scarcity, the IMF has been withdrawing from developing countries for the last 5 years, $2 billion a year more than it has been putting in.

Lifting the veil. The author's tone is polemical and this can get a trifle tedious. But that does not take away from the insight the book offers into the working of the IMF — an aspect ordinarily veiled. Budhoo is at his best when he documents the superficiality of the IMF's style. For all its talk of development, the IMF has very little expertise in this area. Ordinarily, development economics focuses not on mere economic growth but on the "entitlements" the poor should receive. The IMF's prescriptions skirt this central concern completely and are based on a narrowly defined terrain, viz. monetary economics, as defined by the Chicago school of economists led by Milton Friedman. The Fund believes in encouraging the development of a free market and its prescription for a balance of payment problem is demand contraction. To excuse its lack of expertise in development economics, it claims to lean on the World Bank's skills. But the Bank which started off with a view to funding large projects, like irrigation and power, itself doesn't possess a clearly defined theory to guide its own or the IMF's actions.

The IMF has admitted that its adjustment programmes have an adverse impact on income distribution. Yet, no serious self questioning is taken up. The unbeatable defence, of course, is: what are the alternatives? Would the impact of these be better than that of the IMF's prescriptions? Sadly, there seem to be alternatives. Consequently, Budhoo urges that all the macro economic changes insisted upon by the IMF — GDP growth or internal price stability — must be made subject to the condition that they will not at least cause a negative change in income distribution and poverty levels.

Budhoo's explosive accusation is that, not content just with inertial orthodoxy, the IMF staff is even willing to fudge figures to push through its prescriptions

Budhoo used to belong to the privileged band of international bureaucrats who work in international multilateral organisations like the UN, the World Bank or the IMF. In the IMF, they receive salaries and privileges that others can only fantasise about, as they jet from one five star hotel to another. It is the author's contention that the IMF's staff has hijacked its functioning. The Fund's board of governors, content with the privileges they themselves enjoy, have not been too keen to questio

attraction

CALCUTTA: SOCIETY AND CHANGE, 1690-1990
By Samaren Roy
Rupa, 1991,
pp 220, Rs.95

bred Indian, and more partic- Bombayite, has felt, at some er, the fatal attraction of Cal- they will agree, the traffic sys- a mess, the power situation the politics ghastly, the work rating, but... here there is a e, as of the memory of an old But... Calcutta is wonderful. n Roy's book, therefore, is ardently in spite of the un- ic title. Unfortunately the self is quite obviously.. well.. a the city, and this affects the of the book initially. The first ers fail to grip only because the levotion blinds him to the npatience. For example, the n the Derozians is no doubt of o those who have lived and he stimulating atmosphere of but to the lay reader, the name gs a bell. Even if it does, there to the amount of energy he is put into the perusal of the life of Derozio and his band.

rtunately the writer lf is quite obviously.. a devotee of the city, nd this affects the dability of the book initially

er, it is in the chapters on the Samaj, the scientific temper and c achievements of the city, that achieves the blend of univer- erudition that makes the book sting experience. The informa- tailed, the analysis always logi- t times brilliant.
can excuse the inclination, in large measure, towards self-congratulation — in the sense that Calcutta is often portrayed as the centre of the intellectual universe, influencing all thought in the country for the past three centuries — then the book makes for stimulating reading. Towards the end there are two chapters titled "The Painters" and "The Thinkers". The author has blended the development of Calcutta as the art and ideology capital of India, with the advent and contributions of artists and thinkers, some of whom we do not know or may have forgotten. The founding of various important movements and institutions (for instance, the Asiatic Society) comes alive on these pages. The last chapter details a chronology that is rewardingly informative.

However, what tends to jar is the language in certain places. It is awkward to say the least. Can any amount of excellence in content make up for sentences like, "His name was Linnaeus, who was only twenty when Newton died"? Unfortunately, the book is littered with such editorial lapses. And while a loyal Calcuttan may overlook such faults, this makes for a jerky flow of the text for interested readers.

GIVE AND TAKE: A Practical Guide To Making The Most Of Meetings
By Jack Gratus
BBC Business Matters Pack (144-page book and C-60 audio cassette), Distributed by Book Channel, Bombay, Rs.325

Meetings take up 25 per cent of a manager's time. Senior managers attend meetings four days out of five.

Why are meetings held? First, the good reasons: to bring people together, aid communications, inspire, energise, pool resources, liberate, to make you noticeable, and above all, because they are but natural.

Now the bad reasons: meetings are held out of habit, to avoid responsibility, display power, avoid work, avoid writing, or merely to rubberstamp decisions. However, there is universal concurrence on one count: most meetings are poorly handled, are time-wasting, and usually pointless.

This guide aims to change all that. There's advice on how to prepare properly, how to help ensure that the meeting stays on course, how to contribute effectively and how to negotiate a meeting in top gear.

■ BRINSTON MIRANDA

'Perfection' pack

SPEAK FOR YOURSELF: A Practical Guide To Giving Successful Presentations, Speeches and Talks
By John Campbell
BBC Business Matters Pack (144-page book and C-50 audio cassette), Distributed by Book Channel, Bombay, Rs.325

The new format of helpful business books released by BBC — always a leader in information transmission — claims to make you perfect. However, unlike most such 'quick-fix' mannuals and other aids, this book and cassette have an amiable, empathetic tone that facilitates learning for self-development, an achievable task for the busy business person and beneficial, as well, to all other professionals (including bureaucrats).

Managing your nerves, preparing and structuring your talk, using memory aids and support materials, beginning your talk, using your voice, you and the audience, putting it all together — that's what this pack is all about.

The overriding consideration for being successful is to make the needs of the audience the major criterion. Distinguish between what they want to know and what they need to know! If dealing with an audience is part of your work, then this pack is what you have been looking for.

■ BRINSTON MIRANDA

Speech by Shri Y.R. Ghorpade, Chairman, The Sandur Manganese & Iron Ores Limited at the Thirty-seventh Annual General Meeting held on 16th September 1991.

Ladies and Gentlemen,

I extend to you all a very cordial welcome to the Thirty-seventh Annual General Meeting of the Company.

This is a testing time for India. Our former Prime Minister Shri Rajiv Gandhi lived and died for the unity and integrity of our country. He wanted India to be strong and resilient to step into the twenty-first century with confidence and commitment to our time-tested ideals. Many far-reaching changes are taking place on the economic front which will succeed to the extent to which we act in unison and in full awareness of our common heritage and universal human values, rising above all distinctions of caste and creed. In recent years we have witnessed upheavals and struggles in different parts of the world for more democratic rights and opportunities. We, in India, are fortunate to have developed democratically for over four decades, thanks to the vision and dedication of our great national leaders and the united effort of our people. At a time when external and internal forces are trying to undermine our peace and progress, we have to further strengthen our democratic system to the grass-roots level. It is a matter of pride that our Sandur Company (SMIORE), has been able to contribute significantly to the prosperity and quality of life in this area for nearly four decades and is poised to further expand the scope of its socio-economic activities in the years to come.

Power

The monsoons have been good this year. The reservoirs are full and the prospects of power supply are encouraging in Karnataka. Making adequate power available to power-intensive industries should not present a problem. However, it is equally important to make power available to such industries at a rate which is reasonable and stable. This rate should, no doubt, be linked to the cost of generation of power, but should not be burdened with the cost of subsidising power supply to other sectors and avoidable inefficiency in distribution. The monthly power bill of SMIORE at present is of the order of Rs. 2.50 crores. SMIORE has always attached the greatest importance to prompt payment for the power it consumes. However, during the period December 1981 to March 1987, as a consequence of the State Government's unilateral abrogation of our agreement with the Karnataka Electricity Board (KEB), SMIORE had to incur heavy losses but had been paying KEB according to the power rates ordered by the court, and even this difference between court order and tariff rates amounting to Rs. 6 crores in 5 years has also been completely paid without prejudice to our case in court. The KEB is not justified in claiming any penal interest or adjusting to it amounts paid by the Company and showing increasing arrears as due from the Company.

There is another pending legal dispute with the KEB with year from which the concessional state duty became ope period of twelve years for our ferrosiiicon furnaces which production in 1977. It is our contention that the concessio became applicable to the Company for a period of twelve 1977 upto March 1989, and not only upto March 1984 as the KEB, the difference amounting to Rs. 4 crores. Barrin disputes, where the courts have issued stay orders in fav Company, SMIORE has had a harmonious relationship w

Performance

In spite of these and other difficulties, the Company' performance in 1990-91 has been good. The profit for the Rs. 14.70 crores after interest of about Rs. 2 crores and d of Rs. 1.20 crores, based on a turnover of Rs. 93 crores a production of 35,300 tons of ferromanganese, 8,800 tons silicomanganese and 13,700 tons of ferrosilicon at the Me Alloys Plant and 212,000 tons of manganese ore at the Mi matter of satisfaction that once again after eight years the has been able to declare a dividend of 25 percent for the y

Mines

It is significant that our Mines at Deogiri have been a about 80,000 tons of manganese ore of the required Mn:F M & FA Plant at Vyasanakere, near Hospet, apart from ex 70,000 tons of ferrogenous manganese ores and domesti 50,000 tons mostly to ferroalloy producers. This has been concerted effort and commendable cooperation between m and labour, who have the benefit of a progressive incentiv which enables them to earn much more than the statutory wages, while providing sizeable employment at the Mines from the surrounding villages in Sandur taluk. The Compa developed its Mines on a scientific basis at considerable c to get the best out of these pocket deposits spread over o mining concession. At the same time, we have been extre conscious of our obligation not only to protect environmen strengthen it in every possible way. The Company has pla a half lakh trees a year in 1989-90 and 1990-91, which wil up to five lakh trees in 1991-92. There is an environment a which has been built up over the years and has resulted in Organisation and employees acting as guardians of the fa in this geologically ancient tract. To further strengthen our direction, the Company has commissioned the National E Engineering Research Institute (NEERI), Nagpur, to prepa comprehensive report on the management and monitoring

e Sandur Manganese & Iron Ores Limited

Registered Office: 'Lohadri Bhavan', Yeshwantnagar 583 124, Bellary District.

t. At the Mines Environment and Conservation Week
n Bellary district for the first time by the Indian Bureau of
ly 1991, SMIORE's Mines were adjudged the best and
e trophy for environment awareness.

ation

ally our mining concession contains low grade manganese
hough low in phosphorous is relatively high in iron content.
re our endeavour to do our very best to try and beneficiate
de manganese ore to achieve an Mn:Fe ratio which will
use of the beneficiated ore in ferromanganese production.
Company's main research and development objective which
al significance. Available scientific knowledge indicates the
e of roast reduction and magnetic separation as the most
thod of beneficiating our ores. The Regional Research
(Bhubaneswar), Outokumpu (Finland) and
chermet Institute (USSR) have all conducted laboratory
our ores with encouraging results. The Company has
ecided to plan a pilot project to establish the commercial
nd process parameters of beneficiation. We intend to do
eration with the Indian Bureau of Mines and other technical
ns inside and outside the country. It should be possible to
his work and arrive at firm conclusions within a couple of
ne basis of which the Company proposes to go ahead with
n, which would greatly benefit our own ferroalloys
and also export of value-added products.

n Control

Metal and Ferro Alloys Plant at Vyasanakere, near Hospet,
ubmerged electric arc furnaces producing ferromanganese,
anese and ferrosilicon, bulk of which is supplied to the Steel
f India Limited (SAIL). Improved power availability has
better working and enabled the Company to undertake
pollution control in Karnataka by installing bag-house filters
d be commissioned by March 1992. A clean atmosphere is
ment. The pollution control authorities should take a
w of the nature and type of pollution control feasible for
dustries and fiscal measures should also be designed to
feasible. A uniform policy in this regard is desirable in the
equity and environment.

ics

liversification of the Company's activities in the field of
is progressing satisfactorily. Our dot matrix printer has
eceived in the home market and abroad. The indigenisation
phased manufacturing programme approved by the
nt of India for the manufacture of printers is now complete.
several standard electronic components have to be imported
is no adequate manufacturing base in the country for such
ts. The development of "SOFDAC" - a menu driven software
r data acquisition and control systems - is complete and a
s been installed at our Ferroalloys Plant. We have
g responses from other processing industries such as
d cement. The Company has established a centre at
Bangalore for software development, computer services and training in advanced systems and applications for domestic and overseas market, using an IBM AS-400 state-of-the-art computer. This software centre will go a long way in meeting the increasing need for trained professionals in software development and export.

Welfare

The Company's welfare programmes cover health and education and include supply of subsidised essential commodities, cloth and housing. They are designed to protect the real income of our 2400 employees and contribute to community development and the quality of living in the area. The educational facilities have been further strengthened by the starting of a Girls' Residential School with the Central Board of Secondary Education (CBSE) syllabus, at Vyasanakere, near Hospet. The Sandur Education Society's polytechnic started in 1988, at Yeshwantnagar, with diploma courses in computer science, telecommunications and mechanical engineering is now almost complete and has already made a name for quality education and discipline in healthy natural surroundings. It will be our endeavour to strengthen technical education with a view to further diversify the courses and create a strong base for undertaking training programmes to upgrade skills of our employees and also benefit the neighbourhood. Skills for employment and improved employability is at the heart of the problem of development and growth with social justice. The Sandur Kushala Kala Kendra is also doing pioneering work in the field of arts and crafts including mirror work and embroidery, cane and bamboo works, kinhal lacquerware, stone and wood carving, khadi and tailoring. There is great scope to develop traditional skills for indigenous consumption and export.

It is a matter of great satisfaction to all of us that Shri M.Y. Ghorpade has once again joined the Company as its Managing Director from 30 May 1991. His experience and guidance have always been available to the Company, except on two occasions when he had to accept ministerial responsibilities in the Government of Karnataka as Finance Minister from 1972 to 1977 and as Minister for Rural Development & Panchayat Raj in 1990. I also wish to express my appreciation of the good work put in by all the employees of the Company. I am grateful to all my colleagues on the Board, the financial institutions and the banks for their valuable guidance and support.

Thank you,

Yeshwantnagar — Y. R. Ghorpade

Date: 16 September 1991

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Now the same technology that helps NASA study Martian dust storms can help the railways speed up freight billing.

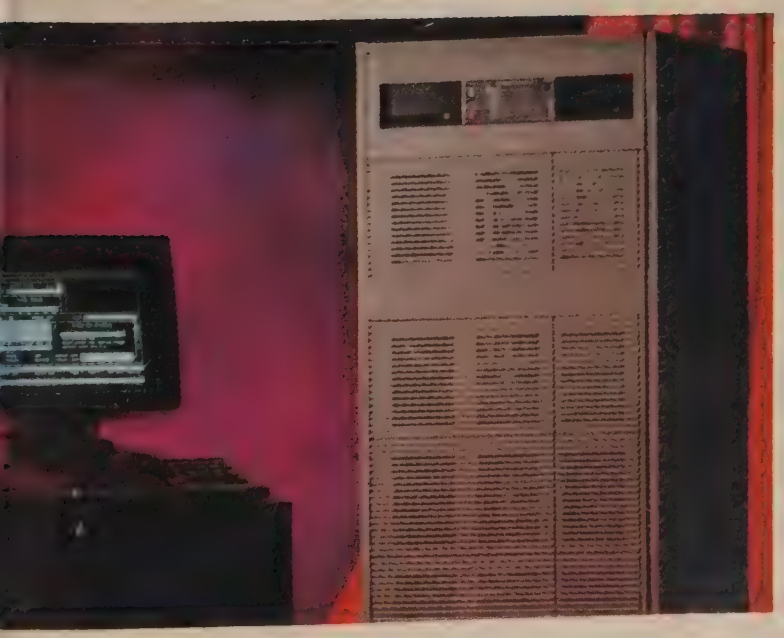
RISC technology. It's the new generation computer technology that's raised the power and speed of computing to a whole new level.

And Silicon Graphics Inc. is one of the world's leading exponents of this technology.

At the Mountain View, California Ames Research Centre, Silicon Graphics systems help NASA engineers bring theoretical data alive with stunning realism. One of the visual simulations these systems are used in, for example, is in the recreation of atmospheric conditions on the neighbouring planets.

It is this superpower that Tata Elxsi (India) Ltd. bringing to Indian users in business and scientific com as well as in visual processing. Through the Power S manufactured with Silicon Graphics know-how at of-the-art facility in Bangalore. And customised to conditions by one of the few Government - rec R & D centres in the Indian computer industry.

Beginning as a single-processor RISC machine



, the Power Series can be upgraded to eight times
r by simply plugging in additional CPU cards.
g no other system in the country can offer.
nost powerful configuration, the Power Series can
ckage like Oracle™ at truly awesome speeds -
0 transactions per second In a scientific
tion, this same power would translate into 63.3
MFLOPS of performance.

Now think of what this power would mean in a complex area like freight handling. Over 250 users across the country could readily access a common, and continuously updated database. Enabling quicker freight billing, and better control over freight movement.

But transportation is just one area where Tata Elxsi can make a powerful difference. Banking, energy, oil, research, meteorology and manufacturing are some of the others.

(Telco, for instance, has just placed an order for six systems for their manufacturing plants and offices).

The most powerful - and easily upgradable - hardware in the country. And a world-class software capability that allows us to tailor solutions to meet your exact requirements. Tata Elxsi offers you all this, as well as a host of specific design advantages unique to the Power Series.

To find out more about the Power Series, and what it can do for you, get in touch with us. Fast.

Power Series is the trademark of Tata Elxsi (India) Ltd., Oracle is the trademark of Oracle® Corporation.

DCM SHRIRAM CONSOLIDATED LTD

CHAIRMAN'S STATEMENT

Shri Mantosh Sondhi

Ladies & Gentlemen ,

On behalf of the Board of Directors and on my own behalf, I extend to you all a very warm and cordial welcome to the 2nd Annual General Meeting of your Company. The Notice convening the meeting, the Directors' Report and the Audited Accounts for the period ended March 31, 1991 have been with you for sometime now and, with your permission, I shall take them as read.

The Annual General Meeting is always an appropriate occasion to take a brief look at the state of our economy with particular reference to our businesses. Such a survey assumes additional significance considering that we are now at the threshold of Eighth Five Year Plan.

Economy

The year that has rolled by has been one of trials and tribulations for the nation. While the production trends in agriculture and manufacturing industries were generally satisfactory, the situation on the price-front and in respect of the balance of payments was disturbing. The Gulf crisis and consequent sharp increase in oil prices had their impact on the import bill, exports and invisibles, and accentuated the pressure on the balance of payments and the inflationary forces. The changes in the Union Government in quick succession created apprehensions about political stability and ability of the Government to take decisive measures to manage the economy. In the context of the critical foreign exchange reserves position and absence of a stable Government, India's standing in the international money and capital markets was adversely affected, creating serious problems in the raising of commercial credits. The domestic turmoil and political troubles culminated in the most tragic assassination of

Speech by Shri Mantosh Sond the Annual General Meeting c Company held on September 3 at New Delhi.

Shri Rajiv Gandhi, the former Prime Ministe in the prime of his youth.

New Economic & Industrial Policies

Against this backdrop of uncertainty and cris threatened to engulf the economy, the bo initiatives taken by the new Government the economy out of the present critical ph welcome. The exchange value of the Ru been brought down to a realistic level vis-a major currencies of the world, to prevent flight, to give fillip to exports, discourage ine imports, and attract capital inflow, particula Non-Resident Indians. The trade policy h been readjusted to reinforce the advantages from the devaluation of the Rupee. The new I Policy has brought structural changes to mov from a command and controlled pattern of of the economy and of ad-hocism to a con and market oriented economy. The diverse c introduced will help in the formulation of a lo integrated policy, which will usher in rapid of the economy. The abolition of threshold MRTP Companies and a license-free regi higher ceiling on foreign equity would also speed up economic growth and make India player. I sincerely hope that the new Gov would keep up its efforts in the direction of libe the economy from the stranglehold of bure controls, which had so far thwarted and thro growth. Thus, while there may be difficultie short-term, the long-term outlook is definitely b

Equity Shares

As stated by me at the Extra-Ordinary Meeting of the Company held in January th 19,792 equity shares of Rs. 10/- each in the C credited as fully paid, representing fractiona were sold after the Company's results for t ended March 31, 1991 were available. N proceeds thereof have been distributed shareholders entitled to such a fractional shar in proportion of their entitlement. Your Co shares now, apart from Delhi and Calcutt Exchanges, are also listed in Bombay Exchange.

Review of Operations

During the year ended March 31, 1991, your C on a turnover of Rs. 360 crores earned

Rs. 12.1 crores. The net profit after on and tax was Rs. 6 crores, which was for appropriation. On an equity base of crores, this represents an EPS of Rs. 10.50 ash EPS of Rs. 21. This is much better nce as compared to the last year. Because roved results, your Directors have nded a dividend of 20%, keeping in mind mmitment to reward the shareholders ly and enabling them to share in the y of the Company.

r thrust and focus is on consolidation of the operations. The Management view is that siness should be self-sustaining and a leader n sphere of activity. As a part of consolidation wth, your Company is studying investment around Rs. 150 crores for accelerating n its present activities of Textiles, Fertilisers, ls and Cement.

les

mpany's Textile Division consisting of ra Bharat Mills and DCM Silk Mills is being red to make its constituents independent nerating entities in the next 2 to 3 years. ese Mills have historically lost over Rs. 5 er year. The Company has made short-term -term plans to revive the Textile Operations.

art of this, proposals for modernisation/ on/rationalisation of some of the existing ns of SBM/Silk Mills are under ntation. To tide over the problem of excess er, we are trying to reduce the manpower in a manner fair and equitable to all.

mpany has its presence in foreign markets A, Europe, South Asia, Africa and USSR. mpany has plans to further strengthen its

liser Business

tiliser Group consists of the Ammonia/Urea Fertiliser Plant operated at record capacity n during 1990-91, and the business is at doing well. The Management has started udies on a scheme to switch over to gas aptha as feedstock. In the meantime, the y is utilising its marketing network for sales ht-out DAP. The proposed reduction in the r Subsidy announced by the Central ment will improve the cash availability position ompany, because there are enormous delays eceipt of the subsidy from the Government. term, the Government has announced de- of Fertilisers, which is a very welcome thing. future, it appears there will be profitable on in this field.

micals Business

VC resin unit at Kota operated at its full . A detailed study is now being made on nology and capacity expansion of this unit. e Management is broadbasing and upgrading mpounds manufacture with the introduction products. Similarly, the Caustic Soda unit at ieved record capacity utilisation. The capacity austic Soda unit is planned to be substantially expanded along with a switch over from mercury to membrane cells, which will check pollution, increase efficiency and reduce power consumption. The Chemicals Business of the Company is doing quite well at present.

D. Cement Business

Cement unit at Kota also achieved record capacity utilisation and generated profits in 1990-91. Schemes for substantial expansion of the existing capacity and for reducing cost of manufacture are under consideration. The brand image for the Company's product is good and it is in high demand.

Power Plant

The PVC resin and caustic soda operations are power intensive. As such the availability of un-interrupted power to these operations becomes quite important. During the year 1990-91, the availability of power from RSEB was better.

The Company's existing Power Plant capacity of 45 MW at Kota is planned to be expanded to meet a substantial part of our requirement of 90 MW in due course. Various options in this regard are under consideration.

For each of the Business areas, I have just placed before you our tentative plan of action. To finance these proposals, the Company is formulating strategies and specific proposals in this regard would be placed before you for your approval at the appropriate time.

The Future

Your Company is well poised for another satisfactory year. In the 4 months period ended July 31, 1991, the turnover of your Company is higher at Rs. 117 crores as compared to Rs. 100 crores for the corresponding period last year. The profitability is also better. At this juncture, I can only say that in terms of operations and profitability, the current year should close on a satisfactory note. In conclusion, I would like to add that every effort is being made to make your Company strong, healthy and growth oriented.

Acknowledgements

I would be failing in my duty if I do not pay compliments to Mr. Ajay S. Shriram, the Managing Director and Mr. Vikram S. Shriram, the Deputy Managing Director. Although young in years, they are carrying very heavy responsibilities, which they are discharging with great deal of courage, deep sense of commitment and a professional competence of a very high order. They are very ably assisted by Mr. V.P. Agarwal and other Senior Executives.

Before I close, I would like to convey my sincere thanks to all our employees for the devoted manner in which they have worked, the Financial Institutions and our Bankers for their co-operation, the Government of India and the various State Governments for their support and encouragement and the most important of all, our shareholders, who have extended unstinting support to our endeavours.

Thank you.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

PRESSMAN

Senior executive positions

THE FOUR BEST JOBS

- GENERAL MANAGER (HRD) * Calcutta * *Sal* Rs.15,000 + flat + car with driver + perks * *Age/Qlfn* 38-45 years * Graduate engineer with MBA * *Reqd* Should be a top-notch professional * *Cont* HRD/BPA/3090, B.P. Agrawal, Chairman, ABC Consultants Pvt Ltd, 43/3, Hazra Road, Calcutta 700019 (BI - 16.9)
- VICE-PRESIDENT (Transmission Operators) * Pune * *Sal* Attractive + house + car * *Age/Qlfn* NS * Mechanical engineer + MBA * *Reqd* 15 years experience of which 5 years should be at a senior level * *Cont* Vice-President (Personnel), Kirloskar Pneumatic Co Ltd, Hadapsor Industrial Estate, Pune 411013 (ToI - 9.9)
- EXECUTIVE DIRECTOR (Marketing) * New D Excellent with perks * *Age/Qlfn* 40-45 years * Eng graduate with an MBA * *Reqd* Not less than 10 yea ence as all India marketing head dealing in consum bles * *Cont* EDM/DEL/1227, C/o V.P. Gulati Associate, ABC Consultants Pvt Ltd, 209 Megh Nehru Place, New Delhi 110019 (BI - 16.9)
- PRESIDENT * Maharashtra * *Sal* Excellent * *Age/* * Any discipline * *Reqd* 10 years at senior level * *C* Tibrewala, President, IFCM Counsellors, 721, Tar Market, Bombay 400034 (ToI 9.9)

WEST

- RESIDENT DIRECTOR * Bombay * *Sal* Delightful * *Age/Qlfn* NS * NS * *Reqd* Persons retired from civil service, public sector undertakings/financial institutions * *Cont* Nutech Financial Consultants (P) Ltd, 29 Whites Road, Madras 600014 (ToI - 16.9)
- EXECUTIVE DIRECTOR (Corporate Finance) * Bombay * *Sal* Attractive * *Age/Qlfn* 37-42 years * CA or MBA (Finance) * *Reqd* 15 years experience in a similar position * *Cont* The Chairman, House of Patels, 52 Hill Road, Bandra (West), Bombay 400050 (ToI - 9.9)
- SENIOR VICE-PRESIDENT TECHNICAL * Raigad, Maharashtra * *Sal* * *Age/Qlfn* 45-52 years * Metallurgical/chemical/mechanical engineer * *Reqd* Senior level experience in construction/operation/maintenance of chemical, fertiliser and steel plants * *Cont* SIP/BPA/3095, B.P. Agrawal, Chairman, ABC Consultants Pvt Ltd, 43/3 Hazra Road, Calcutta 700019 (HT - 9.9)
- FINANCIAL CONTROLLER * Ahmedabad * *Sal* NS * *Age/Qlfn* 30-35 years * CA + MBA * *Reqd* Understanding of finance, costing, accounting etc. * *Cont* S.K. Honda, Managing Director, Core Parenterals Ltd, Narayan Chambers, Ashram Road, Ahmedabad (ToI - 16.9)
- GENERAL MANAGER (Finance) * Bombay * *Sal* Attractive * *Age/Qlfn* 35-40 years * CA * *Reqd* 10-12 years managerial experience * *Cont* MS/5728, A.F. Ferguson Associates, Post Box 1786, Bombay 400007 (ToI - 16.9)
- CHIEF EXECUTIVE * Bombay * *Sal* No constraint * *Age/Qlfn* NS * NS * *Reqd* Experience in similar position in light engineering industry * *Cont* Box J 621-S, ToI, Bombay (ToI - 16.9)
- VICE-PRESIDENT MARKETING (Software Exports) * Bombay * *Sal* No constraint * *Age/Qlfn* Mid-30s * Preferably Engineering MBA * *Reqd* 10 years exposure to marketing and sales in office automation including 3 years as profit centre served * *Cont* Chanden Bathejgia, Chief Executive, The Concept, Counsel of Management Services, 67 White Hall, 143 August Kranti Marg, Bombay 400036 (ToI - 16.9)
- GENERAL MANAGER (Operation) * Pune * *Sal* Attractive * *Age/Qlfn* 35 years * B.Tech/M.Tech with diploma in management * *Reqd* 10-15 years experience with 5 years in senior position * *Cont* Box J615 K, ToI, Bombay 400001 (T
- COMPANY SECRETARY * Bombay * *Sal* No co *Age/Qlfn* NS * CA/LLB, also qualified company se *Reqd* 10 years in similar job * *Cont* V.R. Tibrewala, IFCM Counsellors, 721 Tardeo A/C Market, Bomba (ToI - 16.9)

NORTH

- GENERAL MANAGER (Works) * Pithampur * *Sa* tive * *Age/Qlfn* 40-45 years * M.Pharm with qualifi management * *Reqd* 5 years as senior manager maceutical industry * *Cont* HRD Director, Nicholas tories Industries Ltd, Sion-Trombay Road, Deonar, 400088 (ToI - 14.9)
- PROJECT HEAD * New Delhi * *Sal* NS * *Age/Qlfn* * Chemical engineer * *Reqd* Around 20 years expe which at least 5 years in general management positio ganisations of repute * *Cont* Box No.AA/353/LO/1, India, 59 Regal Building, Connaught Circus, Ne 110001 (BI - 16.9)
- GENERAL MANAGER (Finance & Accounts) * N * *Sal* Terms negotiable * *Age/Qlfn* 35 years * CA/M nance) * *Reqd* Around 15 years experience of which years as an independent head of finance and account puted organisation * *Cont* Box No.AA/353/LO/2, India, 59 Regal Building, Connaught Circus, Ne 110001 (BI-16.9)

SOUTH

- GENERAL MANAGER (Works Process Industry) India * *Sal* Rs.2 lakh + house + car * *Age/Qlfn* E MBA * *Reqd* 15-20 years experience at senior levels i industries * *Cont* GMW/MDS/40, M. Madhusudha tor, ABC Consultants Pvt Ltd, 4 Khader Nawaz Kha Madras 600006 (ToI - 16.9)
- MANAGING DIRECTOR * Bangalore * *Sal* Att *Age/Qlfn* 45-50 years * NS * *Reqd* Currently in senio management profession, with profit centre respons *Cont* LBS/345, Mario Lobo, Managing Director, P Search Services, H.O. 71A Mittal Chambers, Narima Bombay 400021 (ToI - 16.9)

BUSINESS INDIA
APPOINTMENTS

Core Parenterals Limited is one of the fastest growing and profitable pharmaceutical Companies in India. Pioneering the manufacture of High Quality I.V. Fluids with worldclass technology, Core today, is the largest manufacturer of I.V. Fluids in India and is all poised to become one of the largest in the world. To achieve this objective Core is planning to implement manufacturing facilities at multiple locations in India and abroad. The Indian plants itself are likely to involve an investment of more than Rs.100 Crores.

The story of Core dates back to 1979 when a team of professionals launched CORE. Today Core has interests in Pharmaceuticals, Leasing and Finance, Computers & Consultancy. The Group Companies, Core Parenterals Limited, Core Laboratories & Enterprises Ltd. and Growth Finance Limited are all profitable and fast growing companies with an excellent track record. All are listed on the Stock Exchanges. The following figures give an idea about the Group's track record and growth plans:

Year	No. of People	Assets (Crore Rs.)	Income (Crore Rs.)
1985-86	90	1	1
1990-91	756	20	22
1991-92 (Estimated)	1100	35	40
1995-96 (Projected)	3500	175	250

CHIEF EXECUTIVE

PHARMACEUTICAL INDUSTRY

This is a Top Management position reporting directly to the Managing Director. CONSUMER MARKETING & SALES PROFESSIONALS

MIDDLE EAST

Our client is part of one of the world's leading organisations in the fast moving consumer goods business and they manufacture and market strong global brands. Due to expansion, vacancies have arisen in the Arabian peninsula for top quality Sales and Marketing people.

BRAND MANAGERS (MS/5730)

Successful candidates will be preferably management graduates and have 2 to 3 years of intensive experience in managing blue-chip consumer brands in an international company. Field sales experience will be a distinct asset. Age under 32.

SALES MANAGERS (MS/5731)

Successful candidates will be preferably management graduates and have 2 to 3 years experience in field sales management of consumer brands in an international company. Age around 30.

ASSISTANT MANAGERS (MS/5732)

Successful candidates will have advanced from entry/field level positions to a supervisory level in the sales/marketing functions in reputed organisations in the fast moving consumer goods industry or in accounts management in advertising agencies. They should have around 10 years experience and be able to demonstrate potential for advancement into Sales/Brand management. Age around 35.

All these vacancies provide a tremendous opportunity for a longer term career in the Middle East. The entry standards are high but career opportunities are commensurate. Training is excellent and the best will have the opportunity for further international secondment. All candidates must be prepared to relocate within Middle East as their career develops.

Please apply in strict confidence within 10 days to:

A.F. Ferguson & Co.
P.O. Box 1786
Bombay 400 001

giving full details of age, qualifications, experience and salaries drawn along with a recent passport size photograph and contact telephone numbers. All applications and envelopes should be marked with the relevant reference number. Candidates who are not contacted within a month of applying for this position should assume that their experience and qualifications have not been found suitable.

The Director, **Spartek Ceramics India Ltd.,**

SPARTEK
Ceramics India Limited

AT&T, Alcatel, Motorola... Now is your chance to be in the same league.

Right here in India.

WE
Are one of the biggest industrial concerns in the country. Associated with leading players in the world telecommunications field. And are about to create history in the Indian telecommunications market.

YOU
Are young and energetic. Have a degree in electronics and communications/computers. And, preferably, an MBA.

You are in the telecommunications industry, at the managerial level. Possess the capability to go much further. Can communicate fluently with people. Interact with foreign collaborators. Build and lead an effective team. And establish a market for a product.

You have a minimum of 8 to 10 years' experience in business planning/marketing/sales/systems.

Or, alternatively, you have a proven track record in networking and marketing and handling software services in telecommunications. Or in network planning, design, systems engineering and implementation. You understand the intricacies of the software industry. Possess experience in the development of systems and applications software. And are conversant with UNIX, XENIX, and C.

You are already carving out a name for yourself. But would welcome the opportunity to really flex your muscle. Show what you can do.

THE JOB
Business Development Managers for our five telecommunications divisions - Radio Products, Consumer Products, Components, Network Provisioning, and Software.

The job holds everything you want. Responsibility. Challenge. And excitement. For you will be reporting directly to the Vice President. Building your own team. And creating and enhancing markets.

The job would also entail, amongst other things, negotiations with foreign collaborators, interaction with potential consumers, and the preparation of feasibility studies/business plans.

Naturally, you can be sure the rewards will match the responsibilities. So go ahead. Send in your resumé. You wouldn't want to miss out on this job for the world.

tinct and courage

Deepak Tolani

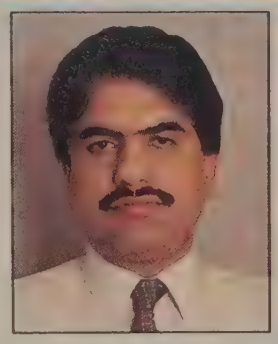
rgava, *55, is deputy managing director, ICICI*

own admission he is an opera- : man, a guy who goes out and gs done. He is not flashy and has vy mannerisms, yet he com- n influence far beyond his desig- f deputy managing director of ustrial Credit and Investment tion of India, the second largest - of the Indian industry. People ay, "Chairman (N. Vaghul) is a y, but DMD is the decision-

ise to the number two spot in k him exactly two decades. The V. Bhargava has risen from the d attributes his success so far to idence reposed in him by the e has worked with. Bhargava s career, in 1956, as an officer in an Tariff Commission (now e joined the India Investment n 1961, and after a four-year n its New York office (1964-68), d ICICI. As senior officer in the ns branch in Bombay, he was two to S.S. Nadkarni, now n of IDBI. Soon after, he took hief of operations.

ava was transferred to ICICI's ice as regional manager in 1978. tico-economic environment of al trained him in walking the between business and politics. to help him greatly in the future.

When he returned to Bombay in 1982, promotions came fast. From AGM to DGM to GM and, then, to DMD, took only six years.



At ICICI, Bhargava has handled the projects of virtually every big industrial house in the country, from the Birlas, the Tatas, the Goenkas, and the Ambanis, to the Ruias. This variety of experience has also helped him understand the problems faced by an entrepreneur. He has, therefore, attempted to speed up, as well as simplify, the process of getting loans from his institution. "I tell my people that an industrialist has a lot of problems outside ICICI, so sit down with them and quickly help in solving these." His greatest satisfaction has been in being able to dissuade entrepreneurs from investing in projects he felt would not be viable. "In most such cases they have come back and thanked me," he says.

Bhargava thinks that development banking hasn't achieved what it was meant to, that is, develop industry in the rural areas, encourage new entrepreneurs etc. "Somewhere along the line, the approach to financing projects became normative. If an entrepreneur came to the institutions with some money of his own and his dreams, he was financed. And in turn, we took protection under conditions in the loan agreement." This led to wrong people coming into industry. Development institutions probably overplayed their role, he feels.

But, right now, Bhargava is gearing up to tackle the "greater challenges" posed by the new industrial policy. According to him, with licensing gone, the entire responsibility of seeing that the nation's resources are not squandered rests with development banks. But with a man like Bhargava around, says a representative of an industrial group, the country can be sure its precious resources are in safe hands.

■ MADHAV REDDY

FRONTRUNNERS

Sriram Khattar, 33, completed a course in chartered accountancy from A.F. Ferguson & Co in Delhi, and initially worked with them in the management consultancy division. Later, he chose to enter financial services.

After a three-year stint with the Nagarjuna group in Hyderabad, he joined ITC in 1988 as manager, special projects. Today, he heads this company's investments, diversifications and corporate finance operations in Bombay. The fact that money markets are tight does not worry him. Says he, "Raising money for ITC is not difficult. What is important is the cost at which this money is arranged."

■ R.B.

"We brought down our break-even point by 45 to 50 per cent this year," says the man instrumental for the turnaround of the Bombay-based Gabriel India's shock absorber division.

Amit Mondal, 32, general manager of this division, is a mechanical engineering graduate from IIT Kharagpur, and a post-graduate from the National Institute for Training in Industrial Engineering, Bombay. His first job was being a production engineer with GEC. Since then he has worked with ASE and Lipton India.

At Gabriel he follows a three-pronged strategy: achieving manufacturing efficiencies — production increased this year by 70 to 80 per cent, while fixed costs were brought down by 22 per cent — concentrating on profitable segments for shock absorbers and increasing the thrust on exports.

Ashok Leyland Limited

Regd. Office: 19 Rajaji Salai, Madras 600 001.

Highlights of the Speech delivered by the
Chairman, Mr. Mantosh Sondhi,
at the Fortysecond Annual General Meeting on September 5, 1991.

On the Company's Performance

Despite the difficult economic situation, 1990-91 has been yet another year of creditable performance.

Gross turnover increased by 34% (annualised) to Rs. 922.90 crores.

Exports rose to Rs. 47.28 crores from Rs. 25.18 crores in 1989-90 (annualised).

The Hinduja Group is actively supporting the Company in its export drive and thanks to this support, the current export order book exceeds Rs. 60 crores.

Profit before tax at Rs. 41.36 crores was higher by 69% over the previous year (annualised).

On the Company's Mission

To bring world-class vehicles to Indian roads and to achieve a major export presence by 2000 AD.

On Expansion Plans

A multi-crore modernisation and expansion programme to upgrade technology and manufacturing facilities; and to widen the product range.

On Technological Upgradation

Ashok Leyland will bring the benefits of the world's finest technologies from IVECO, Italy; Hino, Japan and ZF, Germany.

The product strategy will focus on higher fuel efficiency, better emission control, smoother ride and international styling.

IVECO will actively participate in the Company's technological upgradation programme and support the new product range with their global marketing network for maximum export benefits.

A new range of vehicles in the payload segment of 4 to 8 tonnes will supplement the product range and provide a new thrust for exports.

ASHOK LEYLAND 2000
GLOBAL STANDARDS
GLOBAL MARKETS

On Government Policies

The new initiatives on liberalised trade and industrial policies signal a bold new approach to integrate domestic production with global markets.

It would have helped if measures such as investment allowance and higher depreciation rate for high technology and capital-intensive industries had been taken to sustain large-scale capital formation.

Durable penetration of export markets is feasible only on superior product techhology and quality. These cannot, however, be the concern for exports alone.

Modernising key engineering industries should be an integral part of a drive to achieve international competitiveness, even if it means import assistance in the short run.

Development and maintenance of highways and bridges should be thrown open to the private sector on toll-based systems leaving the State to focus on district and rural roads.

The quality of roads needs improvement to eliminate wastage of fuel and to improve the life of expensive spares.

Road development should be made eligible for direct foreign investment to accelerate improvement.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE FUTURE IS BIGGER BETTER BRIGHTER

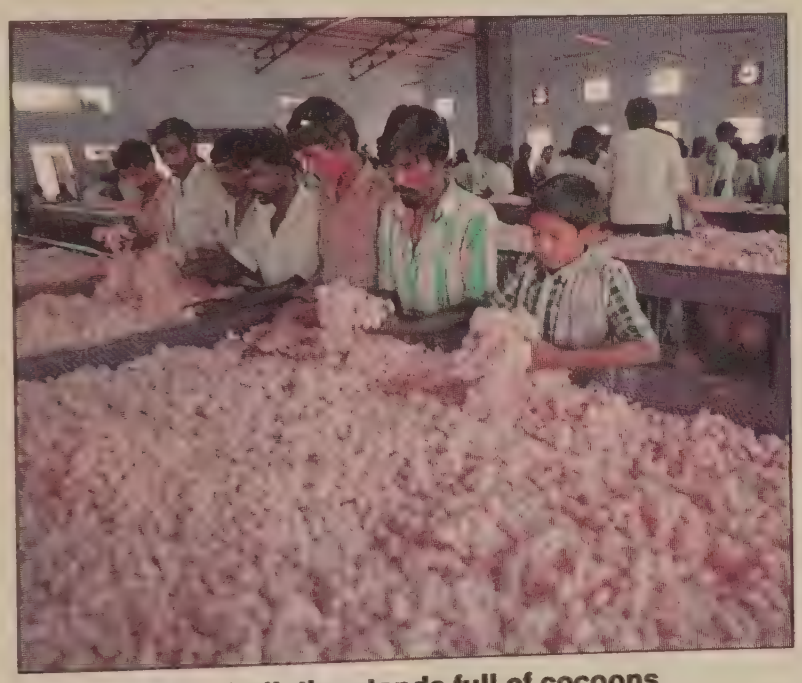
AGARAM

inning a fortune

argest cocoon auction centre is in a one-horse town near ore

nagaram is a one-horse town ing among the awesome boul- nations that dot the Bangalore- highway. Located just 50 kilo- from bustling Bangalore, the ot into prominence in the seven- n it was used as the locale for the ockbuster *Sholay*.



nown, however, is the fact that garam is Asia's largest auction or cocoons, with the market on days a year. Not surprisingly from Andhra Pradesh, adu, Kerala and even far tar Pradesh, find it lucra- sell their produce here. spite 15 identical markets in Andhra Pradesh, West Tamil Nadu, Jammu and , Maharashtra and Uttar . Karnataka itself has coon markets but garam is obviously the e.

demand

th average receipts of 30 f cocoon every day, the garam cocoon auction annot meet local require- This is because, in and the township, there are ensed reelers and 5,000 *charkha* tage units which require 60 f cocoons every day. The maxi- ceived in a day has been 58 in one day, says Chik- tappa, assistant director, ser- department, government of ka, who is in charge of garam cocoon market. "Since is high at Ramanagaram and on arrival is inadequate, the always competitive," he says. why farmers from other states re in large numbers."

ding to the Karnataka Silk t, 1959, all farmers have to sell at government-run cocoon mar- be eligible to participate in auc- ne buyer, the licensed reeler, should have installed machinery for reeling activities. Buyers licensed by the state sericulture department can buy cocoons only from government notified cocoon markets.

Farmers come to the market throughout the day, starting at 7 am when market officials begin issuing slips to them. The auction begins at 10 am and continues after the lunch break. There are 120 employees in this market and transactions worth Rs.20 lakh are carried out daily. Not surprisingly, several co-operative banks and others like Canara Bank, Vijaya Bank, the State Bank of Mysore, and Vysya Bank have opened district branches in the area.

At the auction hall: the stands full of cocoons

Buyers inspect the cocoons as and when they arrive at the market. The bidding price is decided on the previous day's quotations at the Bangalore silk exchange. Buyers deposit a stipulated amount with market authorities and this is adjusted with the auction purchases made later. In most cases, payments are settled in cash immediately after the auctions.

The market levies a one per cent service charge on both buyer and seller. In 1989-90, sales were Rs.85 crore on which the revenue earned was Rs.1.70 crore. Says Chikkavenkatappa, "The sales and revenue will increase further." Interestingly, the state government also participates in cocoon auctions at Ramanagaram, through agents. "This is done to maintain prices and stability," points out Chikkavenkatappa.

Higher margins

"If the cocoon is fresh and well-built, the farmers get a good price," says J. Sampath, deputy director (publicity) of the Central Silk Board. "If it is wet and flimsy, it does not fetch a good price." B. Dasappa, a young cocoon farmer from neighbouring Anantpur in Andhra Pradesh, says, "I come to Ramanagaram because I get a 20 to 30 per cent higher price than in the Hindupur market." He went in for mulberry cocoon cultivation as the margin was greater compared to commercial crops. On an average, a farmer gets between Rs.45 and Rs.170 for a kg of cocoons at Ramanagaram, depending on the quality.

Such high returns encouraged even an automobile engineer, Apoorva Chandra Chandhu, from Maddur, 35 kms from Ramanagaram, to change his line of work. "Compared to other crops, rearing cocoons is economical," says Chandhu, whose crop of cocoons averages about 2,000 kg a year.

Farmers who wish to hold back their cocoons, for a better price the next day, can stay over at the market. They can stay at the Raitha Bhavan constructed by the state government. There are three halls in all, the largest of which can accommodate 100 stands. Each has a storage capacity of 60 to 70 kgs.

Unfortunately, the township is a hotbed of communal tensions and frequently there are riots. Despite this, there appears to be absolutely no security at this cash-rich centre. Still operations at the cocoon auction go on in a smooth and precise manner.

Tea? Or Chidam-
? This seemed to be
erving choice for
t UPASI's recent an-
The Union minister

of state for commerce was introduced as a planter of sorts, but P. Chidambaram brusquely dismissed this. "I've never set foot on a plantation", said he. Before the embarrassed titters could die down, Chidambaram had another crack, "After joining the government, I've found myself drinking tea and coffee in equal proportions, sometimes not knowing which is which."

Jokes over, the minister got down to serious business. His stern slogan, "Export or perish", repeatedly sounded like a whiplash slicing the cool Coonoor air. He then chastised the "existing plantation strategy", which growers assume means "to produce what we can, consume what we will and export what remains".

The 10-day Pune festival had it all: cultural programmes, a food festival, sports, drawing competitions, the works... Sharad Pawar and Madhavrao Scindia lent political weight while Bismillah Khan, Hema Malini, Bhimsen Joshi, Mallika Sarabhai and Ravi Shanker were at their talented best. "The idea," says chief organiser, Suresh Kalmadi, "is to make the Pune festival a tourist attraction not only for Indians but also for foreigners." All the festivities, of course, could not have been possible without a helping hand from the corporate world. ITC picked up a major portion of the Rs.25 lakh tab with Bajaj Auto, SM Dyechem and Bharat Forge chipping in with the rest.

Gone is all that bluster, the abrasive takeover tycoon image. A much-chastened Manu Chhabria now likes to portray himself as a low profile, quiet industrialist, in the midst of consolidating his industrial empire. No more takeovers now, he maintains.

This was only to be expected since six of his group companies are involved in BIFR cases and even his flagship, Dunlop took a drubbing on profitability. Yet old habits die hard. "If there is a tyre company available, I would love to buy it," he mused recently.

Preparing countries for reform

What makes this year's World Development Report different from any other?
While in the past we had taken up one topic at a time and looked at its impact on development, today it makes more sense to look at all topics together. When you look at one topic, the tendency is to think that it is the most important for development. Instead, we preferred to ask: when you look at the entire canvas what priorities emerge?

Do you advocate more private-sector involvement and diminution of the role of the state?
The report's statement on the role of the state and the role of the market must be seen with respect to where a particular country is situated. Clearly, over the last thirty years countries have overused the role of the state to a point where it has become counter-productive. At the same time, due to swings in opinion there has been a tendency to overstate the role of the market: meaning that getting prices right will solve the problems of development.

The report endorses a strong role for both the state and the market, but it makes a clear distinction about the areas in which each can make the maximum contribution.

On what basis do you make this distinction?
In areas of production of goods and services, the report finds little justification for the state to be directly involved. On the other hand, in areas like primary health, education, infrastructure, the environment, or poverty alleviation, since the private sector doesn't have much incentive to be a leader, there is justification for the state to be the leader, provided its capability can be established.

What in your opinion are the necessary conditions for dramatic results in any programme of reform?
There are three preconditions: one, there should be a sound policy framework in terms of pricing, regulation, and competitive environments; two, effort must be made to raise investments, both physical and human; and three, the building up of institutions, the capability to deliver services, the legal framework, property rights, and so on. The three necessarily go together.

For example, if institutions are not flexible to respond fast enough to a shift in a regime from one based on quantitative restrictions to one based on tariffs, exports could really suffer.

Deepak Tolani

Vinod Thomas, *chie economist for Asia at World Bank, was also leader of the team th compiled this year's W Development Repor While in India recently hold discussions all o the country, he spoke* Eapen Thomas of Business India *about import of the report*

That gives price reform, whether it is an exchange rate depreciation or a shift away from quantitative restrictions, a bad name. People are likely to associate the ineffectiveness with the reforms themselves.

Once instituted, how fast-paced should the process of reform be?
There are many cases where full-scale liberalisation was attempted and results didn't come in one year. But what we should observe is whether in a reasonable amount of time, say 10 years, the country was the better off for taking this approach. However, there are examples of countries which went very fast in one line and regretted this.

As the process of reform begins in India, there is the question of priority, whether it should be given to domestic-oriented reform or that affecting the external sector?
Your question assumes that the amount of energy needed for re and the resources are limited. W to look at the amount of regula the domestic market, and that i external market. That will give idea of the marginal benefits of in either direction. India has bo very highly regulated external se and a domestic sector. My feelin that both markets need to be th about. The emphasis on the dom sector, just because it is a large economy in terms of population stand that the external economy important, will be mistaken. Imp one without the other will not pr the required results.

How do you respond to the perc that the process of reform is so painful that it might be better to it altogether?
We have evidence that the later it comes, the reform process is mor difficult, more painful, and more But does this mean that a country wishes to adopt it late will have t up the attempt? But think again, costs will be even higher in the fu All the same, the cost factor shou kept in mind, so as to be realistic how much can be achieved, but it should not result in the slowing d of the process. Alleviating costs is area many countries didn't tackle requires a political will and entail redirection of expenses so that the vulnerable and poor are protected
